Anthrax disease in man, 464.
Apple anthracnose, combating, 131.
crop moving, Washington, 360.
crop, Stevens county, 332.
marketing, need clearing house information, 151.
outlook, Yakima, 419.
packing records, 384, 412.
picking records claimed, 412.
shipments from Peach, 440.
shipments, Wenatchee, 508.
shipments, Yakima, 508.
storage house—Linstad, 265.
trees, removing, 341.
warehouse in northwest planned by London firm, 548.
Apples, cost of production less, 223.
east adopting boxed, 341.
England wants red, 332.
for export, 60.
market northwest crop in middle west, 197.
opening prices higher, 112.
ship to Europe, 440.
water core in, 395.
would eliminate small, 82.
Armistice day tributes, 432.
Artichokes, Jerusalem, 447.
Automobile inner tube, uses for, 495.
operation costs in Minnesota, 495.
testing brakes, 272.

B

Baker Canning Co. at Sumner ends season, 548.
Balanced farming replaces one-crop plan, 335.
Bankers and agricultural conference at state college, Pullman, 555.
Bark louse in orchard, 317.
Battleships Indiana and South Dakota to be scrapped, 116.
Bee and honey exhibits at fair, 91.
Beekeepers' library—Dr. Charles C. Miller, 317.
Beekeeping, 1923, Washington, 467.
Bees, care and feeding in winter, 489.
in the orchard, 76.
protect in winter, 419.
pay—F. L. Jenner, 45.
wintering, 151.
Beet growers get pay, 508.
Beer sugar monopoly, oppose, 352.
Berkeley, Cal., has big fire, 228, 248.
Berries, barreling saves money, 87.
Berries the birds like, 552.
Berry crop brings $100,000, Chehalis, 256.
growers in southwest Washington organizing, 384.
growing—A. H. Reines, 243.
patch, fall weeds in, 419.
plant diseases, 395.
plants must be inspected, 216.
Blackberries, pruning, 201.
Blackberries, Puyallup valley, 144.
Bordeaux spray mixture, 552.
Boys and girls' club judging at Pacific International, (il) 414.
British election campaign, 472, 500, 520.
Building construction greater, 116.
Burbank irrigation wing dam finished, 548.

C

Cabbage lice, control of, 341.
maggots on kale, 112.
root maggot, 44.
seed shipped east by Skagit Valley Seed Growers' ass'n., 188.
storing, 317.
worms, control of, 131.
California county grain pools, 389.
Canadian thistle control, 554.
Canadian wheat shipped into United States, 300.
Cancer of the stomach, 65.
Carbide residue disinfects, 533.
Cherry canning at Yakima, 72.
crop, Prosser, 40.
crop, Sunnyside, 56.
shipments, Grandview, 4.
trees, pruning, 243.
trees winter injured, 112.
Chewelah city library, (il) 87.
Christmas contest prize winners, 525.
Christmas ideas, exchange, 499.
Clarke county prune growers sign up, 216.
Club work at Spokane fair, 270.
Coal strike threatened, 136, 180, 208.
Coat hangers, how to make, 522.
Columbia Basin soil surveys completed, 332.
Columbia river, dredge channel, 216.
Community privileges, better homes lead to better, 87.
Concrete cistern, 61.
Congress in session, 540.
Cooperation in Denmark, 129, 149, 168.
Cooperative marketing, Pres. Coolidge backs, 334, 359, 404, 413.
Copper carbonate treatment of seed wheat to control smut, 215, 255, 256.
Corn growing, Kennewick, 425.
how to can, 47.
prices are high, 324.
selecting ears for seed, 369.
starch, manufacture of, 470.
Cotton largest U. S. export, 429.
Cranberry crop, Washington, 308.
Creeping bent-grass, 419.
Crop estimates, U. S., October, 315.
Crop report, Washington, August, 106.
Crops, centers of production, 389.
Currants and gooseberries, pruning, 223.
Cutworms, climbing, 131.

D

Diet is important, 562.
Diversification pays—C. Lumm, 386.

Cooperation pays, where, 360.
Cooperative bull associations, 481.
Cooperative movement, 236.
Corn clubs popular, 440.
Counsel, the place of, 144.
County agent service, 360.
Cow testing, reducing cost, 384.
Cow testing, value of, 188.
Cows for Whitman county, 528.
Cows on wheat farms, 480.
Dahlia growing a hobby, 88.
Dairy industry, vegetable oils menace, 440.
Dairy men must fight on, 72.
production, call for more, 441.
products consumed in U. S., value, 217.
substitutes bad for dairy industry, 481.
Dealing in bulk, 285.
Decentralization, 412.
Difficult task, the, 285.
Economic cooperation, Rochedale, 89.
Educational fair features, 188.
Educational opportunity, 236.
Every farm a factory, 441.
Experiment station and extension service, 20.
Fair management, successful, 360.
Fairs, more community, 144.
Faith, prove your, 549.
Farm implements and buildings, 461.
loan board, light asked on, 529.
ownership and tenancy, 460, 461, 481.
tenancy, increase in, 509.
Farmer pays heavy price for labor shortage, 5.
Farmer who sticks, 56.
Farming profession, train for, 164.
Farming state of mind in U. S., 125.
Farms, per acre value, 461.
Farms, size of Washington's, 460.
Fear is a destroyer, 529.
Fertilizer tests, 412.
Food, demand increases, 284.
Forage crops favored, 256.
Ford's Shorthorn herd, 548.
Foreign debts, those, 309.
Freight rates and farm products, 548.
rates, one reason for high, 460.
rates, to beat the, 4.
Fruit grade and pack terms, 88.
Give one more trial, 361.
Glorification of work, 165.
Gooseberry growing in Clallam, 88.
Government price-fixing, 236.
Government, what is, 144.
Grain export market, shrewd manipulations of, 361.
Hard labor and clean living, 441.
Harrowing wheat doubtful, 256.
Hens, culling, 308.
Herds, keeping up standard, 480.
Home market, develop the, 332.
Honey on your hot cakes, 108.
How the mighty fall, 237.
Irrigation settler must be enabled to succeed, 124.
Italy—farming statistics, 309.
Japanese ownership of land prohibited, 440.
Kale, new variety, 412.
Kitchen, making convenient, 164.
Kittitas fair grounds, new, 124.
Lewis County Berry Growers, 56.
Lewis county clover industry, 164.
Lincoln, comment on death of, 217.
Makes work worth while, 256.
Meats, food value of, 108.
Medicine of good cheer, 332.
Milk, fixing price, New York, 216.
freer use of, 508.
use of skim, 461.
Mosaic of berry plants, 72.
National dairy interests, 528.
Northwest Potato Growers' association, 508.
Northwest potato show, Spokane, 384.
Oil stocks, value of, 308.
Oleo, when is it not oleo, 40.
Orcharding, the virtues of, 332.
Pacific coast eggs by Panama, 236.
county agent work, 412.
northwest development, 72.
trade, growth of, 460.
Palouse country farming, 308.
Pasture, rotate the, 144.
Persistent fire campaign pays, 360.
Persuasion a spiritual weapon, 217.
Persuasion gives life to decision, 125.
Pests, quick need of fighting, 56.
Plant trees on highway, 256.
Pleasure, seeking, 165.
Potatoes, quality should affect price, 308.
Poultry at Adams fair, 360.
flocks, culling, 72.
interest in Thurston, 480.
Power or impotence, 481.
Prices, unfair balance of, 144.
Prohibition, friends must be on alert, 284.
Prohibition has deep, quiet strength with the people, 72.
Public spirit, what it really is, 72.
"Purebred, but not registered," 216.

THE Season of Strawberries and Cream Is at Its Height and Washington Is a Plentiful Producer of Both.

There Is Something on Page 10 This Week You Cannot Afford to Overlook.

mere whitewash wont do—

SENSIBLE hygiene no longer stands for mere whitewash—its effect is too temporary. For barns, stables, dairies, poultry houses, chicken coops, cow sheds, hog houses, cellars, kennels, etc., use *Puritol*—a snow white paint and disinfectant combined. Its base is a superfine pigment with which is combined a disinfectant many times as strong as pure carbolic acid—a disinfectant which is neither caustic nor poisonous at the dilution used. Puritol, properly applied, will stick to any clean surface. Will not rub off, flake or peel. Comes in 5-pound packages, 100-pound boxes and 300-pound barrels. May be applied with brush or spray. Address for free folder and of nearest dealer. General Basic Products Co., 4796 East Marginal Way, Seattle, Wash.

Tour Lewis County

West Washington's second annual live stock tour ended with a visit to several Lewis county farms.

Lewis county is one that can point to organization as a means of success with dairying and poultry raising. Both the United Dairymen's association and the Washington Cooperative Egg and Poultry association have branch houses in the county and they are among the strongest in the state. The live stock breeders have always worked well together and the Lewis County Pure Breeders' association, which includes all breeds of dairy cattle, takes an active part in the agricultural life of the county.

It is interesting to learn that the poultry breeders are giving the dairymen a close run for the value of the products. There are a large number of farmers who are keeping a small flock of hens in connection with their farm and are finding it a paying practice when properly handled. On the other hand, there are a surprisingly large number of commercial poultry flocks that have been established on small places and the number is constantly increasing.

Strawberries and bush fruits have increased in total acreage and are working in well with both egg and milk production. The last day of the tour was spent in Lewis county and was led by R. G. Fowler, the county agent. The day's trip included stops at dairy and live stock farms in the vicinity of Centralia and chehalis, where all of these types of farming are being practiced.

The Charles Ives farm near Centralia was the first place on the list and the 30 head of Holsteins were waiting in the barn lot. This herd includes a number of the Hamilton cows and the high cow is Ostego Highlands Butterfly, who has a record of 812 pounds of butter. The cows get pasture and green feed, but there are 10 acres of vetch and rye for summer silage, which will be all fed out in time for the 10 acres of corn to be ensiled for the winter. All milk produced at this farm is bottled and sold for city trade.

Builds Up Guernsey Herd.

On the opposite side of the town is the P. H. Thomsen farm, where the crowd saw one of the best examples of what can be done with the right herd sire that had been shown on the whole trip. Ten years ago Mr. Thomsen started in with Guernseys by buying 11 heifers and a registered bull with high production back of him. All of the heifer calves were raised and he now has a herd of which any breeder might be proud.

The herd made an average of 392 pounds in the testing association and the high cow made 485 pounds. Mr. Thomsen said that the association had been worth $500 to him for the improvement on the herd and the ability to get a better price for his cows. This point is emphasized by the fact that recent sales were $50 per cow higher than in former years when there were no testing association records.

The picnic lunch was at Riverside park at Centralia where George Barner, mayor of Centralia, welcomed the crowd, and W. H. A. Tram, president of the Lewis County Pure Breeders' association acted as toastmaster. He called on N. B. Coffman of Chehalis, O. M. Plummer, manager of the Pacific International Live Stock exposition, R. M. Turner and C. M. Hubbard of the state college for short talks.

At the J. T. Alexander farm near Chehalis were 60 head of Poland China sows and pigs, which were being run on pasture and fed a grain ration. A demonstration will be put on with two lots of these pigs. Both will get the same pasture and grain ration, but one pen will get a supply of tankage. Mr. Alexander expects to see a big difference in the growth in favor of the tankage fed pigs by early fall.

Len Goff of Adna showed his 26 head of registered Holstein cows, most of which are from Carnation blood lines. A senior calf out of Madam Hazelwood Pauline has exceptional type and quality. The herd is headed by a son of Matador Segis Walker, the well known Carnation bull. The bull's dam has a 27-pound record.

The last stop of the tour was at the home of Mrs. Jessie Greggs near Adna. Here was a splendid herd of Jerseys that indicated high production by their uniform udders. One of the best cows has an association record of 56 pounds of fat for 30 days and the herd average has been running between 35 and 37 pounds. The herd bull is Firwood Noble, a good individual out of Dahlia Forest Girl, sired by Luchiamute Sir Alpha. Both the sire and dam are in the N. C. Sorenson herd.

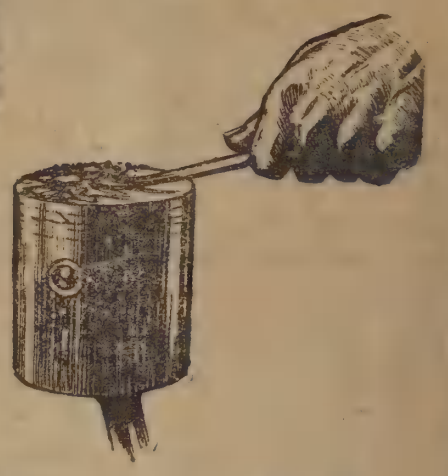
Since the Kittitas county day had been called off, the tour ended at Chehalis. With the exception of one or two days, the weather was good, and the attendance was all that could be expected, and in many cases the crowd was greater than all expectations.

SOUTHWEST WASHINGTON FAIR.

Premium lists for the 15th annual Southwest Washington fair, which is held on the fairgrounds between Centralia and Chehalis August 20 to 25, have been issued. The prize money is said to total more than at any previous Southwest Washington fair.

Avoid Motor Oils

containing paraffin, asphalt or any other non-lubricating substance. Aristo Oil is refined by the most advanced processes, designed to remove everything in the crude which has no lubricating value.



Some "Carbon" Clings hard and flint-like—

Some Blows Out with the exhaust

THERE are two kinds of carbonaceous residue—"carbon." All motor oils deposit one kind or the other, as every maker of oil knows.

The harmful "carbon" is hard and flint-like. It acts as an abrasive, wearing cylinders, pistons and rings. It is hard enough to score cylinders.

It has a tendency to cling, and must be burned or chiseled out of motors.

Causes "Knocking"

This hard "carbon" becomes incandescent, pre-igniting your gasoline, which causes "knocking."

It attaches to spark-plugs and causes short circuiting—the motor misses.

Particles clog the valves. The valves leak. Therefore, some of your gasoline is wasted both before it can do any work and while it is working.

And this flinty, clinging "carbon" is deposited in quantities two to three times as large as the other kind.

Fluffy, Soft, Non-Clinging

Aristo Motor Oil deposits a very little of a different kind of residue. It hasn't the same tendency to cling, hence most of it blows out with the exhaust. That which is left is soft and fluffy—softer than cylinder walls, pistons, rings or bearings—so can not scratch or wear.

Your cars and trucks run thousands of miles farther and your tractor months longer without needing valves ground or pistons or cylinders cleaned. Spark-plugs practically never "foul."

Motors don't "knock," last longer, run more smoothly and give more power, due to full compression. "Carbon" troubles are eliminated.

Aristo is a finer motor oil, developed by the expert lubrication engineers and chemists of the Union Oil Company, equipped with every accepted facility for the most exhaustive research. Famous drivers have tested Aristo under gruelling conditions—far more severe than any that your motor will ever encounter.

A durable, fine film penetrates to and protects each working part in any weather and at all motor heats.

ARISTO MOTOR OIL

To get perfect lubrication without "carbon" troubles, always say "Aristo" when you buy. For sale at all first-class garages and service stations.

Union Oil Company of California

Aristo Motor Oil

Government Proposes to Standardize Eggs

Highest Grade in Proposed Schedule Would Be Considerably Below First Grade in Washington

The eggs produced in the state of Washington have attained a reputation for quality in the great marketing centers of the cast that has given them the top prices over the product of the eastern hen. The Washington Cooperative Egg and Poultry association is largely responsible for the development of this reputation and the corresponding profitable market in such cities as New York. The association has established and lived up to high standards in grading, the best egg sold being about as nearly perfect as an egg can be.

Comes now what some Washington poultrymen feel is a threatening menace in the form of proposed federal standards in which the highest grade is far below the highest grade upon which the Washington association has built up its reputation. The adoption of the proposed grades would, says Director E. L. French of the state department of agriculture, shut Washington eggs out of New York city, the destruction of this market meaning a loss of $5,000,000 anuually. "This market is the mainspring between success and failure of this great industry," says Director French.

The Washington Farmer took this matter up with the state department of agriculture, receiving the following statement on the problem by F. H. Gloyd, chief assistant director:

"The objection to the proposed federal grades for eggs is that the highest grade provided in those grades is just about equal to the third grade of eggs in the standards of the Washington Cooperative Egg and Poultry association. The only apparent requirements in the proposed federal standards are those of freshness. No eggs except strictly fresh are handled by the cooperative association. All that fail to come up to the highest quality in that respect, all soiled eggs, and all either far above standard in size or below the size of pullet eggs are broken and frozen and sold only to the bakers' trade.

"In addition to the requirements of the proposed federal standard, Washington extras are required to be chalk white, the slightest tinge of cream color relegating them into a lower class; they must be of exactly uniform size and weigh not loss than 24 ounces to the dozen and 46 pounds to the case. The slightest soil on the egg puts it in the next lower class. No tolerance of any kind is permitted in this grade, while the highest standard of federal grades permits a wide margin of tolerance. It is through rigidly adhering to these standards that Washington extras command a substantial premium on the New York city market over eggs grown in New York, Pennsylvania and New Jersey in the immediate vicinity of the New York city market.

"With the adoption of the proposed federal standard, while the trade would understand the very much higher standards of the Washington eggs, it would be different with the consumer. When assured that the eggs offered him were of the highest federal standard, and officially inspected and marked as such, he could not be expected to understand that there were eggs of much higher standard. He would believe he was getting the best, the more so as the federal standards propose the removing of any showing of the place of origin. As the trade could not sell the Washington extras for any more than the highest federal standard eggs would bring, it is easy to see that the premium would no longer be paid for Washington eggs and they would compete on exactly equal terms with the low standard eggs from adjoining states. If unable to get the higher price due to their superior quality, it would not pay to ship eggs to New York. The big reputation made by Washington eggs would be lost. The proposed standards would be hailed with solid satisfaction by the egg producers of the east, who are complaining bitterly of the manner in which Pacific coast eggs command the top price of the market and incidentally lower the price which their own product commands. That appears to be the most tangible argument for lowering the grades.

"It will also be observed that the proposed federal standard permits the sale in the market, for food consumption, of eggs which the association would never offer for sale in their shells, but handles only, while still fresh enough for food consumption, after breaking and freezing them, for the bakers' trade, selling directly to the public none except eggs which are strictly fresh, within the highest meaning of the term.

"The solid objection to the federal standards is that they lower the present standards of this state by a very wide margin; yet if they go into effect they will be recognized by the consuming public as indicating the highest possible quality of eggs offered for sale."

While realizing that the establishment of federal grades would tend to complicate the situation with reference to the popularity of Washington eggs in the east, S. D. Sanders, president of the Washington Egg and Poultry association, does not share the fear expressed by representatives of the state department of agriculture above. The fact that Washington grading regulations are higher than the proposed federal grades leads him to believe that Washington eggs would still be able to maintain their supremacy in the New York and other eastern markets.

A statement by the United States bureau of agricultural economics regarding the proposed federal standards says:

"It is proposed to establish the following United States grades for edible eggs. Five grades for eggs of sound, clean shells as follows:

"(1) U. S. specials; (2) U. S. extras; (3) U. S. No. 1; (4) U. S. No. 2, and (5) U. S. culls.

"Two grades for eggs of sound, dirty shells as follows:

(1) U. S. dirties No. 1 and (2) U. S. dirties No. 2, and one grade for eggs of cracked shells, viz., U. S. checks."

Herewith is a chart showing the proposed grades and the factors that determine each grade:

In the proposed federal standards there are eight grades, the requirements for which are as follows:

U. S. Specials (a tolerance of 3 per cent of U. S. Extras and 2 per cent of U. S. No. 1 permitted): Shell—Clean, sound and strong. Air cell—Localized, regular, 3-16 inch depth or less. Yolk—Dimly visible. White—Firm and clear. Germ—No development. Size—Uniform. Color and weight—As marked on the package.

U. S. Extras (a tolerance of 3 per cent of U. S. No. 1 and 2 per cent of U. S. No. 2 permitted): Shell—sound and stain-free. Air cell—Localized, well defined, regular, 5-16 inch depth or less. Yolk—Visible. White—Firm and clear. Germ—No development. Size—Reasonably uniform. Color and weight—As marked on the package.

U. S. No. 1 (a tolerance of 5 per cent of U. S. No. 2 and 3 per cent loss permitted): Shell—Sound and stain-free. Air cell—Localized, regular, 7-16 inch depth or less. Yolk—Visible but mobile. White—Reasonably firm. Germ—Development not over one-quarter inch diameter. Size—Variable. Color and weight—As marked on package.

U. S. No. 2 (a tolerance of 5 per cent culls and 5 per cent loss permitted): Shell—Sound, few stains. Air cell—May be bubbly, freely mobile and overmobile, 7-16 inch in depth. Yolk—may be fairly heavy to heavy, but must be mobile. White—May be weak and watery. Germ—May be well developed, but no blood showing. Size—Greatly variable. Color and weight—As marked on package.

U. S. Culls (a tolerance of 5 per cent loss permitted): Eggs which are heavily shrunken, salted or chilled or which weigh less than 20 ounces to the dozen.

U. S. Dirties No. 1: Eggs which are of the quality of U. S. Extras or better, but which are stained or dirty of shell.

U. S. Dirties No. 2: Eggs which are of the quality of U. S. No. 1 or lower, but which are stained or dirty of shell.

U. S. Checks: Eggs which are slightly cracked, with the shell membrane unbroken and not leaking their contents. (Eggs with slightly leaking contents shall be classed as leakers. Those with contents flowing freely from shell shall be classed as smashed.)

Loss: Loss is defined to mean eggs which are inedible.

The following are the grades established by the Washington Cooperative Egg and Poultry association. They are given here so that readers may compare them with the proposed federal grades and study the probable effect that the establishment of the latter grades would have on the market of Washington eggs in the east:

Washington Extras: Must consist of all white, fresh eggs, clean, sound, uniform in size and shape. Must average net to the case 46 pounds, that is 22 ounces and over. Cream or off-color not allowable in this grade and all soiled eggs of any kind must be eliminated.

Washington Firsts: Must consist of all fresh eggs weighing not less than 45 pounds, net average to the case containing no eggs less than 22 ounces. Must be reasonably clean and fairly uniform in size. Color white, but may contain cream or off colors. Slightly soiled, but no dirties. Washed eggs will be classed as firsts, but should be packed separate, and so marked.

Brown Eggs: Must be clean, fresh, weighing 22 ounces or average 45 pounds net to the case. May contain heavy cream eggs. This grade is always classified as a Washington first.

Washington Pullets: Must be all white, fresh eggs, weighing not less than 37 1-2 pounds net to the case, that is 19 to 22 ounces. Must be clean, free from soiled or stained eggs.

Undergrade Pullets: Must consist of all fresh eggs, weighing 37 1-2 pounds net to the case, average 19 to 22 ounces. Off colors and light dirties may be put in this grade.

Pee Wee Pullets: Must be fresh, reasonably clean, weigh 16 to 19 ounces. Real small under size, weighing less than 16 ounces, will be broken and sold by the pound to the best possible advantage.

Dirty Eggs or Seconds: Must be fresh and weigh not less than 43 pounds net to the case. May contain stained eggs and other soiled or dirty eggs, but it is not permissible to put in this grade smeared or extremely dirty eggs.

Bakers or Thirds: May contain real dirty, smeared, stained, shrunken eggs; also checks. Contents must be free from must or rot. Must be good salable stock.

Berry Festival

250 Attend Thurston Affair

The strawberry growers of Thurston county held a strawberry festival at Community hall, near South Bay, June 21. There were more than 250 guests present and as many who were directly interested in the production of berries. Each farmer and his wife asked some business man and his family to be his guest for the occasion and the novel affair ended with a strawberry feed late in the evening.

A committee of 10, representing the grange and farm bureau were responsible for the success of the affair. On the committee were the following: Fred Lewis, L. L. Snow, J. A. Donnelly, G. W. Parse, O. E. Ferguson, E. B. Stookey, Mrs. Agnes Taylor, Mrs. F. C. Baker, Mrs. Gus Nelson and Mrs. Ross Chilson.

The program of short talks was held before the feed and Fred Lewis of Tumwater acted as toastmaster. A. S. Caton of Olympia gave the address of welcome and the response was made by Charles Rose.

As representative of the grange, F. P. Walters gave a detailed account of the work of the grange and told of the many principles for which the organization stands. He named many beneficial laws that had been brought about largely by the efforts of the grange since its organization 50 years ago. "Cooperation with the business men is something that is needed more than anything else today," he said, "since that is the only way the important matters are going to be worked out."

Asked to speak on marketing, E. F. Dummeier of the state college outlined the present farm situation and demonstrated that the purchasing power of agricultural products was decidedly less than that of any other product that could be named. As a solution he suggested a balancing of production rather than a curtailment of production. Unless many of the farm products are better balanced, he said, the farmer will begin to desert his land and start manufacturing in other lines of industry.

Cooperative marketing was suggested as one of the best means for bringing about such a balance and he illustrated his point by citing what has been done in California and also in the state of Washington by the egg producers. The latter example was used to show how any industry here at home could be advanced to a high degree of efficiency and to such an extent that there is no overproduction of the products.

The program ended at a late hour, but not until all had had their fill of strawberries and cream and strawberry shortcake. The berries were donated by the North Pacific Cooperative Berry Growers of Thurston county and the Cloverfields dairy of Olympia furnished the cream. The cakes were brought by the farmers' wives.

REMEMBER THIS FUNDAMENTAL.
High yield means lower cost per unit.

College Graduates 50 in Agriculture

Degrees in agriculture were awarded to 50 students of the State College of Washington at Pullman in June, 49 men and one girl, Miss Adah Elizabeth Proctor of Seattle. Of these, 47 receive the B. S. degree, and five the master's degree, two men taking both degrees.

The representation from the different towns is as follows: From Ellensburg, 3, Fred Adams, Ellison Mundy and Harold Sorenson; Prescott, Martin Alexander; Wilson Creek, Hugh Armstrong; Centralia, Charles Arveson; Clarkston, G. Orien Baker; Bellingham, Harold Bliss; North Bend, Lorraine Boggs; Tacoma, L. W. Boyle (both degrees); Creston, Ernest Burke; Everett, Robert Christenson and Irwin Ingham; Mt. Vernon, John Clouston; Walla Walla, Cecil Compau and Louis Eiffert; Chewelah, Cornelius Cramer; Elberton, Willis Glenn Cronk; Pullman, Dan Crowley; Spokane (5), Don Foster, Leonard Le Grant, Leslie McIntosh, Lorin Markham and John Stone; Riverside, Robert French; Bothell, Harold Graham; Seattle (4), Mark Haller, Charles Parker (both degrees), Miss Proctor, and Alexander Sumbardo; Chelan Falls, Herbert Hamilton; Glaber, Otto Hill; Japan, Harry Ideno; Ilwaco, Wain Johnson; Ferndale, Louis King; Pe Ell, Robert Knox; La Center, Edwin Landerholm; Garfield, Warren Love; Donald, Dan McDonald; Stanwood, Chester Miller; Lynden, Donald Pace; Yakima, Guilbert Peck; Cushman, Mont., Paul Phillips; Port Townsend, George Ruehle; Sunnyside, Frank Ruppert; St. John, Aubrey White; Cloverland, Stephen White; Albion, Edward Farr (master's degree); Corvallis, Ore., Herbert Lunt (master's degree); Greenacres, Arthur Post (master's degree).

It Is on Page 10 of This Issue

Our new serial story, which we believe to be one of the best we have ever offered our readers, begins this week. Turn to Page 10 and read the opening paragraph. We leave it to you then whether you stop or continue, for we know that the curiosity that first paragraph arouses in you will carry you on chapter after chapter until this remarkable story of the adventures of a boy in the west ends. From the hour that Harry Hodson urges his fagged horse into the dark street of the frontier town of Bismarck with news that an Indian attack is coming until the hour that John Worth, the hero of the story, reaches college, "Cattle Ranch to College" relates one stirring adventure after another. There is not a man or woman or boy or girl in our big family of readers who will not enjoy every chapter. Begin this week. The opening chapter is on Page 10.

Building Up Soil

In St. Clair and Yelm Districts

A crop of vetch grown on any of the sandy loam prairie soils of Thurston county has a great influence on the succeeding crop. Many of the farmers in the St. Clair and Yelm districts have taken advantage of vetch in building up their soils. R. H. Ensign of St. Clair has an excellent stand of vetch on one 45-acre field, which he attributes largely to the application of a heavy coat of barnyard manure. It is sometimes hard to get a crop started on this type of soil, but this method seems to partly solve the difficulty.

In another field there is 60 acres of Rosen rye. This field was covered with a thin layer of straw last May by the use of a straw attachment on a manure spreader. It was immediately plowed under, cultivated during the summer, and seeded September 20. It made a splendid growth during the fall and was pastured until May 1. The 24 head of milch cows could not keep the patch down enough to injure this season's yield. The field is now in splendid shape and promises to give a maximum return of grain when harvested.

Mr. Ensign planted four acres of sunflowers for the silo last year, and it furnished two months' feed for the entire herd during the winter. The cows eat it readly, and he has planted 14 acres this year, which he expects will fill the two 80-ton concrete stave silos. The crop is planted closer this year, so that the stalks will not be so big, will be more palatable and easier to cut.

All of the stable manure from the cow barn is dumped into a large concrete manure pit by means of a litter carrier. No roof is built over the pit, since they feel that what little moisture accumulates during rainy weather does not injure the manure because it does not seep away. The liquid manure from the gutters is drained into the pit by means of tile. Any surplus that accumulates above what is absorbed by the manure in the pit is hauled onto the fields by means of a tank on a stone boat. The pit is emptied several times during the year, so that it does not accumulate and stand too long in the pit. The spreading is planned so that the wettest fields are covered before the rainy season sets in in the fall, and the drier fields are covered during the bad weather in the winter. In this way Mr. Ensign avoids hauling all the manure at one time, is able to utilize every bit of fertilizer that accumulates and gives his crops the advantage of this additional fertility.

One field has been seeded to a permanent pasture mixture, consisting of Italian rye grass, tall oat grass, hard fescue and other dry land grasses that are recommended for this district. After the land is well worked and the grass seeded broadcast, a brush drag was used to cover the seed. The result has been an excellent stand with the exception of some places where it was dragged too heavily, which covered the seed too deep. Mr. Ensign believes he should have used a lighter drag, which would have meant an even stand throughout the entire 30 acres.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 1.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

Published Weekly on Thursday.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Anti-Liquor Forces Must Maintain the Advantages Won

A prominent anti-liquor worker recently made the declaration that the saloon was as dead as Caesar and would be dead just as long.

We trust that this is true, but it will not prove true if the people of this country who believe in prohibition take the position that the fight against intoxicating liquor is finished, as some are inclined to do.

The liquor issue is not a dead one. The fight is only partially won. Not only have we more or less illicit liquor, but there is a nation-wide campaign on foot to make intoxicants legal in spite of the amendment which 46 of the 48 states added but recently to the national constitution prohibiting their manufacture and sale.

The constitutional amendment prohibits the manfacture and sale of intoxicating liquor. The Volstead act defines intoxicating liquor as a beverage containing one-half of one per cent or more of alcohol. The constitution and laws passed by congress are the supreme law of the land, but the federal authorities find it exceedingly difficult to enforce prohibition when the states do not cooperate. Yet there are several states in which the so-called wets are attempting to prevent state cooperation in prohibition enforcement.

New York, for instance, repealed its law which had been passed to require state enforcement of the Volstead act. Then Wisconsin and Illinois began trying similar tricks. The leader for the liquor interests in the Wisconsin legislature indicated the nature of the campaign when he said that enough states were going to repeal their prohibition laws to compel congress to modify the Volstead act so as to permit the manufacture and sale of wine and beer. The legalization of these intoxicating beverages would, of course, be but the opening wedge which might be driven in so deeply as ultimately to bring about the return of the saloon with all its objectionable features.

Fortunately, the movements in Wisconsin and Illinois have met with temporary failure, but the liquor interests are not quitting the battle there. We must make no mistake about it—to yield ground to the liquor forces is to permit our land to go backward toward the evils of the saloon. If prohibition is to become in truth the law of the land, the forces that believe in it must be ever vigilant in their defense of it. They must give no ground. They must support loyally those officers who enforce the law and they must look into the future and elect legislators, congressmen and administrative officers that understand the menace of relaxation in liquor legislation and who will stand squarely behind the amendment and the Volstead act.

To Beat the Freight Rates

When we consider the advisability of marketing our products in more concentrated or more finished forms, we think primarily of avoiding the high freight rates on bulky products. There is, however, another phase of this matter that deserves thought. If the Pacific northwest develops its manufacturing as it well might it would mean not only a reduction in freight on bulky products, but it would mean a greatly increased population in this territory. This increased population, in turn, would mean increased consumption, meaning a home market with short hauls for an ever increasing amount of northwestern produce of various kinds. For example, suppose that there be established in the Pacific northwest woolen mills and clothing factories. We will then, to whatever extent we manufacture our raw wool into finished products, avoid the high transportation cost on that wool to eastern or foreign markets, gaining by the lesser amount that we will have to pay for the transportation of the finished goods. It will likewise require men and families to operate the mills and factories, and these people will have to be clothed. Therefore a considerable part of the product of the mills and factories will be used at home, thus avoiding the freight rate entirely. At the same time a market will be created for foodstuffs, other products of this territory, including those of the farms as well as those of the forests, streams and other sources.

Is it therefore good business for the wool growers of the west to ship their wool to the east in its crude state, paying high transportation costs eastward and paying the cost of shipping the clothing west again? The same principle can be applied to many other products of the farm and ranch.

Is it not time that serious thought be given to the development of factories in the Pacific northwest? Could we not thereby do much to build up our own markets and relieve ourselves of the present burdensome transportation charges?

Will Advertise Washington Well

It is a fine idea, that of the Holstein breeders of the state of Washington to send a selected state herd of the breed to a series of eastern dairy cattle shows this season.

Washington Holsteins are world famous. As a class they stand well at the top, both for show and production records. Washington numbers among its black-and-white breeders some of the most successful in America, and individual cattle of the breed stand pre-eminent among their fellows. There, for instance, is Segis Pietertje Prospect, with that wonderful milk production record of over 37,000 pounds in a year. Of the comparatively small number of cows that have produced 30,000 pounds or more milk in a year, Washington has more than her proportionate share.

In the past the limited number of cattle going from Washington to the eastern shows have brought honor to their state, convincing easterners that this state must be taken into consideration in figuring breeding possibilities. Easterners are beginning to come west to compete in our own shows because they realize that out here there is competition worthy their best efforts.

The entire northwest will follow Washington's state herd of Holsteins to the east with deep interest, and every breeder, of whatever kind of cattle, in this region will profit from the advertising this choice collection of black-and-whites will give this dairy cows' paradise.

LOOKING INTO OTHER FARM FIELDS

As an experiment three months ago a Viennese baker began putting out a loaf of wheat bread with a 20 per cent mixture of soy bean flour. The bread has become so popular that the output has now increased to 10,000 loaves daily. Soya flour is said to be rich in proteins and fats, and the carbohydrates in its content possess a sweetening quality which makes it agreeable as an ingredient of bread. The soya flour is produced under a secret process that eliminates the objectionable features of the flour prepared from straight milled soy beans, and the claim is made that it is not only palatable, but is easily digested and assimilated.

* * *

Declared exports to the United States from China for 1922, as reported to the department of commerce by the consul at Shanghai, were $163,891,630, an increase of 24 per cent over the previous year. The principal articles exported to this country during the year were raw silk, cow and calf hides, sheep's wool, wood oil, hair nets, squirrel skins and goat and kid skins.

Washington State Gleanings

The Grandview district June 15 shipped its first straight carload of cherries this season. They were Royal Anne and were consigned to the Yakima cannery.

OLD SETTLERS MEET.

At a meeting of the old settlers in Waterville recently the following officers were chosen for the ensuing year: Charles V. Ogle, president; John McKay, vice president; Art Will (Alstown), clerk; George A. Hensel, secretary-treasurer. In order to join this association it is necessary that one reside in the county for at least 20 years.

DAIRY PLANT PLANNED.

That the Yakima Dairymen's association may build at Sunnyside within a year is a possibility, according to G. V. Harris, manager. The matter was discussed at a recent meeting of the board of directors at Sunnyside. It was thought to be too late to build this year, but it is possible that construction of a plant may be undertaken early next spring. The next meeting of the board will be in Yakima on July 14.

CHEHALIS CANNERY BUSY.

Twenty-five tons of strawberries are being received daily at the Chehalis cannery, which is being operated to full capacity. Two hundred women and girls are employed, in addition to a large number of men and boys. Southwest Washington berries from Lewis county, southern and eastern Thurston, parts of Grays Harbor and other adjoining counties are going to the Chehalis plant. Fresh shipments are being made, the shipments thus far going to Montana, the Dakotas, Nebraska, one car to Texas and other states.

STRAWBERRY RETURNS LARGE.

A. McCleary, a strawberry grower within the limits of Ridgefield, has sold approximately $120 worth of strawberries from one-fourth of an acre since May 24, and expects to reach the $150 mark before the season is over. The fruit is of the Marshall variety and the first berries brought $3 a crate. The season is about two-thirds over and the best for years on account of an abundance of moisture, the lack of which cut down last year's crop about 50 per cent. Many plants have ripening berries and blossoms and it is believed the season will be extended for several weeks.

MARKETING CONTRACT APPROVED.

The membership contract drafted for the proposed Northwest Hay Growers' association has been approved by E. L. French, state director of agriculture, and it will be circulated throughout the hay districts of central Washington for signatures as soon as copies can be printed, according to Boyd Oliver of San Francisco, attorney for the organization. At least 75 per cent of the marketable alfalfa in the territory must be pledged in order to make the plan effective. Mr. Oliver has suggested $15 per ton f. o. b. cars at shipping point as a minimum price, and has urged growers not to sell for less than that figure.

EXPECT GOOD ONION CROP.

Indications are for a yield of between 600 and 700 carloads of onions in the Walla Walla valley this year and they should bring a sum in excess of $375,000 into the community, according to A. A. Prince, vice president of Gwin, White and Prince, Inc., sales managers of the Inland Empire Cooperative federation. The Walla Walla Gardeners' association and the Walla Walla Vegetable exchange are members of the federation. The onion crop is freer from disease than it has been for several years and the yield per acre bears every indication of being very good, said Mr. Prince.

SHIP 50,000 CRATES BERRIES.

The Kennewick strawberry growers, now ending their season, shipped 50,000 crates, at an average price of $2.50 a crate net to the grower, according to L. E. Johnson, president of the First National Bank of Kennewick. Premium crates, he reports, sold as high as $6 and many averaged $3 and $4. The district had a large acreage and production of strawberries this year, with ideal growing conditions. Prices, however, were only normal, because of the lateness of the California crop. Twenty-eight straight cars of strawberries were shipped. In addition to the bumper crop of strawberries, the Kennewick valley growers have shipped 25,000 boxes of asparagus, at running prices from $1.25 to $2.25, averaging about $1.50 to the grower. The district shipped six straight cars of asparagus this season, one going as far as New York and others as far as Minneapolis and Chicago.

HARVEST LETTUCE CROP.

Most of the lettuce crop of the Clarkston Heights has already been or is now being harvested, according to S. D. Steininger. Mr. Steininger stated that he had one-fourth of an acre in lettuce this season, from which he harvested over 200 crates, many of which packed 36 heads to the crate. The average pack is 48 heads. W. B. Smith, who had about three acres in lettuce, has harvested around 300 crates from his acreage and the returns from a few of the first crates shipped netted him a little better than $3 a crate. Mr. Steininger expressed the opinion that the lettuce industry will be greatly increased in the Clarkston Heights district from year to year, inasmuch as it has been proven that it can be grown successfully and profitably in that section. It is estimated that between 10 and 15 acres were planted to lettuce on the Heights this spring, which will net the growers around $200 an acre.

HOLDS POULTRY RECORD.

Known as "the home of the big white egg," Winlock, in Lewis county, has, within the first half of the year, shipped out 99 cars, or 16,929,000 eggs, according to railroad records. This is two-thirds of the total of the 1922 shipments, and with this record Winlock expects to head the national procession for poultry honors within a short time. Shipments for 1922 showed that 146 carloads had been shipped out, or 26,280,000 eggs. Poultry shipments included 150,000 broilers and 250,000 hens. The Winlock creamery shipped 409,149 pounds of butter and the Toledo Cheese association 202,192 pounds of cheese. Winlock is south of Chehalis, between Napavine and Vader, with a paved road leading into the city from the Pacific highway a little north of Toledo. In this district there are more than 1000 farms devoted largely to the poultry and dairy industry, according to the Winlock Commercial club.

FARM BUSINESS AND MARKETS OUTLOOK

LARGER receipts attracted by the recent advance in prices and congestion in beef trade channels as a result of hot weather caused a slump in prices of all grades of cattle last week. The yearling market was glutted again and some were about $1 lower at Chicago than the high point of the preceding week. Light grassy steers, heifers and cows showed greatest losses, with trade on low grade she stock in a semi-demoralized state. Veal calves lost about half of their gains of the preceding week.

The marked decline on low grade cattle is partly due to increased receipts of that kind, especially at southwestern points, and partly because of the less satisfactory carcasses produced by finishing on grass early in the season as compared with grain-fed cattle. The vacation season, combined with urban prosperity, is making a broad outlet for good beef, so that prices on better grades of steers did not yield quite so much as those farther down the scale.

Prime steers will probably reach $12 before the summer is over; common and medium grades have little chance of a sustained advance. Receipts usually increase sharply after the middle of July, when the southwestern grazing areas and western range begin to disgorge. These sections have about as many cattle as last year and grazing conditions so far have been favorable. The breadth of feeder demand will have much to do with prices on such cattle during the rest of the summer and fall.

Upturn in Hogs Checked.

Ten days of light receipts forced a recovery of 75 cents to $1 in hog prices, but the market turned downward again and ended last week about 35 to 50 cents lower at Chicago. Receipts have increased moderately once more, fresh pork trade was affected by extremely hot weather, export sales are gradually tapering off and a relatively low level of prices will be necessary to insure consumption of the present rate of production.

Receipts last week fell below the corresponding week a year previous for the first time since last December. The signs all point to a heavier summer run than a year ago, however. A 10-year average of receipts at 11 markets shows a gradual decline during July and August of about 40 per cent. Last year, when the summer run was the largest on record, the decline was only about 25 per cent. Some reduction occurs every year and there may be enough this year to keep prices around the present level or higher, depending on how well the demand is maintained. Besides the liklihood of larger receipts than last summer, total stocks of hog meats and lard on June 1 were 991,167,000 pounds, compared with 759,553,000 pounds last year. The increase in holdings is the equivalent of about 1,250,000 hogs which must be absorbed during the late summer and fall.

Lamb Market.

After a week of heavy receipts under which lamb prices crumbled rapidly, the supply let up again and values have strengthened, although the loss has not been regained. Louisville and Nashville are sending many southwestern lambs to northern markets and Virginia has kept Jersey City well supplied, although not flooded. Receipts during July and August are expected to be larger than a year ago, when they showed an increase of about 25 per cent over the June level. Practically no western lambs have arrived as yet, but the range crop is reported to be larger than last year. A broad demand for breeding ewes is springing up, although the season is exceptionally early for this trade.

Wool Market Dull.

The wool market was dull last week, with prices slightly lower, even on finer grades, which have held up fairly well heretofore. Manufacturers are buying slowly in the belief that prices are not yet at bottom. Bids in the west are 5 to 10 per cent lower, but growers are selling slowly and some western wools are being sent east on consignment. Some Missouri wools have been sold at 47 to 48 cents and Ohio wools at 50 cents. Foreign markets are fairly firm, but the London auction, at which about 220,000 bales are to be sold in the next four weeks, started at a decline of 5 to 7 1-2 per cent. Further sales for export from this country are being made. Woolen manufacturers predict higher prices for goods during the fall.

Undertone in Wheat Improves.

Wheat prices declined close to the dollar mark at Chicago last week. The market is beginning to show a firmer undertone, so that the break may soon be at an end.

Rains in the northwest where most needed have stilled complaints of drought for a time and clear skies in the southwest have stopped the damage to quality caused by previous rains as well as favored harvest, which is under way as far north as Nebraska. Canadian prospects at present are reported to be unusually favorable. Conditions in Europe have not changed as much as Broomhall's reports of a week ago indicated, as he now estimates that the European crop, including Russia, will be 160,000,000 to 175,000,000 bushels larger than last year, compared with his estimate of 200,000,000 larger made six weeks ago. Another factor against the market was the breaking of the drought in Australia, so that seeding of the new crop can proceed under favorable conditions.

Europe bought wheat in volume again last week when prices were around the low point. With the new crop abroad approaching harvest, foreign interests are disposed to carry as small stocks as possible.

While foreign countries have not been absorbing wheat as fast as expected months ago, supplies in commercial channels have been reduced and there is no great pressure from any country. Winnipeg prices are higher than in the United States, while they ruled below us most of winter. The July 1 carryover in this country promises to be about 100,000,000 bushels, Canada is reported to have had only about 30,000,000 bushels for export after June 1, and the world carryover will not be much greater than a year ago.

Domestic mills are grinding rather freely for this time of year, but their output of flour is less than the average disappearance, so that stocks in the principal markets are gradually being reduced.

Railroads have more empty box cars stored in the southwest than last year in readiness for handling the new crop of wheat at a rapid rate. There are indications that producers will sell reluctantly at prices now being offered, although offerings of new wheat have increased in the last two days and it is probable that the usual after harvest movement will be fairly heavy.

Rye prices have reached an unusually low level. The visible supply is 15,420,000 bushels, compared with 2,580,000 bushels a year ago, thus offsetting most of the decrease in the size of the crop. The financial condition of Germany, which is the chief foreign buyer, does not favor export sales. She has bought from all countries in the last year 70,000,000 bushels less than her calculated needs. Our exports in the first 11 months of the crop year were 44,147,147 bushels, compared with 24,950,134 bushels last year.

Corn Makes New High.

Corn prices have acted independently of other grains, owing to continuation of light receipts, a broad demand from industries and other buyers and gradual fading away of reserves at terminals. New crop prospects are spotted also, although hot weather last week forced rapid growth and helped to make up for lost time. Exports sales are small. Clearances from the United States last week were only 299,000 bushels, compared with 5,064,000 bushels from Argentina.

Too Hot for Oats.

Last week's hot spell arrived at a critical period in the growth of the oats crop when wet, cool weather is needed. No great damage has been reported thus far, however. Prices are at an unusual discount below corn.

Cash Grain Markets.

The range of cash grain prices for the week ended June 27 was as follows:

CHICAGO—Wheat—No. 2 red, $1.03 1-2@1.13; No. 2 hard, $1.03 1-2@1.09. Corn—No. 2 mixed, 84@85c; No. 2 yellow, 85@86c; No. 3, 85@86c; No. 2 white, 84 1-2@85 1-2c. Oats—No. 2 white, 43 3-4@45c; No. 3, 42@44 3-4c. Barley—62@66c.

Higher Prices on New Crop Clover Seed.

New crop clover seed for October delivery is quoted at Toledo about $1 higher than old crop seed. The market appears to be treading bottom unless the prospects for the new crop improve.

CHICAGO, per 100 pounds—Clover, $15@17.50; timothy, $5.50@6.50.

TOLEDO, per bushel—Prime red clover, $10.40; prime alsike, $10.25; prime timothy, $3.25.

Feed markets are dull and prices practically unchanged. Jobbers, contracted for large quantities of bran and absorbed offerings on the recent decline and prices are a shade higher. Cottonseed meal is quoted slightly lower. Production and stocks of most feeds are in excess of present demand. With new alfalfa starting to market, alfalfa meal prices have declined.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $22.50; standard middlings, $27.50; flour middlings, $32; cottonseed meal, 36 per cent, $41.25; 43 per cent, $46.50; hominy feed, $33; gluten feed, $37.15; old process oil meal, $40 tankage, $57.

Hay Receipts Still Light.

Hay receipts are light and prices are firm, but demand is limited to local needs at most markets and the undertone is unsettled. Quotations are unlikely to go higher. Hay harvest is starting, but alfalfa cutting is about two weeks late in Kansas and Nebraska. Receipts of new alfalfa are increasing, but wet weather during the cutting season lowered the quality and such hay is quoted at Kansas City at $10 to $16.50 per ton. Meadows and pastures have improved recently, but they are not so favorable as last year.

Prices per ton in carlots: Chicago—No. 1 timothy, $23@24; No. 2, $19@22; No. 1 light clover mixed, $20@22; No. 1 clover, $16@17; No. 1 and choice alfalfa, $16@25; midland prairie, $17@20; rye straw, $12@13; oat and wheat straw, $11@12.

Egg Holdings Approach Record Size.

Offerings of eggs at distributing markets were large last week, but as graded stock was not plentiful, prices were maintained. Storage holdings continue to increase over last year faster than the difference in receipts would indicate, showing that current consumption is not equal to that of last year. All signs point to record holdings in the United States on July 1 and they may be as large as on August 1 last year.

Butter Market Steady.

General hot weather caused smaller receipts of top scores of butter, which are generally desired for storage, so that prices were maintained throughout last week. Accumulation of lower grades, which must find consumptive outlets, was a weakening factor. That consumptive demand is very good probably accounted for the failure of the market to decline under the weight of these lower grades. Production and receipts continue to increase, but the increase is smaller than during the previous weeks, indicating that the flush season is being approached.

June is rapidly drawing to a close, with little headway made as yet in the storing line. The increase in storage stocks at the four leading markets last week was over 1,000,000 pounds lighter than during the corresponding week a year ago.

Imports of foreign butter continue unabated, with 3600 casks of Danish and 500 casks Holland arriving in New York last week. More Danish and a shipment of Argentine are expected soon.

Cheese Market Quiet.

Prices for cheese in distributing markets declined last week in line with reduction at country points. Receipts were liberal and stocks of many dealers showed accumulation. Much cheese is going into storage, although some buyers are still of the opinion that prices are too high for that purpose. Trading was slow, with only immediate needs being taken care of. Until speculative demand develops on a larger scale, increased sales are not expected.

Fruits and Vegetables.

The early and intermediate potato crops are not as good as last year and total shipments to June 16 were only 13,590 cars, compared with 20,249 cars to the same date a year ago. The difference has been partly made up by shipments of the old crop, which for several weeks have been larger than ever known at the corresponding season. Prices were generally lower last week, with Irish cobblers quoted at $4.50 to $5.50 per barrel in consuming markets. Southern Bliss Triumphs were $2.50 to $3.50 per 100 pounds in midwestern markets.

LIVESTOCK AND DAIRY

Cottage Cheese

Good Skim Milk Is Essential

By E. V. ELLINGTON. Head Department of Dairy Husbandry, W. S. C.

We would like a recipe for cottage cheese from sweet milk. MRS. M. L. B. Beaver, Wash.

To make cottage cheese it is essential that good skim milk be used. Therefore, all milk utensils, including the cream separator, should be thoroughly cleaned before using, as dirty utensils may contaminate the milk and cause a poor quality of cheese. The skim milk should be used as soon after it comes from the separator as possible. It will then be fresh and sweet.

The milk should be placed in a vessel and brought to a temperature of 70 degrees Fahrenheit at once and held at that temperature until curdled. (It will be necessary to use a dairy thermometer so that the temperature can be regulated.) The curdled milk should have a clean, sour flavor. Ordinarily this will take from 24 to 30 hours, but when it is desired to hasten the process a small quantity of clean-flavored sour milk may be mixed with the sweet milk. As soon as the milk has thickened or firmly curdled it should be cut into pieces about two inches square, after which the curd should be stirred thoroughly with a spoon. Place the pan of broken curd into a vessel of hot water, so as to raise the temperature to 100 degrees Fahrenheit. Cook at that temperature for about 30 minutes, during which time stir gently with a spoon for one minute at five-minute intervals. This insures uniform heating. Vigorous stirring should be avoided, as the curd will be broken into fine particles and thus interferes with proper draining.

At the conclusion of the heating pour the whey into a small cheesecloth bag (sugar or salt sacking will answer the purpose nicely) and hang the bag on a rack to drain, or the curd may be poured into a milk strainer or colander, over which a piece of cheesecloth has been laid. Part of the whey will pass through immediately and it is important that the whey be removed as soon as possible. This may be accomplished by rolling the curd back and forth on the cloth. To complete the draining tie the ends of the bag together and hang it up. Draining, however, should not be hastened by twisting or squeezing the drain sack as this will produce hard, dry lumps of cheese. Draining should stop when the whey ceases to flow in a steady stream.

The curd is now emptied from the bag and worked with a spoon until it becomes fine in grain, smooth and of the consistency of mashed potatoes. Add about 2½ ounces of salt to 10 pounds of curd, or a teaspoonful to each pound. Sour or sweet cream is added, if desired, as it increases the smoothness, palatability and flavor of the cheese. This should be added at the rate of one-half pint for each 10 pounds of curd. One gallon of milk will make about 1½ pounds of cheese.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

Pigs That Are Down.

I have numerous inquiries relative to the condition in pigs that is manifest by inability to raise the hind quarters from the ground. Just now a man came in to tell me that such a condition existed on his farm and he wished to know what this trouble was and how it could be corrected. This condition is particularly common in brood sows and is most likely to occur during the period when the pigs are nursing. In many cases the cause is one of improper feeding. Particularly if the ration is too heavy in grain and not heavy enough in the roughage which contains the minerals and the nitrogen.

Pigs are commonly found to be eating grains as a great part of their diet and trouble is likely to result when this is continued over a great period of time. The man who just left told me that their hogs had been fed on wheat and barley almost exclusively. I asked if they had access to clover or alfalfa pasture and he said their was no clover or alfalfa on the place and that all the roughage they had received was from the wheat and barley plants.

The condition that he described was that the animals were unable to raise themselves on their hind legs. They could sit like a dog with the fore feet raising the fore quarters, but they had to drag the hind parts if they moved at all. They prefer to lie most of the time and make little effort to move about. Many of these cases seem to suffer very little, if any, pain, at least for a time. Swellings and soreness may develop later, however, when the cases become chronic.

Other diseases of a similar nature are sometimes met in hogs. Rheumatism and a disease described as a degeneration of the nerve and resulting paralysis have been mentioned. Probably a great many of the conditions of this nature are due to faulty feeding, through, of course, the above mentioned diseases do exist—rheumatism particularly when the animals are required to inhabit quarters that are damp and poorly drained.

The nursing mother that must provide milk for her young has to secure the materials for its manufacture from the foods that are provided her. Likewise she must provide the same nourishing materials before the young are born. If the essential elements are not in the ration afforded, she will take them from her own body to a considerable degree and that is what has occurred in many of the cases of the broken-down brood sow. This condition may also be seen in young pigs that are litters that were poorly nourished in certain essential elements, especially the bone-forming substances.

What is to be done when this condition is found? The greatest good should be done in preventing it by giving the brood sow a ration that contains the elements necessary to build sound and strong pigs and not rob her own body. Good pasture of clover or alfalfa will help or other pasture grasses along with the grain ration that is quite necessary to supply the energy materials. Ground bone meal is helpful in supply this deficiency, but if the elements can be given in organic combination, as they are in the plants and as nature intended them to be supplied the results are better, since these materials are more readily used by the body when supplied in this form.

When the animals is already down the condition has reached an advanced stage that may not respond to treatment. The pigs should be taken away from her, unless they are more valuable than the sow, and the sow given plenty of green feed with the addition of bone meal. Even then they may not recover, as the softened bone may not restore itself.

Thousands of Farmers Thresh With Wood Bros. Individuals

THE INDIVIDUAL THRESHER

The years of satisfactory service given by the army of Wood Brothers INDIVIDUALS in use by farmers all over the county stand testimony to their superiority as the lightest running, cleanest separating, most durable threshers on the market.

Because of its overwhelming merits the Wood Brothers 21x36 Steel INDIVIDUAL has been adopted universally as Standard Fordson Equipment and is guaranteed to operate on Fordson power. Our 21x36 Steel INDIVIDUAL is of the same high grade, heavy construction as our 26x46 and 30x50.

Thresh the INDIVIDUAL way—do away with loss from grain wasting in the field. Don't wait. Thresh at your own convenience.

Write today for our richly illustrated free book on growing and threshing grain. Learn how so many farmers make more money on grain with the Wood Brothers INDIVIDUAL.

Sold by Ford Dealers everywhere—price fully equipped, $900, F.O.B. Des Moines—the same low price as last year with latest 1923 improvements. See your dealer now.

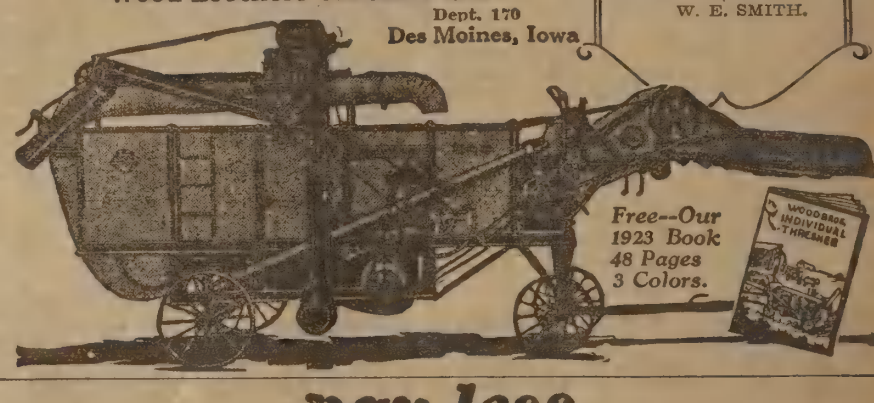
Des Moines, Iowa

OREGON.

Corvallis, Ore.
The 21x36 Individual Thresher has given the best of satisfaction in all kinds of threshing. The Fordson tractor has plenty of power to operate it. It is the lightest running thresher I have ever operated, or seen in the field. It is the easiest machine set, and least bother to operate I ever handled, and the upkeep is practically nothing.
I threshed 25½ days on an average of 10 hours per day, and threshed an average of 1500 bushels per day. One-half day of five hours I threshed 1138 bushels of oats. The largest day's work done was 1911 bushels of oats.
W. E. SMITH.



pay less and get more in lubrication

It is a fact, that the "body" of Zerolene follows the changing piston clearances of the automobile engine more closely than other oils, no matter what price they sell at.

Zerolene, made from selected Naphthenic-Base Crude piped separately to the refinery, and manufactured by our exclusive high-vacuum process, resists heat better, forms less carbon, and consequently *the car lubricated with it will run from 25% to 50% farther* without having valves or cylinders cleaned.

Zerolene reduces friction and wear to a greater extent than any lubricants we have seen and tested, or been able to produce for the automobile.

Insist on Zerolene—even if it does cost half as much.

POULTRY AND RABBITS

New Poultryman at State College

John S. Carver, now of the U. S. Veterans' Bureau Vocational school at East Norfolk, Mass., has been appointed head of the department of poultry husbandry at the State College of Washington. He was graduated from the Massachusetts Agricultural college at Amherst, in 1913, and has had experience in commercial poultry plants in New Jersey and Connecticut, besides his teaching and experimental work in colleges. In 1915-17 he was head of the poultry department of the Essex County Agricultural school at Hathorne, Mass., and later was poultry extension specialist for the University of Maine, Orono, Me.

Mr. Carver has been much interested in experimental work, and has been engaged in some form of it practically all the time since 1915. First he worked on the elimination of blackhead disease in turkeys, through breeding, at Stanford, Conn., breeding some 275 turkeys with 25 different matings in a year's experiment. For five years he worked with nine different types of trap nests, attempting to eliminate the out-egg factor in trapnesting. In 1919 he perfected a trap nest that practically rids the poultryman of that difficulty.

Tests Similar Feeds.

For three years he experimented with the relative value of fish scraps and beef scraps as protein feed for chickens. After trying them on some 8000 chickens he established the fact that fish scrap as the only source of protein gave better growth at less cost per pound for the protein than did the beef scrap. At the market price it was cheaper and more efficient.

From 1915 to 1921 Mr. Carver ran experimental work in pedigree breeding for egg production with Rhode Island Reds and White Leghorns. The final average at the end of the period with the Leghorn flock was 178 eggs for a flock of 450 birds. With the Rhode Island Reds the average secured was 167 eggs. This pedigree breeding work, which was not completed, aimed to establish two strains of cockerels bred for high egg production, which could be recommended to breeders as a means of improving and grading up egg production in their home flocks.

Through six egg-laying contests he weighed all feed, both scratch grain and mash, and also weighed all hens at two-month intervals. Many changes were made in the feeding of the birds as a result of this experiment in feeding contest hens.

House Construction.

The ventilation of poultry houses has been a subject of special interest to Mr. Carver. He has done more experimental work along this line and poultry house construction than in any other. After a considerable amount of work covering some four years he perfected a poultry house front with a sliding curtain that gave most satisfactory results as to uniform temperatures and regulation of dryness in the house. He has built nine different types of brooder houses for coal stove heaters and last summer, after seven years of keeping careful records, he arrived at a type of brooder house which he considers most efficient from all viewpoints—ventilation, light, room and initial cost.

John S. Carver.

Through his contact with egg-laying contests (for some years he was superintendent of the Essex county egg laying contest), he has had opportunity of doing a large amount of special disease experimentation. Careful post mortem records were kept of every bird that died, and disease records of all that were sick. Of the principal diseases encountered—chickenpox, canker, roup and intestinal worms—he had a wide range of experimental treatment. He also studied all kinds of poultry diseases and performed hundreds of post mortems under varying conditions.

Projects for Washington.

Two special interests he has in experiment projects for Washington are: (1) Breeding for egg production with the idea of distribution of well-bred cockerels to Washington farmers; and (2) a five or 10 year experiment in breeding for egg production on the basis of external selection versus pedigree selection.

The state college was anxious to get the strongest man possible for the poultry work, in view of the large poultry interests in the state; the excellent opportunities for development of both farm flocks as a side line to other products, and commercial poultry plants; and the amount of cutover and irrigable land as yet undeveloped which in time will be open to settlers to whom a good, producing poultry flock will mean ready money in time of need. The college feels it has found the right man in Mr. Carver.

The 1923 De Laval Separator which has now been on the market for over nine months, and of which there are already more than 75,000 in use, is acclaimed on all sides as being the best De Laval ever made, and that is saying a lot.

This new De Laval has all the efficiency, quality, durability and the advantages of former De Lavals, plus:

—A self-centering bowl which eliminates vibration, causing it to run smoother and adding to its efficiency and life;

—More uniform separation and less variation in the cream test;

—Still easier running, and

—Greater convenience, through the use of a bowl holder which is now attached to the supply can support. In addition, this new De Laval has other improvements and refinements, all of which give its owner the greatest value obtainable in a cream separator.

The Sweetest Running De Laval Ever Made

Saves the Most in Summer Months

A De Laval will soon pay for itself any time, but more quickly during the summer months. Then the greater capacity, easier cleaning and handling of the De Laval are most appreciated. Quick, easy and thorough handling of milk and cream in hot weather maintains the highest quality of both and often means the difference between profit and loss.

Why not see your De Laval Agent or write us about securing one of these new De Laval Separators? Sold on easy terms, from $55 and up.

ORCHARD AND GARDEN

Fruit Shipments

Total Movement of 15,039 Cars Out of Wenatchee

By E. H. PHERSON.

Complete reports of all fruit shipments out of the north central Washington district through Wenatchee station have just now been compiled and checked over. There were 13,871 cars of apples forwarded from the district, and 1178 cars of soft fruits, making a total movement during the season of 1922-23 of 15,039 cars, which was 1351 less than for the previous season when 14,850 cars of apples and about 1450 cars of soft fruit were shipped.

The apple shipments were divided as follows among the principal varieties: Winesaps, 4241; Jonathan, 2341; Delicious, 2371; Spitdenburg, 1301; Rome Beauty, 1030; Stayman, 1094; Black Ben, 236; Yellow Newtowns, 178; Winter Bananas, 167; Winter Pearmain, 204; Black Twig, 126; Arkansas Black, 119; Ben Davis, 121; King David, 99; Grimes Golden, 76, and miscellaneous varieties, 231 cars.

Notable features of the distribution of shipments by varieties are the fact that Delicious have displaced Jonathans as the second leading variety, and it is doubtful if the Jonathan will ever gain its place as hundreds of trees of this variety are being cut out or grafted over, while Deilcious are increasing in number and bearing capacity annually.

It is also worthy of remark that the Stayman has gone ahead of the Rome Beauty and threatens to usurp the place of the Spitzenburg. The Stayman is now taking its rightful place as one of the leading varieties of winter apples. Experiment with oil wraps prove the Stayman to be one of the best keeping apples, excelling the Spitzenburg in this respect by a considerable margin.

Classification of soft fruits as to kinds is a much more difficult task than that of apples. A great proportion of summer fruit shipments go out in mixed express cars. Thus out of 1120 cars of soft fruit shipped 361 were mixed, containing cherries, apricots, plums, prunes, peaches and pears. Most of the pears, however, went out by refrigerator freight, there being 436 cars thus listed with about 60 cars by express or mixed.

Shipments of fruit by months reveal the time and manner of the transportation breakdown that cost the growers of the district $5,000,000 for which claims are now being presented to the railroads. During June 7 cars went out, all by express; in July 135 by express; in August 450 cars of soft fruit by express and 51 cars of summer apples; in September 462 cars of soft fruit and 1478 of apples; in October, when over 7000 cars of apples should have been shipped, according to schedule, only 3032 cars of apples and pears were forwarded; in November shipments dropped to 2114 cars so that by December 1, when 11,000 cars of apples should have been moved, only about 6600 had been forwarded, or 4400 less than schedule.

During December apple shipments were 1845, and in January when the Pacific Fruit Express and Milwaukee refrigerator cars arrived, 2967 cars went out, the heaviest apple movement of any single month during the season, though usually apple shipments are at a minimum during that month. February showed 1552 cars, March 776, April 241, and May the 20 last cars of the season were shipped.

Already refrigerator cars are arriving in the district from eastern points and being stored on sidings everywhere. The first solid carload of cherries will go out within a few days, followed by others daily, probably to Seattle. The cherry crop is unusually fine this year, though rains at this date (June 12) threaten to split the fruit if they continue.

Insects Infest Raspberries

There has been an increase in the number of insect pests that infest the raspberries in western Washington, and some of them have been found to be abundant, according to Arthur Frank, plant pathologist of the western Washington experiment station at Puyallup. Among them may be mentioned the small green worms known as the raspberry sawfly worms, the leaf roller, and the American raspberry beetle.

On the leaves of the new shoots are seen many ragged holes. On looking on the underneath side of these leaves a number of whitish green worms are seen working. They are quite hairy. These eat rapidly and increase in size. The adult form of the insect is a small fly, which appears when the new shoots are quite small.

Spraying the new shoots up from underneath with lead arsenate powder, 1 pound to 35 gallons of water, is recommended as soon as the worms appear. The pest has obtained a bad start and is present in raspberry and loganberry fields quite generally through western Washington.

The leaf roller twists and gnarls and webs together the terminal leaves of new shoots or the ends of leaves on the new shoots. While this pest is quite common everywhere in the valley, still it is not very abundant.

Within the webbed-together leaves will be found a small, dark green worm with a black head. Growers are advised to inspect their fields for this pest and to pinch together the webbed part, thus crushing the worm whenever they find indications of this pest.

If pests such as these are let go from year to year without paying any attention to them, the time comes when they are a problem to deal with and one that may cause a great deal of damage.

Several years ago much complaint was common on account of a small white maggot being found in raspberry and loganberry and blackberry fruit. The true cause for this could not be found for some time. Finally it was found that the insect which caused this condition was the American raspberry beetle.

This is a small, brown hairy beetle about one-eleventh of an inch in length. The beetle is common on the new shoots, eating holes in the terminal leaves. Later this same beetle works on the fruit buds and also on the blossom.

It is then that the egg is laid on the newly formed fruit, for that is where the worms are found. The only remedy known is to spray the new shoots with lead arsenate and to keep them covered, starting when they are small and keeping it up until they are two feet or more high.

Drooping and dying shoots are indications that the cane maggot is working on the shoots of the raspberry. The same also on the dewberry. The adult is a small fly which lays the eggs on the tips of the new shoots when small.

The egg hatches into a small grub which works its way down inside the new shoot and then turns toward the outside and then girdles the shoot just beneath the bark. There is no remedy for it except to cut off and burn the shoot. Careful inspection of the fields is advised to be done frequently and faithfully so that all infested shoots are taken. No spray is effective.

PUT ON THIN COATS OF PAINT.

Do not make the mistake of putting on thick coats of paint. Three thin coats are much more valuable than two thick ones.

Cuts Tops Off Thistles

"I have found one way to get rid of the Canadian thistle and have demonstrated that it will work, even in extreme cases," said James Carstairs of Shelton, who has a farm close to the Grays Harbor county line, just north of Elma. "It is not a difficult remedy, and is not as costly as some of the other methods advocated.

"The secret is nothing more than to take a hoe and keep after the thistles, cutting off all the tops as fast as they come through. The first three times they come up they should be cut as soon as they show through the ground, but the most important time is when they come up the fourth time late in the fall. There may be a few plants come through in the following spring, but they will be very delicate plants, and one cutting will usually kill them off.

"It is a good plan to plant some kind of a hoe crop, such as potatoes, corn, or any other row crop which can be cultivated with a horse and hoed by hand. The cultivation which is necessary will be very effective in keeping the thistles down and it will not take long to entirely rid the field of the pest."

The "40" Fits the Fordson

The only plow for the Fordson with the great draft-reducing, work-improving combination of rolling landside and self-adjusting hitch is the

John Deere "40"

All-wheel-carried — rear weight rolls on the rolling landside — no dragging friction — that means very light draft.

Hitch adjusts itself to proper line of draft whenever depth is changed — it's always automatically correct — bottoms always run true and level at all depths.

Genuine John Deere bottoms, famous for scouring, good work and long wear. There's a type for every soil.

Quick detachable shares, strong and close-fitting. Loosen one nut to remove share; tighten the same nut and share is on tight.

Beams guaranteed not to bend or break. Simple, strong and positive power lift. Lever control of depth and leveling, from the tractor; you don't have to go behind the "40" to adjust it. See the "40" on display in your town.

FREE FOLDER. Write for your copy today. Address John Deere, Moline, Illinois. Ask for Folder FC-647

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

"Like the old gray mule — they never die"

Mr. Wesley Overton, Bridgeport, Oklahoma, owns four OILPULLS. In a recent letter he says, "I have put these OILPULLS in places where a good horse could not go and they pulled out easily. They are a good investment. I have never found an OILPULL in the scrap pile. They seem to be 'like the old gray mule — they never die'."

Long life is only one result that comes from the careful building of the OILPULL. Letters received from every section of the country mention this. But there are, also, thousands of other letters which point out the unusual dependability—the great saving in fuel—the remarkably low upkeep cost—farmers are experiencing. All are largely the result of Triple Heat Control, dual lubrication and other OILPULL features.

Write for letters from your district

No matter where you are located we can send you letters from your district — maybe from neighbors —who have used and proved out the OILPULL. Read these letters. They are interesting. They are convincing. They tell the story of the OILPULL from YOUR side. Just ask us to send along the letter. We will include our new booklet on Triple Heat Control and other interesting literature.

Cattle Ranch To College

By Russell Doubleday - Copyright by Doubleday & McClure Co.

Says the author:
This is a true tale of a boy's life in the west many years ago. It is an account of his amusements, his trials, his work, his play. The incidents described actually happened and are described substantially as "the boy" related them to the writer.

An Indian Attack.

CHAPTER I.

A solitary horseman rode into the little frontier town of Bismarck, shortly after dark one evening, a good many years ago. Horse and rider passed up the single unpaved street; in the darkness no one noticed the fagged condition of the animal, nor the excitement of the rider, betokened by the continued urging of his weary pony.

The town was unusually full of the nomadic people who made up its population, cow-punchers, saloonkeepers, gamblers, freighters, and outlaws. The evening quiet was constantly broken by the sounds of revelry, and the report of a pistol occasionally punctuated the general noise as some hilarious cowboy playfully shot at the lights.

In the dim ray cast across the street through the small windows of the saloons and dance halls, no one saw the horseman ride up the street to "Black Jack's," one of the most conspicuous saloons; here he stiffly dismounted and tied his pony to the pole where stood a row of other horses. After glancing around to see that all was secure, he entered. He was hailed with a chorus of shouted greetings and questions.

"Hello, Harry! what's the matter?"

"Why, there's Harry Hodson! What drove you down the trail tonight?"

"Are you dry, old man? Come and drive a nail with me."

As the crowd drew around the newcomer, who was a sober, steady cattleman from 25 miles up the river, they noticed that there was something out of the ordinary in his manner. Even the fact of his appearance at that place and hour was unusual.

"No, boys," he said, in answer to the many invitations to drink. "I think we'll all need clear heads before daylight."

"Why, what's the trouble?" chorused the crowd.

"The fact is," continued Hodson, hurriedly, "I cached my cattle and then came down to tell you that a big bunch of Indians crossed the river above my place this afternoon, and they looked as if they were on the war path."

All were attentive now, and even the most reckless of these wild men, living continually in the midst of dangers, wore grave faces.

"I didn't stop to investigate. I wasn't taking any chances, you see," he went on. "So I ran my cattle over onto Woody island and then started down the trail, giving the word to the fellows along the road. Hostiles have been pretty thick across the river lately, and I've had to watch out."

By this time all hands were thoroughly interested. As Hodson went on with his tale, the men drew nearer to him, their faces showing how keenly they realized what his news might mean to all.

Questions followed thick and fast.

"How many were there? Where did they cross?" asked one.

"How many horses? Did they have any squaws with them?"

Without giving Hodson a chance to answer, they all began to talk in an excited babel of voices, advancing opinions and theories as to what had taken place. One big fellow, in a red flannel shirt, asserted that they must have crossed the river at Elbow island; another contradicted this statement and said that the stream was too wide at this point and that they crossed in "bull boats," as the rude craft made of buffalo or cowhides stretched over strong light frames of willow were called.

Hodson stood apart while this discussion was going on, with the bored air of one who was fully acquainted with the facts and could end the unnecessary talk in a moment if he was allowed an opportunity.

"Big Bill" Smith, one of the older men, took in the situation. "Dry up," said he; "let Harry talk, will you? He's the only one who knows anything."

"Well," said Harry, as the crowd once more turned to him, "there isn't much talking to do, but there's plenty of hustling ahead for us. About 200 Indians crossed the river up at Sioux ford. They were traveling pretty light, and I guess they are looking for beef or anything else they can lay their hands on; probably they think they can scare us off with a few shots and then run the stock off. They had a lot of horses—not enough to go around—but a lot. We've got to get ready for them on the jump, for if they're coming they'll be here before daylight, and the stock and wagons will have to be got in right away."

"Somebody go for Jim Mackenzie," said Big Bill.

As one of the men started for the door to carry out this order, a tall, commanding figure, grizzled and somewhat bent, but more from hardship than from age, entered the room. He was recognized at once as the sheriff; the central figure when trouble was brewing, but a retiring, inconspicuous citizen when all was peaceful.

When action was required he was in his element. A man to depend on in time of trouble, one to command in an emergency. It was very noticeable that these rough cattlemen, accustomed to depend upon themselves, who when off duty acknowledged no law except their own wishes, instinctively looked for a leader when confronted with this common danger. No one thought for an instant of questioning his orders, but obeyed with military precision. For the time, his word was law.

"Harry," said the sheriff, turning to the bringer of these bad tidings, after the facts had been told him, "you put your saddle on my bay and take a couple of men with you back on the trail. Bring back Jim White and his outfit of wagons and stock; he's camped down on Hay creek. There are some smaller outfits on the Black Hills road; better help them get in. You'll want to hustle," he added, as Hodson and his two helpers went out.

"Smith," continued the sheriff, issuing orders as fast as a pony could trot, "take a couple of men and get in the circle bar stock, there's only a night-herder with them. The rest of you who have wagons and stock out, bring them in yourselves. All you loose men," he added, as he noticed that several men still lingered in the hot, close smoke-filled room, "get your guns, saddle up, and come to my shack."

The sheriff had been in the place but five minutes, but now fat Sam Whitney, a frequenter of the place, Black Jack, the saloon keeper, and a couple of soldiers from the fort across the river, were all that remained with him.

The men outside could be heard saddling up, struggling with their refractory horses, and calling out to each other; from time to time the rapidly diminishing sound of galloping hoofs came to the ears of the silent men who for the moment remained motionless.

The sheriff was planning his defense against the expected Indian attack, and the men who were with him, without a word, waited for the announcement of his next move. It was Jim Mackenzie, and they put themselves in his hands with blind confidence.

Bismarck was a frontier town in the full sense of the word. A collection of rude houses, more or less strongly built of logs and dried mud, straggled along the single street. Placed at the intersection of the expected railroad and the Missouri river, a town of considerable size was mapped and many streets with high-sounding names were projected. But only Main street was actually laid out. The houses, which their inhabitants called shacks, were built on the north side of the street facing the south, in obedience to the natural law of cold climates, so Bismarck boasted really of but half a street, and that a short one.

Fort Abraham Lincoln, situated directly across the river, was supposed to afford protection to the settlers from the Indian marauders, but the hardy, self-reliant frontiermen were generally able to take care of themselves. Not many of the inhabitants stayed the year round. The few who did remain through all seasons—the saloon keepers, horseshoers, stable keepers, and the three families—dwelt in the more pretentious houses. The other residences were mere temporary shelters, which the owners would not have considered worth fitting up had they been able to do so.

Around the outskirts of the town were always a number of freight outfits, and this night was no exception to the general rule. The cumbrous wagons were drawn in a circle, harnesses lying in a seemingly hopeless tangle on the wagon tongues, and the tents were pitched against their sides or canvas lean-to's were rigged up. A number of greasy men lounged around the campfires some sleeping, some rebraiding whips, some mending harness or chopping out new brake blocks. The work stock were grazing at a little distance where the grass was good, guarded by an armed herder.

To these freighters' camps came the sheriff himself to warn them of the impending danger. Immediately all was activity. The work stock were brought in and in a thrice were harnessed to the heavy wagons. The mules were urged forward with shouts and cracking of whips, and soon the whole outfit was on its way to form a cordon around the town, or, at least, on the side that was most likely to be attacked.

Mackenzie rode with the wagon-train for a short distance, then branched off after giving some final orders, or rather suggestions, for any emergency that might arise.

"So long," he said.

"So long," said the driver of the leading team. (Whether a man was leaving for a trip across the street or across the continent, the parting words were, invariably, "So long.")

Mackenzie went on his way, skirting the town, keeping his eyes and ears wide open. There was nothing within hearing to indicate that the settlement was in danger of attack from the dreaded Indian. The teamsters could still be heard shouting to their mules, and an occasional creaking squeak from the wagons broke the stillness. The sheriff listened in vain for more ominous sounds. "The reds are still pretty far off or they are keeping mighty dark," he said to himself, as he put spurs to his horse and galloped toward one of

the better-looking houses that stood on a little rise some distance from the main street settlement.

Messengers had been sent in every direction, to warn sleeping citizens, and all had been arranged for except this household, one of the three families of the town.

Mackenzie rode up to the door and, without dismounting, knocked.

In an instant there was a sound of bustling, for the westerner sleeps with one eye open, and is ready at a moment's notice for anything that may occur.

"Who's there?" shouted a voice.

"Mackenzie," answered the sheriff.

Almost at the same moment the door opened, and a man stepped out.

"Hello, Worth!" said the sheriff. "You'd better bring the wife and children further down. Harry Hodson just came down the trail and reports a big bunch of Indians a few miles up, and——"

But Worth did not wait to hear any more.

"John," Worth shouted back into his shack; "you and Ben help your mother pack up the bedding and take care of the baby. We've got to be lively. You know what to do. You see, Mac," he said, turning to the horseman, "I thought I might as well get things started while you were telling me about these hostiles."

"All right," said the sheriff. "Good scheme. You might as well saddle up and come along with me so you can find a place beforehand for the wife and kids."

In a few minutes both men were on their way to the center of the town: Mackenzie, to send out his pickets and guards, and to arrange the placing of stock and wagons; Worth, to find a temporary shelter for his family. The boys, John and Ben, were left behind to look after the home, pack up the goods, catch and saddle

(Continued on the following page.)

A solitary horseman rode into the little frontier town of Bismark shortly after dark one evening.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Cheer up! for the sun is shining
Somewhere, in the heart of the sky;
Cheer up! for the folly of whining
Is close to the sin of a lie.

Cheer up! for the burden of sorrow
Has ever a coming relief;
Cheer up! there's a brighter tomorrow;
Cheer up! there's an ending of grief.

Cheer up! or the present is wasted.
The beautiful, only today;
Cheer up! till a beaker is tasted,
Why turn in abhorrence away?

Cheer up! for good sense is a leaven
To lighten the load of a fear:
Cheer up! for all God and all heaven
Are offered, and eager, and here.

—AMOS R. WELLS.

Dear Mrs. Barland and Members of the Family Circle: I take it for granted that each member is anxious to do his bit to bring the price of sugar back to normal again. I suggest that everything be canned without sugar that well can be, and that you use honey for the rest. I have used honey successfully and as there is a knack to the process I will give my method.

Use more honey than you would of sugar and cook the fruit from one-third to one-half longer than with sugar to neutralize the acid, or fermentation will take place. I made jellies, jams, preserves, etc., one season and had splendid success. I was warned about the longer time to cook the fruit, but a friend of mine living in Colorado lost all she put up not knowing about this.

We are going to send east of the mountains for a 60-pound can of honey and we hope the bees will not go on strike nor the beekeepers raise the price. We must let the sugar barons see what a mistake they have made to antagonize the housewives of these United States.

MRS. LOURA PRATT.

Dear Mrs. Barland: I have been a subscriber to THE FARMER for many years and we look forward to the day for it to come. It is surely a grand little paper.

We live on a small rented place and our family consists of my husband and two dear little children, a boy of nearly 5 and a girl of 2.

My husband is a landscape gardener and has been in business in Everett for about 14 years. He is growing nursery stock. I am raising fancy sweet peas of 1923 novelty for cut flowers, as I have made good before in cut bloom for receptions, parties and hospitals.

I am like many of the others, I make over old clothes and make new ones from flour sacks. I pull a stocking top over my broom and tie it to the handle and it holds it in shape, and I put a screw eye in the end of the handle to hang it up by. It saves the broom and keeps it in good shape.

I think children should be trained to help, boys as well as girls. My boy of 5 gets in the wood every morning and evening and is also beginning to dry the dishes. He knows how to use a broom and I have taught him to clean the walks and porch if he gets them dirty.

Both my parents were born across the ocean. My father was born in London and was a Civil war veteran, and my mother was born in Paris and was on the stage there for 31 years. MRS. R. J.

Family Circle Girls

Dear Mrs. Barland: I always look at the Family Circle first and think these discussions that we are having very interesting and helpful.

I live on a dairy ranch about five miles from Klamath Falls, Oregon, and I like ranch life and often help my father with the work. I can milk and do any chores that my brother can do. I like to read better than anything else and I don't like housework at all. I would rather help my father with the outside work. I am very fond of school and it is the height of my ambition to get a good education.

I think smoking is a vile habit and that no girl with self-respect would do it. If a girl starts smoking and drinking and such like when she is young she is apt to do worse as she grows older till she becomes a disgrace to herself and family. I don't think boys should smoke, either.

I try to do as my mother advises, as she is experienced and knows what is best for me and always knows where I am.

My brother broke open an egg the other day that didn't hatch with the other eggs under the hen and found a chicken in the egg with four legs. We have put it in alcohol to preserve it to show to our friends. FLORENCE.

Dear Mrs. Barland: I have been reading the letters in the Family Circle and find them interesting, but the discussion on kissing was more interesting than the smoking, because it was not so one-sided. Many letters were written in favor of kissing. For my part, I can't see why girls want to lower themselves and thus show the world how weak their character is. I admire R. V.'s ability to refrain from smoking, when she chums with so many girls who do smoke.

I would like to ask the Circle what they think about girls going with boys younger than themselves.

I was an Idaho girl till last April, when I came to Utah. I like it pretty well here, but it doesn't seem quite like home.

A. P. H.

Cattle Ranch to College

(Continued from the preceding page.)

the horses. It was a seemingly big task for boys of 10 and 12, but from the time these boys were able to walk they—in common with other boys of the frontier—had to look out largely for themselves. They were strong, sturdy little chaps. John, the elder, was his father's right-hand man, and when Mr. Worth was away on one of his frequent freighting trips. John was often called upon to take care of the family in emergencies much like the present one.

In this frontier town, the reports of bands of hostile Indians coming to raid and kill were not uncommon. The single man, active, mounted, armed with weapons as familiar to him as his right hand, had no fear of not being able to outwit or escape the enemy, wily as the redskins were. In fact, the Indians themselves were well aware of the ability of the plainsmen to cope with them when unhampered by women and children, so they practically never began hostilities until they could get their white enemies at a disadvantage. The few families were, therefore, their special point of attack. It was their helplessness that tempted the onslaught and aroused the savage instincts of these marauders. When the head of the family, the bread winner, was away, the dread of these fearful, relentless attacks on his helpless ones abode with him always. The mother and children, left at home, lived always under the shadow of the same fear.

John and his brother, therefore, fully understood the danger and the need for speedy and careful preparation. They had often, at the warning of the hostiles' approach, helped their mother make a fort of the solid log house by piling up the scanty furniture and bedding against the doors and windows, leaving only loopholes for their rifles; and though the present situation was one that would make ordinary boys useless through fear, John and Ben, on the contrary, were too busy to worry; they knew exactly what was to be done, and in their sturdy, independent way went to work to do it.

"Say, Ben," said John, as they went toward the corral (the circular inclosure in which the saddle horses were kept), "I'll bet it's just those Indians we saw across the river, day before yesterday, while we were hunting Gannons' horses. There was a lot of squaws in that bunch, do you remember?"

"That's right," assented Ben; "and I'll bet that some of Gannons' horses were in that lot of Indian ponies. If it was $10 reward instead of five, it might have been worth while to run the risk of trying to find out; but five dollars is too little to go fooling around a strange Indian's camp for."

The talk was ended by their arrival at the corral and the subsequent busy time catching and bridling of the horses. The ponies were then led to the door, where they were saddled. As they were cinching them up—as the tightening of the girths is called—Mr. Worth returned. In a few minutes the whole family were on their way to the Sebells', one of the other Bismarck families who lived on Main street.

In town they found all activity. Horsemen were galloping to and fro, cattle horses, and mules dashed in and out, wagons driven at full speed crossed and recrossed the dusty street. As soon as they were installed at their new-found shelter and their household goods disposed of, John went with his father to get in the extra stock of horses and mules, for, next to his family, these are the freighter's chief care.

They found their stock together, as was expected, for animals, particularly horses, that come from the same place, always stay together. This instinct made it much easier for the herder to gather his own, when there were many animals belonging to different outfits on a common grazing ground. The Worth stock was promptly driven inside the now almost complete circle of wagons, and there tied.

A group of men were busy piling up boxes, barrels and bales, taken from the freighters' wagons, into the semblance of breastworks. As John and his father approached, the sheriff came forward and joined them.

"Family all right, Worth?" he asked, kindly. "I sent up a couple of men to help you and they reported that your shack was deserted and the place locked up for keeps. You didn't waste any time."

"That was good of you, Mac," said Mr. Worth, holding out his hand. "How you're able to think of so many things at once, beats me. Yes, we got out in pretty quick shape; you see my boys, Johnny here and Ben, are first-rate hands to depend on in an emergency. They did pretty near the whole thing tonight. By the way, the boys were hunting horses up the river day before yesterday, and saw quite a bunch of Indians in the brush below Harry Hodson's."

"Why didn't you say something about this before?" interrupted the sheriff, turning to John.

"Ben and I have seen plenty of Indians," said John, eagerly. "There were a lot of squaws in this bunch, so I didn't believe they were a war party. We didn't think anything more about them until this scare came up tonight."

"Well, you have a good head on you, young man. I don't know but you are right, and this may be a false alarm. Still Hodson generally knows what he's talking about." The sheriff was speaking more to himself than to his hearers. "I'm glad we've got a lot of first-rate scrappers with us; I guess the reds would think twice if they knew what they were running up against."

All was comparatively quiet. The work and strain of preparation was succeeded by a time of waiting, a period of suspense that was, perhaps, harder than the first shock of the unpleasant news.

John and his father returned to their temporary home to calm the fears of John's mother. Mrs. Worth had the family rifle ready and Ben had polished and oiled every cartridge in the belt so that they would slip in without jamming. Mr. Worth shouldered the gun and went out, leaving the boys with their mother. Though all was now quiet and his mother and brother were asleep, John could not close his eyes. He understood, as his younger brother could not, the danger that menaced the household and the town. Death, swift, by knife or bullet, or slow through torture, was sure to come if that band of Indians got inside the inclosure. He had heard gruesome tales describing the treatment that the savages meted out to their prisoners and the horror of it would not leave him. At last he could stand it no longer. Quickly he rose from the heap of bedding and stole to the door. He was fully dressed, and his little six-shooter still slung on his hip, where he had buckled it when the sheriff first knocked at the home shack.

All was still outside, except for the occasional stamping of a pony or the distant wail of a coyote. Pickets were posted just over the rise to the north of the town, from which direction the attack was expected. They were to give warning of the approach of the Indians by a rifle shot.

Suddenly there was borne on the breeze to the waiting men the sound of galloping horses. Louder it grew, then fainter; then again still louder. So the sound wavered, but ever came nearer.

The watchers sprang to their feet, rifles ready, eyes gleaming.

"Steady, boys," said the calm voice of Mackenzie. "Wait a bit."

Still the thumping of many hoofs approached nearer.

What had become of the pickets? Had they been all killed with the enemy's noiseless arrows? Or had they been lured away beyond hearing and shot?

Daylight was breaking; the enemy could now be seen, that was one comfort. And as they stood, cars alert, eyes strained, their nerves keyed up to the tensest pitch, awaiting the onslaught, that ominous noise of hoof-beats came ever nearer, nearer, nearer.

Suddenly a horse's head appeared above the brow of the hill, then another and another until quite a score or more were in plain view. They dashed down the incline toward the corral of wagons. But they were all riderless! Presently two riders appeared. They shouted a greeting as they came down the hill and explained that they were of the N bar N outfit.

A space was hastily cleared between the wagons to allow these newcomers' horses to enter the inclosure; but it was too late; the bunch parted, turning to right and left. The two herders also separated in pursuit, each following a bunch.

Immediate danger over, the waiting men relaxed their extra vigilance, and all hands watched the efforts of the two herders in their vain attempts to head off their charges. The sheriff was just saying, "I wish some of you fellows would help round up that bunch; we want to get them all in before the hostiles show up," when a third horseman appeared, riding like the wind.

"Say, that chap has got a fresh horse, said "Casino," one of the freighters.

The new arrival, after a headlong dash, regardless of ditches, brush and badger holes, succeeded in rounding up the frightened horses, and with the help of the herder, drove them into camp. A similar performance soon brought in the other bunch.

As the new rider trotted in through the gap, some one shouted: "What'll you take for that horse? He's a regular whirlwind."

"Yes," said one of the herders, "he's a dandy, isn't he? My stock would have got away if Johnny Worth hadn't come out on Baldy."

"So it's Johnny Worth, eh!" said Bill Smith. "Good work, kid."

"Oh!" said Johnny, "they're only worn-out, winded plugs; they were easy for Baldy. He was saddled and all ready," the boy added in explanation.

"Well done, Johnny," said the sheriff, who had once before that night praised the boy's pluck. Then, turning to the group about him, "Some of you boys had better get breakfast," said he; "there's no telling when that war party may turn up, and you must eat now when you have the chance."

While the men were eating (a sufficient number being left to keep watch and guard) in one of the dance halls, which was hastily impressed for the purpose, the herders of the N bar N outfit were questioned as to their knowledge of the Indians.

They reported that the redskins were in force and were coming rapidly in the direction of the town. That while they were guarding their stock, they were startled by the sudden appearance of an Indian near them, who yelled and waved his blanket, and finally succeeded in stampeding the animals. They started off at a gallop after the horses, and this solitary brave forthwith disappeared.

The stock stampeded, but the herders stayed with them, riding full speed over all sorts of rough country. The Indians appeared at intervals in pursuit of them, and added to the confusion and danger by keeping up a running fire.

The herders said they were about to give up the attempt to keep their charges out of the savages' hands when they came in sight of the town. "Even then," said one of the men, called Singing Jim, "we couldn't have corralled the beasts if that youngster hadn't chased out to help us a fresh horse, and a fast one at that."

"We'll have troubles yet," said the other herder, Calamity Jake he was called, because of his ability to see small black clouds of evil a great distance off. "Plenty of trouble, too, in the shape of Indians on the warpath. They were not far behind us when we reached these diggins."

"What became of your wagons?" said Harry Hodson, a mouthful of beans interfering somewhat with his speech.

"Oh! I guess they're done for. Probably makin' light for the Indians to do a war dance by," remarked Singing Jim, cheerfully.

"I reckon not," said Mackenzie, who had appeared in time to hear the last; "they'll not show their location by making a big blaze like——"

"I heard a shot fired from over the hill," shouted Johnny, who stuck his head in at the door that moment. "Maybe it's one of the pickets."

The men jumped up and made a rush for the door. The herder, Singing Jim, who was the last man out, exclaimed as he disappeared, "Well, if that kid ain't ubikkertous, as the States papers say!"

Several shots were now heard and then the pickets topped the rise and made a break down the slope to the town.

The enemy was close, but still invisible behind the ridge.

High Points in News of the Week

President Harding and his party reached the northwest last Thursday, the first stop and the first address in the three Pacific northwestern states being at Pocatello, Idaho. On the same day, June 28, he delivered an address at Idaho Falls before leaving for Montana points and the Yellowstone National park. He arrived at Spokane, Wash., Monday afternoon, July 2, and left that night for Meacham, Ore., where, on July 3, he participated in the Old Oregon Trail celebration. His other two stops this week are at Portland, Ore., July 4, and Tacoma, Wash., July 5, from which latter point he sails for Alaska. He returns after three weeks in Alaska, reaching Seattle July 26.

In his addresses last week the following were important points stressed:

That reduction in the cost of government and consequent reduction in taxes is essential to the wellbeing of the people; that the new federal budget law offers much of hopefulness in this direction; that not only in governmental affairs but in personal affairs the habit of lavish spending must be corrected; that the cost of living must be reduced by the shortening of the bridge between the producer and the consumer; that the cost of distribution of essential commodities between producer and consumer is unwarrantedly high; that the old-fashioned features of the American home must be restored if the American people are to endure; that the United States should become a member of the world court of justice but should not become a member of the league of nations; that if the United States ever becomes involved in another war, all the people and all the industry of the country must be drafted for various forms of service and not merely the young men for military service; that labor has the same right as capital to organize for its own betterment and protection, but that evils on both sides of the labor-capital question must be removed.

The special train carrying President and Mrs. Harding carries also Secretary Wallace of the department of agriculture, and Secretary Work of the department of the interior, and a considerable number of other persons more or less directly connected with the government.

* * *

That the French people are not weakening in their determination to compel Germany to live up to the terms of the treaty which ended the World war is indicated by the fact that the senate of that country by a unanimous vote last week indorsed the present program of occupation in the Ruhr and appropriated 307,000,000 francs with which to continue this occupation. Premier Poincare declared in an address to the senate that France would not relax until Germany paid. He declared that France had no desire to annex the Ruhr district or any other German territory, but that her army would not recross the Rhine until Germany had lived up to her obligations.

* * *

Secretary Work of the department of the interior last week indicated why he had reorganized the reclamation service by discontinuing the office of director and accepting the resignation of Secretary A. P. Davis. He indicated that under the old system the director of reclamation had really been an engineer rather than a general supervisor of reclamation policies and the actual development of projects after water was placed upon them. "We do not need two engineers in charge of the reclamation service," said Secretary Work. "In the future the service head will be known as the chief of the bureau of reclamation and will be qualified to aid the farmer rather than to supervise engineering work on the project." Former Governor D. W. Davis of Idaho was appointed by Mr. Work to be the chief of this newly created bureau. F. E. Weymouth, former assistant chief of the service, has been appointed chief engineer of the bureau.

* * *

The American Medical association convention representing 90,000 doctors, last week defeated four resolutions that were aimed against the Volstead prohibition enforcement act. The resolutions were intended as denunciations of the prohibition laws and were so framed as to urge removal of restrictions on the use of liquor for medicinal purposes.

* * *

The department of the interior has announced the beginning of a nation-wide survey of undeveloped water power resources in public land states, with a view to determining the possibility of developing additional power. Public lands that are now reserved for use in connection with water power sites, but which are shown by the survey to be without power value, will be recommended for restoration to public entry.

* * *

Figures show that 39 per cent of the total imports of the United States during May were in the form of raw materials intended to be manufactured in this country. Exports for the month of May to Europe exceeded imports from Europe, but total imports from all parts of the world exceeded total exports.

The Slogan Contest

Voting on the slogans submitted in THE FARMER'S contest for a slogan to take the place of "Diversified Farming," will close with the ballots received from readers Saturday, July 7. If any slogan receives a clear majority of the votes cast, it will be declared winner of the $10 prize. If no slogan receives a majority, then the board of judges will decide which shall be the winner. Announcement will be made as early as possible.

Make your shingle roofs last twice as long

It's less costly to weatherproof shingle roofs and sidewalls than to let them "run down." Careful farm owners use Oronite Shingle Oil—inexpensive and easily applied.

It retards the evaporation of natural oils in the wood and prevents the absorption of water. It checks warping, splitting and leaks and prevents the growth of moss. It keeps down repair bills.

Ask our agent—there is one near you—how to mix Oronite Shingle Oil with color pastes for cheerful red and green stains.

STANDARD OIL COMPANY (California)

ORONITE

Shingle Oil

The Reasons inside the hard-shell fact

There is something goes into the Silvertown Tire from which the farmer reaps service. It is as real as the seed that goes into the ground from which grow his crops.

You see it in Silvertown's rugged body—tough, slow-wearing, anti-skid tread—and sidewalls extra fortified with tread rubber to protect them from the road ruts of dry, hard-pan weather.

The experienced farmer invests in quality in whatever he buys for the farm, with a weather-eye on the ultimate cost.

That's why he should buy Silvertown, the tire with a pedigree.

Bits of Fun for Everyone

The Nervous Patient.

A dentist had to crawl under his auto in order to make some adjustment in the machinery. Applying the monkey wrench to it he said soothingly, "Now this is going to hurt just a little."—Outlook.

Score One for Adam.

Whatever trouble Adam had,
No man could make him sore
By saying, when he told a joke,
"I've heard that thing before."
—London Opinion.

Natural History.

Teacher—"A quadruped travels on four legs and a biped goes on two legs. Give an example of a biped."

Johnnie—A pair of stockings.—Boys' Life.

Organized Arithmetic.

A Chicago teacher gave a pupil a sum for home study, which was in substance: How long would it take a certain number of men working 10 hours a day to complete a stated job?

The next morning one pupil handed the teacher a note written by the boy's father, saying: "Dear sir: I refoosed to let my son James do his sum you gave him last night, as it looks to me like a slur on the eight-hour system. Any sum not more than eight hours he is welcum to do, but not more."—Boston Transcript.

Wonders of Nature.

Miss Angelina (to Captain Brown, who has been cruising in Alaskan waters)—I suppose, captain, that during part of the year the sun doesn't set till quite a while after dark in those northern latitudes.

A Claim to Distinction.

Teacher—If Shakespeare were alive today, wouldn't he be looked upon as a remarkable man?

Student—I'll say so. He would be more than 300 years old.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4123. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 7 1-2 yards of one material 44 inches wide. The width of the skirt at the foot is 2 1-8 yards. Price 10 cents.

4414. Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 1-8 yards of 32-inch material. Price 10 cents.

4409. Sleeveless dress with guimpe. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires four yards of 40-inch material. The guimpe requires 1 3-4 yard of 36-inch material. Price 10 cents.

4393-4418. A smart suit style. Jacket 4393, cut in four sizes: 14, 16, 18 and 20 years. Skirt, 4418, cut in seven sizes: 16, 18 and 20 years for misses, and 31, 33, 35 and 37 inches waist measure for ladies. To make the suit for an 18-year size will require 4 1-8 yards of 40-inch material. The width of the skirt at the foot is about two yards. Two separate patterns, 10 cents for each pattern.

4264. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires seven yards of one material 40 inches wide. Price 10 cents.

3681. Girl's under garment. Cut in six sizes: 4, 6, 8, 10, 12 and 14 years. A 10-year size will require 2 1-8 yards of 36-inch material. Price 10 cents.

3613. Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1 3-4 yards of 36-inch material. Price 10 cents.

4415. A comfortable "smock." Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 7-8 yards of 32-inch material. Price 10 cents.

4408. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 3 1-2 yards of 27-inch material. Price 10 cents.

4066. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 3-8 yards of 32-inch material. The width of the skirt at the foot is 2 1-8 yards. Price 10 cents.

4400. Group of bathing accessories. Cut in one size for the bags and in four sizes for the shoes: 3 1-2, 4 1-2, 5 1-2 and 6 1-2. The shoes will require one-half yard 36 inches wide for one pair size 4 1-2. Bag No. 1 will require three-fourths yard and bag No. 2 one-half yard of 36-inch material. Price 10 cents.

4397. Dressing sack and cap. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 1-8 yards of 32-inch material for the sack and five-eighths yard for cap. Price 10 cents.

Send 12 cents in silver or stamps for our up-to-date spring and summer 1923 book of fashions.

"Here's what I'll weigh when I eat these KELLOGG'S CORN FLAKES"

Kellogg's Corn Flakes ring true with every member of the family because they are not only delicious in flavor and crispness, but because they satisfy hungry appetites.

It takes more than the annual crop of a 450-acre farm to supply the raw corn used in the "million packages a day" made in the Kellogg factories.

And another thing: Kellogg's Corn Flakes are ready to serve—no bothersome cooking and scraping afterwards!

Kellogg's are extra delicious with the family's favorite stewed fruit, and with bananas or other fresh fruits in season.

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

A letter of thanks for the good things in The Junior Farmer comes to us from Pauline Robinson, who lives in Whitman county, Wash. Pauline expects to have a good time during her vacation.

We have the following letter from a boy in Whitman county, Wash.: "My name is Delbert L. Rucker. I shall be 7 years old July 25, 1923. I have a little puppy named Bobby. I go two miles to school. I ride a Shetland pony named Don."

"Here I am at school," says Martin Crowe. "I am in the fourth grade. Two more children are in my grade. They are Chester Porter and Hattie Pierce. When school is out, May 16, we are going to have a picnic. (Martin's letter was written April 27.) There are big hills all around us and they have bunchgrass on them." Martin lives in east Washington.

Sophia Pflugrath of central Washington writes: "In school we have a great deal of fun and we play such games as keep-away, hop scotch and ball. There are four stories in recent issues of The Junior Farmer that I like best. They are "The Treasure Box." "The Deserted Cabin," "The Three Brothers" and "Petit's Demise." Sophia was 10 January 11, 1923.

Birthday Greetings

THURSDAY, July 5—Bernice Almlee, 10 years old; Harold Milton Dunnagan, 11; Virgil Sills, 6.

FRIDAY, July 6—Olive Peterson, 8 years old; Helen Schmauder, 11.

SATURDAY, July 7—Marjorie Cannon, 11 years old; Mildred Gerber, 11; Roy Kister, 11; Violet Sherwood, 11.

MONDAY, July 9—Thelma Bulard, 11 years old; Elva Morehouse, 10; Harriet Perkins, 11; Daniel Trupp, 10.

TUESDAY, July 10—Alma Abrahamson, 11 years old; Murray Dean Snell ,7; Daniel Trupp, 10.

WEDNESDAY, July 11—Clara Breitmeir, 10 years old; Harold Michael, 11.

BEDTIME STORIES

By THORNTON W. BURGESS.

MAKES THEMSELVES AT HOME.

Bully, the English sparrow, and Mrs. Bully soon had their home completed in the house they had stolen from Skimmer, the swallow. It was made of straw and dead grass and feathers and was big and dirty, not at all like the neat little nest that Skimmer had had in the same hollow of the old apple tree. But it seemed to suit them perfectly. Mrs. Bully fussed over it a great deal, as if it were really something very fine. If they noticed that not one of their neighbors in the old orchard ever spoke to them or even seemed to see them when they met they made no sign. It didn't seem to bother them the least little bit.

Every day they flew over to Farmer Brown's henyard to help themselves to the grain meant for the chickens, and were so bold about it that their neighbors of the old orchard didn't know what to make of it. It soon became very clear that Bully considered that he had a perfect right to go where he pleased and do what he pleased in the old orchard. For a few days after the nest was finished, he fussed around, never going very far from the house and spending most of his time quarreling with Mrs. Bully and then making up again. All of this was very unpleasant for their neighbors. They didn't seem to care the least bit in the world what their neighbors thought.

"I declare," said Goldie the oriole, "if I hadn't a young family I would move right out of the old orchard at once, much as I love it."

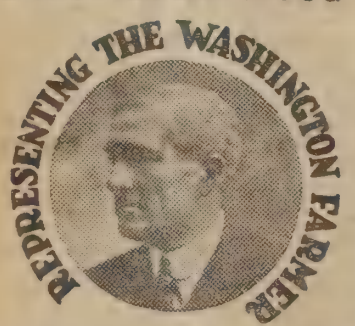
"I feel exactly the same way," said Pewee, darting into the air to catch a fly. "I never in all my life saw such disagreeable people. There isn't a moment of peace and quiet. They seem to think they own the whole orchard."

It did begin to seem so after a time. Bully began to go about all through the old orchard trying to pick a quarrel with some one. It didn't matter how much bigger than he they were. He wasn't afraid of anybody. One morning, while Welcome Robin was busily hunting for his breakfast, Bully stole up behind him and without any warning attacked him. It was all so sudden that Welcome Robin was so wholly taken by surprise that he couldn't half defend himself, and Bully actually drove him away. He did the same thing to others. He even went so far as to visit their homes and threaten to drive them out as he had driven Skimmer the swallow out of his home. He invited them to come on and fight. In fact, he seemed to be always looking for a fight just for the love of fighting.

His very boldness made the others hesitate. Most of them are peace-loving people, anyhow, and all they asked was to be let alone. But Bully wouldn't do this. It began to look very much as if he had made up his mind to have the whole of the old orchard for himself and Mrs. Bully. Everybody said so. But nobody knew what to do, and so there was great unhappiness in the old orchard.

(Copyright by J. G. Lloyd.)

Don't Be Buncoed



During recent weeks we have been warning our readers against the solicitor who shows up in every community once in a while with a bunco game of some kind. We refer especially to the unscrupulous solicitor for farm magazines. As stated in previous issues, we have on hand evidence that some of our own readers have been bilked by fellows who claim to represent The Washington Farmer when they do not. These solicitors usually offer a premium of some kind like a pencil, a map or a wallet and collect anywhere from a few cents to a few dollars for a subscription to some farm paper. What makes us especially indignant is to have some one whom we have never employed claim to represent us and get money from our readers under this misrepresentation.

In order to help our readers guard against the trickster when he appears, we have furnished our field men large round buttons bearing their pictures, real photographs of the men themselves. Around the picture are the words in gold, "Representing The Washington Farmer."

The next time any solicitor approaches you for your subscription to this magazine, if there is the slightest doubt about his honesty, demand that he show you his button. If he can not do it, he is not our representative.

ENTERTAINING STORIES, POPULAR FEATURE OF YOUR STATE FARM PAPER

A GOOD story is welcome in the home circle any time of the year; and it gets an extra welcome these weeks when the evenings are long and dark.

One of the reasons for the popularity of The Washington Farmer is the fact that you will find a chapter of a rattling good yarn in every issue. How our friends would miss it if it didn't appear!

READ NEW SERIAL WHICH STARTS THIS WEEK

In order to provide a fresh treat for our thousands of story lovers throughout Washington, we are starting publication of a new serial story, "Cattle Ranch to College," which we believe will prove exceptionally popular. Start reading it tonight. We would suggest that you attend to renewing your subscription promptly in order not to miss any part of this and scores of other worth-while things which are being prepared for forthcoming issues of your state farm magazine.

Our cooperative subscription plan has established a rock bottom subscription price. Our readers are requested to send in their own renewals and the orders of friends and neighbors as well. You get the benefit of every penny which would ordinarily go to the subscription agent.

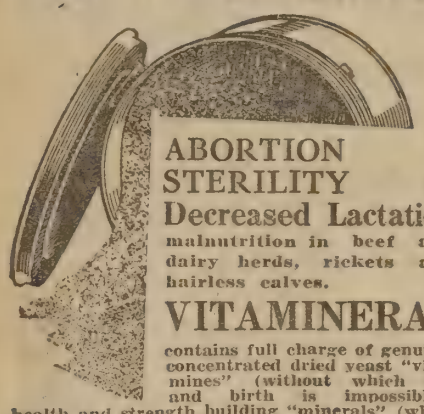
CORRECT TREATMENT FOR



ABORTION
STERILITY
Decreased Lactation
malnutrition in beef and dairy herds, rickets and hairless calves.

VITAMINERAL

contains full charge of genuine, concentrated dried yeast "vitamines" (without which life and birth is impossible); health and strength building "minerals" (which cattle do not get from ordinary natural or prepared feeds).

Vitamineral is indorsed and used by leading veterinarians, farm advisers, county agents and big breeders everywhere. Secretary Axby (Indiana State Vet. Ass'n.) has had miraculous results with VITAMINERAL in entire herds afflicted with abortion; he advises every veterinarian and breeder to use it.

Avoid dangerous, fatal contagion; make more beef; increase milk flow and butter fat; get healthy, sturdy calves.

Ask your veterinarian or write for free illustrated book "Vigorize Your Herd."

News for Breeders

FROM OLD DUTCH TYPE.

The herd of registered Holsteins on the Dr. H. K. Stockwell farm at Monroe, Snohomish county, is from the old Dutch dual purpose type cow, one of which is still in the herd. She is the foundation cow, and has 13 calves, some of which are now milking in the herd. The main characteristic of this type is that the cows are more beefy than the true dairy type, and yet the udders are well placed and they have the frames to carry them.

The herd bull, Prince Aralia De Kol Burke 4th has many heifers in the herd and none have given less than 58 pounds of milk. In fact, he has increased the production of all the heifers over their dams and he has maintained the true Holstein type.

During the last few months Dr. Stockwell has added some new blood to the herd. Tyee Patricia Fayne was recently purchased at the Dr. Heg sale. She stands fourth in the United States for milk production and eighth in butter.

Dr. Stockwell devotes most of his time to his practice at Monroe, but takes a great pleasure in looking after his herd during his spare time. In addition to milch cows he has some registered Hampshire hogs, which are being fed on pasture and soilage crops.

BOAR FOR PIG CLUB MEMBERS.

William Hawes of Withrow, Douglas county, has a registered Berkshire herd boar which is indeed a credit to any one who intends to build up a herd of this breed. His name is Matchess Laurel 3d and he comes from the F. M. Curtis farm at Fruitland, Wash. He was sired by Ames Laurel the 2d, one of the Curtis animals, and is a strictly smooth individual with a quiet disposition.

He is to be used in the neighborhood by members of the pig club who have seven Berkshire sows. All the boys expect to get some good, typy Berkshire pigs from this boar.

In addition to the herd boar Mr. Hawes has two registered sows from the Warren Gray herd of Jefferson, Ore. They are Graymere Mistress 4th and 5th and are litter mates. Both are typical Berkshire sows and promise to make the best kind of brood sows. Mr. Hawes plans on keeping a few head of sows on the place each year to handle such waste as is unavoidable around a wheat farm.

BROADMEAD HERD ON TOUR.

Seventeen head of Aberdeen Angus cattle from the Broadmead farm herd of J. A. Scollard of Chehalis have been shipped to Brandon, Manitoba, Canada, where the animals will start on the Canadian western fair show circuit. They are in charge of Thor Hedon. Following the Brandon exhibition July 2 the fairs at Calgary, Edmonton, Saskatoon and Regina, in Alberta, wil be visited; later Vancouver, B. C., which will close August 18. Thence the herd will return direct to Chehalis for the Southwest Washington fair, which will be held August 20 to 25. The later show circuit will also be made.

BUY YEARLING HOLSTEIN.

A yearling Holstein heifer of excellent breeding was added to the Holstein herd of Sommers Brothers, young but budding breeders of Little Rock, Thurston county, at the Frame sale near Chehalis, in May. Frame farm Jeannie Ormsby is a daughter of the Frame senior herd sire, he by a son of King Segis with 93 A. R. O. daughters and out of a 22-pound daughter of King Segis 10th. She is out of a 17-pound granddaughter of King of the Pontiacs, and a 20-pound daughter of Sir Johanna Ruth Rayne is her maternal granddam.

YOUNG LADY IS GUERNSEY BREEDER.

Miss Bee Morris, a young lady living near Buckley, Wash., recently purchased a 2-month-old Guernsey bull calf from W. A. Goodin of Cornelius, Ore. The calf is out of one of the good cows of the herd and by Langwater Khedive, a herd sire that is both richly bred and is siring high-class offspring. Miss Morris' father is president of the Pierce County Guernsey Cattle club and Miss Morris, who is much interested in the breed and in dairying, has a few choice cows and is building up a fine little herd.

DOUBLE LETTER RECORDS.

Recent A. R. records approved by the American Guernsey Cattle club include two double letter records made by H. B. Douglas of Ferndale, Wash.; three single and one double letter by Valley Gem farms of Arlington, Wash., and two single and one double by A. B. Flint of Beaverton, Ore.

EXCELLENT RESULTS SELLING TURKEYS

Boise, Idaho,
June 9, 1923.

Pacific Farm Trio,
Spokane, Wash.

Dear Sirs:

I have had most excellent results in selling my turkeys the past season and your paper is a fine advertiser.

Yours truly,
—Adv. MRS. C. R. LOWERY.

ROCHESTER MAN BUYS JERSEYS.

A. E. Lundeen of Rochester recently bought 16 head of Jerseys at the Ed. Cary sale in Oregon and brought them to Thurston county. He does not intend to keep the carload, but is reselling to neighbors and will dispose of about half of the lot. He has sold five head to E. E. McPherson of Rochester for $2000. Lundeen's Jersey cow, St. Mawes of Glenn Thelma, held the record for butterfat production the last year in Thurston County Cow Testing association with 571 pounds of fat.

Thousand Springs Farm

HERD SIRE.

MASTERPIECE'S ULTRA KING OF EDGEMOOR 69741.

1st prize Pacific International, 1922. His six nearest dams average 13,411.31 lbs. milk, 657.5 lbs. butter fat. Traces 19 times to May Rose 2d and is 15.22 per cent her blood.

For Sale.

BERNARD OF THOUSAND SPRINGS—Born January 21, 1923. Sire, Masterpiece's Ultra King of Edgemoor 69741. Dam, Imp. Buttercup 2d of the Queen's 104112. 1st prize, junior and grand champion at Utah state fair, 1921. 2d prize at Western Royal (Spokane), 1921. In 135 days has made 5018.9 lbs. milk, 249.44 lbs butterfat in class D.

NORMAN OF THOUSAND SPRINGS—Born January 26, 1923. Sire Masterpiece's Ultra King of Edgemoor 69741. Dam, Imp. Norma of Brechou 107365. Dam of Rosanne of Thousand Springs 121434. 2d prize Pacific International, 1922. An unusually large, vigorous calf. A real show bull.

THOUSAND SPRINGS FARM, Wendell, Idaho.

SPEED WAGON

REO ©

Canopy Express
$1375
at Lansing; add tax

For *Every* Kind of Rural Transport

FRUIT GROWER, dairy farmer, market gardener, truck farmer, stockman, poultry farmer,—food producers of every description and in every section have found the Speed Wagon the most definitely practical vehicle for economical haulage.

Designed and manufactured as a unit (not assembled) in the big Reo shops, the Speed Wagon has *balanced goodness*. Stamina for a quarter-million miles (or more) is inbuilt, and a policy of 50% oversize applied to all vital parts guarantees certainty of performance under the severest conditions of operation.

Ruggedness—fleetness—safety—roadability—ease of driving and riding—remarkable economy. All are *provable* Speed Wagon factors, and reasons why there are nearly 100,000 Speed Wagons in service.

Capacity 500 to 2500 pounds. Equipped with pneumatic cord tires and complete electrical system. Chassis, $1185 at Lansing; add tax.

THE WASHINGTON FARMER
ESTABLISHED 1894
SPOKANE. SEATTLE.

STATE COLLEGE LIBRARY

DAISY of Chicona, junior three-year-old Guernsey owned by A. L. Gile of Chinook, Wash., is a world record cow. As recently reported, she produced in a year 12,915.2 pounds of milk with a butterfat content of 747.84 pounds. The record is made in Class EE. The head of this Washington world beater is shown here.

The Fruit Crop Prospects Are Bright; What of the Market?—Page 6

President Visits Northwest

Makes Six Formal Stops in Washington, Oregon and Idaho

For the first time in the more than half a century that the territory of Alaska has been under the American flag, it is being visited by a president of the United States. After several days spent in the four Pacific northwestewn states, President Harding on Thursday, July 5, sailed from Tacoma for Alaska, where he will spend about two weeks prior to his return for the last lap of his nationwide trip.

The president first entered the Pacific northwest when he crossed the line from Utah into southern Idaho week before last and, after delivering two addresses in Idaho went to Spokane, Wash., by way of western Montana.

At Spokane, the president's message dealt primarily with reclamation, due to the intense interest in this form of development in Washington, Idaho and Oregon. He emphasized the necessity for continuous development of natural resources.

"Contemplating the certainty that another century will give us a population of approximately 300,000,000, one is forced to concede that a wise development of resources is the only policy to which we dare commit ourserves," said President Harding. "There was a time when the public domain was thought of as the treasure house of potential wealth, to be looked up against the day when we should need it. It was assumed that by looking it up we should make it surely available whenever it was required. As a matter of fact, that would prevent it from being ready when needed. Developments must be gradual; a business of the decades and the centuries. It should, indeed, be given wise direction and supervision. The opportunities of the newer country should be so administered as to insure their equitable distribution in future. We have done with the era of thoughtless and reckless exploitation of our domain."

The president urged the development of water power projects in connection with the development of irrigation projects, predicting that before many years the railroads would be operating by electricity rather than by steam power.

"Our whole view of the relation of water to western development has changed much in the last generation," he said. "Only a few years since, these waters were looked upon as potentially useful merely for irrigation and agriculture. We entered upon a great program of irrigation enterprise in that era when we had as yet but a vague notion about the dual purpose that your water resources ought to serve. But now we know that the same water can, in most cases, be utilized in both power and irrigation. Thus the great power development will mark the sites of industrial centers, adjacent to which will grow up areas of intensive agricultural production. The industrial populations will provide markets, without impossible transportation expenditures, for the products of the soil, and in time the people on the soil will afford markets for the products of industry."

Speaking directly with reference to the proposed Columbia basin irrigation project, President Harding said:

"The Columbia river basin alone, under the program of development on which your Inland Empire is bent, will be made the seat of a greater, incomparably more rich and varied empire of industry and agriculture than was the Egypt which served as granary for imperial Rome. Not once, but a hundred times over, will we reproduce here, in the plains and mountains and valleys of our west, the wealth and productivity which enabled the pharoahs to build monuments for the wonder of all times. But the monuments of our achievement will bear inscriptions telling not of the slavery and suffering of gencreations which gave their lives to perpetuate the glory of a tyrant. Our inscriptions will tell of great, free states made up of contented, cultured and Christian homes.

"I am sure you are interested in what the federal government can do to help solve the problems on which your future so largely depends. As we have gone onward in reclamation there has been impatience that we could not proceed faster; there have been disappointments in the progress of work involving intricate and diversified engineering, and hesitant

(Continued on page sixteen.)

Judges Will Have to Decide

The judges will have to decide who won the prize for submitting the best slogan to take the place of "Diversified Farming." In the voting which closed Saturday, July 7, no slogan received the necessary majority to make it the winner. In fact, no slogan received 10 per cent of the total vote cast. This means that the board of judges will have to decide who wins the prize. It is hoped that the judges will make their report in time for publication in the next issue of THE FARMER.

When the announcement is made it will cover all the prizes offered and the names of the winners. First, there will be the $10 prize offered for the best slogan. Then there will be the three prizes, one of $5 and two of $1 each, to the three persons whose ballots for the slogan that received the highest number of votes were received first in the office of THE FARMER. Watch for these announcements in an early issue.

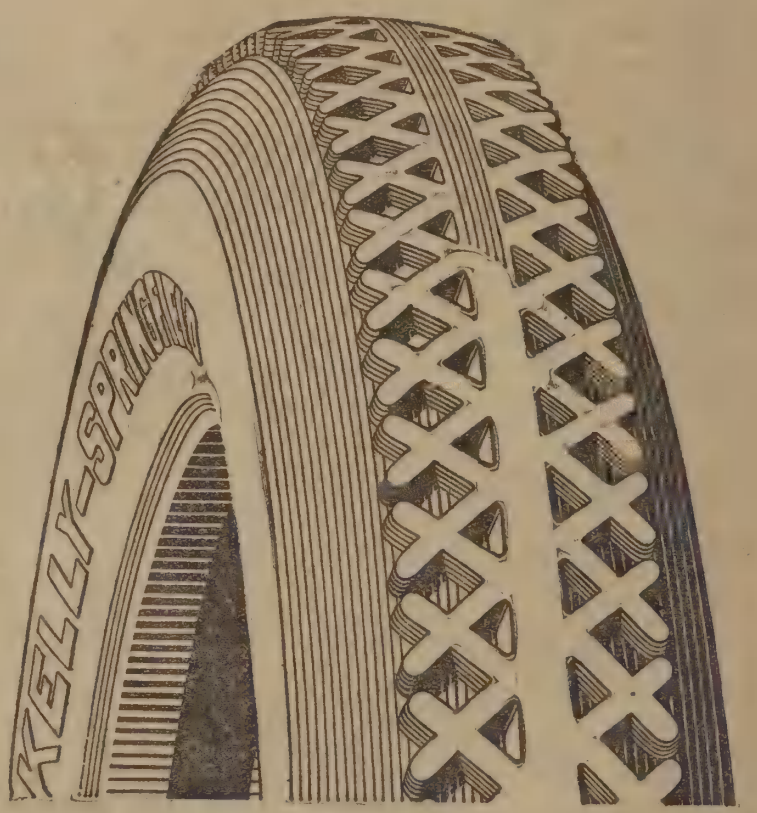
KELLY SPRINGFIELD TIRES



A pedigreed tire for farmers

There is no place on the farm for "culls." Pedigreed stock pays best.

The same is true of tools, machinery, automobiles and tires. The best is most profitable in the end.

For more than twenty-five years, Kelly-Springfield Tires have held the blue ribbon for high quality and long mileage. Their pedigree is unquestionable.

To buy inferior quality because of its lower price is sometimes a temptation, but when it comes to buying tires, there is no need to be satisfied with any but the best.

It costs no more to buy a Kelly

Wheat Is the Big Thing in the Big Bend

Experiment Station at Waterville Holds Annual Field Day to Show Farmers What It Has Learned

By RALPH ERSKINE

SUMMER FALLOW RECOMMENDATIONS FOR THE WATERVILLE DISTRICT.

Early plowing of summer fallow land gives better results than any method where the ground is worked later.

Clean summer fallow prevents excessive loss of moisture and gives a better yield of wheat.

By growing a larger percentage of winter wheat the cost of production is lowered because of a better distribution of labor.

Straw can be scattered on early plowed summer fallow without injury to the succeeding crop.

Wheat growing gets the farmer into a rut, but be sure it is the right rut. Find out the best methods and stay with them.

The new smut proof wheat is proving to that description, even though the seed be rolled in smut spores before planting.

Harrowing of winter wheat does not pay in the Big Bend section.

Best results have been obtained by not harrowing fall wheat after seeding. Better stands have been secured with a hoe drill which leaves the seed covered in a clean furrow.

The smut proof oats has proven to be the best for the Waterville section.

The Big Bend farmer is always happiest when he is talking wheat. It is natural that he should be, since wheat is the main crop in almost every part of this district that is under cultivation. There were between 800 and 1000 wheat growers who attended the fourth annual field day at the branch experiment station at Waterville June 30, and they talked wheat all day.

It has been the custom at this and other branch stations to hold a field day each year when every one may have an opportunity to see the results of the experiments that are being carried out and to hear the explanation of the methods that are in use. To say that the experiments carried on each year are getting results is putting it mildly because one can see these results in every part of the county. Practically all of the farmers in the Waterville district have adopted the growing of winter wheat, one of the methods advocated at the station, and many other practices have been taken up by wheat growers in other counties as well as in Douglas county.

The event was an all-day affair. The main part of the program was held at the county fairgrounds at 10:30. Edward C. Johnson, dean and director of the experiment station of the state college, was the first speaker and he outlined the work at the station and told of its connection with the home station at Pullman.

"While there is much talk about better marketing for our products, we must not forget that production is basic and that it is our duty to produce the best yields we can," said Dean Johnson. "In times when prices are not the best we are properly anxious to produce our crops at the lowest possible cost. Therefore, cost of production is one of the problems on which the experiment stations are working so that growers may adopt the most economical methods and not have to experiment on their own individual farms."

There are few growers who have seen the work at the Waterville station but realize that the expense of maintaining it is more than repaid in better production and more economy to the farms where the facts which it discovers are applied.

Many questions have arisen among farmers relating to the various practices recommended and F. J. Sievers, head of the department of soils at the college, was one of the speakers at the Waterville station to answer many of them.

"Wheat is the one crop upon which the farmer of the Big Bend district must depend and always will depend," said Mr. Sievers. "There are some that believe the growing of wheat is getting the farmer into a rut, but there are cases when ruts are the right thing. It is all right to get into a rut, provided you are in the right rut. The wheat farmers must learn which are the best methods to use and then follow them out.

"There should be no argument between the experiment station and the farmer. The station is here to learn the facts and on the basis of them show the farmer why he should do certain things and not simply how to do them. That part of the game must be worked out by the man himself according to his local conditions. The average farmer is not equipped to find out the reason why certain practices are better than others. The experiment station can better do this work.

"There are many problems that are yet to be worked out by the wheat farmer and many of them can only be done in a general way at the experimental stations. For instance, how is the wheat grower going to maintain the fertility of the soils that are fast being depleted by our one-crop method? It is certain that alfalfa and clover can not be profitably grown on a very extensive scale in the Big Bend.

"It is very essential, however, that more straw be put back into the soil than has been done in the past, provided it can be turned under early enough in the spring to allow it to decay during the summer fallow year. Where straw is applied on late plowed land it is liable to remain all summer in the dry state and then cause a decreased yield of the succeeding crop."

After the noon lunch, which was served by the Waterville Commercial club, the crowd listened to addresses by State Senator C. E. Meyers of Davenport and Judge Sam B. Hill of Waterville. Judge Hill has never missed a field day since the first one put on at the station four years ago. Mr. Meyers has always been directly interested in farming and operates farms in Lincoln and Douglas counties.

The second part of the day's program came in the afternoon, when C. E. Hill, superintendent of the station, took the people from outside the county and went the rounds of the experimental plots at the station farm. H. F. Zentner of Waterville, the county agent, took those from Douglas county, thus giving each group a better opportunity to see the results and to hear the explanations.

The trip was through the varietal test plots, on to the tillage trials, then to the time-of-seeding rows and back to more of the varietal plots. There were a number of farmers' wives present, all of whom braved the hot sun and dust to see the results that were vitally interesting to them. What they saw and heard can best be left to Superintendent Hill for explanation.

Gamble in Farm Methods.

"Dry farming under a clean summer fallow system on the deep soils in the Big Bend area is no more of a gamble than farming in any other section, but it is probably true that farmers gamble more in their farming methods in this section than in other sections," said Mr. Hill. "Experimental results indicate that no method of tillage will give the best results every year because of varying climatic conditions. In 1917 the best yields were obtained from the dryest plowing, but the farmer can not foretell conditions when he starts field work in the spring and should play safe by following a system of farming that will give the most profitable yields over a period of years.

These groups of farmers are learning what the experiments in wheat growing at Waterville station have revealed.

"Growing two or more crops of wheat in succession without summer fallowing is generally poor economy, although large yields are sometimes obtained under the most favorable conditions. This practice has brought grief to many farmers in the Big Bend during the last five years and should be discouraged. A large yield was obtained from a "stubble in" crop in 1921, but what was gained was more than lost the next year when it was again necessary to "stubble in" to balance the farming operations.

Grow More Winter Wheat.

"In order to be assured of a maximum yield each year, the farmers in this section have come to the growing of winter wheat on clean summer fallow. This has given higher average yields than spring wheat and because of better distribution of labor it is grown at a lower cost per bushel. The proof that it is a more profitable practice is evident from the large percentage of winter wheat that is now grown in Douglas county, where 10 years ago there was mostly spring grain. The most important factor in the growing of winter wheat is to maintain a bare surface of the summer fallow. The ground must be kept free from all growth of volunteer wheat and weeds during the active growing season. The cultural methods by which this is accomplished are of minor importance from the standpoint of resultant yields and will vary in different sections. There will often be a wide variance on the same farm in different years, according to the conditions, but the aim should be to keep the ground clean at the lowest possible cost and to prepare a firm and level seed bed for winter wheat.

"Early plowing has given the best results at all the experiment stations under soil condttions varying from light blow land to soils of the heavier type. Land that can not be plowed in the spring before volunteer wheat and weeds have made an appreciable amount of growth, should be disked early in the spring to kill all growth and conserve the moisture and available plant food until the time of plowing. When the ground is disked the plowing should be finished before the second crop of weeds or volunteer wheat has become large enough to draw seriously on the soil moisture and plant food or a second disking will be necessary."

Comparing early spring plowing with disking and delayed plowing, Mr. Hill pointed out that both methods give maximum yields, but that the first method was the cheaper, as it costs more to disk the ground than it does to plow early and give the land the extra cultivation that may be necessary after plowing, since much more land can be tilled in a day with a harrow or weeder than with a disc. This tillage after plowing prepares the ideal eed bed for winter wheat, while the late plowed ground is often too loose for seeding.

The plats on the station farm that were plowed in the fall and followed by clean summer fallow the next year showed good yields and the practice is recommended for the section with farmers who have more land to be summer fallowed than can be plowed early in the spring. By a combination of these methods, fall plowing and disking the land that must be plowed as late as May 1, it is possible for the farmer to do more work himself and obtain the maximum yields at the lowest cost of production.

Early Disking Pays.

The advantages of early disking at Waterville to hold the moisture for delayed plowing are told by the following figures, taken from the station records:

Land that was disked April 15 and plowed May 10 yielded grain at the rate of 35.9 bushels to the acre and hay at the rate of 5510 pounds. A similar plot that was not disked, but which was plowed May 10, yielded at the rate of 30.1 bushels and 4280 pounds of hay. Another plot disked April 15 and plowed June 20 yielded at the rate of 33.4 bushels and 5150 pounds of hay, while a similar plot not disked, but plowed June 20, yielded at the rate of only 20.8 bushels of grain and 2790 pounds of hay.

All plats were given clean tillage after plowing until the time of seeding and were sown on the same day. It will be seen that the 15 bushel variance is due entirely to early disking before early plowing.

Deep plowing, over eight inches, has not been found necessary to get the best yields, according to experimental results, and in dry years slightly higher yields have been obtained from shallow plowing, as the ground dries out almost as deep as it is plowed. The time of plowing on ground that has not been disked is more important than the depth of plowing and shallow plowing can be done faster with the same horsepower, while additional horsepower increases the cost of plowing.

Packing after plowing has shown a slight increase in yield some seasons, but not sufficient to pay for the extra cost when the work is done with horse, but if the farmer delayed plowing to pack his ground the yield from the entire field would be reduced much more by the later plowing than it would be increased by the packing. Some tractor farmers figure that the extra cost of pulling a packer behind a plow is more than saved in the next cultivation because of lighter draught of the tractor in running over the firm ground and less wear on the machinery.

Must Control Weeds.

Cultivation after plowing should be efficient to control weed growth and to prepared a firm and level seed bed for winter wheat and will vary in different years, according to the time of plowing and the rainfall after plowing. The spike-tooth harrow was recommended for the first cultivation on soils that do not blow, as the largest area can be tilled per day with this implement. The spring-tooth harrow was recommended for blow lands. After the weeds get a hold on firm ground so that they can not be controlled with a harrow a rod weeder has been found best. This tool, it was stated, firms the ground below the surface and leaves a cloddy mulch.

Plans for making a double-rod weeder in general use can be had by application to the Waterville station, so that a weeder of this type can be made at home. It has been estimated that more than 100 of these weeders have been made in Douglas county following the first demonstration of the weeder on the Waterville station three years ago. The acme or knife harrow was not recommended, as it often makes the mulch too fine and dusty and is not as effective as a rod weeder in controlling weed growth.

Regarding the burning of the stubble, Mr. Hill said that his experiments were not far enough along to make a definite recommendation, but that this practice was often necessary when fields were harvested with "combines," leaving straw rows and a very heavy stubble which caused trouble in plowing and subsequent tillage operations. He knew of no experimental results to show that this practice reduces yields, but that the stubble should not be burned in sections where it is needed to keep the soil from drifting.

The best yields are usually obtained from wheat that shows above ground in September, according to experiments at the station and from general practice around Waterville. When it is not possible to obtain a stand until late in October the rate of seeding should be increased and every precaution should be taken to prevent the seed from being sown too deeply. A hoe type of drill which drops the seed in clean furrows was considered preferable to a single-disk drill, which throws the soil too much, especially on hillsides. In using a hoe drill, the ground should be clean, so that it will not be necessary to zigzag the hoes, as the rear hoes often cover the seed from the front hoes too deeply.

An eight-inch drill is preferred to one with the hoes or disks spaced closer, as it is possible to plant the seed in deeper furrows, which give the plants better protection through the winter and with more plants per drill furrow in sowing at the same rate per acre they are better able to push through a crusted ground. With clean furrows the ground will crack in the furrows and if the rain comes too late for the plants to get up in the fall they will emerge in the spring through the cracks, providing the seed is not sown too deeply or injured by wet treatments. One of the plants sown November 7 on a north slope was shown, and excellent stands were obtained from the grain that emerged through the cracks this spring.

Dry Treatment of Seed.

The new dry method of treating wheat with two ounces of copper carbonate per bushel of seed was compared with the old treatment and other new methods and as yet no treatment has surpassed it. This method has shown satisfactory control of smut without causing any injury to the germination of the seed. The importance of using a good grade of powder and thoroughly coating the seed was emphasized.

"I do not know of any place where harrowing winter wheat has paid except on

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Wool Growers and the Forest Service

"Washington wool growers have always maintained a strong, well officered association and have done good work," testifies Will C. Barnes, assistant forester, of Washington, D. C. "They have cooperated with the forest service to the fullest extent, and looking back over the many years' relations we have had I do not recall anything which has arisen between the service and the association in which they have not given us credit for trying to handle matters on the forest, in which they were interested, in a fair and just manner. Even in the early days when few of the associations were our friends, the Washington wool growers maintained a friendly attitude. The service which they are rendering their members through carrying out such plans and policies as are mentioned in their circular indicates that members of the association are getting value received from their fees. Under such circumstances any stockmen's association is bound to grow in usefulness and prosper."

Every sheepman in the state should feel proud of his association's standing with the forest department, as indicated by this extremely complimentary letter, thinks Secretary J. F. Sears, and he is right. Every sheepman, too, should be taking advantage of the "plans and policies" referred to. If you are not, you are missing something which Secretary Sears, whose address is Yakima, will be delighted to tell you about.

A Great Team

It is not uncommon for two lawyers of different qualifications to form a partnership. The one is a first-class office man; the other is a good speaker. The one knows how to keep things straight and in order, how to find the provisions of the law in the law books, decisions of the courts on particular issues and so on; the other knows how to present the case in open court with logic and convincing argument. The man in the office often does the hardest work; the orator or trial lawyer gets the plaudits of the public. Each is vitally essential to the success of the firm.

This case is not entirely different from that of the experiment stations and the extension services of the agricultural colleges. The scientists in the laboratories and in the fields of the college farm work diligently and long over problems that confront them. They try this and they try that, hoping that they may prove some specific thing that will be of value to mankind. They spend hours and days and months—even years—seeking the discovery of new facts, and they find them. They find out how to produce a smut resistant variety of wheat, for instance; how to combat a pest that threatens the orchard; how to win over an animal disease that threatens an important industry, and many other things of equal importance.

Then comes the extension service, carrying the message to the people at large. This service is organized thoroughly with a view to the maximum efficiency of operation. Its men are trained in both knowledge and the skill of transmitting it to others. They go on schedule throughout the state preaching the gospel—the gospel of facts that the experiment station workers have discovered through long labors. Sometimes we sort of forget the fellows there at the home station that are silently working out these problems and give all the glory to the fellows who come out into the field and tell us about the discoveries.

Well, just as the office lawyer and the trial lawyer is each vital to the success of the law firm, so is the experiment station and the extension service each vital to the success of the college of agriculture. They are a great team when properly operating. They do a valuable work. We seldom realize how important it is to us, even though we be practicing the gospel they teach in our orchards and our fields and our pastures.

Ayrshire Records in Washington

A pointed illustration of the value to the breeders of a particular state or district of a great breeding establishment like that formerly conducted by J. W. Clise at Redmond, Wash., may be drawn from a recent compilation by the Ayrshire Digest of advanced registry facts regarding the breed of which it is the mouthpiece.

Out of a total of 212 leading records of the breed, based on production equivalent to 15,000 pounds of milk and 600 pounds of butterfat in one year, 23, or approximately 10 per cent, were made in the Pacific northwest, or, to be exact, in Washington and Oregon. But of the 23, 21 were made in Washington, and of the 21, 18 were made by J. W. Clise of Redmond. Looking still further, it will be seen that 14 of the 18 were made on animals obviously of Clise breeding. Thirteen others made all over the United States fall into the same category, so that all told nearly 15 per cent of all the leading animals of the breed bear the made-in-Washington sign of "Willowmoor." What this is worth to other men who are striving to advance the prestige of the Ayrshire in this section can not be computed in dollars and cents, but it certainly is true, in the words of W. A. Kyle, advanced registry superintendent, that "the progress of the breed is measured by the increase in production of advanced registry records each year," and that "the forward movement and increased interest in the Ayrshire breed can in great measure be attributed to the progressiveness of the owners mentiond in the list."

The loss of such a plant as Willowmoor is keenly felt, but that there are others coming along to take its place is indicated by the remarkable production records being made by the younger animals, particularly in several northwest herds. For example, E. W. Van Tassell of Wenatchee, Wash., who has a 4-year-old in the list of 212 leaders, bred and developed the animal which holds the world record among junior 3-year-olds in the roll of honor, and he owns another which is sixth in that class and sixth also among junior 4-year-olds of the advanced registry. He had eight animals, three of them class leaders, all of them of his own breeding, and none of them over four and one-half years old, in the latest monthly 50-pound list, and his Wenatchee farm herd is constantly in the limelight, both for its production records and its show ring winnings. It is by way of becoming as potent a factor in advancing the interests of the Ayrshire as Willowmoor ever was.

The state colleges, too, are doing excellent work with this breed. At Pullman, two records just completed put Willowmoor Ila and Chinook Peter Pan Bessie in the honor list of 212, and the latter animal, a senior 4-year-old, is of the college's own breeding. Seldom a month goes by without a Washington State college Ayrshire in the 50-pound list, and this is true also of Oregon Agricultural college, which too has one of its own youngsters, Oregon Robinetta M, in the list of 212. Lathrop Brothers of Grants Pass, Ore., is the fourth northwest name to be so honored, and there will be others when the list is compiled another year.

Washington State Gleanings

Farmers in Pend Oreille county are putting out poison mash to kill grasshoppers, which are found in large numbers in parts of the county. County Agent E. E. Hupp is directing the work.

INVESTIGATE PINE BEETLE.

E. J. Jaenicke, forest examiner in charge of insect work for the federal forest service, will spend two months surveying the pine beetle situation in the Chelan national forest in Washington.

POTATO BUGS REPORTED.

Potato bugs are reported to be doing damage in the Burbank district and growers are being given advice on eradication by A. W. Kasten, Walla Walla county agent. Not only are potato vines infested, but weeds near potatoes are covered with the bugs.

HARRAH HAY GROWERS MEET.

Hay growers of the Harrah district, meeting June 18, expressed themselves as being for the proposed hay growers' association. They favored the idea of having a 75 per cent minimum, that is, that the organization should not function until 75 per cent of the product is signed up.

ORGANIZE NEW FARM BUREAU.

Five community farm bureaus have been organized in Stevens county and 50 new members signed three-year contracts for membership. The work is progressing in an excellent manner, according to W. H. Tally, secretary of the state organization, and D. H. Ulrich of Colville, manager of the county bureau.

PUPILS DRING MUCH MILK.

Annual report of the milk distribution in the Yakima schools was made at a recent meeting of Secretary B. F. Kunder, showing a total consumption of 114,417 half pints. Of this number 88,834 were sold and 25,643 were given away. The milk was purchased at a cost of $3387.71 and that sold brought in $2576.24.

APPOINT NEW HORTICULTURIST.

R. P. Bean, superintendent of the Washington irrigation experimental station at Prosser, has announced the appointment of Thorland R. Hall as horticulturist for the station. Mr. Hall graduated at Oregon Agricultural college and has just completed post-graduate work at Ames, Iowa.

INDIANS CATCH SALMON.

The 1923 salmon fishing season closed June 14 for the Quinault Indians with a total catch of 150,000 fish, says an Aberdeen repoft. This is slightly better than half of last year's catch, when 266,000 fish were caught. This season's catch will pack 20,000 cases. The catch will net the 65 Indians, who had fishing rights on the river, a total of $70,000.

STRAWBERRY PACK LARGE.

Thirty thousand cases of strawberries have been packed so far this season by the cannery of the Oregon Packing company at Vancouver, which expects to pack more fruit this year than ever before in its history. The strawberry season has been unexpectedly long and the cherry and raspberry crops will keep the cannery working to capacity for the next several weeks.

DEMAND FOR FEEDER LAMBS.

Applications for more than 20,000 head of feeder lambs have been made to the Woolgrowers' Service corporation, which is just launching its campaign to develop in the Yakima valley one of the great winter feeding grounds for lambs. J. F. Sears, general manager, hopes to double this number by July 15, after which time he will not agree to consider further orders for the coming season.

PIONEER PICNIC HELD.

At the annual meeting of the Stevens County Pioneer association at Chewelah recently the following officers were elected for the coming year: President, John Rickey, Colville; vice president, Frank W. Dickey, Chewelah; secretary, Mrs. Clara Shaver, Colville.

There were about 400 people in attendance and an enjoyable time was spent by all. The next meeting will be held at Colville.

HORTICULTURISTS TO MEET.

At a conference at Walla Walla between C. L. Robinson, state supervisor of horticulture, who is secretary, Colonel Paul H. Weyrauch, who is president, and J. L. Dumas of Dayton, who is chairman of the committee on arrangements, the dates of the summer session of the state horticultural association were set for August 17 and 18 in Walla Walla, according to announcement of Mr. Robinson. A large attendance of fruit men from all over the state is expected.

PIONEERS FORM ASSOCIATION.

The Grandview Pioneer association has been organized, with the following officers: President, H. Murray; vice president, John V. Hartman; secretary-treasurer, J. M. Fleming; executive committee, Mrs. A. B. Marshall, Mrs. W. W. Wentch, J. H. Stuckrath, Mrs. J. M. Fleming, C. V. Tharp.

Citizens who have lived at Grandview 12 or more years are eligible to membership. The association will hold a picnic July 10.

CHERRIES BRING PROFIT.

Some excellent yields of cherries have been harvested in the Ziliah district, according to C. H. Furman. A tree in the Rudolph Smith orchard produced 400 pounds of Bing cherries which sold at 10 cents a pound. The fruit on the tree thus brought $40.

The fruit on 14 cherry trees in the same orchard brought $309 three years ago. The fruit on a Royal Ann tree in another orchard in the Zillah district brought $36 this year, the cherries selling at 9 cents a pound.

CODLING MOTHS LOSING.

The codling moths are on the losing side of the fight being waged against them by the horticultural office and the county agents of the Yakima valley, according to reports from the orchards. The horticulture office, cooperating with the county agents, waged an intensive fight against the moth this season, and, armed with additional data on the habits of the moth from their own observations and the investigation of E. J. Newcomer at Yakima, have been making great headway in the fight.

FARM BUSINESS AND MARKETS OUTLOOK

THE specialists who forecast business trends are still divided in their opinions as to the outlook.

The Harvard committee on economic research is optimistic. It declares that "the business situation remains sound; and we forecast firm or rising money rates for the remainder of 1923. Nowhere is there evidence of a reversal in the trend of the business cycle. After all, the important consideration during the prosperity phase of the cycle is not the short time movement of commodity prices; it is the movement of interest rates. The relatively easy condition of the money market sustains our forecast of good business in 1923."

The Brookmire agency says that a high rate of business activity can be expected, at least, up until the end of the present year. It points out that basic conditions indicate a depression early next year, but that some of them are already improving again, so that there is now a strong probability that a favorable forecast will be justified a little later on and that the business reaction will not occur.

Moody suggestions that plans for the future "should be formulated on the basis of a trade reaction beginning before the end of the present year and running far into next year," but declares that nothing very serious is indicated.

Babson states that "events of the last two weeks have shaken our faith" and he now forecasts" a sagging tendency in the average of raw material prices in the next few months" and a gradual decline in business activity which will be reflected in a period of low prices for industrial stocks, which have already dropped about 15 points from the high point reached in March.

Upon certain points opinions are fairly well agreed:

1. That the business reaction, if it comes in the next six or eight months, will be much less severe than in 1920 and 1921.

2. That retail buying of goods will be maintained at a high rate through the rest of 1923, which implies an excellent consumptive demand for such farm products as live stock and dairy and poultry products. While the demand for cotton and wool usually declines sharply during business depressions, these commodities have the advantage of present scarcity.

3. That one reason for the termination of the prosperity phase of the present cycle is the fact that agriculture has not prospered proportionately and that prices of farm products being already low, may not suffer quite so much as prices of finished products in which present high labor costs are so important a factor.

Cattle Breaks and Recovers.

Cattle prices received a severe jolt last week when arrivals at the leading markets increased about 8 per cent and accumulation of dressed beef as a result of the recent hot spell made slaughterers indifferent. All kinds of steers, cows and heifers declined in value, with losses of 75 cents to $1 on half-finished yearlings at Chicago. Producers promptly applied the rest cure, however, and with cooler weather to aid dressed beef trade, about half of the loss was recovered. Long-fed, mature steers rose to the high point of the season once more.

During the first half of July market arrivals are unlikely to increase much and prices, even on grassy kinds, may work up again. But, before the month is over, Kansas and Oklahoma grassers will be filling southern markets, and the vanguard of western rangers will appear at northern points. These additions to present sources of supply will tax beef trade channels.

Stocker and feeder demand subsided last week, as farmers are extremely busy, old corn is high priced, the new crop is not yet assured and the probable supply of late summer and fall forage is uncertain. July always is a dull month in this division, but if the corn outlook is favorable, a broad demand can be expected a month hence.

Lighter Hog Receipts Are Due.

The bulge in hog prices a week ago started another run, forcibly demonstrating that the crop is not all in yet. Prices dropped back almost to the low point of the season before reaching solid footing again.

If receipts of hogs are going to show the usual summer decline they should begin to do so in the next 30 days, according to past records. Such a letup in the run would permit another bulge and a return to $8 for choice light hogs at Chicago might easily take place. A big summer run of half-fat sows and light hogs lacking finish is probable and it is difficult to see a better future for them.

The halt in the decline of lamb prices last week was due to a lighter supply, as the dressed lamb and mutton market was sharply lower. The run from Tennessee is subsiding and shipments from Kentucky are moderate, but Virginia is still sending a large quota to Jersey City and rangers are becoming more numerous at Omaha with reports of increased loadings in Idaho and Washington. Prices are apt to work lower as the range movement rises to flood tide.

Opening sales of wool at London auction, which began last week, were at a decline of only 5 to 7 1-2 per cent, which was better than generally expected, and part of this decline has been recovered since. As a result our seaboard markets have shown a tendency to rise more nearly to the world level. The woolen goods market is in a fairly healthy state and consumption of wool by mills continues at a high rate. In the west a deadlock exists, as most growers refuse to sell at prices which show a decline of 5 to 10 per cent from the peak. In the bright wool state around 46 to 50 cents is the ruling price.

Wheat Market Marking Time.

Wheat prices have declined to the lowest level of the season and almost to the lowest point since prewar days.

Crop prospects have improved recently and unofficial estimates now place the yield about 20,000,000 bushels higher than a month ago. Rains in the northwest have removed fear of drought for a while, although irreparable damage was done in parts of North Dakota early in June.

Canada continues to report prospects of a crop nearly as large as last year, the Australian drought has been broken and European weather has become favorable again.

Broomhall estimates that exporting countries will have an exportable surplus of 768,000,000 bushels, while importers' needs will not exceed 656,000,000 bushels, suggesting a fair factor of safety in favor of the buyer if these conditions are maintained. Since the importing countries of Europe are still in financial straits, they will buy as sparingly as possible and are expected to do less buying ahead than usual during our heavy marketing season.

Cash Grain Markets.

Cash grain prices on July 3 were:

CHICAGO—Wheat—No. 2 hard, $1.05 1-4; No. 1 northern, $1.04 1-2; No. 2 northern, $1.04 1-4; dark northern $1.04 1-2@1.11.

Corn—No. 2 mixed, 80@80 1-2c; No. 1 yellow, 82@82 1-2c; No. 2 yellow, 82@82 3-4c; No. 1 white, 81@81 1-4c; No. 2 white, 81 1-4@81 1-2c; No. 3 white, 80 3-4c.

Oats—No. 2 white, 42 1-4@43 1-4c; No. 3 white, 40 1-2@44c; No. 4 white, 38c.

Rye—No. 2, 64 1-2c.

Barley—61@66c.

Flax—$2.70.

Clover Seed Prospects Improve.

Prospects for the new clover seed crop have improved recently as a result of favorable weather and prices declined again last week. Crops news is the chief market influence at present. Timothy seed prices show little change. Blue grass and red top seed crops are smaller than last year.

CHICAGO, per 100 pounds—Clover, $15@17.50; timothy, $5@6.50.

TOLEDO, per bushel—Prime red clover, $10.05; prime alsike, $10.25; prime timothy, $3.25.

Country demand for byproduct feeds is slow and prices on most kinds remain easy. The arrival of new wheat is a weakening factor in the bran and middlings market in the southwest.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $22 50; standard middlings, $27.50; flour middlings, $32; cottonseed meal, 36 per cent, $40.25; 43 per cent, $45.50; hominy feed, $32; gluten feed, $37.15; old process oil meal, $39; tankage, $57.

With new crop alfalfa and prairie hay coming on the markets, prices are adjusting to a lower level. Some new clover is arriving also. Total receipts are not large. Demand for timothy has declined and prices are weaker on some markets.

Prices per ton in carlots: Chicago—Choice timothy, $24@25; No. 1, $23@24; No. 2, $19@22; No. 1 light clover mixed, $20@22; No. 1 clover, $16@17; No. 1 clover mixed, $16@17; No. 1 and choice alfalfa, $16@25; upland prairie, $17@20; midland prairie, $15@16; rye straw, $12@13; oat and wheat straw, $11@12.

Egg Pack to Make New Record.

Storage stocks of eggs at the four leading markets continued to increase last week in excess over the same period a year ago, so that it is believed a surplus of holdings in the United States of 200,000 cases will appear July 1, as compared with the same date last year. Receipts during June were heavier than in 1922, but lack of broad consumptive demand sent relatively larger numbers into storage than the increase in receipts would suggest.

Peak of Butter Production.

Storing demand for butter bearing the Junt mark maintained prices on high scores last week. The movement into storage was heavier compared with both the preceding week and the corresponding week a year ago. Receipts of butter at the four leading markets during the month were larger than during the same period last year, but consumptive demand was so broad that the net addition to storage stocks at those markets was about 8 per cent less than in June, 1922.

That the peak of production arrived during the week was the opinion of the trade. The report of the American Creamery Butter Manufacturers' association showed a small increase in production compared with the week previous, but this increase is expected to be eliminated in the next report. Last year the peak was reached earlier in June, after which the market dropped rapidly. The decrease this year is expected to be more gradual by those who look for a cool summer, with a resultant effect on quality and receipts.

Cheese Prices Lower.

The break in country cheese markets early last week was reflected in lowered asking prices at distributing points. Many still believe cheese too high and buying is chiefly for immediate requirements only. Speculative operators have been slow to start storage operations this year because of the high prices of cheese in relation to butter and appear to be waiting for prices to work down to a lower level before taking hold in any large way. A little storing is going on, chiefly on dealers account.

Fruits and Vegetables.

The shortage in shipments of new potatoes is still largely offset by a heavy movement from the old crop, so that the total market supply is large. Prices have declined further, with Carolina Cobblers quoted at $4.50 to $5.50 per barrel in leading cities. Southern Bliss Triumphs are quoted at $2 and $3 per 100 pounds in midwestern cities

Total shipments of peaches from producing sections to June 25 were 1417 cars, compared with 2788 cars to the same date last year.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., July 7.—Cattle—Choice steers, $7.75@8.35; medium to good steers, $7@7.75; fair to medium steers, $6@7; common to fair steers, $5@6; choice heifers, $5.00@5.50; medium to good cows, heifers, $4.50@5; fair to medium cows, heifers, $3.50@4.50; common cows, $2.50@3.50; canners, $1.50@2.50; bulls, $3@4.50; choice dairy calves, $7.50@8; prime light calves, $7.50@8; medium light calves, $7@7.50; heavy calves, $4@7.

Hogs—Prime light, $8.25@8.50; smooth heavy, 230 to 300 lbs., $7.50@8; do 300 lbs. and up, $7@7.50; rough heavy, $4.50@6; fat pigs, $8@8.50; feeder pigs, $8@8.50; stags, subject to dockage, $2.50@4.

Sheep—Choice valley lambs, $10@10.50; medium valley lambs, $9.50@10; common valley lambs, $7.50@9; cull lamps, $6@7.50; light yearlings, $7.50@8; heavy yearlings, $6@6.50; light wethers, $6@6.50; heavy wethers, $5.50@6; ewes, $1.50@5.50.

SPOKANE, July 7.—Cattle—Prime steers, $7@7.75; good to choice steers, $6.50@7; medium to good steers, $6@6.50; fair to medium steers, $5.25@6; common to fair steers, $4.50@5.25; choice cows and heifers, $6@6.50; good to choice cows, heifers, $5.50@6; medium to good cows, heifers, $4.50@5.25; fair to medium cows, heifers, $3.50@4.50; canners, $2@2.75; bulls, $3@4; light veal calves, $7@8.50; heavy veal calves, $6@7; stockers and feeders, $4@5.50.

Hogs—Prime mixed, $7.75@8.25; medium, $7.25@7.75; heavies, $4.75@6.75 fat pigs, $7.50@7.75; stockers and feeders, $7@7.50.

Sheep—Prime lambs, $11@12; fair to medium, $10@11; yearlings, $8@9; wethers, $6.50@8; mutton ewes, $3.50@6.

The Grain Market.

PORTLAND, Ore., July 7.—Wheat, soft white, $1.09; western white, $1.08; northern spring, $1.04; hard winter, $1.03; western red, $1.

SEATTLE, July 7.—Kheat, hard white and Big Bend Bluestem $1.10; soft and western white, $1.08; hard and soft red winter, northern spring and western red, $1.05

LEWISTON, July 7.—Red, 87c; white No. 1, 93c.

WALLA WALLA, July 7.—Bluestem, Bart, 92c; Club, 89c; Turkey red, 82c.

ODESSA, July 7.—New wheat. Bluestem and Bart, 88c; Turkey red and Marquis, 83c; Forty-Fold, 81c; Jones Fife, 78c.

DAVENPORT, July 7.—Bluestem, 89c; Gold Coin, 86c; club, 86c; dark northern spring, 86c; northern spring, 83c.

Hay and Feed Grain.

PORTLAND, Ore., July 7.—MILLFEED—City delivery prices: Millrun, $34 per ton; middlings, $46; scratch feed, $50; rolled barley, $37; cracked corn, $49; rolled oats, $46.

HAY—Buying prices, f. o. b. Portland: Alfalfa, $16 ton; cheat, $22; valley timothy, $26; eastern Oregon timothy, $27; clover, $16; oats and vetch, $24.

SPOKANE, July 7.—WHEAT—Feed wheat, $44 ton; OATS, $42 per ton; rolled, $44; CORN, $44 per ton; cracked corn, $46 per ton. BARLEY, $40 per ton; rolled $42; BRAN, $31 ton; BRAN AND SHORTS, $32 ton; SHORTS, $34 ton.

ALFALFA, $24 ton; timothy, $28 ton; mixed hay, $24 ton.

General Produce.

PORTLAND, Ore., July 7.—BUTTER—Cubes, extras, 39@40c lb.; prints, parchment wrapped, box lots, 42c; cartons, 43c. Butterfat, 41c delivered Portland, 38@39c station buying price.

EGGS—Buying price: White hennery stand-

Yakima Fruit Prospects Are Bright

Good Yields and Good Quality Assured; Market Is the Doubtful Element

By RALPH ERSKINE

There is a better outlook for a bumper fruit crop in the Yakima valley this year than there has been for several years. From all indications the crop will exceed previous records. The early rains were abundant and the weather favorable for the growth of both early and late fruit crops.

It is the custom each year for many of the warehouse men and other authorities to make a general survey and estimate what the tonnage will be for the entire season. This year there were six estimates made, among which were those of W. L. Close, district horticultural inspector, and H. A. Glen of the Northern Pacific railway and other men who are familiar with the crops.

A summary was made from a number of individual estimates, the conclusions being that the 1923 crop will run from 18,500 cars to 22,000 cars.

The highest record known in the Yakima valley for fruit shipments was 17,500 cars, which was produced in 1921. This shows that it is not unreasonable to estimate the 1923 crop 1500 cars better than the 1921 crop, which would put this year's estimate at 19,200 at the lowest.

The above estimate includes 13,500 carloads of apples, which is the average of all the figures obtained. They ranged from 13,500 to 1600 cars. The record production of apples was also in 1921, when 12,000 cars were shipped. The same year there were 1000 carloads that went to by-product plants. There have been many acres of apples that have come into bearing since that time, a large part of which increase can be shown in the Tieton project, which is now one of the best producing districts of the valley. Even last year, when the production was far from the maximum, there were 10,000 cars of apples shipped out of the Yakima valley.

Pear Prospects.

As for the prospective pear crop, growers all say that it has never been better. There have been no pears taken out lately and many young orchards have come to maturity. The estimate runs from 2200 to 2750 cars and from all appearances the general average of 2350 cars is conservative. The record for pears is 2400 cars, which was made in 1920. In fact, the growers look for a record crop of pears this year and there seems no reason why all other production figures are not surpassed.

Peaches should come back to the record production of 2200 cars which was made in 1919 just before the heavy damage from freezing weather took place. The crops have been light ever since that year, but the damaged trees have been pruned back and are again in full head and promise a heavy production. Experts put the figure at from 1200 to 1500 cars. The general average of 1350 is considered almost too conservative.

The estimate for the strawberry crop was less than half of the actual crop. Climatic conditions this year could not have been better, according to many of the producers. There were just enough rains to bring the plants along during the early part of the season and the weather later on was mild enough to ripen the fruit admirably. There were a total of 55,000 crates shipped, or approximately 55 cars. The estimate had been 25 cars.

The cherry crop was not all shipped when this article was written, but at that time there had been 150 cars taken out of the valley and there were yet from 30 to 50 cars to go, according to estimates. This, of course, was only for freight shipments, but if all express and all less-than-carlot shipments were counted there would doubtless have been close to 250 cars in the total count.

There seems to be little variance in the crop of plums and prunes and the 150 cars of last year seems to be about the figure that will be reached this year. The acreage of apricots is gaining each year. The crop last year produced 30 carloads and there is little doubt but that there will be more this year. The same will hold true with the grape crop. In the lower part of the valley the plantings have been increased and this year's crop is estimated at 100 cars.

It is interesting to note the estimate on the number of mixed cars. These will include express shipments and packages sent by parcels post, in all of which there has been a steady increase during the last few years. Last year the shipments were nearly 1400 cars and there is little doubt that there will be 1500 this year.

While this year's crop is very apt to set a new high record for production, it will not indicate the possible peak that may be reached and it does not show the hundreds of acres that are coming into bearing. There are also many new plantings that have been made and will in time be counted among the bearing orchards. There is a strong tendency toward soft fruits that will have their tonnage contracted to the canneries on 15-year agreements. Such fruits are largely sour cherries, apricots and cling peaches.

Quality Is Excellent.

A point that looks still better to the growers than the good crop is the fact that the quality of the fruit promises to be much better this year than it has been in some previous years. Some growers claim that the season has been unfavorable to the codling moth and that there is not the need for such heavy spraying as has usually been necessary. Others feel that the pest has been cleaned up by the extra caution this season that has resulted from the heavy infestation of last year.

Pruning methods have had something to do with the condition of this year's crop, although this will show up to a greater extent during the next few years than it has this year. For several years the trees have been headed back and pruned heavily. This has resulted in the loss of wood growth and caused the water sprouts that must be removed to keep the frame of the tree open.

A more recent practice has been to do more thinning of the branches and follow what is termed the "long system" of pruning. This plan tends to go to the other extreme and allow too much growth. The growers are coming to the conclusion that they must strike a happy medium and apply both methods if they are going to get the maximum production from their orchards.

Thinning has done much to improve the quality of the apple crop and there are very few orchardists now that do not believe severe thinning pays. Those that get the best returns from the practice get the job done early in the season before too much of the strength of the tree has gone to the fruit

Some growers are finding that it pays to thin pears, since the size and quality can better be controlled in this way, although the practice is not general. The state college has put on a number of thinning demonstrations each spring through the extension service and there has been ready response to this work. A. E. Lovett, county agent, has a few trees in different orchards this year that are to be recorded at picking time to compare their crop with other trees which have not been thinned or were thinned at different rates.

Much interest has been created in the stationary spray outfits that have been in use in the Wenatchee district. Many of the Yakima growers are considering putting in similar equipment. They are finding that by having the spray pipes under ground and hydrants at the right intervals they can save time in spraying the trees and there is practically no damage done to the trees nor as much wear on machinery as is the case where a spray wagon is hauled through the tree rows with a team.

The grower finds that he can do much of the work himself and get it done more thoroughly than when he has to depend on hired help. Since there is a scarcity of men this year it is still more important that more of these labor-saving methods be adopted. So far only a few have installed the stationary rigs, among whom are: Erwin Wickersham of the Harwood district, A. F. Linse of Knob Hill and William S. Barr of the Englewood community.

New Grading Rules.

There is another factor that will affect the fruit men this season and that is the new grading rules. Last year there was no little dissatisfaction in the rules, which allowed small stings in the fancy grades of the green and yellow varieties. The ruling allowed stings to go on apples that had the extra fancy color, but since the green and yellow varieties have practically the same color in all grades, there was a chance to run a high percentage of apples with stings.

The new ruling calls for the extra fancy or second grade to "consist of apples that are of one variety which comply with specifications for extra fancy grades (except for color) except that they may be fairly well formed and that scab spots affecting not to exceed a total area of one-fourth inch in diameter, or limb rubs, slight drought spots, slight hail marks or heavy russet, slight sun scald, and two small healed stings on red varieties showing extra fancy color shall be permitted."

Another change has been made which

(Continued on page twenty.)

Guaranteed for Life!

McCormick-Deering Tractor Crankshaft and Main Bearings

THE crankshaft and the crankshaft ball bearings of the McCormick-Deering 10-20 and 15-30 tractors are guaranteed against breakage, not for a month or a year, but *during the entire life of the tractor.*

This guarantee covers breakage from any cause whatsoever, and in the case of the ball bearings guarantees them from wearing out or burning out during the life of the tractor.

Read this SPECIAL TRACTOR WARRANTY, which every purchaser gets in writing:

The seller agrees to replace free the Two-BEARING CRANKSHAFT in any 10-20 or 15-30 McCormick-Deering tractor, should it break during the life of the tractor, provided the broken parts are promptly returned to the factory or one of the branch houses.

Further, the seller agrees to replace free any CRANKSHAFT BALL BEARING in the 10-20 or 15-30 McCormick-Deering tractor, which may break, wear out, or burn out during the life of the tractor, provided that the defective ball bearing is promptly returned to the factory or one of the branch houses.

THINK of it! Never before in the history of the automotive industry—with automobiles, motor trucks, engines, or tractors—has such a warranty been given. You have never before seen nor heard of so liberal a tractor guarantee. This is convincing proof of the indestructibility of the crankshaft and the crankshaft ball bearings in the McCormick-Deering tractors, and you will find the machines of uniform quality throughout.

In addition, the Company continues its policy of providing tractors with all necessary equipment—throttle governor, belt pulley, platform, fenders, brake, etc. No extras to buy.

Your McCormick-Deering dealer will show you the many valuable features of these tractors, such as ball and roller bearings at 28 points, unit frame, replaceable wearing parts, etc. He will show you the size of the guaranteed crankshaft and demonstrate how easily it runs in the guaranteed main ball bearings. When you buy a tractor, be sure this valuable guarantee is written into the contract!

King County Cow Testing Tour

"I am always willing to learn and I am as busy as any one. At present I am getting a milk shed built and attending to other pressing work, but I decided to take the day off and bring the family along to see what the other members are doing," said one of the men who attended the King county cow testing tour held in the Snoqualmie valley June 22. In fact, this seemed to be the sentiment of all who made the trip and many of them left important work in order to attend.

The one big object of the tour was to demonstrate the real value of testing cows for butterfat and to let each breeder tell in his own words how he managed to maintain his records for the last 12 months. The trip was both interesting and instructive, and although there were but four herds visited, they all had a lesson that was well worth studying.

Selects the High Producers.

The most interesting thing at the John Odell farm near Duvall, which was the first stop, was to hear how John built up his herd of grade cows by selecting only the high producers from herds on which there were cow testing association records. His herd now contains 35 cows that have an average of 436 pounds and only three mature cows made less than 400 pounds. One 10-year-old Jersey is high cow of the herd with 542.8 pounds of fat and 10.420 pounds of milk.

A "guessing contest" was held at this stop and the crowd was asked to place three cows in the order of their production. When they had all handed in their decisions there was only one who placed all three cows right and seven placed the second cow highest. They all agreed that it is not always hard to determine whether a cow was a good producer of milk, but that it was next to impossible to tell what her butterfat test is.

At the H. L. Allen farm, also near Duvall, were three generations from pure bred Jersey sires. The cows were all placed in different lots in the barnyard and it was interesting to learn which ones were descended from the first herd sire, Melia Anne Golden Woolsey. This herd had a butterfat average of 339.4 pounds for 28 cows, while in 1922 there were only 25 cows in the herd and they made an average of 375 pounds. This was an increase of 36.4 pounds per cow, and there were 10 2-year-olds in the number.

Boys' Judging Contest.

The boys' dairy club of Duvall held a judging contest for their members with three cows from this herd. Rev. George R. Abbott is in charge of the club and he asked Mr. Allen to place the animals and give the boys some instruction in judging.

The picnic lunch was held under the large black walnut trees in the yard of the Allen home and Mrs. Allen served strawberries and cream to the visitors as well as a big part of the dinner.

After the meal a few short talks were made. C. B. Hall, banker of Duvall and Tolt, gave a very striking comparison of the herd that had been tested and the city store that kept a careful set of books. A business man would be foolish to operate his store without knowing where he stood, he said, but yet there are many dairymen who are doing the same thing and just making a living.

W. W. Henry, the county agent, who was in charge of the tour, gave an explanation of the chart which showed the records of the cows of the entire association in groups, according to their production. He emphasized the fact that the cows in groups up to 300 pounds of fat were showing an actual loss to their owners when all costs were considered. To make a profit the dairyman must have cows that will average above this mark, he said, since no herd is any better than its average production. Another point was that the herds with higher averages were showing a lower cost of production of a pound of butterfat and greater returns to their owners.

Other speakers were L. J. Clark of Bellevue, secretary of the association, and E. W. Trezise of Tolt.

There were eight heifers in the Trezise herd, near Tolt, the next stop, which made an increase of 81 pounds of fat over their dams. These were all daughters of Olympia's Fern, once a world record cow. This is a registered herd and the average fat production for 16 cows was 383 pounds, which included nine 2-year-olds. This is an increase of 54 pounds of fat and 535 pounds of milk over last year, when there were 11 cows tested. Mr. Trezise credits his increased production to the records obtained in the testing association.

There was a real treat awaiting at the A. E. Moore farm near Fall City, where a herd of grade Guernseys had an average fat production of 409.9 pounds. There were 16 cows in the barn and they were all neat looking Guernseys that showed every qualification of purebred animals except pedigree. The herd average for May was 62.2 pounds of fat and for June it was 50.1 pounds. The startling thing about this herd was the fact that one cow made 110 pounds for May and 104 pounds for uJne. All of the cows are running on pasture and are getting a mixed grain ration according to their production.

The tour ended at this farm. One stop, at the Methow Valley Live Stock company, near Tolt, had to be cancelled because of the death of Mr. Cushman, the superintendent. There were between 30 and 40 who attended and had it not been so near haying season there would have been a larger crowd.

—but Woman's work is never done"

Here's one of the 398,000 wives for whom the discovery of Union Carbide has brought an *end* to the day's work—and hours for rest and recreation, vitally necessary to health and happiness.

Old tasks made easy

Can you imagine a gas well right in your own yard? Then you have a vision of the Colt Lighting-and-Cooking Plant—known everywhere as the Colt "Gas Well." From it comes Union Carbide Gas, made automatically as needed—a gas for convenience and comfort—

—for lighting your house and barn!
no more lamps to clean and fill
—for cooking your meals!
—for ironing your clothes!
—hot water for washing!

The Colt "Gas Well" makes these tasks lighter—brings the relief your wife has always longed for.

Remember—your wife's kitchen is her workshop

How many summers has she burned of her health and courage in that stifling kitchen—overheated to exhaustion by the hot cook stove—facing the week's wash or an all day's ironing! And the meals to be got, bar nothing! At bedtime mentally and physically exhausted—head aching—nerves on edge—and tomorrow all over again.

Let us help you change all this

Union Carbide Gas from the Colt "Gas Well" makes a cooler kitchen. Heats the water, or the iron, and cooks without heating up the room. Instantly turned on or off—work shortened—an extra hour or two for rest and enjoyment of this greatest of all home improvements.

We make it so easy—a whole year to pay

Make this your first cool kitchen summer! Delight in the soft sun-like brilliance of Union Carbide Gaslight in every room. You'll read more and learn more; so will all the children. Colt "Gas Wells" are helping farmers everywhere to make their farms pay. Surely you're interested—get the facts. Send the coupon today—NOW.

LIVESTOCK AND DAIRY

Neutralization

By E. V. ELLINGTON,
Head Dairy Husbandry Department, State College of Washington.

Would you please advise the kind of a preservative the creameries use to sweeten cream for churning? If a preservative is used please state how much to use per gallon of cream. W. C. G.

The material used for this purpose is not a preservative as you seem to indicate in your letter. The material used is perfectly harmless, slacked lime, bicarbonate of soda, or magnesium lime, the one most commonly used being probably magnesium lime. This may be prepared by mixing two pounds of magnesium lime and then mix with water to make one gallon. From this stock mixture take a cupful and dilute with water to about a quart and use this last mixture to add to the cream. Cream is usually slightly warmed when the "neutralizer" is added, but great care should be taken to have the cream cooled again to the churning temperature for two or three hours. The cream should be stirred while the neutralizer is being added. About the only guide as to how much to add is to taste the cream. Cream should taste but slightly sour when properly "sweetened."

Neutralization or "sweetening" of cream as practiced in creameries has become rather general because of so much poor quality cream being sent them. The best butter made any place is made from sweet cream. Good butter may be made from cream that is slightly sour, but not from old, sour cream. Neutralization helps to reduce the sourness of the cream. For these reasons the practice of neutralization should be resorted to only as a temporary expedient and not as a general practice. The practice was developed because of poor cream and those who use the process confess that they are using cream that is not first grade and probably not even second. There may be cases where the use of neutralizer is justified, but we should try to keep our cream in such shape that it is sweet or nearly so when ready to churn.

Our public educational institutions, local and state, are advocating churning from sweet cream and the U. S. government itself is setting the example by buying only sweet cream butter for the navy.

Benefits From Testing

The benefits to be derived from official testing may be summarized as follows:

1. It provides a basis for proper selection, breeding and feeding so essential for developing a high-producing and profitable herd.
2. It increases the value of the cow, her offspring and her other relatives.
3. It stimulates personal pride in the development of the kind of dairy stock which will improve the herd.

Holstein Standards

By R. D. TUCKER,
Superintendent of Official Testing for Washington.

There are three principal divisions of the Holstein-Friesian advanced register or three different classes of records which entitle a cow to be entered in the advanced register. They are the seven-day record, that 365-day record and the 305-day record. The Holstein-Friesian association is the only one that now accepts a seven-day record. A cow calving on the day she is 2 years old or younger must produce 10 pounds of butterfat in seven days to be entered in the advanced register. For each day that she is older than 2 years at the time of calving the requirements are increased .00548 pounds. This brings the requirements of a 5 year-old or mature cow up to 16 pounds of fat in seven days.

The 365-day record is the most commonly used long-time record. To be entered in this division a cow calving on the day she is 2 years old or younger must produce 318 pounds of fat in 365 days. For each day that she is older than 2 years old at time of calving her requirements are increased .1479 pounds. This brings the requirements for a mature cow up to 480 pounds of fat in 365 consecutive days.

The third division of the advanced register is the 305-day record. To qualify for this division a cow must produce 85 per cent of her 365-day fat requirements, and in addition produce a living calf within 14 months of the previous calving. This record is gaining in popularity. There is a subdivision of the 305-day record known as the farmers' class, or subdivision B. The requirements for this record are the same as for the regular 305-day record, the only difference being that the cow may not be milked more than twice a day after the 45th day on test.

Holstein bulls are entered in the advanced register when they have four daughters in the advanced register.

Feeding the Calf

At birth a 50-pound calf needs about eight pounds of milk a day, while a 100-pound calf will use 12 pounds. Underfeeding at the start, says the bureau of animal industry of the department of agriculture, is better than overfeeding. Some beginners make the mistake of giving the calf all it wants. This would probably be a good practice if the calf were fed every two or three hours, as is the case when it runs with the cow. However, when a young calf has been without feed for from eight to twelve hours there is danger that it will gorge itself if allowed to consume all it wants, which may cause digestive trouble.

A uniform temperature of about 90 degrees Fahrenheit is necessary if the milk is to agree with the calf and produce the best results. Some feeders attempt to make up for any lack in quality of the milk by increasing the quantity. For instance, they will feed much more skim mik than whole milk in the belief that the increased quantity will make up for the lack of butterfat. This is wrong, as the same rule about overfeeding holds good with skim milk as with whole milk.

If, on account of age, souring or dirt, the quality of the milk is poor, the quantity should be reduced rather than increased. The calf will not lose so much in development through a reduction in feed as he would from digestive disorders.

Why Calves Get Sick

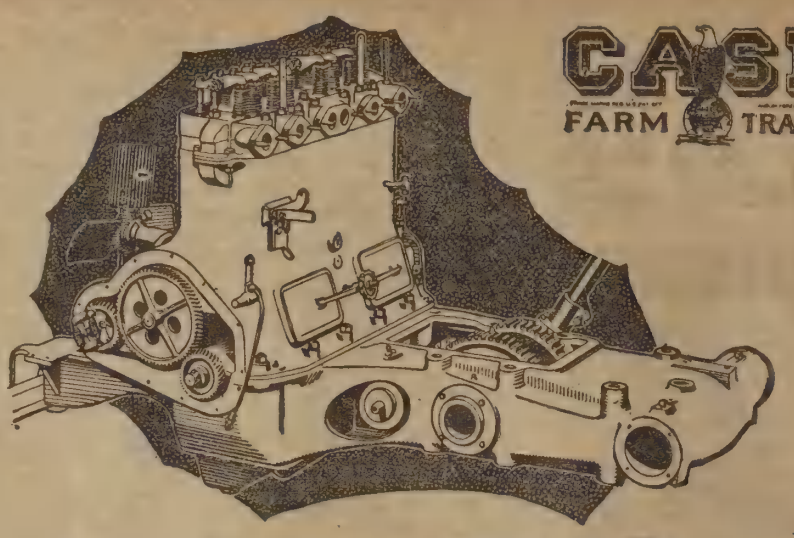
Nearly all disorders or diseases of calves, says the United States department of agriculture, are caused either directly or indirectly by lack of cleanliness. Filth, whether it is in feed, pens, bedding, or pails and utensils, is dangerous to the health of the calf. To be on the safe side use nothing but clean milk (sweet or sour), scald the pails or sterilize them with steam, remove old feed from the boxes and clean them daily. Filth and dirt are the natural breeding places of many bacteria that will cause disturbances in the young animal's stomach. Freedom from filth usually means freedom from disease.

HOG CHOLERA CAUSES LOSSES.

The department of agriculture estimates that hog cholera cost the farmers of this country about $28,000,000 last year. Greatest losses occur in the fall. The way to control the disease is to vaccinate the animals with hog cholera serum. If a herd is treated as soon as the first evidence of the trouble is seen most of the animals can be saved.

DO NOT LET FOUNDATION ROT.

Never lay wooden foundation timbers directly on the ground.



CASE FARM TRACTOR

longer life — and lower cost

The most valuable qualities you can get in a farm tractor are *dependable efficiency* and *durability*. Many exclusive Case features contribute to these important qualities.

One of these is the Case Frame—one piece of special iron, strong, rigid, and practically indestructible. With this special construction these important advantages are gained:

1. The center of gravity of the tractor is low, yet the machine has plenty of clearance. This is a big advantage in side hill work, reducing slippage and possibility of upsetting.
2. All gears, shafts and bearings are held in perfect and permanent alignment. This rigidity and accuracy are highly important in securing durability and efficiency. The working parts are relieved of the strains and stresses set up by less rigid construction, and friction losses are reduced to the minimum.
3. In case of replacement, the new part falls automatically into perfect alignment because this frame cannot change in shape, nor can the bearing housings wear.
4. This construction makes a compact and convenient tractor, easy to handle on rough or hilly ground, and in close quarters.
5. With this frame the weight is distributed so as to secure the greatest possible pull at the drawbar.

The frame is good evidence of the extreme care used in the design and construction of every feature in a Case tractor. Write for an interesting booklet **"Better Farming with Better Tractors."**

Breeds Up Herd

Jenner Started With Small Foundation of Guernseys

The fire that swept away the cattle barn and the greater part of the hay crop on the Fred L. Jenner farm near Oso last summer was the cause of a serious loss, but it has resulted in the erection of a better barn in a more convenient location and farther away from any danger of the kind in the future. The new building is a modern one, has a concrete floor, steel stanchions, large hay loft and a feeding shed adjoining.

The 17 head of registered Guernseys are some that Mr. Jenner has bred up from a small foundation herd and a good bull. He made his selection from the Dellwood farm at Mount Kisco, N. Y., and this first herd bull proved so prepotent that his former owner bought him back at double the original cost. The present herd sire is Regent's May King of Dellwood, from the same farm, sired by Regent of Allenwood.

The foundation cow, Masher's Buttercup, now 9 years old, is the dam of three full sisters that are still in the herd. There is much similarity between these heifers, and they all show the splendid characteristics of their sire.

Diamond's Little Rose, an animal purchased from the Miller herd, near Arlington, made an official record of 226 pounds during the first 173 days of her test. She is out of a daughter of Lover Bold, and is by a son of Lover Bold. She is a very promising animal, and Mr. Jenner expects to get some good records from her. Another heifer in the herd was bred back to her own sire, and produced a heifer calf of apparent quality.

Twelve of the cows and heifers now in the herd are from the foundation herd sire, while the rest of the young heifers are from the present herd bull. They are all typical Guernseys, with uniform udders, and promise to become a splendid producing herd. Mr. Jenner is a good caretaker and understands Guernsey pedigrees. There is no doubt but that within a short time he will have one of the higher classed herds in the county.

There are 160 acres on the farm, 40 of which are cleared. He raises practically all of his own hay, and pastures the animals on the logged-off land adjoining, part of which is hill land which would be hard to cultivate or crop in any other manner.

Mr. Jenner got his start in Washington as a logger, and did much of this kind of work in the neighborhood of his own farm during the first few years he was getting a start with Guernseys. He now has a herd large enough to demand his entire time. Although he is somewhat isolated from the main dairy communities of the county, he ships milk to the Arlington condensary daily, and reserves enough at home to feed his calves and pigs.

Money in Hogs

"It has been my experience that $100 invested in hogs will pay better than $700 invested in dairy cows," said Dr. H. K. Stockwell of Monroe, Snohomish county. "I had five brood sows last winter, and sold $1100 worth of pigs this spring, and still have enough to handle my clover pasture and to utilize all of the waste feeds we have. The sows averaged 13 pigs to the litter this spring, and one of them had 17. They are all registered Hampshire and I find there is a good demand for them for breeders as well as stock pigs in this neighborhood.

"I seeded a small patch of Dwarf Essex rape in last year's hog pen, and intend to pasture it when it has attained proper growth. The main hog pasture will be a two-acre patch of clover, which contains alsike and white clover that was seeded five years ago. Last year we applied 800 pounds of superphosphate to the acre, and it has greatly improved the growth of the clover. There is still a good stand and I believe it will last five head of brood sows and the young pigs all summer, provided it does not get too dry."

Dr. Stockwell keeps a mixture of minerals before the pigs at all times, and finds that it helps their growth. Limestone, salt and charcoal are some of the ingredients, and lately other bone-building materials have been added. Some mineral supplement of this kind is absolutely essential while the hogs are on pasture unless minerals are added with the feed.

LIVE STOCK MONEY AVAILABLE.

The Wool Growers' Service corporation of Yakima, Wash., of which A. D. Dunn is president and J. F. Sears is secretary and general manager, announces that it is now making loans on cattle and sheep with funds obtained from the federal intermediate credits banks. The rate of interest is 7 per cent in advance. "The terms are of sufficient length in time to permit the borrower to liquidate his debt from the operation of his business," says the announcement. The bank has already loaned about $300,000 to live stock men of this state.

POULTRY AND RABBITS

Loss Is Small

Only 62 Chicks Out of 1600 Die

When a bunch of day-old chicks can be raised with the mortality of only 62 out of 1600, it shows that the stock were good in the first place, and that excellent care was given during the first few weeks of their lives.

J. Shafer of Shelton has obtained just such a percentage, and attributes much of his success to the new Mason county accredited hatchery, which has made it a point to furnish the very best kind of stock. He feels that there would have been a still smaller loss had not a number of them smothered during the first few days that the brooder was operated.

"The only mistake that I made was in not getting 3000 chicks to begin with," said Mr. Shafer. "I am merely getting started with poultry, and have 350 of last year's pullets, which will be culled over and used for breeders to furnish eggs to the hatchery next spring. In addition there are 350 hens which have laid between 190 and 220 eggs all spring. Last December they laid close to 70 per cent, since they were given lights at that time, but they dropped off early in the spring because of some bad feed. I am fattening 160 young cockerels in a small house, and will soon have them ready for market.

Increases Berry Acreage.

"This farm is ideal for keeping a flock of hens, since I am building up a berry farm in addition to poultry. There are 40 acres on the entire place, and I am increasing the acreage of berries each year, and expect to have a large part of the place to small fruit in the course of a few years. The berry patches make a very convenient place for the hens to range, and they get a large part of the green feed. During the winter they are fed kale, carrots and mangels, and I always mix up my own dry mashes and chick feeds.

"I am trying an experiment with cooked potatoes for a fattening ration for cockerels and so far it has worked successfully. It consists of two-thirds corn meal, one-third ground barley and a small amount of fish flakes. I put one cup of salt in five gallons of sour milk and mix a thin slop with one-half part potatoes and enough of the grain to thicken to the right consistency. I have plenty of potatoes this year, and believe the combination makes one of the cheapest rations I could feed.

"When I get the entire farm built up to where I want it I will have from 3000 to 4000 hens, from 15 to 20 acres of berries and four or five cows. I think this will make a very good combination for a one-man farm, and it should produce a reasonable income, provided it is properly managed."

Poultry Problems

By W. D. BUCHANAN, Poultry Extension Specialist, State College of Washington.

Some of my hens get large hard balls on the bottoms of their feet and on their toes. If I do not touch them they have to be isolated and limp around for weeks, but if I cut them open they have a discharge of whitish water. When the cut heals the blister disappears, only to return again in a few weeks. Please tell me wat to do for them. H. T.
Bothell, Wash.

This is so-called bumble foot and is caused by a bruise or a thorn or something in the foot. Let the whitish water form a pus, then lance, clean out and dip the foot in a 2 per cent solution of zenolium. If you can locate the cause of the trouble, remove it.

My chicks turn their heads from side to side. One had her head on her back, turned over completely, had spasms. I killed and burned her, but others are getting this, too. I feed commercial scratch, shorts, they have free run on range, open house, we keep it clean. What is the matter with them? MRS. A. S.
Kennewick, Wash.

This is either ptomaine poisoning or a very bad case of indigestion. Commercial scratch and short is not a balanced ration; but, unless moldy, would not produce the condition which you describe. Look for putrid meat, dead rabbits, field mice, etc.

Will you please send me a formula for mixing mash for growing chicks where they have lots of grass and outside range and plenty of clabbered milk. I am using bran middlings and corn, equal parts.
Centralia, Wash. MRS. G. L. F.

A good mash under these conditions could be made by mixing 100 pounds of bran, 100 pounds of middlings (or 200 pounds of mill run), 100 pounds ground corn, 20 pounds meat meal and 15 pounds bone meal. If they are over 3 months old, and still have plenty of milk, the meat scraps may be reduced to 10 pounds; if over 4 months old, cut out the meat scrap if they appear to be maturing too rapidly.

What causes small brown spots in the white of egg? How is the best way to rid chickens, a large flock, of lice and mites? Would you advocate this automatic sprayer? Is it lice or mites that make chickens bald headed?
Pateros, Wash. MRS. W. E. S.

Brown spots in the whites might be caused by shells coming in contact with oil or filth. The best way to rid a flock of lice is to dip them (on a hot day) in a solution of warm water and sodium fluoride, using one ounce of the sodium fluoride to each gallon of water. The best way to rid a flock of mites is to spray the roosts and roosting closets with oronite shingle stain. There are many causes for bald heads in chickens; but, if caused by depluming mites, the dipping will kill them.

I have 15 White Leghorn chicks that are very thrifty. I feed them chick feed and mash, coarse charcoal, and I boil one egg hard for them every day. About a week ago they began to get lame in their toes and now I have five that go with their toes doubled up. They don't have much use of their legs. What is the cause of this and the cure? T. L. B.
Seattle, Wash.

This is a case of indigestion. If you are feeding hard-boiled egg, be sure it is crumbly and tender. If you are feeding commercial chick mash, in connection with eggs, mix it equal parts mash and bran. Feed all grain in deep litter and give them outdoor life, plenty of fresh air and green feed.

What is the matter with my hens? Their right eyes are swollen shut and when I pull the eye open it seems to have cancer grown on the inside of the lower lid and pus comes from it. MRS. A. H.
Pullman, Wash.

You are so close to the state college that I would advise you to take an affected hen to the poultry department for examination. It might be roup or chickenpox or an infection of some sort. It is impossible to tell without seeing the birds.

I have 20 little chicks. I have been feeding them chick feed and a chick mash, but don't know the amount to feed them, so am using my own judgment. They have straw and chaff to scratch in. They have plenty of room and are warm. Would you advise me to feed them chick developer? Please give me a balanced ration for 100 chicks from now until they are ready to lay and when they are laying. MRS. C. E. H.
East Stanwood, Wash.

It is impossible to give a balanced ration for chicks without knowing their age. A simple mash for chicks from 1 to 2 months old could be made by mixing 100 pounds of bran, 100 pounds shorts, 100 pounds middlings, 40 pounds meat meal and 15 pounds bone meal. After they are 9 weeks old the meat meal should be gradually reduced, so that at 5 months it is not over 10 pounds. When you want them to lay increase the meat meal to 50 pounds. This is assuming that they are eating 50 pounds of grain to 40 pounds of mash.

Baby Chick Men to Meet

The eighth annual convention of the International Baby Chick association will be held in Washington, D. C., Wednesday, Thursday and Friday, August 8, 9 and 10. The dates have been changed from the first, second and third to the eighth, ninth and tenth, in order to bring the International Baby Chick association and the American Poultry association conventions on adjoining weeks and thus facilitate the joint attendance of persons at both conventions.

It is anticipated that this eighth annual convention will be the biggest and most rousing meeting that the International Baby Chick association has ever held.

CROSSES PHEASANTS AND BANTAMS.

J. D. Sanford, Sequim, Clallam county, has an experimental turn of mind and besides growing a half dozen test plots of various kinds of vetches he has raised four young China pheasant hens which he is crossing with a bantam rooster. He has already collected a number of eggs and expects to make his first setting soon.

Put This Money-Maker to Work

A John Deere Spreader on your farm will make manure go practically twice as far; it will increase your crop production per acre; it will cut in two the time required for hand-spreading, and, besides, it does away with the most disagreeable and one of the hardest jobs on the farm.

John Deere Spreader
The Spreader with the Beater on the Axle

Easier on You—only thirty-six inches to top of box—six to ten inches lower than others—easier to load.

Easier on the horses—high drive wheels—four to eight inches higher than others—apron runs on forty-eight rollers—manure is not dragged to the beater.

Does better work—beater low to ground—does not throw manure high in air to cause drifting.

Lasts longer—simple—only half the parts usually required. All main working parts mounted on axle—can't get out of line. Gives years of satisfactory service.

See this spreader at your John Deere dealer's.

"SOIL FERTILIZERS" — VALUABLE BOOK FREE — also booklet on John Deere Spreader. Address John Deere, Moline, Ill., and ask for Package SC-647

ORCHARD AND GARDEN

Selling Vegetables at a Profit

By A. B. G. BOUQUET.

The season for marketing vegetable crops is fairly under way. What lies before many growers along this line depends upon a good many things. A great deal depends upon the grower himself. He should take steps to look into the methods of handling his crop as he has handled it in the past, study to see whether or not improvement can not be made and how his general marketing conditions can not be bettered so that greater profits may be the result.

Too often the cause of unsuccessful vegetable selling is due to the kind of produce the grower is trying to make the market absorb, and also the manner in which that produce is offered for sale. It is an old adage that good stuff helps the market by stimulating consumption, while poor stuff causes a blockade that even holds up the good stuff from moving very freely. We see an example at this time of the year in greenhouse tomatoes. While greenhouse tomatoes sell at a comparatively high price you must remember that these fruits not only have excellent quality, but they look well in the package and, therefore, even at their figure they move along. Every year we have gluts in one line or another and, while I know perfectly well that some of these are caused by an absolute overproduction of an article more than the market can absorb, too often the glut is caused by a lot of inferior stuff piling up because it is ungraded, poorly put up and people are not attracted to buy that class of stuff.

Careful Harvesting Important.

The grower can help his cause along in the first place by being sure that he is taking his crop or crops from the field when they are in the right condition. Careful and accurate harvesting in the field is more important than it is often given credit for. A recent California bulletin mentioned the fact that one of the hardest things to be driven home to the California grower was the requirement that he handle his stuff in the field in the right way and at the right time. The qaulity of the vegetable as it is on the market is largely due to the above mentioned factor. Lettuce must be solid before being cut; corn, to be good, must be neither too young nor doughy; beans must be in the snap stage and not old, and so on.

One of the greatest evils of many of the vegetable and fruit growers of England is their habit of "topping" their packages, that is having a different grade of stuff on the top layer than those beneath. This evil has gone on for years and years until it is almost a national trait in the preparation of produce for market. Active steps are now being taken to eradicate this trouble in the habits of the better class of growers. There will always be those who will never do anything else than "top" their packages. This question is, of course, one of proper and uniform grading. More of our local vegetable growers should work along the same lines, namely studying the market demands and grading their vegetables accordingly and as laid down by an approved plan which calls for specific grades for each crop.

How Grading Helps.

The retailer who handles the grower's goods is much better able to move the stuff along if it is at least reasonably graded. Definite grading rules, as suggestions, have been laid down by the department of agriculture at Washington, D. C., and copies of grade rules for many different kinds of vegetables may be obtained free by writing to the department of agricultural economics. While these rules may not be absolutely fitting to every grower's needs, they at least are suggestive and give him an idea as to what United States Nos. 1, 2, 3, etc., grades constitute. A well-graded package gives the handler of your product the impression that you recognize the relative value of the vegetables that you are growing and that prices for each grade should be set according to the value of each.

Summer Maintenance of Vegetables.

The best growing months of the year are in the summer, therefore the vegetable grower has the greatest opportuiity to get results from his plantings if they are given good care during the warmer months. There are two things of importance to every garden, first the keeping down of insects, and second, the provision of sufficient moisture for the growing needs of the crops.

The northwest during the last 10 years has come to be a regular mecca for a great number of different kinds of insects which are injurious to vegetable plants. Some of these bugs did not seem to be nearly as numerous as they have been of late and the situation in many cases is very serious. One grower put it recently that he was a new comer in this region and he was plainly discouraged at the poor growth of his vegetables and the damage that was done them by many different kinds of insects. It is evident that part of vegetable gardening consists, therefore, in scrapping with the enemy in the form of one kind of insect or another, depending upon the kind of crops which are being grown. The worst enemy of the tomato is the flea beetle, but this is simply controlled as compared with some others. The greatest pest of cabbage, sunflower, Brussels sprouts and kale is the root maggot, which is one of the most difficult insects to be controlled. Beans are readily attacked by the 12 spotted beetle; eggplant is very liable to be chewed up considerably by the flea beetle, while sweet corn is very susceptible to the ravages of the earworm working on the ears after they are formed.

In the last few years dusting material has come to be more widely used for the control of garden insects because of its easiness of applying, its ability to control the insect, and the rapidity with which an area can be gone over with the material. Added to these advantages also is the fact that several kinds of dusts are already prepared for different purposes, so that there is no necessity on the part of the grower to go to the trouble of compounding a spray

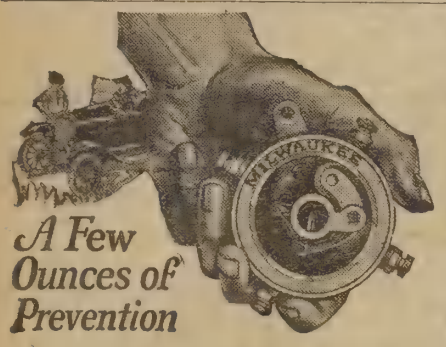
Taking a situation as it now exists, we find that gardens everywhere are now planted to late cabbage, the plants being yet small and probably not yet injured by worms or aphis. Now is the time to dust these clean young plants with the dusting mixture so as to repel the insects, which is a better way than trying to control them after they have once begun to attack the plants.

The moisture situation is almost fully as important as that of keeping the insects in check. Plants suffer severely from drought during the months of July and August, two of the months when they should be making their best growth. The only way this growth can be obtained is for the grower to try and furnish the necessary moisture. Tomatoes dry rot badly when suffering from moisture; other plants often get to the wilting point under the stress of hot sun and decreasing moisture. Water is the limiting factor as to what the crop will amount to in many cases. Watch the response of the plants after a good soaking, together with the warm weather as a stimulant, and be converted to the fact that irrigation for home gardens is necessary just as much as it is for the commercial grower. Bigger yields, better quality, greater uniformity and getting away from insect injury are the direct results of the application of water to vegetable crops. It is better to apply irrigation water to growing plants before they get to the wilting point. It is also considered the best practice to make a thorough application of water rather seldom than to apply a light amount frequently, although the type of soil will largely determine this point. One of the best tools with which to irrigate is the hoe, for in between waterings any tool that will cultivate the ground and keep a good mulch is worth as much as a watering.

To summarize, then, keep the garden clean and, therefore, free from being stunted by applying control material for insects such as dusts. Keep the plants steadily growing by irrigating as often as need be for the needs of the crop. These are the two biggest garden maintenance factors for the months of July and August.

FEEDING UNWELCOME GUESTS.

The department of agriculture says that two hours of every day's work on the farm and in the garden and orchard go to produce feed for farm and fruit pests that have been introduced into this country from foreign lands. It is to keep pests and diseases out of the country that the federal plant quarantine work is carried on.



A Few Ounces of Prevention

AVOID Ford timer trouble.

In this trim little unit is a season's freedom from misfiring and other timer troubles, plus added power for hills and heavy roads, quicker pick-up, and steadier slow-speed pulling.

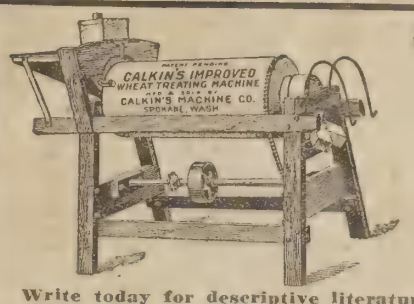
Don't wait till your old timer stalls you at the roadside. Replace it *now* with a Milwaukee Timer. It's the best two-dollars'-worth you can buy for a Ford—as 1,000,000 users know.

Milwaukee Motor Products, Inc.
Milwaukee Wisconsin
(Timer Builders for Over 18 Years)

Get a Milwaukee Timer from your dealer today, and install it yourself—it's easy. The Milwaukee also fits the Fordson tractor.

MILWAUKEE TIMER for FORDS

At auto supply and hardware stores, and garages $2.00
($2.75 in Canada)



Saves Handling When You Use Copper Carbonate

CALKINS IMPROVED MACHINE is required for proper treating. Eliminates all grain handling. Automatic feed, accurate and drum is absolutely powder tight. Capacity up to 70 bushels per hour.

EFFICIENCY AND DURABILITY Endorsed by STATE COLLEGES and many individual users. Workmanship and Material Fully Guaranteed.

Write today for descriptive literature and get acquainted with its merits and our selling plan. Reasonably priced.

5000 Farmers

Attend Skagit County Picnic

When 5000 farmers can meet for an all-day gathering, a picnic dinner and a general good time for old and young it is hardly necessary to say it was a real picnic. But this is the way they do things in Skagit county. It was held at Sedro-Woolley on June 20 and was under the auspices of the county dairymen's association and the county farm bureau.

The morning program consisted of athletic contests and features, for which the stores of Sedro-Woolley gave prizes of merchandise to the winners. There were two bands on the grounds and the dairymen's association sold ice cream at cost. Coffee and cream was furnished and the family dinners were spread on the long picnic tables and on the grass under the trees which helped to make the affair a true picnic.

After dinner the crowd gathered at the bandstand, where the speakers gave their talks. D. M. Donnelly, mayor of Sedro-Woolley, made the address of welcome and W. J. Knutzen of Mount Vernon, president of the Skagit County Dairymen's association, made the response. J. A. Scollard, president of the United Dairy Association of Washington, outlined the growth and development of the association and credited its splendid success to the spirit of cooperation that has prevailed among the members.

Asked to outline the plan of marketing the dairy products from the different county plants, U. M. Dickey of the Consolidated Dairy Products company, which handles a large part of the output from the association, told how they had increased their sales by 14 per cent since 1921, all because of handling a high-quality product and selling at a reasonable price. Our sales have increased fully 50 per cent since a year ago, he said, and we have plenty of room to expand, since our market now is largely in western Washington and California.

Mrs. W. E. Barnhart, president of the Washington State Federation of Women's Clubs, made a strong appeal to the people to work for the welfare of the children of the state. A careful check shows that over 30 per cent of the children are underweight, she said, and in need of better diets in which more milk and its products are used. The welfare of the nation depends on the welfare of its children and it is for this reason that the federation has sponsored the filled milk and butter substitutes measure, for which the dairymen are now fighting.

Other speakers on the program were President Berry of the Frasier Valley Dairy association, in British Columbia, who gave a few points about the work among the dairymen in Canada; Pete Omdahl of Mount Vernon, David McLeod of Bellingham and L. W. Hanson, state dairy inspector of Seattle.

Mail-O-Grams

By State College Specialists

A. B. Crane, agricultural engineering: This is a good time to plan for the construction of a septic tank. It can be put in more conveniently from now until September than later. Be sure you have your water system in first.

B. A. Slocum, apriculture. Bees place a little nectar in each cell, consequently they require plenty of room to ripen honey.

Don G. Magruder, dairy: Put steamed bone meal in box and let cows run to it. Cows digest mineral best when on green feed.

Leonard Hegnauer, farm crops: Go over the seed fields and pull all weeds. All mixtures of other varieties of seed must be removed and nothing left except the variety grown.

M. D. Armstrong, horticulture: (East side.) Look closely for signs of red spider. Spray applied early when they first appear is most important in controlling these insects. (West side.) Carefully supervise the berry picking; green, overripe and imperfect berries mixed with the first-class fruit will surely reduce the returns.

C. M. Hubbard, live stock: One county breed association has appointed a committee to cull the spring boar crop, castrating all inferior purebred boars. Be sure to alter all grade boars.

George L. Zundel, plant pathology: Farmers in 16 eastern Washington counties treated their seed wheat with copper carbonate this year, resulting in the sowing of 734,000 acres of treated wheat.

W. D. Buchanan, poultry: Cull out all weak, sickly or poorly developed pullets. They are a menace to the flock.

Approve Hay Growers' Plans

A meeting of the hay growers and business men of Kittitas county was held recently and plans of the proposed Northwest Hay Growers' association were presented by Boyd Oliver of San Francisco and L. A. Hunt, manager of Oregon Hay Growers' association, of Hermiston, Ore. The farmers considered the proposed program and were pleased with the prospects of the association's being able to take care of surplus hay and to stabilize the hay markets. The plan was unanimously approved and an organization committee consisting of J. O. Sorenson, H. H. Adams, A. W. Gregory and J. C. Wilson were appointed to take care of the organization work in this county. The meeting was presided over by Soren Sorenson, president of the Washington state farm bureau. Growers will be given opportunity to study this pan before definite sign-up work is undertaken.

Home Ownership

Essential to Highest Development

That home ownership and permanence of the home are essential to the highest development in country life was the thought stressed by Dean Edward C. Johnson in an address at a picnic of settlers on the state land settlement project at White Bluffs, Wash., June 16. While at all times we must look at farming as a business, handle it as a business and succeed in it as a business if we are to live on thel and, said Dean Johnson, we also should look at it as a mode of life and as an occupation profoundly interesting and of superior dignity. We should look at the farm not only as our home where we and our children will want to live and work, but where our grandchildren and great-grandchildren in turn will live and work and then pass it on to their descendents. Then will life on the farm acquire in full measure that dignity and standing so essential to its highest development. Every true pioneer has something of a spirit of this kind. Every true farmer loves the land upon which he works. As their numbers increase they will grow in wealth, in power and influence. The community, the public at large and the state increasingly will honor these families who, generation after generation, live on the old homestead, cultivate the land and build a true community.

IF LEGUMES FAIL.

If legumes fail due to acidity of the soil, liming becomes essential to the establishment of a permanent system of agriculture.

TOO FEW PUPS TO SUPPLY DEMAND CREATED BY TRIO ADVERTISING

Albany, Ore., June 8, 1923.

The Pacific Northwest Farm Trio,
Spokane, Wash.

Dear Sir:

I am well pleased with the results obtained from the advertisement I had in the Farm Trio of Newfoundland pups for sale. Through my ad in your paper I could have sold more pups than I had.

FRED SCHNEIDER,

Entertainment
as Well as Information

FARMING is a BUSINESS and The Washington Farmer does its best through market quotations, regular departments and special articles to help its readers who are engaged in this vital business in every nook and corner of Washington.

However, the business of farming is not all there is to farm life. Not by a jugful. Recognizing this, The Washington Farmer aims to give its readers full measure of entertainment, and to make even the soberest facts interesting.

Our new serial, "Cattle Ranch to College," is just one of the features of an entertaining kind, none the less popular because it transports the reader into an environment beyond the range of his own daily life.

This story by an able writer, Russell Doubleday, is in its early chapters. You can easily pick up the threads with the installment in this issue. If you do so, we feel sure you will enjoy the weekly visits of your state farm magazine even more for following the exciting developments of this story. Here is a story which in book form would cost you $1 or $1.50; yet is only one among a wealth of varied features in a magazine which costs you only $1 for five years.

We say to our friends: "Send your subscription order direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your offer if you have not already done so and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

July 12, 1923.

CHAPTER II.

The Young Brave's Daring.

The men lay crouched behind their barricade, silent, alert, ready for what might come. The three pickets made their way back to the breastworks and reported that the advance guard had shown itself coming down a coulee half a mile away, and the main body, probably 50 strong, was straggling after when the pickets last looked back. A long night of vigil and hurried preparation had told on these watchers and they were anxious to begin the work and end the suspense. The short 10 minutes which elapsed seemed 10 hours. Then two Indians rode to the top of the ridge and looked down upon the preparations for their reception. They were a long rifle shot distant and the defenders had no ammunition to spare. Moreover, if unprovoked, the redskins might go without firing a shot. To tell the truth, however, especially when they saw the unlikelihood of making a successful assault, most of the little garrison were in the mood to feel disappointed if the attack ended so harmlessly.

"If those fellows are hard up for a fight," said Big Bill Smith, "maybe they'll tackle us; but I never saw an Indian yet that would ride a quarter of a mile in the open under fire even when he wanted something to eat," and Bill knew Indians.

"They won't leave without tryin' us," said Casino. "You'll see if I ain't right."

A moment later two painted and befeathered savages appeard to the left, and rode full tilt along the hillside in direct view of the camp, yelling and waving their blankets in derision: a tantalizing sight to the waiting men.

"Keep steady, there," called Mackenzie, sternly, as several rifles were raised. "There's no use shooting now; they're only trying to draw our fire and find out how strong we are. There'll be more presently. Wait for them."

A few minutes later half a dozen braves repeated the ruse. The flying figures, almost naked, being poor targets, the fire of the little garrison was still reserved. A dozen then made the run, one following the other at regular intervals. More and more of the painted, yelling, gesticulating savages followed, dashing along the slope in single file and disappearing over the ridge to the right, until what was a short line became a procession.

Presently they began to creep down the hill, each rider advancing beyond the one preceding him, all yelling epithets of contempt as they came ever nearer the silent garrison.

This was the regular mode of Indian attack; it afforded them an opportunity to fire and yet gave their enemy a very poor chance to do any damage.

A desultory firing began; each Indian letting go his reins, fired his rifle as best he could as he rushed past. The shooting was naturally bad, for there was no chance to take careful aim. If the savages planned, however, to draw the fire of the besieged and so determine their strength, the scheme failed, for not a shot was fired from the camp, though the provocation was great.

The rushing line came closer and closer. The colors of the war paint and fluttering feathers could now be plainly seen. It was within easy range, but still the fire was withheld. Each Indian had worked himself into the frenzy which is so necessary a part of a brave's courage.

As the distance was lessened, the savages' aim became better, and several bullets struck the wagons and the barricade. The situation began to be interesting; any shot might now reach its human target, and the temptation to return the fire was almost irresistible.

But the sheriff only said, "Not yet."

The bullets were striking freely and the yelling enemy were within easy revolver range.

At last Mackenzie, who showed signs of suppressed eagerness, said, just loud enough to be heard: "Boys, don't shoot when your man is opposite; wait till he has passed, then aim at his back and shoot straight. You can't hit him otherwise. Ready now. Fire!"

This was not a military company, but a band of frontiersmen, which a common danger united under the leadership of one man. The volley which followed, therefore, was not one of precision, for every man took his time and pulled the trigger when he was ready.

The Indians, anticipating a return fire, rode by at full speed, their bodies hugging their horses closely. They made difficult targets, so the first few shots did nothing more than kill and disable a horse or two; but soon the fire became more rapid and accurate. A big buck was seen to fall out of his saddle, another was thrown violently from a wounded horse, several were hit in arms and legs. The yelling diminished and the line moved further up the slope, scattering as it went.

As the file, now rather scattered, turned the ridge at the right, firing as it moved, a young buck, in full war regalia and mounted on a beautiful bay pony, bounded into view. He dashed out of the circle of Indians, and rode boldly down toward the white men, yelling defiance.

He was a young chief endeavoring to earn the approval of his tribe and the consequent advancement and influence, according to the custom of the Sioux. Down the hill he came with a rush right into the thick of the fire, and yet, though the bullets whistled on all sides of him, he was unharmed. Nearer and nearer he drew, until he reached a point within 200 yards of the white man's guns. Then he stopped, turned his pony half-way round and flourished his revolver derisively, yelling imprecations at the garrison the while. He then fired a shot which came so close to John, that he was sure he could feel the wind of it—the sound was unmistakable.

After this reckless feat, the young chief trotted slowly back to his own people, but kept his face always toward his enemies. The daring of the deed took both sides by surprise, and for a time hardly a shot was fired by white man or red. It was a tribute to the young brave's courage and bravado.

It would not do, however, to let him escape unharmed. Other warriors might be inspired to emulate the rash act, and if they took it into their heads to rush the stockade there would certainly be much loss of life.

The Indians now began firing again, covering as well as possible their comrade's retreat. Those behind the barricade also woke up.

"Shoot that fellow, boys," cried Big Bill. "He mustn't get away unhurt. We've got to discourage that sort of thing."

Every man aimed at the fleeing Indian, but still he rode with his face toward his foe, gesturing defiance. The feathers in his war-bonnet fluttered in the wind, and the quirt hung on his upraised right wrist swayed with the motion of his pony.

Of a sudden a single rifle spoke from the white man's intrenchments, and, in an instant, the young chief was changed from a superb living bronze statue to a lump. He fell, clawing at his saddle and yelling shrilly. His well-trained war pony slowed down and circled back to where his master lay.

All this occupied much less time than it takes to tell it.

During this distraction, half a dozen Indians, who had been unhorsed, rose from their brush coverts and ran for their lives to gain the more substantial refuge which the ridge afforded.

Four escaped, but two were dropped in their tracks before they could reach the shelter.

Though bullets had dropped all around the white men, none had been hit.

"Had enough?" said the sheriff. "Found the camp stronger than you thought, eh?"

Such seemed to be the case, for, after a long parley, which was held discreetly out of range, the band disappeared, leaving their dead on the prairie.

An attempt had been made to rescue the fallen, but the risk was too great, and it was given up.

The Indians had been gone some time before the little garrison crept carefully from under cover, for the Sioux were notoriously tricky and their apparent departure might simply be a ruse to put their enemies off their guard.

Finally, however, the sheriff turned to his men. "Casino," said he, "you, Singing Jim, and Calamity Jake follow their trail and see what becomes of them. If they start to come back you hump yourselves and let us know. You'd better go along, Hodson, and look after your stock."

The men appointed saddled up and started out without delay. The good wishes of those remaining went with them. It was a perilous undertaking, for there was no telling where the war party might be or what they might do.

After the scouts had left, guards were set to keep watch and prevent a surprise, though it was thought that there was little danger of an attack by daylight.

The sheriff and the rest of the men began to count noses, not only of men, but of stock, for it might be that in the excitement some one or some animal had been hit unknown to the others. In fact, it would be a marvel if one bullet had not reached its mark, since, at times. they had dropped around like hail.

All were found intact, but several of the wagons had been pretty badly riddled.

A barrel of molasses which rested in one of the wagons was punctured by a .45-caliber bullet, and the sticky stuff leaked down on and in a trunk marked "Charles R. Green, Boston."

"Belongs to a tenderfoot who got stalled with the rest of his outfit near the railroad," Casino had explained, when some one remarked on the strange object.

Certainly the "tenderfoot" was having rather a novel introduction to the hardships of frontier life. As Charley Green said afterward, "he was stuck on himself for fair."

Mr. Worth and John now thought of the family at the Sebell's, and at the first lull they made their way back between wagons, around and through bunches of cattle, mules, and horses to the house. It was hard to tell which was most glad to see the other, but a stranger coming in would not have realized that this was the return of a father and son after several hours' exposure to all the perils of Indian warfare. There were no tears of joy, no outward demonstration of happiness. The frontiersman had learned, perhaps from the Indian, perhaps from stern nature herself, to keep his feelings to himself. Even John and Ben was not demonstrative.

"I suppose you did 'em up?" said the latter to his more fortunate brother. "How many were there in the party?"

John dropped to the floor, for the experience of the night before was, at least, trying. "Sure we did," he answered. "They didn't come till daylight and so were in plain sight, while we were under cover, see? Same bunch we saw the other day, I guess. Phew! I'm tired."

He had hardly got the words out of his mouth before he was sound asleep, and, not long after, his father was also in the land where none but phantom enemies are seen.

The Indians evidently had enough, for they disappeared, taking with them, however, some of the N bar N stock. The two herders accepted the situation, each in his own fashion.

"I told you so," groaned Calamity Jake. "These pesky Indians ought to be wiped off the face of the earth."

Singing Jim, however, merely grinned, and said as he ran his fingers through his hair: "Well, I'm glad this thatch is not decorating some Sioux tepee. I think it looks better on me than it would a lodge pole."

After this, things went on in much the same old way in the little frontier town, for the Indians did not venture another attack.

In spite of its small size, Bismarck was a busy place and was the distributing point for a large unsettled territory.

Freighters came in from points on the distant railroad with provisions for the cattlemen, trappers, and miners, and the constantly changing population of the town. Their wagons were in long trains, one hitched to the other, the whole drawn by many teams of mules and driven by one man, who rode the near mule next the first wagon, controlling his team by a single "jerk line," which ran to the front near animal. This mule, who was picked for his intelligence, knew that one pull on the line meant turn left, and two short jerks indicated that a right turn was wanted; moreover, he knew just how wide a sweep to make to clear an obstruction.

When the trapper came to town to bring in his pelts for shipment east, and to get a supply of pork, beans and coffee—his standbys in the matter of diet—and when the cowboy raced in with a couple of pack ponies to get supplies for his outfit, the rare opportunity was always taken

(Continued on page twenty.)

He dashed out of the circle and rode boldly toward the white man.

Bits of Fun for Everyone

Confessing His Age.

Comic Artist—Capital joke, isn't it?

The Editor—First rate! First time I heard it I laughed till the tears ran down my bib!—Tit-Bits.

Ambitious Johnnie.

Mother—Never put off till tomorrow what you can do today.

Johnnie—That's right, ma; so I finished up the other part of that cherry pie right away.—Answers.

A Friend Indeed.

Jones—Hevaen bless him! He showed confidence in me when the clouds were dark and threatening.

Robinson—In what way?

Jones—He lent me an umbrella—Youth's World.

Checking Up.

"What are you reading, Charley?"

"It's a book called 'Child Training' that I borrowed from Mrs. James," returned the young son.

"Do you find it amusing?" laughed his mother.

"I'm not reading it for that. I merely wanted to see if I had been brought up properly."—Country Gentleman.

A Speed Contest.

It was during a session of the superior court, says the Boston Globe, and a case of breach of contract was on trial. The plaintiff, a voluble Italian, talked as fast as his knowledge of English would permit—yes, even faster.

Looking down at the court stenographer, the Italian noticed for the first time that his testimony was being reduced to writing—the stenographer was trying his best to keep up—and thereupon he began to talk faster than ever, until finally he burst forth, "Don't writa so fas'; I can'ta keep up with you."—The Youth's Companion.

Not Weally!

Algy—The bwute! He threatened to blow my bwains out.

His Friend—And did he?—Youth's World.

Unflavored Drink.

"Give me a plain soda without any flavor."

"What kind of a flavor would you like it without?"

"Oh! I'd like it without vanilla flavor."

"Sorry, sir! I am out of vanilla. You will have to have it without chocolate, sir."—Boys' Life.

Everybody Accommodated.

Tommy (just off train, with considerable luggage)—Cabby, how much is it for me to Latchford?

Cabby—Two shillings, sir.

Tommy—How much for my luggage?

Cabby—Free, sir.

Tommy—Take the luggage; I'll walk.—Boston Transcript.

Some Dog.

"Who fiddled while Rome burned?" asked the schoolmaster.

"Hector, sir!"

"No, not Hector. Try again."

"Towser, sir."

"Towser! What do you mean?"

"Well, if it wasn't Hector or Towser," said the voice aggrievedly, "it must have been Nero. I know it was somebody with a dog's name."—Youth's World.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

BE HOPEFUL.

Be hopeful, friend, when clouds are dark
And the days are gloomy, dreary;
Be hopeful even when the heart
Is sick and sad and weary.

Be hopeful when it seems your plans
Are all opposed and thwarted:
Go not upon life's battlefield
Despondent and faint-hearted.

And, friend, be hopeful of yourself.
Do bygone follies haunt you?
Forget them and begin afresh.
And let no hindrance daunt you.

Though unimportant your career
May seem, as you begin it,
Press on, for victory's ahead:
Be hopeful, friend, and win it.

—FRANCIS STRICKLAND.

Dear Mrs. Barland: Everybody nearly has expressed his ideas on dancing and smoking, but nothing has been said about the evil of the pool hall and pastime places. I think they are worse than any of the other things that one could do or go to. Women and girls are not allowed in such places and I don't think it right that places should be allowed to exist where women are not permitted to go.

Outside of other things that go on there, men spend money which is needed for the comfort of their families. There are plenty of good, clean places where men can take their families and where young men can take their girl friends and have a pleasant time together.

These talks on smoking are surely doing good. I know of several who have been reading these letters who have quit smoking. My husband had been smoking for years and he doesn't smoke at all now.

"MICKEY."

Family Circle Girls

Dear Mrs. Barland: I have been an interested reader of the Family Circle for some time. The instructions of "A Bachelor" on how to make bread without taking a "day off" for the purpose are fine! I think some of us girls might profit by that recipe. My mother taught me how to make bread when I was 10 years old and, although I am not much of a cook in other ways, I think I can compete with almost any woman in making bread which is wholesome and light. I am not boasting, either. "Bachelor," I am going to copy your recipe to use when I must be away all day, as mine won't allow me to forget my bread in that fashion!

As to the questions under discussion: A woman is supposed to be more pure than a man, and it is her duty to keep herself so. The trouble is that there are lots of girls who are willing to lower themselves, and incidentally the boys in question, too. I have had invitations to go on wild rides, into the seclusion of a dark corner at a dance, or the back seat of a car, and I have always said "No." I believe, too, that I have had as good a time as those who didn't. Maybe I didn't get as many "dates," but I'd rather have none than to "pay" for them that way.

You asked us what we liked to do best. I may seem rather lazy, but I like to travel. Not on the train or in a ship, but on the highway in an automobile. Nothing is more interesting to me than to ride along, seeing new things, new towns, new people. I have been in the heart of the Rockies, and smelled the pine and the fir, and lain down to sleep under the stars. Maybe not so pretty, but almost as interesting, is a trip through the sagebrush country. A different, but pleasant odor there, a different landscape, but the same stars. They are in the prairie country, too; and I have a genuine love for that, because there is where I was born. But Oregon is best when the cold northwest wind blows and covers it with snow.

I am going on a camping trip soon, and I am sure a great many other girls are, too. When we all get back, why don't you have us tell our experences? I, for one, would be only too glad to. Many interesting things happen in the tourist world, and I am sure it would be fun for those who do not go to get some of the benefit of them.

"THE RAMBLER."

Dear Mrs. Barland: I like THE FARMER. We have taken it for several years. I like it even better now that we have the Family Circle Girls. I always turn to it first thing and see what others have to say on questions in which I am very interested. In answer to the letter of P. E. M., I'll tell her what to do for recreation instead of dancing. I am 17 years old and next year I will be in my senior year in high school. First of all, there are the high school affairs that are not dances. Our girls' organization has some parties that are not dances. There are games, track meets, debates and picnics, besides some parties that are not all dancing. Second, I belong to a Christian Endeavor society. Although the first aim of the organization is religious, it has its social side as well. It seems there is hardly a week goes by but what there is a "weinie roast," party, taffy pull or something.

All of our family are great lovers of the mountains and we go on picnics to the near-by canyons. I like to read also and manage to find time for quite a bit of it. The trouble with me is that I can not find time for all the things that I would like to go to that are not dances.

Washington. A HAPPY GIRL.

Family Circle Boys

Dear Mrs. Barland: We have been taking THE FARMER for several years, but nothing interests me but the Family Circle, as I am not a farmer. Although we live in town, we own a large ranch several miles out of the city.

You ask us to tell of our plans for the future and our present occupation. I am taking a business course in high school. When I finish I think I will be able to obtain a position in the bank where my father has a good position.

I also believe in enjoying life. I am only 18, but I go to dances and parties and my main pleasure is car riding.

I surely enjoy reading the different opinions of the writers; I like R. V.'s letter; it is unusual.

Hoping there will always be a corner for the Family Circle, I remain,

"SPEED."

Dear Mrs. Barland: The Family Circle is more interesting than any I have ever seen and your advice to boys and girls is fine.

I haven't smoked for several years, as it is bad for the health. I injured my health by smoking.

I go out car riding many times. One can have more fun with the wild girls, they will go most any place at any time and the good girls won't go. For having fun I would rather go with the wild girls, but if I were to marry I would rather have a nice girl, as there would be less chance of having trouble in the family. I think the girls would make the same choice, too.

I enjoy music and dancing and think it good for the health. There are three dances here every week. E. A. B.

Dear Mrs. Barland: As the Family Circle is taking an important place in our home and I have an invitation to write, I will do my best to make the letter interesting.

I live on a ranch of 800 acres, 25 miles from the railroad. My brother and I are in partnership and are just beginning to like it here. Out of our 800 acres about 400 are under water; we have our own reservoir and don't have to pay for any rights. Our ranch lies right in the foothills on the old Asmoon trail and our nearest neighbor is six miles away.

We are milking 10 cows at present, which seems to me to be a day's work. We have all the mountain trout we want within one-half mile and plenty of sage hens and grouse. Circle readers, let us forget about the kissing and smoking question for a while and write and tell each other about our plans for this summer. It will be just as interesting. I am a very poor writer, as I left school far too early. I have lived on a farm all my life and think it the best place for young people.

Idaho. J. W.

Family Circle Men

Dear Mrs. Barland: In reply to C. S. W., who wants a cure for seasickness, will say that it can not always be avoided, but several ounces of prevention can be used for resistance.

Even old sailors get seasick sometimes and when one has it there are two stages; the first stage is where you are afraid you will die and the second is when you are afraid you won't.

I have crossed the Atlantic four times and the Pacific twice. I will give some instructions that were given me by some old sailors and which I followed with good success.

Don't think about being sick nor begin worrying. Give your system a good cleansing before starting on your journey, eat plenty of food that is easy to digest, such as vegetables and fruit, all but bananas. Use very little sugar or salt and no greasy food.

Choose your stateroom amidships and take plenty of fresh air. Try exhaling when the ship goes down and inhale when she comes up. If this doesn't work satisfactorily reverse the breathing process. Begin this system of breathing when you first begin to feel symptoms of seasickness.

My trips have been on cargo boats; the longest time at one stretch was 29 days.

"SALTY."

Fragile Clay

By Julia M. Martin.

Fleeting and fragile is sentiment,
Only the treacherous plastic,
Only the impotent pattern
Dreamed in the clay insecure.
Carve we our dearer relations
Finely in character's marble.
Chaste, then, and firm in its beauty,
Long will the image endure.

AGES AND MARRIAGE.

The proportion of women married and neither widowed nor divorced rises steadily in our country with the age of woman until the year 33, after which it declines steadily. In other words, of women of all ages a larger percentage of those aged 33 are living as wives than of women of any other age. About 82 per cent are at that age wives, unwidowed and undivorced.

Among men, however, the percentage married and neither widowed nor divorced rises with the age of men, by age groups, until the period between 45 and 54 years of age, at which about 81 per cent are husbands of living and undivorced wives.

Water for House and Barn

R. H. Ensign of St. Clair has harnessed a small stream which runs through his place by means of a hydraulic ram which pumps the water 68 feet and supplies both the house and barn with drinking water. Only a 15-foot head was obtainable, but it has sufficient flow to operate a ram, and so far it has worked with maximum efficiency. The tank holds 110 gallons and it is kept full at all times except when drawn on heavily. Mr. Ensign expects to pipe the overflow to a water trough in the main cow pasture, so that the herd will have fresh water without going clear down to the creek.

BETTER THAN ALFALFA.

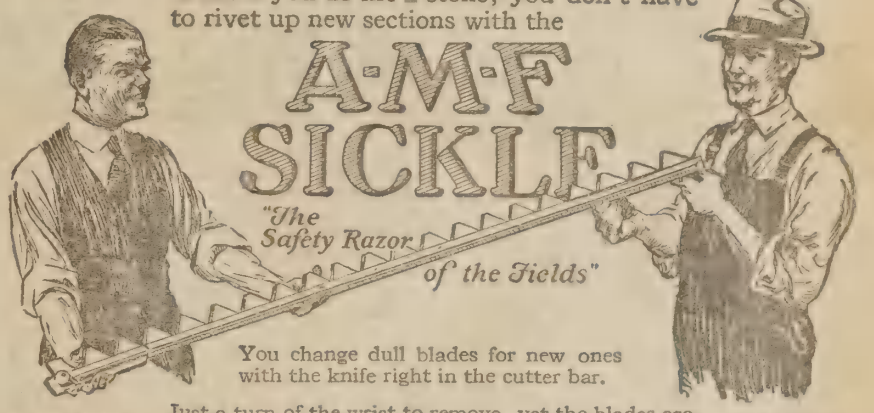
Alsike, red clover or vetch is better than alfalfa on clay bottom soil or on prairie land. The "king" of forage crops requires good drainage.

You Change Blades Right in the Machine

What if you do hit a stone; you don't have to rivet up new sections with the

A-M-F SICKLE

"The Safety Razor of the Fields"



You change dull blades for new ones with the knife right in the cutter bar.

GUARANTEED FOR ONE YEAR

Just a turn of the wrist to remove, yet the blades are locked so tight they cannot come loose. You keep a "dozen" package of new blades in your tool box, and *keep your mower working.*

Goodyear Means Good Wear

Advantages That Save You Money

Consider for yourself the advantages that save you money in the new Goodyear Cord Tire with the beveled All-Weather Tread:

MILEAGE

The tread on the new Goodyear Cord is made from an extraordinarily dense, tough, improved rubber compound that gives longer wear.

ENDURANCE

The carcass of this tire is made from highest grade, long-staple cotton and embodies the patented Goodyear principle of group-ply construction.

STAMINA

The sidewalls of the new Goodyear Cord are thicker and heavier, offering greater resistance to curb and rut wear.

LONG LIFE

The double-molded process employed assures stronger unions between plies and between carcass and tread.

SMOOTHNESS

Reinforcing rubber ribs at the base of the blocks of the tread result in a stronger, smoother-running tread design; the beveled feature reduces vibration and strain as wear proceeds.

SAFETY

The non-skid qualities of the famous All-Weather Tread are preserved without sacrifice, insuring the utmost in slipless, safe travel.

ECONOMY

In quality and construction this new tire is the finest Goodyear has ever made; it costs less to use in the end.

SERVICE

The new Goodyear Cord with the beveled All-Weather Tread is sold by Goodyear Service Station Dealers, pledged to help you get from the tires you buy all the mileage built into them at the factory.

The new beveled All-Weather Tread Cord Tire is made in all sizes for trucks and passenger cars

President Visits the Northwest

(Continued from page two.)

financing. But I have been heartened by the convincing evidence I have already seen of the wonderful results where water meets the land.'

"The government is interested to aid your effort from the standpoint of adding to the national wealth by the transmutation of arid spaces into fertile fields. It is interested also in the protection of the national finances, so that money advances to prosper this work may not be dissipated in doubtful projects or jeopardized in experiments. We must look for plans that are safe; plans so conceived that they will not unduly burden the settler in the days when he is reducing the land to production; plans that will be reasonably broad, and that will not commit the government to unwise and unreasonable expenditures."

Both Secretary Work of the department of the interior and Secretary Wallace of the department of agriculture, who accompanied the president on his trip, emphasized the point that there was in the east a general sentiment of opposition to the development of more agricultural lands at the present time. They declared that there was much to be overcome in congress before the necessary advancement of money for the proposed Columbia basin project and other northwestern projects could be made. Secretary Wallace manifested less personal favor toward the project than did Secretary Work, the latter frankly picturing the day when the project as proposed would become a reality.

From Spokane the presidential party went to Meacham, Ore., where it participated in the Old Oregon Trail celebration on July 3. In his address there the president paid glowing tribute to the spirit of the pioneers who had made development in the northwest possible. On the following day, July 4, the president was the speaker at Portland's Fourth of July celebration. His address there covered fundamental points of national and international issues, being of an especial patriotic nature. On the following day, July 5, he addressed the people of Tacoma and surrounding territory before sailing for Alaska. At Tacoma he laid special emphasis upon the necessity of a strong merchant marine if this country is to prosper in its international commerce.

After the president has completed his study of conditions in Alaska he will return to the states, stopping first at Seattle, where, on the 27th, he will be the guest of honor at the stupendous patriotic presentation of the "Americanus." He will go thence to San Francisco, returning east by the southern route.

* * *

The French chamber of deputies, which corresponds somewhat to the house of representatives in the congress of the United States, last week voted in favor of ratification of the five-power treaty that was drawn up at the conference on limitation of armaments held in Washington, D. C., at the call of President Harding two years ago. The other four nations that were parties to the treaty have already ratified it—this country, England, Japan and Italy. Before French ratification is complete the senate of that country must ratify it, and it is not known what the sentiment of that body is. The failure of France up to this time to ratify the treaty has resulted in world-wide uncertainty as to the naval situation of the world. The leading naval countries have delayed the scrapping of portions of their navies as provided in this five-power treaty, fearful that the failure of France to accept the treaty would result in international disturbances greater than those under naval rivalry. It has generally been assumed that the delay of France in ratifying the treaty has been due to an effort on her part to force England to come around to the French attitude on the Ruhr occupation and the general enforcement of payment of German reparations. It is probable, however, that France now proposes to ratify the treaty to prove to England and the world that this has not been the cause of her delay.

The action of the chamber of deputies is greatly pleasing to President Harding, who was directly responsible for the drawing up of the five-power treaty. It was the outstanding result of the international conference called by President Harding on the armament question.

* * *

The significant announcement is made that organized manufacturers of the United States, 20,000 strong and representing directly or indirectly invested capital of $40,000,000,000 and employing nearly 6,000,000 men, are planning a united effort along the four following lines:

1. Opposition to the enactment of a soldier bonus law along the lines of recent proposals.
2. Enactment of what the manufacturers regard as a constructive immigration law permitting the entry into the country of selected groups of workers when the need for such workers is manifested by a labor shortage in their respective trades.
3. A legislative moratorium for the railroads.
4. Revision downward of tax burdens upon industry.

* * *

A political organization to be known as the federated farmer-labor party was launched in Chicago, July 5. The farmer-labor party, as an organization, has refused to participate in the new movement, according to published reports. The new organization is reported to be extremely radical. It endorses the third internationale at Moscow, Russia.

* * *

Though unable to land a knockout blow on Tommy Gibbons, Jack Dempsey, world champion heavyweight pugilist, was awarded the decision in the championship contest at the end of the 15 rounds fought in Shelby, Mont., July 4.

A monument in honor of the American volunteers in the French army who lost their lives in the World war was unveiled in Paris, July 4.

Wenatchee Apples

Crop Increases Over Last Year

By E. H. McPherson.

The district inspector of horticulture at Wenatchee estimates the total 1923 apple crop of the north central Washington district at a little over 16,500 carloads, which is a gain of 2500 cars over the total shipments for 1922, an increase of nearly 20 per cent. This is the largest yield ever predicted, the 1921 crop being 15,000 cars and the 1922 crop 14,000 cars.

District Inspector Nielsen adopted a new policy this year of delaying a forecast of the apple crop until July 1, it being his theory that any estimate made before the June drop is necessarily inaccurate. To be sure, Inspector P. S. Darlington, his predecessor, had a record of only missing the size of the crop once in 10 years, and then only by a little over 7 per cent. The rest of his estimates came within 2 per cent of the actual total production as shown by the shipments.

Last year Mr. Nielsen took over the duties of his office July 1 and estimated the yield at a little over 14,000 cars, though the usual estimates ran from 15,000 to 16,000 cars. The loss from worms and from failure to get cars amounted to about 1500 cars, but the worm loss was already apparent when Mr. Nielsen made his estimate, and he took it into consideration in making up his estimate.

A slight decrease is indicated in the yield of Grant, Douglas and Okanogan counties, also in the Lake Chelan district, but this is more than made up by the heavy gain forecast for Wenatchee, Cashmere, Peshastin, Dryden, Monitor and all points in the main Wenatchee valley. East Wenatchee and Rock Island have a particularly large crop, much greater than ever before. Many orchards will yield twice as many apples as ever before in their history.

Despite the reported damage by frost and hail in the Okanogan valley, the crop there will be approximately the same as last year, of which 575 will be Winesaps, 285 Jonathans, 160 Delicious and 120 Spitzenburgs.

From Okanogan station shipments are estimated at 550 cars, compared with 575 for last year, and of these 240 cars will be Winesaps, 90 Delicious, 85 Jonathans and 50 Spitzenburgs. From Malott the shipments are estimated at 375 cars, compared with 425 last year.

Shipments of nearly 5000 cars are estimated for Wenatchee and immediate vicinity, an increase of nearly 1500 cars. This will be by far the largest volume of fruit ever handled through the local packing and shipping warehouses, and in addition to this nearly 1000 carloads of summer fruit will go forward from the local warehouses, according to present estimates.

The grade and pack certification rules for 1923 have been issued by the state department of horticulture. There are no changes in the color requirements of any of the varieties compared with last year, but there is a decided change in the requirements as to stings and condition of the fruit when picked.

Under the 1923 rules all apples must be mature or at the proper stage of maturity to insure the proper completion of the ripening process when picked.

Apples must be clean, reasonably free from dirt and from excessive spray material. They must be well formed, having the shape characteristic of the variety in the locality where grown.

Drought marks, slight hail marks, slight russeting and slight sun scald are all defined, and especial emphasis is laid upon the definition of "worm stings" as follows:

The term "worm sting" means a thoroughly healed worm sting, as the healing of the sting is the only evidence which shows that it is not infected. "Small healed stings" are further defined as those in which the diameter of the dark discoloration caused by the sting, exclusive of any encircling green ring, shall not be more than one-eighth inch.

Apples to go in the extra fancy grade must be clean, hand picked, well-formed, free from bruises, limb rub, spray burn, sun scald, russeting, drought spots, hail marks, visible water core, broken skin and other damage caused by disease, and up to the required specification as to color.

In the fancy grade the color requirements are less, and apples may have scab spots not exceeding one-fourth inch in diameter, slight drought marks, hail marks not over one-half inch in diameter, slight sun scald and not more than two healed-over stings, provided they are extra fancy as to color requirements.

In the C grade the above imperfections are allowed provided there is no infection, and color requirements are less rigid. The fourth grade permits more healed-over worm stings provided they are free from infection, and a combination grade is provided under which extra fancy and fancy may be packed together, or combination fancy and C grade, provided, however, that such combinations must always contain 25 per cent of the apples of the higher grade.

When apples comply with the requirements of the rules in every other respect a "tolerance" of 10 per cent is allowed for a total of defects.

Wheat Is the Big Thing

(Continued from page three.)

bottom land having a water table near the surface," said Mr. Hill. "An experiment conducted at Moro, Ore., for nine years showed an average yield of one bushel more per acre on ground not harrowed. The four years' results at Waterville are as follows: Harrowed as soon as the ground was dry enough to be tilled, yield 23.3 bushels; harrowing delayed until two weeks later, 24.7 bushels; harrowing one month after the first field work was started in the spring, 26.4 bushels; ground not harrowed, 27.1.

"The greatest injury from harrowing has resulted in years when the grain came up late in the fall or early spring and by setting the wheat back by harrowing the wireworms have killed more plants than on the unharrowed ground. In years when the grain obtains an early start in the fall harrowing has not increased or decreased yields to any marked degree, it has only been time wasted. The fact that the ground has a dry crust is conclusive evidence that the capillary rise of moisture has been checked and instead of closing the cracks by harrowing the crust is broken up as deep as it is cracked. The growing plants soon take up any moisture near the cracks, and the farmer's time is better spent in conserving the moisture on the ground to be summer fallowed where early tillage is so important for obtaining the best yield the next year."

CONTROL SHEEP SCAB.

No widespread infection of sheep scab is expected by state officials following the discovery of one infected herd in the Yakima valley. So far the trouble is confined to that herd and precautionary measures are being taken to prevent its spread.

Modern Magic in Jelly Making

New PEN-JEL makes jelly "jell" instantly. Boil two minutes and your jelly is ready for the glass. It never fails. No anxiety lest your jelly be a failure.

PEN-JEL is effective with any fruit juice. Supplies pectin, the active fruit property which makes jell. Perfect results assured with fully-ripe fruits. Made from fruit, hence its absolute purity is sure.

Improves the taste, too, because the delicate, natural flavor is not boiled away. Insures clear, firm jellies. Saves fuel, energy, time, and sugar.

Once you've tried PEN-JEL you'll always use it. Order from your grocer. Should it be possible he hasn't it, send 15c in stamps for a full-size package, enough to make six 7-ounce glasses.

A valuable book of recipes and information in each package. Full directions for making delicious jams and jellies from every kind of fruit. SEND YOUR 15c TODAY.

LEO PECTIN CO., St. Joseph, Mo.

NEW PEN-JEL MAKES THE JELLY JELL NEVER FAILS

JELLY RECIPE

Put 2½ cups fruit juice in kettle (about 6 quart); add 1 package New PEN-JEL, stirring until boiling vigorously. Add 3 level cups sugar, boiling vigorously from 2 to 4 minutes, depending on fire. Pour into glasses.

You should try PEN-JEL for making delicious jams and jellies with strawberries, cherries, blackberries, raspberries loganberries and all other fruits.

Just Folks

Is there such a thing as doing too much in a collective way for the people?

I have just been in some of the biggest cities of the country and I marvel over the costly privileges offered to all freely or at a nominal cost.

Sometimes it seems to me that the more the public does for the individual the less the individual does for himself.

The home seems to become less and less, to a vanishing point, in the big cities. The theater party is not a home affair. The public library not only supplements home books, but verily discourages home libraries. One good book in the home is worth a dozen from the town library.

The educational value of art galleries, museums, parks filled with rare animals and plants, to be found in the big cities, is largely destroyed by the dominating idea of entertainment. Education has a hard side to it as well as an easy side. The ways of life may be made too easy. Cities especially are forgetting that social perils lie in the pathway of ease.

A writer in the June Atlantic declares: "Living in an air of indulgence, we are soft, flabby and morally short of wind. If a thing is disagreeable, we do not do it!"

The supreme advantage of life in the open country is the fact that more common life difficulties must be met and overcome than in the cities. You must do more for yourself on the farm than in the city.

EAS

Home Recipes

Filled Cookies—One-third cup shortening, 1 cup sugar, 1 egg, ½ cup milk, 1 teaspoon vanilla,, 3½ cups flour, ½ teaspoon salt, 4 teaspoons baking powder,. Cream shortening and add the beaten egg, milk and vanilla, add flour, salt and baking powder which have been sifted together. Roll thin on slightly floured board, cut out with cookie cutter and place one teaspoon of filling on a cookie and cover with another and press edges together. Bake in a moderate oven.

Filling for Cookies: Two teaspoons flour and ½ cup sugar, ½ cup water, ½ cup each of chopped raisins and figs. Mix the flour and sugar together, add the fruit and cook till thick, being careful not to scorch.

Strawberry Shortcake—Two cups Flour, ½ teaspoon salt, 4 teaspoons baking powder, 3 tablespoons shortening, 2 tablespoons sugar, 1 egg, ½ cup of milk. Sift dry ingredients, mix in the shortening, add the beaten egg to the milk and add the dry ingredients to make a soft dough. Divide the dough into two parts and without rolling press into layer pans well greased, placing one on top of the other after spreading butter between. Bake in a hot oven 20 or 25 minutes. Split while hot and spread with crushed strawberries. Serve with cream, plain or whipped.

Rhubarb Conserve—Stew enough rhubarb to make ½ dozen quarts; put 1 package of raisins and ½ dozen oranges through the meat grinder and ad dto the rhubarb and to ever ycup of fruit add a cup of sugar. Cook slowly for three hours. I have made this many years.

Mrs. H. H. Ackley, Wash.

20 MULE TEAM BORAX

No matter what form of soap you use or for what purpose, 20 Mule Team Borax should be added. It is nature's greatest cleanser and it will soften the hardest water. It has more farm uses than any other commodity. 20 Mule Team Borax protects all fabrics. It will not fade the softest colors or injure the most delicate material. It makes white goods whiter and will not shrink woolens. 20 Mule Team Borax is always convenient and economical to use and its action is mild and sure. Borax is an antiseptic as well as a cleanser and makes all fabrics antiseptically clean.

Make this week's wash *clean.*

20 Mule Team Borax is in all clean kitchens and bathrooms, is it in yours?

At all grocers and drug stores.

Send for Magic Crystal Booklet giving a hundred household uses for 20 Mule Team Borax.

NATURES GREATEST CLEANSER

Amalia Schall is very much interested in her flower garden this spring. She also has a vegetable garden. Amalia won second prize of 50 cents in a spelling contest at the recent school meet. She lives in Adams county, Wash.

Martha Pierce attends the Central school. It is called "Central" because it is near the cross roads. This summer Martha says she is going to wear overalls and go barefooted, so she can wade in the creek. She is an eastern Washington girl.

Hattie Pierce rides to school in a buggy her papa made. When winter came he put canvas over it and it was like a little house. Her classmates in the fourth grade are Chester Porter and Martin Crowe. We were glad to hear from this cousin in Garfield county, Wash.

Little Nellie Hurst, who is 6 years old, expects to start to school this fall. She reads, spells, writes and does arithmetic problems already and she is sure that she will like to go to school. This is our first letter from Nellie She lives in Mason county, Wash.

Chester Porter and Martin Crowe are schoolmates and are in the same class in the Central school, in Adams county, Wash. Hattie Pierce is in the same grade. Chester says there is much around their school.

Maple Schlief shares her Junior Farmer with the girls and boys at school who are not Corner cousins. She has promised us a pioneer story and we shall all be on the lookout for it. Maple's house is in Okanogan county, Wash. (Aunt Nellie appreciates your good report card, Maple.)

BEDTIME STORIES

By THORNTON W. BURGESS.

BULLY MAKES A MISTAKE.

An independent spirit is a thing to highly prize,
But too much independence is an evil in disguise.

If there is one thing above another on which Bully the English sparrow prides himself it is his independence. He says so. He is forever talking about it. He says that the way to get on in this world is to look out for yourself and never mind any one else; let them look out for themselves. Of course, that is one of the oldest and most mistaken ideas in the world, but Bully hasn't learned it yet in spite of the fact that what he calls independence is forever getting him into trouble.

He had been wandering through the old orchard with nothing to do but try to bully whomever he met, when at last he came to the far corner, where Johnny and Polly Chuck live. In the very tree under

Bully looked up to see a trim-looking gentleman with a white waistcoat sitting on a branch of the old apple tree.

which they have made their house he discovered a nest different from any nest which he had ever seen before. In his usual bold way he started over to look at it.

"Better keep away from there!" said a sharp voice.

Bully looked up to see a trim-looking gentleman with a white waistcoat sitting on a branch of the old apple tree. He was larger than Bully, but not nearly as large as Welcome Robin or Goldie the oriole, both of whom he had whipped that very morning. At least he thought he had whipped them, though the truth is they simply had refused to fight.

"I could whip that fellow with my wings tied," thought Bully and went right on.

"I told you you had better keep away from there!" said the trim-looking gentleman with the white waistcoat.

"Who'll make me?" demanded Bully.

"I will!" retorted the other.

"Let's see you do it!" retorted Bully.

The words were hardly out of his mouth when something hit him and knocked him sprawling. Before he could quite get his breath it seemed to him that the air was full of sharp bills. When he tried to strike back there was no one there. It was too much for Bully, and he turned tail and flew away. But as he flew he was knocked down again and lost several feathers. So it went for quite a distance back through the old orchard, Bully trying his very best to get away and this trim gentleman with the white waistcoat knocking him down and pulling out feathers until Bully's coat was a sight. It was with something like a sob of relief that at last he found himself free.

"I guess I made a mistake," said Bully to Mrs. Bully as he explained how he had got his clothes so badly torn.

He was right. He had made a mistake. He had tried to bully Scrapper the kingbird, who is a famous fighter.

(Copyrighted by J. G. Lloyd.)

Birthday Greetings

THURSDAY, July 12—Mildred Smith, 9 years old.

FRIDAY, July 13—Inez Brown, 11 years old; Violet May Clark, 10; Wallace Cole; William Leettola, 10.

SATURDAY, July 14—Edna Doris Melton, 10 years old; Hazel Reeves, 11.

SUNDAY, July 15—Leona Tuisku, 11 years old.

MONDAY, July 16—Merritt Galbraith, 9 years old; Katherine Lund, 10; Carl Moody; Mildred Stiles, 11.

TUESDAY, July 17—Hazel Puckett, 9 years old.

WEDNESDAY, July 18—LaVonne Elm, 9 years old; Cecilia Hansen, 10; Doris McDonnell, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

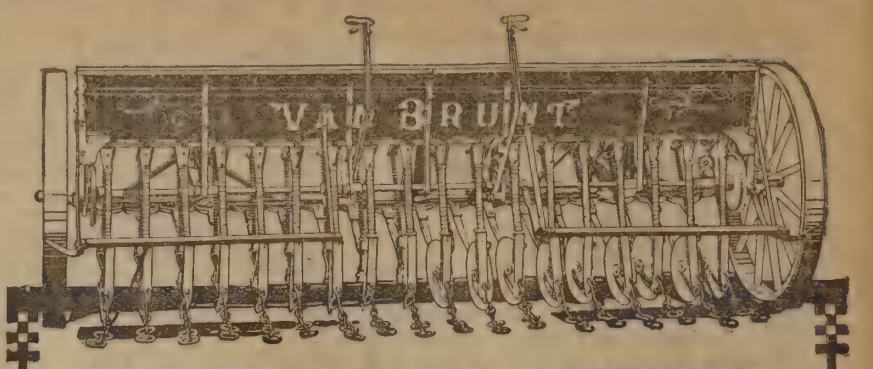
Weeks Slip By

One by one the weeks go, and with each of them goes one installment of our serial story. We urge our readers not to overlook the early chapters of the new story, "Cattle Ranch to College," for it is so easy to lose a paper and thereby fail to get started into the story at all. We have all done the like, and we have all regretted it when it was to late.

The first chapter of this new western story of adventure appeared in the issue of July 5. The second is in this week's issue, beginning on page 14. We know that you will read all of this wholesome, interesting story if you once begin it.



Plants Evenly on Steep Hillsides

There is no axle end-play and the grain cannot shift to one side, leaving part of the box empty and part of the soil without seed—you can do a good job of planting on hillsides and on level land with

JOHN DEERE

Van Brunt Grain Drill

with double-run feed

The adjustable gates of the Van Brunt double-run feed, together with the multiple gear construction, make it possible easily to adjust drill to plant 48 different quantities of treated or dry grain—wheat, 16 to 258 pounds per acre, and other grains in proportion. No wire reducers or other contrivances are required.

Kernels of every kind and size are planted at regular distances apart—there are no vacant spots. All the seed is properly covered so that it establishes root connections easily and receives the nourishment from the soil necessary to make deep roots and strong stalks. The result is a crop better able to withstand excessive heat and blighting winds.

The grain box is trussed to the frame and axle at five points. **The frame is angle steel, reinforced.** The Van Brunt is built like a steel bridge—it cannot buckle or sag. Frame is supported on long, strong wheel hubs.

Gears always in mesh—no sudden jerks to strip them. They are self-aligning, dirt-proof, and are provided with spring relief—obstacles pass through without breaking or damaging the gears.

Guaranteed disc bearings; tilting levers for adjusting position of furrow openers to cut deep or shallow; single discs, double discs, shoe or hoe furrow openers.

Sold by John Deere dealers.

FREE BOOK. Write today, address John Deere Plow Co., Portland, Oregon, for free book describing the Van Brunt Drill with Double-Run Feed. Ask for Booklet R.C.-447

Guernsey Excursion

Two Days by Boat; One on Land

The second annual Guernsey excursion to the Guernsey Islands of America, namely, the San Juan islands and Whidby island, will be held July 18, 19 and 20. The trip this year will be two days by boat, and one day by land and the crowd will return by way of the Clinton ferry by Everett. The steamer Potlatch will again be chartered for the first two days, but the excursionists will be taken to some point either on Whidby island or to Whatcom county, where the breeders will act as hosts for the third day of the trip.

The boat will leave Seattle on the night of July 17th, and the first day of the trip will be spent visiting herds on Orcas island. A barbecue dinner has been planned for the crowd on Mount Constitution, one of the scenic spots of the island. Plans are not yet complete as to the third day, but the time will either be spent visiting the herds on Whidby island, or in Whatcom county. In either case the excursionists will be taken care of until the evening of the second day, when the Potlatch will return to Seattle, and any who desire may return to Seattle with her.

This excursion is the second of its kind, and the three days spent among the islands last year was considered one of the best breed excursions ever held in the state. It is an ideal outing for any one who is interested in any breed of cattle, whether Guernseys or not. Meals are usually furnished by the hosts, and only one meal a day, breakfast, was served on the boat. The trip includes berth during the two days and what meals will be necessary on the boat. A good crowd is expected this year, since every one that attended last year expressed their desire to go again this year if possible.

The expenses of the trip have been estimated at $14 for the two days spent on the Potlatch, while the cost for the third day will be very light. Those wishing to make reservations for the trip should write to Leland J. Clark of Bellevue, secretary of the Washington State Guernsey Cattle club, or to E. L. Westover, 211 Northwestern Bank building, Portland.

Stimulate Patriotism

When Professor Edmond S. Meany of the department of history of the University of Washington wrote "Americanus" he was inspired by a desire to counteract various present day activities that seek to break down fundamental American institutions. "Americanus" is one of the most stupendous pieces of pageantry, combined with drama, oratorio and grand opera, that has ever been attempted in this country. It will be presented in the University of Washington stadium at Seattle each evening of the week of July 23-28, under the direction of Montgomery Lynch, producer of the "Wayfarer," which was presented in Seattle last year and previously.

"Americanus" will portray six important episodes in American history, from the colonial days to the present time. Such characters in history as Washington, Jefferson, Lincoln, Roosevelt, General Grant, General Lee, General Pershing, Wilson and Harding will be portrayed by men selected for their personal resemblance to the originals and their ability to play the parts.

It is understood that President Harding looks upon the feature as of sufficient importance to justify him in arranging his present western itinerary so as to return from Alaska during the week of "Americanus" to attend one evening's performance.

Ten thousand persons will take part in the performance, including a 1000-piece band. Choruses will be sung by 5000 voices.

An especially important episode in the pageant is that dealing with the Monroe doctrine, the 100th anniversary of the pronouncement of which is being celebrated this year.

While the spirit of patriotism inspired the author and those taking the leading parts in this great spectacle, the net proceeds from its presentation will be turned over to the student body of the University of Washington to help pay off the debt against their stadium.

REPLACES HOLSTEINS WITH JERSEYS.

"Six of the prettiest grade Jerseys a man could ask for," is the way Anton Adolphsen of Lewis county described the herd which L. B. Hope of Chehalis recently assembled to take the place of five purebred Holsteins which he sold to Albert Hamilton. Five of the animals were purchased from John W. McCutcheon of Adna, who has been using purebred sires for 20 years, and the sixth from Adolphsen.

HERD PREFIX RESERVED.

"Golden Glen" is the herd prefix and farm name reserved by the Holstein-Friesian Association of America for the use of Willson & Boyd of Sunnyside, Wash.

Breeders' Department

HIGHLAND GROVE FARM HOLSTEINS

It is conceded that the two greatest cows, combining type and production, that the world has ever produced, are TILLAMOOK DAISY BUTTER KING DE KOL, with a four-year-old record of 32,450 pounds of milk and 1260 pounds butter, grand champion cow Pacific International Live Stock exposition, 1922, proclaimed by Judge Moscript as America's greatest show cow, and LADY AAGGIE ORMSBY OF ROCK, with approximately 30,000 pounds milk and 1100 pounds butter, grand champion cow Pacific International, 1921. The sire of the former is our senior herd sire, SIR BESSIE FAYNE DE KOL FOBES. A full brother of the former, and a son of the latter, are our junior herd sires.

As a result of this breeding, we have ninety head of purebred cattle, all having straight top lines, square udders, and not a sloper in the herd. Our blood lines, in combining superb type and production, are unequaled and unapproached by any other breeder.

We are offering scientifically bred young bulls and heifers of our blood lines at prices within your reach and upon terms that are reasonable. HIGHLAND GROVE FARM.
F. R. BEALS, Proprietor. Tillamook, Ore.

Hollywood Holsteins A fine individual son of our junior herd sire out of 796-lb. 4-year-old dam.
HOLLYWOOD FARMS, Hollywood, Wash.

Jersey Bull for Sale

Two-year-old registered Jersey bull, Cleo's Poppy's Lad. Sire, Anoka's Poppy's St. Mawes. Dam, Hester's Cleo, was producing 504 lbs. of fat in year and 50 lbs. of milk per day shortly after dropping this bull. Price $200. See bull at O. L. Moore's farm, Colton, Ore., or write
MRS. A. M. CLARK, Portland, Ore.
294 Fargo St.

Jersey--Gold and Silver Medal Sire

Ashnook Farm offers a few heifers and young bulls, sired by the gold and silver medal sire, Silver Chimes, of S. B., sire of ex-world champion heifer, Silver Chimes Gwendola, and 20 register of merit daughters, and more qualifying.
DEL PERKINS, Carlton, Ore.

Richly Bred Young Jersey Bulls

Sired by Gertie's St. Mawes and out of tested dams with good records.
C. F. BATES, Rt. 5, Salem, Ore.

Silver Medal Jersey Dams First four two year-old daughters of Susie's St. Mawes Poppy, average 575 lbs. fat, with first calf. Young bulls at attractive prices.
JOHN KOPPLIN, Gaston, Ore.

Milking Shorthorns

Bull calves by Foothills Corporal, record of merit bull and grand champion at Pacific International, 1919, and Jackson county fair, 1922, the only times ever shown. Sire of champion and grand champion calves. Correspondence solicited.
KIRTLAND FARM, Central Point, Ore.

Milking Shorthorns Cows and young bulls by Peerless Knight, by Beau of Glenside, carrying 93¾ per cent of champion milch cow, Rose of Glenside.
J. E. DANILLS, Murphy, Ore.

Read the "Want Ad" page this week for good offers of all kinds.

Richly Bred Holstein Bulls Grandsons of the great Matador Segis Walker and out of dams on yearly test, making good records.
A. J. EVERS, Forest Grove, Ore.

Richards Champion Durocs

We have 25 last fall gilts, bred to farrow during July, August and September; also boars ready for service and the best lot of spring pigs we ever raised. All sired by our champion boars and out of big sows. They are priced way down to sell quick. Write for prices. Satisfaction guaranteed.
RICHARDS LIVE STOCK COMPANY.
Virginia, Idaho.

Bargains Weaned Duroc boar pigs from heaviest prize winning herd, Wash. and Ore. state fairs. Champion stock, $25; 1st prize stock, $20; all others, $15.
S. D. CORNELL, Grandview, Wash.

4 Poland China Bred Sows

And herd boar. Best big type blood lines. Good individuals. Bargain prices to close out.
J. L. BROGDEN, Hillsboro, Ore.

Big Type Poland Chinas Weaned pigs, bred gilts at farmers' prices. My pigs please from California to Alaska.
H. J. STILLINGS, Hermiston, Ore.

Polands Big type male pigs, weaning age; Archdale, Peter the Great 2d, Designer, Peter Fashion, Chess, Clansman, breeding; reasonable prices.
B. F. KAMMERZELL & SONS, Colfax, Wash.

Berkshires An exceptional lot young boars. Breeding unsurpassed. Offered on a year's time. Write for sale plan.
Cedar Canyon Farms.
F. M. CURTISS, Prop., Fruitland, Wash.

Red Poll Bulls

For sale, at farmers' prices.
J. S. GOULD, North Cove, Wash.
BREEDER OF RED POLLS.

advantage of to enjoy what pleasures the town afforded. The gamblers and saloonkeepers did a thriving business, though a perilous one, for on the slightest provocation the frontiersman was ever ready with his shooting irons.

It was only a few weeks after the Indian attack described before the parching heat of summer began to give way before the dreaded wintry breath of the north.

John and Ben, when they went out to guard their father's stock, gave up their daily swimming in the river and took up horse racing instead; and many a race was hotly contested. The boy, however, who rode Baldy, the big bay, always won.

Mr. Worth, as has been noted before, was a freighter; he was also a miner, opening up mines of coal in the deep-cut river banks, the coal so obtained being sold to the government for the fort garrisons.

On these coal-prospecting trips he usually went alone, carrying on his back the bare necessaries of life: a blanket, perhaps a string of bacon, a bag of beans, and a little coffee, besides the never-absent rifle and revolver.

Late in the fall, Mr. Worth set out on a prospecting trip. The garrison of Fort Lincoln and other outposts situated up the river were clamoring for more fuel, and no time must be lost if they were to be supplied before the heavy snows set in.

John went with his father a half day's journey, helping to carry his equipment. They started out afoot, and the mother, holding the baby in her arms, watched them.

"So long," called back Mr. Worth, as he started out.

"So long," returned his wife.

At dark, John returned and, in his self-sufficient way, began to prepare for the night. He and Ben each saddled a horse, of which there were several tied to a pole, and set out to round up the "saddle band" (as the ponies which were reserved for riding were called), and the work stock of mules and pack horses. They were not far off, nibbling the tufted buffalo grass, and soon were turned toward the corral, the boys riding on either side, ready to head off any animal that showed a disposition to separate or lead the "bunch" astray.

The stock safely disposed of, John and Ben went back to the shack, but were promptly sent out again for wood and water.

"Let's get a lot of wood," said Ben, "for it's colder than blazes tonight. Hope father will find a good place to turn in tonight."

"Oh, he's all right," replied John, between grunts, for the load of wood he was carrying was both heavy and bulky.

An hour or so later, the windows and door were barred, the embers of the fire scattered, and all hands turned in for the night. The beds were really bunks built into the wall, and were not exactly luxurious, spring mattresses being quite unknown; but the boys found them comfortable, and in a minute or two were rolled in their blankets like great cocoons and fast asleep.

Mr. Worth was not expected back for several weeks, for his journey was to be a long one and subject to many delays on account of bad weather and, worse, Indians.

It was about a week after he had left that Charley Green came up to where the boys sat on the doorstep braiding whips or quirts.

"Hullo, kids," he said, "Mr. Mackenzie wants—what are you doing?" His curiosity made him forget his errand.

"Braidin' a rope to hang a couple of horse thieves," said John, facetiously. "What did you think we were doing, branding calves?"

Even the kids made fun of the "tenderfoot," who was really a good fellow, just out from an eastern college, but densely ignorant as far as western ways went. He saw he was being laughed at and so hastened to come back to his errand.

"Mr. Mackenzie wants some old clothes, blankets, and other warm things for a man who turned up just now, half-dressed. He's almost frozen. White man, too," he added.

In a few minutes John and Tenderfoot Green reached the sheriff's shack, bearing clothes and blankets. The crowd that stood before the door parted and allowed them to pass.

In the far corner of the room, leaning over the fire, sat a man who turned his head as John and Green came in.

"Why, it's my father!" cried John.

(To be continued.)

CALL OFF TRANSPORTATION HEARING.

The hearing scheduled for Seattle July 17 by the interstate commerce commission to inquire into the inadequacy of transportation for fresh fruit during 1922 has been called off. The only hearing to be held in the state on this subject will be at Spokane July 30, immediately after the Wenatchee Southern hearing. Both will be held by Commissioner C. B. Aitchison. The Wenatchee Valley Traffic association will present a large amount of evidence at the Spokane hearing regarding the failure of the railroads to furnish adequate transportation for the fresh fruit crop of 1922, especially in the Pacific northwest.

Yakima Fruit Prospects

(Continued from page six.)

affects the packing rules. The text reads: "All apples packed under these regulations shall be arranged in the container according to the approved and recognized methods, with the stems pointing toward the end of the box except when jumbled and all packages shall be tightly filled, but the contents shall not show excessive or unnecessary bruising because of an overfilled package."

One of the big factors and one that will play an important part in the marketing of this year's peach crop is the new association that is known as the Yakima Peach Growers, Inc. This is a cooperative organization that was organized under the cooperative marketing law and requires that the state director of agriculture appoint one of the members of the board to represent the public.

The idea of the new body is to stabilize the prices of the peaches for the entire season and prevent under-bidding or price cutting, which has heretofore caused unsettled prices, according to many of the growers. By signing up practically 90 per cent of the crop on five-year-contracts the officers of the association feel that there should be less trouble in maintaining a fair price.

"The new body is to be strictly a selling organization that will sell to dealers and to the trade," said H. H. Lombard of Yakima, president of the board of directors. "It is our plan to have loading stations in many of the towns of the valley to load the fruit direct onto the cars. We are going to have inspectors of our own and we will also call on the state inspectors and ship every year under state certification.

"In this way we can handle our sales through brokers in the middle west and we feel that we can market the crop very economically. The organization was formed last year, but we were not incorporated and there were only 300 cars shipped out. This year we expect to give it a real trial and we see no reason for not making the plan a real success."

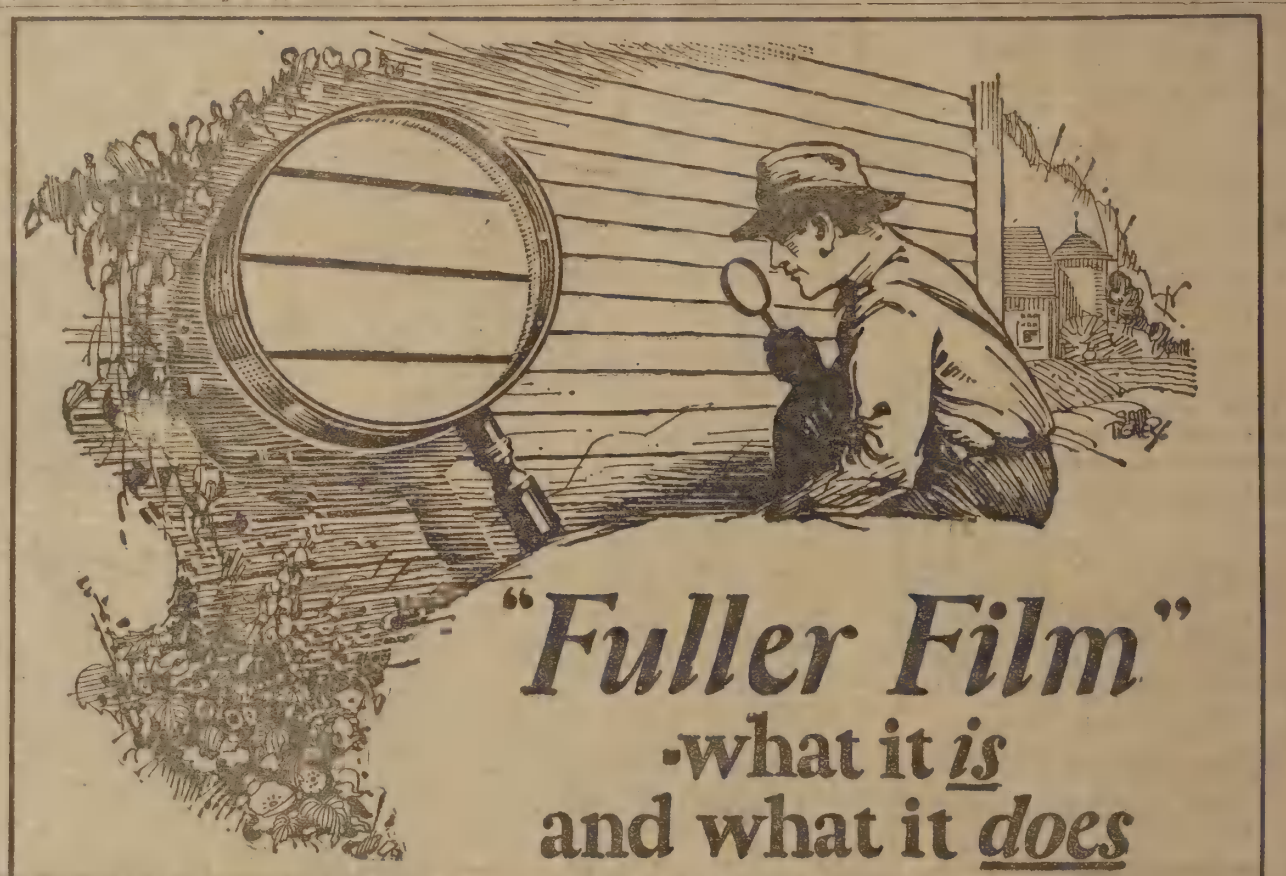
The officers of the association are: H. H. Lombard, Yakima, president; Bruce Wees, Donald, vice president; Ed Ballard, Buena, secretary; Fred Thompson of the Thompson Fruit company, Yakima, manager and treasurer, and John Bourgaize, Zillah, trustee. Mr. Thompson has had 30 years' experience in the valley as a fruit grower and shipper.

Market Created at Yakima.

The cannery at Yakima has created a market for a large quantity of fruit and a few vegetables as well as giving employment to from 200 to 300 men and women during the rush season. Operations begin at the plant about the middle of May with the early crop of spinach. This year there are 400 acres of the crop under contract.

Royal Anne and sour cherries are then ready and after that come table beets, Bartlett pears, peaches and apples. Last season this plant put out 70,000 cases of pears and there were nearly 100,000 cases of apples. The cannery has a concrete floor, which is 198x530 feet, and has six complete lines of modern canning machinery, with four large reports. The warehouse has a capacity for 135,000 cases.

A report has been made that the cannery will call for pears of a certain size this year, No. 1 pears to be two and three-eighths inches in diameter. In regard to this grade, G. B. Kile, superintendent of the local plant, says that as yet the officials have not called for such close grading, but that there is little doubt but that it will be demanded at some future time.



"Fuller Film"
-what it *is*
and what it *does*

PROTECTION to the surface of buildings painted with Fuller Paint—that's "Fuller Film." It is the "coat" which forms when Fuller Paint dries from exposure to the air. Paint should be thought of as a *protecting film*—not so much liquid in a can.

How well any paint can serve you depends upon how smooth, tough, tenacious and elastic its film becomes. Fuller Film is unusually high in these protective properties because Fuller Paint has exactly the correct proportions of Pioneer White Lead, pure zinc, pure linseed oil and pure colors thoroughly ground, mixed and intermixed so as to provide the greatest covering and wearing qualities. It is weather-resisting and will not blister, peel, crack or check when properly applied—the result of 74 years of successful paint-making experience.

There's a Fuller Paint or Varnish for every farm or home need. Ask your dealer in Fuller Products or write to this company for further information. Ask why Fuller Paints will, in the end, prove much less expensive than paints which cost a trifle less per gallon.

Baruch Offers Interesting Advice to Organized Wheat Growers—Page 4

Beware of Swindling Game

Tricky Peddlers of Doubtful Stocks Promise Farmers Alluring Returns

THE fact having come to the attention of Spokane bankers that glib-tongued salesmen of oil and mining stocks and other worthless or doubtful "securities" are operating with renewed boldness in eastern Washington and northern Idaho, the clearing house association has named a special committee to warn farmers and other possible investors against tricky stock peddlers.

One salesman recently sold $50,000 of questionable oil stock in one community in the Palouse region, and boasted that he would place $200,000 there before fall. He persuades his victims that by buying shares of this stock they can easily make up losses incurred by short crops or low prices. He then takes the wheat grower's note and discounts it with the country or city banker, leaving the buying banker to collect from the unfortunate farmer next fall. Some of these salesmen have offered Spokane banks collections of farmers' notes running as high as $50,000.

BANKERS WHO BUY THESE NOTES.

Stock salesmen who are taking farmers' notes would have to quit the game if they were unable to discount them. Bankers who buy these notes are making it possible to fleece hard-working farmers and others in their own communities. If any of our readers should discover after harvest that their notes are in the hands of a bank, or of an individual connected with a bank, they would have a right to hold that bank to a strict accounting. In some instances these stock salesmen have been known to get from a local bank the names of prospective buyers of stocks, and then, supplied with a list of representative farmers, they go from place to place in search of victims.

Farmers in all parts of the Pacific northwest have been swindled, and many impoverished, by unwise ventures into the stock game. A federal reserve bank official recently said that money put into worthless stocks in southern Idaho during the good years after the war was sufficient to have met all the obligations of all the banks, in one county, when deflation set in. Many farmers, he said, made the lamentable mistake of putting their profits into these worthless stocks, with the result that they had no cash reserve to tide them over the bad years.

"BLUE SKY" LAW OF WASHINGTON.

Farmers in Washington state should understand that the "blue sky" law enacted by the last legislature and effective since June 7, instead of protecting them against peddlers of questionable stocks, is actually being twisted by stock salesmen to further their game. All companies issuing stocks for sale in this state must secure a permit from the secretary of state, and salesmen of corporations granted such certificates are showing them as evidence that the certificate is an indorsement of their scheme by the state. The truth was pointed out recently by Charles R. Maybury, in charge of "blue sky law" enforcement, who said: "The issuance of a certificate to sell stocks in the state by the secretary of state is in no way an indorsement or guarantee of that stock. The state can not indorse or guarantee the stock of any corporation."

GAMBLE WITH PEOPLE'S MONEY.

The odds are overwhelmingly against the buyers of these dangerous securities ever getting back a fraction of their original investment. Long observation convinces THE FARMER that buyers of mining and oil stocks have not one chance in a hundred of making a profit. Even with the best of these ventures, the promoters generally are gambling with other people's money—with the hard-

SHRUBS will make a House into a HOME

This House

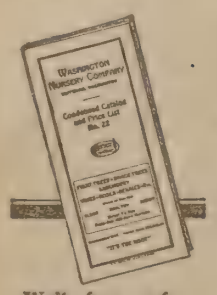
—was made into this Home

That indefinable something called "hominess" is not attained by lavish expenditure for ornamentation of the dwelling, but it is in reach of the humblest property owner, yes, even the tenant.

A small expenditure for a few vines, flowering shrubs, shade trees and roses transforms the commonplace surroundings into a real "home" in the fullest sense of the word.

Just a few dollars wisely expended for correct ornamentation of your property makes it more livable, and adds to the selling value many times the cost of the plants.

Write for folder and ask our salesman for suggestions as to how you may obtain the most pleasing results in your own particular case.



Write for our free catalog describing large numbers of trees, shrubs and plants, and many hundred varieties of Roses

LARGEST IN THE WEST

Box Y Toppenish, Washington

Dynamite, a detonating explosive, is never used in guns. It lacks the power which non-detonating smokeless powder develops to drive great shells 10 miles and more.

It Doesn't Detonate

—this gasoline of surer, smoother power

MARK this difference in gasolines. Some explode instantaneously — detonate. Union Gasoline is non-detonating.

The detonating gasoline deals a sledge hammer blow upon the piston, depending on a single impulse to pound the piston down.

It has the tendency to explode **prematurely**, thus limiting compression and reducing power and efficiency.

It is frequently responsible for "knocking" on the hills. And by causing vibration, it increases wear and tear.

The Other Kind

Union **Non-Detonating** Gasoline delivers a prolonged explosion.

It thrusts the piston **throughout** the entire stroke —doesn't crash against it.

And because it does not detonate, Union Gasoline permits increased compression, which results in increased efficiency and power.

New "Lift" on Hills

You'll notice a new "lift" on the hills—a steady, sustained stream of power, more speed on the level, a faster pickup and less vibration, which means less wear and tear.

Also more mileage because of increased efficiency.

Union **Non-Detonating** Gasoline is always **uniform.** It doesn't disintegrate, thus doesn't deteriorate in storage. It has all the power when you use it that it has when it leaves the Union plants.

This is one more reason for the use of this non-detonating gasoline in motor cars, trucks and tractors.

Union Oil Company of California

Union Gasoline

Kittitas County People Move a Mountain

Country and City, Men and Women, Unite in Making County Fair Grounds and Public Park in Two Days

By RALPH ERSKINE

In the days of our childhood we were told of moving mountains through the united efforts of a whole community, but little did we dream that we have just such a community of folks right here in our home state. On June 14 and 15 the farmers of Kittitas county and the business men of Ellensburg met 500 strong and literally did this thing. It was a necessary step in the building, during those two days, of a new fairgrounds, brief mention of which has been made in THE FARMER.

The work was all done under a well-organized system of superintendents and straw bosses, each of whom was responsible for a certain job. There were 500 men, 220 horses and four tractors that began work at 7:30 in the morning and worked until five that evening. They took only an hour off for lunch, which was served in exactly 12 minutes by 50 women who were delegated to prepare the eats. All work was donated, as were the supplies for the dinner, and the people of the county now feel that they have a real personal interest in their new fairgrounds as a result of their participation in its construction.

The story properly begins soon after the close of the county fair last year. For three years the people had been using an old building formerly occupied by a woolen mills near the business part of town. The women were dissatisfied with the building, which had housed all of their part of the exhibits and they all declared they would never show their articles there again.

When the subject of a new location came up, many difficulties presented themselves, the greatest of which was that of financing such a large undertaking and to secure an organization capable of handling it. A committee consisting of W. L. Davis, the county agent, as chairman, found three sites and called a general meeting of the following organizations, with whom they talked over the plans: The county commissioners, the fair board, the county farm bureau, the chamber of commerce, the city park and playgrounds association, the city park committee from the Elks, the Rotary and Kiwanis clubs, the state college extension service, the Ellensburg state normal school and the Ellensburg high school. The president and secretary of each body were invited.

This, of course, was their organization meeting and the problem of financing the scheme was partially eliminated by Dr. J. C. McCauley of Ellensburg, who was joint senator of Kittitas and Chelan counties who introduced a bill at the last session of the state legislature which allows a county of this size to capitalize for $10,000 for any purpose deemed necessary. This was called the McCauley pig and pumpkin fair bill. When the plan was first considered the bill had not yet passed, but the committee went ahead and got an option on the property that had been agreed upon and were ready when the law became effective three months after being signed by Governor Hart.

Committee at Work.

In the meantime the committee of three, consisting of Mr. Davis, Dr. McCauley and J. C. Caynor, had been working and had gone into details as to getting the cooperation of the park committee with the idea of having a city park on the same grounds. The plan met with approval and was looked upon with favor by the county fair board, since they realized that there were more than 11 months of the year when the fairgrounds were not in use.

The spot chosen was ideal in that it is near town, it lies in splendid shape for a fairgrounds and consists of 18 acres, part of which is on a side hill which can readily be beautified. There is a stream of water running through the property which can be used to make small ponds or wading pools for the children. It is also in a part of town that is desirable for a park site and it is at the end of one of the main streets of the city.

The new law went into effect June 7 and by that time many of the plans had already been made for a field day, on which the business men and farmers of the county were to cooperate in building the grounds. The same committee was appointed to continue with the plans for the work to be done that day and the rest of the story is told in the results that were accomplished that day.

The jobs that were to be accomplished were laid out and the men selected to act as superintendents and straw bosses, each to be held responsible for some one task. The names of all men that were available in the county were then gone over and each assistant asked to personally solicit his men and get them to promise to turn out early on the day that was designated, June 14.

The county engineer was asked to draw up the plans for all grading and filling, as well as for building all bridges and roads along the side hill and diverting the course of the creek that originally passed through the center of the grounds. This was done in order that all work could be done according to carefully prepared plans.

When the day arrived the men were all on the job sharp at 7:30 and every one worked hard at his own particular job in an effort to get as much done as possible. There were men from almost every walk of life; farmers, city business men, office men, doctors and lawyers, many of whom had done scarcely any hard physical work for years. They all stuck to their task and made the work lighter with sallies of wit and challenges until the sound of the dinner bell at the far corner of the grounds caused a general stampede.

Here the women had arranged 10 tables with five women at each. The men were lined up in 10 lines and marched along the tables and the women loaded the plates and handed them out as they went by. Mr. Davis said that he held the watch on them and found that it took only 12 minutes to supply the entire multitude. It was a simple meal, but substantial and tasted better to the workers than many a "table de hote" spread.

On the committee that prepared the dinner were Mrs. Henry Mitchel, Mrs. Charles White and Mrs. W. D. Carter. The tables were set in an orchard on one of the lots adjoining the grounds. They had so well organized their work that no sooner had they gotten the men through the lines than they were ready with their dishes and were offering seconds to those that had fin-

(Continued on page fourteen.)

The largest of these pictures gives a birdseye view of the proceedings out of which grew the fairgrounds at Ellensburg the middle of June. The other two show at closer hand how the crews worked on their respective tasks. It was an occasion for pleasure, but primarily pleasure in a lot of work being well done.

Seven Hundred Farm Folk Visit College Experiment Station

By JOE L. ASHLOCK

"Well, what new things have you got to show us today?"

"That's the way I like to hear farmers talk," said a member of the state college experiment station staff. "These western farmers are ready for the new thing just the minute they are shown that it's better than the old."

Two hundred and fifty automobiles from all parts of eastern Washington were parked under the trees and in the open places on the state college campus. Not less than 700 farmers were attending annual farm field day prorgram and taking part in the tour over the state farm.

The forenoon tour took in the dairy and beef cattle herds and the new poultry plant. A band of fine young calves pastured among big, leafy trees whose shade defies the hottest days known in the Palouse country, claimed particular attention. Judging by the way the visitors stayed in the calf pasture, one would suppose that the visiting farmers liked the shade about as well as did the calves. The day was warm.

The Noon Campmeeting.

Noon brought forth a big picnic luncheon under another flock of those big, shady trees. The stacks of fried spring chicken and the big round chocolate cakes made one think of campmeeting with everybody entertaining a preacher. Here in the comforting shade, chicken and cake and ice cream and new potatoes and peas and cherry pie and neighborhood gossip held the hour.

"Why, no, he's been dead for 12 years," came in a big, bass voice, from the left. "Three dishes of ice cream are enough for any boy," said a mother to her son. "Yes, he died 12 years ago sick only 10 days." "The man in the poultry plant said bran and sawdust were made of the same kind of stuff," drifted in from the right. "That reminds me of a fellow that fed his chickens sawdust—and they quit laying eggs and laid knotholes." "Who's going to be president?" From many directions the answers: "Ford—Jack Dempsey—Harding—Underwood—Walt would if he'd run!"

When Soil Wears Out.

The most serious concern of the wheat farmer, as brought out as the farm tour progressed, was that dealing with the crop-producing power of his land. Soil that is wearing out is not helped by the introduction of new crops. Before anything else can be done, the soil must be ready to produce.

A difficulty now experienced by wheat farmers is that the legume crops—red clover, alfalfa, sweet clover, peas and so on, suggested for use between grain crops, result in so much enrichment of the soil that the following grain crop "burns" or "lodges."

Lodging, or burning, though much different in aspect, proceed from the same cause. In one case, the red clover sod richly supplied with plant food, encourages, in early spring, more vigorous growth than the later and drier part of the season will sustain.

Or it may be that in some seasons rainfall continues through the months of crop growth. In this case, the grain becomes topheavy, is knocked down by the wind; that is, it lodges.

The use of the legume crop to give his soil a period of rest, or rejuvenation, thus gets the wheat grower into difficulties. Nevertheless, in all the systems of tillage and crop rotation worked out on the state college farm, no method is found doing quite so much to keep soil producing and in good health as is the occasional intercrop of red clover, alfalfa, peas or sweet clover.

In a field experiment worked out on the state college farm by F. J. Sievers, red clover land before being turned under for grain production, was dressed with straw at the rate of one ton to an acre. This operation prevents burning in a dry season, or lodging in a wet season. The method is recommended for use, and is already practiced by many farmers who use a legume in their system of crop rotation.

Wheat Is Overfed.

Occasionally a wheat grower, while satisfied as to the fact, wants to know the reason why. The "why" of this particular bit of farmology gets into chemical formulae unintelligible to any but the chemist. Stated roughly, setting aside a bit of the hair-splitting phraseology of the chemical laboratory, the nitrogen as left in the soil by a crop of red clover, is food to the growing wheat plant. Small wheat plants, like small children generally, overeat if given a chance. Overstuffed on nitrogen in the first few weeks of their existence, the wheat plants, like overstuffed children, become fat, overgrown; and when hit by the hot winds, they get thirsty. If it rains, they take a drink and grow some more. If it does not rain, they dry up—that is "burn."

Now, although clover, peas, alfalfa and other legumes leave the soil rich in nitrogen food, wheat straw does not. Wheat straw puts carbon into the soil. The clover sod is over-rich in nitrogen, and under-rich in carbon. So the addition of the straw pieces out the shortage, balances up the ration as it were, holds back and makes more stable the growth of the wheat plant.

All farmers know, of course, that straw thrown on their fields has a bad effect. That is the reason why so many of them burn it.

Straw for a Balancer.

Here, however, straw is recommended for use on a legume sod. Where farmers must use straw on their land on which legumes have not preceded the cereal, they are advised to summerfallow or plow it

(Continued on page fifteen.)

"Barney" Baruch Makes Suggestion to Wheat Growers

Bernard M. Baruch advises the American wheat growers to strengthen the United Grain Growers, buy out an established selling concern, such as the Armour Grain company, and handle the exportable surplus of the American crop. In a letter to the editor of The Washington Farmer Mr. Baruch says:

I hope you will give thought to the plan and make some comment upon it. I do not differ in any way from the Grain Growers or any farm activity which desires or is already operating under cooperative marketing. The idea back of my suggestion is simply to take a piece of machinery that is already well organized and functioning, retaining, if possible, the man or the men who have been the directing influence in its success. To me this seems a practical short-cut and a conclusive supplement to the cooperative grain marketing methods already in existence, for what we all want is the best plan to assure the success of cooperative wheat marketing, which is the only possible source of relief of the American farmer. And the emergency requires that it be brought forward quickly.

Mr. Baruch explains that to be effective at least 35 per cent of the country's wheat acreage would have to be a party to the cooperative scheme.

"Think of what this would do for the farmer," adds Mr. Baruch. "He would have a practical organization, with practical men to do what needs to be done. His organization would deal only in grain. Enough farmers would be asked to subscribe an amount sufficient to make a large part payment, the balance to be paid out of the cost of handling the grain. The farmers would receive a certificate of interest for their original subscription and for the profit made out of the grain until the profits had paid for the purchase. Armour & Co. would retain a certain number of directors and the farmers would have a certain number, until gradually, through the profits of the concern, Armour & Co. were paid in full, or until, by further subscription, the farmers paid off the balance. In the meantime there would be no control of the organization except by means of a certain class of directors who would provide the balance of power on the board and whose business it would be to see that the organization was run according to contract and to settle any disputes between the two parties."

A Chicago dispatch quotes George F. Mracy, president of Armour & Co., as saying that he was very much interested in Mr. Baruch's idea, and that "we are open to any proposition made to us." Mr. Baruch quotes Mr. Marcy as saying that if this plan had been in operation last year he believed the farmers of America, under the world conditions then prevailing, could have obtained 40 cents a bushel more for their wheat without costing the people of the United States any appreciable extra amount for bread.

We are not disposed, at this point, either to condemn or to approve the Baruch plan. Much would depend on the terms under which it is proposed that the grain growers would contract to buy the Armour Grain company. If a contract could be drawn that would be fair in price and protect the grain growers, the plan would be deserving of careful consideration.

When Is Oleo Not Oleo?

Everywhere the fight goes bravely on against bogus butter and other imitation dairy products. The big Dairymen's League Cooperative association, in annual session at Utica, N. Y., a few days ago, called upon the government at Washington to follow the example recently set by the Canadian parliament, which passed a law prohibiting the manufacture, sale and importation of oleomargarine and other substitute butter in the Dominion of Canada. Our government, the resolutions declare, should take the same action "in the interests of public health, agriculture and general welfare." Eighteen hundred dairymen from five eastern states, representing nearly 100,000 engaged in the industry, attended the Utica convention.

As fast as the dairymen stop the traffic in one kind of imitation butter, a new product bobs up on the market somewhere. The New York Produce Review reports the appearance on the market in Providence, R. I., of another kind of "oleo" called "Nut-Z-All." It is said to be made of vegetable oils, probably a combination of cocoanut and peanut oil. The product is colored to about the same shade of yellow as good, average June butter, and is packed in small cartons of triangular shape, labeled by the trade name as stated above and called a "cooking compound."

The manufacturers, when brought before the internal revenue bureau, claimed that it was not oleomargarine, and a ruling was made that it was not subject to the provisions of the oleomargarine act. More recently, though, the internal revenue bureau has withdrawn that first ruling and issued a new ruling holding that Nut-Z-All was subject to the oleomargarine act. The manufacturers are contesting the ruling in the courts. The case raises a technical question whether or not a compound made up of oils or fat other than butter fat, to imitate butter in every way except taste, comes within the statutory definition of oleomargarine, which defines oleomargarine by the use of the words, "in semblance or imitation of butter."

Experts who have seen the new product say that if they were in a store where butter is sold and saw it they unhesitatingly would buy it, thinking it was butter, unless they definitely cut into it and sampled it by taste. It is said that manufacturers and vendors of real oleomargarine are asking that this product be classified as oleomargarine, claiming that it is a fraud on their product as well as on butter to permit it to be made and sold without the statutory warning and labeling.

The Raspberry Saw-Fly

Spraying with arsenate of lead, one pound to 25 gallons of water, will effectually control the raspberry saw-fly, says Arthur Frank, plant pathologist of the western Washington experiment station.

If you are not on the mailing list for the bulletins of the western Washington experiment station, write and have your name put on the list.

In the July bulletin, just out, Mr. Frank tells of some common, but unfamiliar, fruit pests and how to control them.

During the last two seasons the work of the worms of the raspberry saw-fly on the leaves of the raspberry plants has been very prevalent. The worms are greenish-white, looking much like the under surface of the raspberry leaf upon which they are working. The body is covered with fine hairs. The adult is a medium-sized, wasp-like fly. The eggs are laid within the tissues of the leaves in May and soon hatch. The worms begin eating on the upper side of the leaf, cutting out perforations which increase in size as the plant grows. The larger worms eat irregular holes, leaving only the veins. When abundant they may also eat tender parts of green shoots and blossom buds of young fruit.

Farmer Must Fight On

Inch by inch farmers are fighting their way into the marketing game. The fight isn't over yet. The grain company organized by the Farmers' Union of Nebraska has just been denied membership in the Omaha Grain exchange. This is the second time membership on the exchange has been denied the union.

Washington State Gleanings

RECORD WHEAT STALKS.

The V. B. Tapps wheat in the Baker district between Ridgefield and Vancouver on the Pacific highway is attracting much attention. It is of the Scotch Fife variety. Stalks measuring six feet two inches tall with long heads, well filled, are being exhibited by Tapps, who believes it will thresh from 50 to 60 bushels to the acre.

CELEBRATE AT WOODLAND.

Three thousand persons attended the Planters' day celebration at Woodland June 30. The day commenced with a tour of the dike lands by automobile at 9:30 a. m., after which followed band concerts and speaking. At noon the barbecue was served at the fairgrounds.

This was the second annual Planters' day celebration, which is an annual day of thanksgiving on account of the great dikes at Woodland.

HAY GROWERS ENTHUSIASTIC.

Enthusiastic response to the idea of organizing an all-northwest hay growers' association was shown by the growers in the Touchet and Hermiston, Ore., districts, according to L. A. Hunt, manager of the Oregon Cooperative Hay Growers, who, jointly with Boyd Oliver of San Francisco, held some meetings in those districts. At Hermiston quite a few business men attended the meeting and indorsed the movement. Together with the growers, they pledged themselves to assist in seeing the organization campaign through.

PROSSER HAS LARGE CHERRY CROP.

The cherry crop from the Prosser section of the Yakima valley was the largest reported in the past seven years. Although only a limited amount of cherries are grown in the Prosser district, it is estimated that approximately $30,000 worth of the fruit will be sold during the next few weeks. Returns on the first carload came in June 21, which netted the growers $2500. Prices also are exceptionally high for cherries placed on the market at this time of the season; prices for commercial cherries range as follows: Bings, 10 1-2 cents per pound; Lamberts, 9 1-2 cents, and Royal Annes, 9 cents.

NEW ORCHARD PLANNED.

Having faith in the future of soft fruit growing in the Yakima valley, W. H. Wyman of Summitview will next year add to his holdings of developing orchard. Recently he acquired seven acres of land on a ridge in the Richland district and is having the land cleared and prepared for planting next spring. He will set the entire seven acres to Bing cherries. Last year Mr. Wyman planted five acres of pears near Cowiche and this spring added 10 more acres of pears on the same property. Mr. Wyman said he does not believe that the time will ever come when too many Bings are grown in the Yakima valley.

LARGE CHERRY YIELDS REPORTED.

F. Stanley Millichamp of Wapato realized a gross return of $1417 from 89 Bing cherry trees, 8, 9 and 10 years old. The trees, which occupy half an acre, yielded 14,170 pounds, which were contracted for at 10 cents a pound. Seedling cherry trees planted between the Bings and used as pollenizers are partly responsible for the size of the crop, Mr. Millichamp said he believes.

An average of 450 pounds of cherries for a large number of trees is perhaps as good a record as reported so far this year. Seth Brown of Naches harvested 38,760 pounds of cherries from 75 Bing and Royal Ann trees, making an average of 450 pounds a tree. The ground occupied by the trees is three-quarters of an acre.

One of the large yields from comparatively small cherry trees is that secured by William Hanlon on Summitview. Four Royal Ann trees yielded 1160 pounds, or an average of 290 pounds a tree. A Bing tree yielded 396 pounds of cherries. Mr. Hanlon attributes the satisfactory yield to opening up the trees in pruning.

PLAN FOR POULTRY SHOW.

Preparations for putting on the greatest poultry exhibit ever staged at the state fair are under way, is the announcement of Secretary H. P. Vermilye. In the first place the antiquated coops are to be removed and sent to the junk pile and 1000 new wire coops of the Keipper type installed. This will add greatly to the attractiveness of the exhibit.

E. A. McInnis of Yakima, proprietor of the McInnis hatchery, will be the poultry superintendent. Mr. McInnis took the course offered at the Puyallup experiment station and has been operating a plant at the edge of that city for the past year. D. F. Mitchell of Spokane will be assistant superintendent.

As a stimulus toward a better poultry show, Secretary Vermilye this year, in making up the premium list, increased the awards until they equal those offered by the Oregon state fair. He is assured already from breeders he has had communications from that there will be a bigger and better poultry show than ever this fall.

In the demonstration department at the model poultry house, Charles H. Westaby of Terrace Heights will exhibit 100 laying pullets of the White Leghorn class. There will be the usual demonstrations in methods of feeding and caring for a commercial flock.

POTATO BUG IS MENACE.

The potato bug situation in the Kennewick and Pasco districts is very serious and threatens the potato industry of those sections with destruction, according to W. E. Johns, deputy horticultural inspector, stationed at Kennewick. The Colorado bug (properly beetle) is very prevalent on the Pasco side of the Columbia river, and there are enough beetles on the Kennewick side of the river to infest the entire district by next year. This is the view taken of the situation after making a survey of the Pasco and Kennewick districts recently. The menace is not so much in the large fields as the growers there are spraying and keeping their fields clean, but it is in the small patches grown for home use and in the backyards in the towns that there is neglect.

"The danger lies not only in the ravages of the beetles in our fields, but the quarantine of our potatoes in the markets of other states," said Mr. Johns. "Already there is a quarantine on potatoes from many of the California districts on account of the tuber moth and on the potatoes from some other states on account of the Colorado potato beetle. It is safe to assume that as soon as it is known that the Colorado potato beetle is active here, a quarantine will be slapped on potatoes, not only for shipment out of the state, but into other potato growing districts of the state."

FARM BUSINESS AND MARKETS OUTLOOK

CONDITIONS in the cattle market were reversed last week as the preceding decline in prices together with the holiday choked off the run so that combined receipts at 10 markets fell off about 35 per cent. Dressed beef markets were aided by cooler weather and began to recover from the recent spell of indigestion.

Prime steers again reached a top of $11.50 at Chicago and much of the previous damage to prices on other grades was repaired, although common natives lagged on the upturn because of the abundance of cheap Texas beef, the arrival of the vanguard of Kansas and Oklahoma grassers at Kansas City, and the discriminating mood of the consuming public. Much the same behavior occurred in the butcher cow and heifer division. Receipts of calves were the lightest since February and prices advanced sharply, but declined again toward the close as the supply expanded.

That an increase in supply is on the cattle market horizon is indicated by records of former years. In the last nine years arrivals at the seven leading markets have increased from an average of 156,000 head in the second week in July to an average of 238,000 head in the last week in August, a gain of over 50 per cent. A further increase to 312,000 head in the third week in October has been the average history of the same years.

Expansion of Hog Production.

Expansion of hog production apparently has not yet been checked by higher prices for corn and lower prices for hogs. The survey by the department of agriculture not only shows an increase of 9-10 of 1 per cent in the number of pigs raised in the six months ended June 1, 1923, but an intention on the part of producers to breed 28.3 per cent more sows for fall pigs than farrowed in the fall of 1922. Conditions in the last six weeks and during the rest of the summer may discourage breeding and stimulate the sale of brood sows, but it is hardly likely that the full amount of intended increase will be overcome.

Light receipts for 10 days put top hog prices above the $8 mark early last week, but this advance attracted big runs, Chicago receiving on July 9 the third largest number for one day in the history of the market.

Domestic demand for hog product continues broad. Exports have shown a progressive decline for several weeks, most of the falling off being in lard. Clearances of lard in the last month have been the lightest for any like interval in more than a year.

Western Lamb Run Starting.

Receipts of western range lambs have been gradually expanding, although practically all of them stopped at Missouri river markets until last week, when Oregon, Idaho and Nevada contributed to Chicago. A sharp decline in prices resulted and a further break may occur as the range movement rises to high tide.

The wool market manifested a better tone last week and the end of the recent sagging tendency appears to be at hand. Most of the weakly held wools have been disposed of. Foreign markets are firm at the recent decline, especially at London, with continental countries the chief buyers.

Mills are still consuming wool at a high rate on old orders.

In the west conditions remain quiet. In the bright wool states 46 to 48 cents is the going price for most clips, with choice wools up to 50 cents or slightly higher.

Wheat Prices Below Dollar Mark.

Wheat prices declined again last week, the July delivery breaking below the dollar mark at Chicago, and reaching practically the lowest point since 1914. Increasing receipts of new crop wheat, greater hedging pressure, limited sales for export, dull flour trade, failure of a rust scare to develop in the northwest and bearish sentiment were elements in the decline.

The department of agriculture estimates the winter wheat crop at 586,000,000 bushels and spring wheat at 285,000,000 bushels, making a total of 821,000,000 bushels or slightly less than expected. The combined carryover on farms and in the visible supply is only 12,000,000 bushels larger than last year, or a much smaller increase than expected early in the season.

While the movement of new wheat from farms is increasing, it is slower than at the corresponding time last year or two years ago and demand is enough greater than receipts to make further inroads into stocks at terminals. The world's available supply in commercial channels has been declining rapidly in the last few weeks and stocks on ocean passage have fallen off 25 per cent in the last month, owing largely to lighter exports from North America.

Foreign crop prospects show no decided change recently. Canada still promises an enormous yield. Italy will have 44,000,000 bushels more than last year and France 33,000,000 bushels more, according to recent estimates. Reports of moderate exports from Russia in the next few months are persistent. The Argentine acreage for harvest next December and January is believed to be larger than last year.

Although the European harvest is a little later than usual, foreign buyers are not aggressive and have contracted for much less wheat than usual at this season.

The rye crop has deteriorated in the last month, the July 1 forecast being 68,700,000 bushels, compared with 72,500,000 bushels a month ago, and 95,500,000 bushels harvested last year.

Corn Crop Below Normal.

The estimate of the department of agriculture shows a slight increase in the acreage planted to corn, but because of poor condition the yield forecast is 2,877,437,000 bushels, compared with a harvest of 2,890,712,000 bushels last year and an average yield of 2,931,271,000 bushels in the five years, 1917 to 1921.

Cash demand has broadened again as industries are expanding, operations and purchases by feeders are rather persistent. The live stock production outlook suggests heavy domestic consumption during the next 12 months. Export sales are small. Clearances last week were only 175,000 bushels, compared with 6,716,000 bushels from Argentina.

Receipts of corn at primary markets have been gradually increasing and last week were the heaviest since April.

Oats prices declined to the lowest of the season last week. They are cheap compared with corn, receipts are not large and the visible supply is only 8,532,000 bushels, compared with 42,743,000 bushels last year. The new crop is estimated at 1,284,000,000 bushels, compared with 1,201,000,000 bushels last year.

Cash Grain Markets.

The range of cash grain prices for the week ended July 11 was as follows:

CHICAGO—Corn—No. 2 mixed, 81 1-4@86 1-4c; No. 2 yellow, 83 1-4@88 1-4c; No. 2 white, 82 1-4@88c; No. 3, 82 1-4@87 1-2c. Oats—No. 2 white, 40 1-4@43 1-4c; No. 3, 38 3-4@41 1-2c. Barley—60@69c.

Clover Seed Market Weak.

Clover seed prices are still weak and at the low point of the season, with alsike now quoted nominally higher than red. New crop prospects continue favorable. Timothy seed prices are stable.

Feed markets are declining again, as interior demand is dull, stocks are ample and offerings are increasing. Bran for September and October shipments is quoted at $1.50 below prompt shipment prices and new crop cottonseed meal is quoted at a discount of $3 to $5 below prevailing prices.

Prices per ton (100-pound bags) in carlots: Chicago—Bran for September and October shipment is quoted at $31; cottonseed meal, 36 per cent, $39.25; 43 per cent, $44.50; hominy feed, $32; gluten feed, $37.15; old process oil meal, $39; tankage, $57.

Hay Market Outlook Favorable.

The department of agriculture reports that the 1922 hay crop has been well cleaned up, with 90 per cent of the marketable surplus of timothy, 98 per cent of the alfalfa and 97 per cent of the prairie hay disposed of by June 15. A little more timothy, but less alfalfa and prairie, is on hand than at the same time last year.

Besides the rather light carryover, condition of the new crop on July 1 was placed at 81.1, compared with 88.7 last year, and a 10-year average of 85.5. The acreage is smaller than last year also. Much of the first cutting of alfalfa was spoiled by rainy weather at cutting time. Some of the best new hay is being warehoused in anticipation of a heavy fall demand from the southeast.

Prices per ton in carlots: Chicago—No. 1 timothy, $23@24; No. 2, $19@22; No. 1 light clover mixed, $19@22; No. 1 clover, $17@19; No. 1 and choice alfalfa, $16@25; midland prairie, $17@20; rye straw, $11@12; oat and wheat straw, $9@11.

Egg Holdings Largest on Record.

A record egg pack was shown by the official preliminary report, which showed holdings for the entire country on July 1 of 10,213,000 cases of eggs, a surplus of 402,000 cases, as compared with the same date last year. The movement into storage during June has been very heavy, as holdings on June 1 were smaller than on June 1, 1922.

Scarcity of good quality eggs lent support to the market last week and prices for this grade will probably begin to work higher. Production still exceeds current consumption and receipts show effects of hot weather, so that it is not probable that the general run of eggs will sell much better for a while.

Butter Market Develops Strength.

With an active demand for butter for storage in distributing markets and a shortage of top scores as a result of recent hot weather, the butter market developed strength last week and prices were maintained without difficulty. With widespread cool weather, plenty of rain and excellent pastures, maximum production and good quality should result, so that lower prices are probable later in July. Reports on the make for the whole country for the week ended June 30 showed a decrease as compared with the preceding week, indicating that the peak has been passed.

Cheese Market Firm.

The recent declines in the Wisconsin cheese market failed to have much influence over distributing markets, where prices were firm at from 1 to 1 1-2 cents over the country quotations. The decline in prices from June has resulted in more active trading, as many storage operators were waiting for lower prices before entering the market. Storing of cheese is going on on a larger scale, and stocks are heavier than last year, the preliminary report showing holdings of 35,769,000 pounds on July 1, compared with 33,730,000 pounds a year ago.

Fruits and Vegetables.

Potato prices advanced sharply last week. The total volume of shipments from producing sections has been declining gradually for several weeks. Shipments of new potatoes for the season to July 9 were only 24,602 cars, compared with 33,450 cars last year.

The acreage planted to white potatoes is 10 per cent smaller than last year, according to the government's estimate, and a yield of 382,000 bushels is forecast, compared with 451,000,000 bushels harvested last year and an average of 388,000,000 bushels in the five years, 1917 to 1921.

New apples now predominate in carlot shipments. They are not coming forward as freely as last year, however, as the total for the season to July 2 was only 126 cars, compared with 878 cars a year ago.

The commercial apple crop is estimated at 33,100,000 barrels, compared with 31,000,000 bushels harvested last year and an average of 25,700,000 bushels in the preceding five years.

LIVESTOCK AND DAIRY

Relative Value

Timothy, Clover and Winter Vetch

By J. SOTOLA,
Department of Animal Husbandry, State College of Washington.

Can you tell me the relative value of timothy, clover and winter vetch in a cured form? Also in a green form as pasture.
R. E. T.
Scotia, Wash.

First of all I think a series of tables giving the chemical composition of these feeds as hay and as fresh green roughages will help you considerably in detecting any difference in these feeds. Their composition is as follows:

Hay—Per Cent Composition.

	Dry Matter.	Protein.	Total Digestible Nutrients.
Vetch hay	92.9	11.6	58.0
Clover	87.1	7.6	50.9
Timothy	88.4	3.0	48.5
Fresh Green Roughage.			
Vetch	20.4	2.7	12.3
Clover	26.2	2.7	17.1
Timothy	37.5	1.5	22.2

Winter vetch is fairly drought and cold resistant and yields from one and one-half tons to two and one-half tons of good, palatable hay per acre. The hay is sometimes richer in digestible matter than alfalfa hay. Many dairy men like the hay-oats-vetch combination better than just the straight vetch. This roughage affords good pasture for cattle, sheep and swine, and is particularly good for growing stock because of its high protein content.

Timothy hay is commonly called the best roughage for horses. However, it is not satisfactory for dairy cows because of its low content of protein material. For this reason it must be supplemented with expensive cottonseed meal or linseed meal. This roughage is not as palatable as vetch hay or clover hay, and if fed in too large quantities it has a constipating effect. Cows receiving the same grain feed produce about 17 per cent more milk on alfalfa hay rations than when timothy hay is fed. Of course, timothy has its advantage in that it is easy to establish a field of it. The seed is cheap and the crop cures easily into good hay.

Clover hay in a ration for fattening lambs or dairy cattle reduces the quantity of grain necessary for good results as compared to the feeding of timothy hay. Possibly with the exception of alfala hay, there is no better roughage for dairy cattle, sheep and beef cattle. Just like the vetch, it has a high lime content which is necessary for bone growth in young stock. Timothy, on the other hand, is poor in lime. As a pasture it has a high value, particularly for young growing stock. Cattle and sheep bloat on clover pasture, particularly if they are not accustomed to it. Pigs running on red clover pasture need only 70 per cent as much grain for gains.

If you really wish to get at the comparative value of the hays I believe that the column headed "total digestible nutritent" represents pretty closely the relative value of these feeds, keeping in mind that the vetch and clover are high in protein, and timothy low in this valuable nutrient.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

Rabies.

This disease is probably the most dreaded of all the animal diseases. Rabies is common in the northwest and many counties have been quarantined when this disease has been particularly prevalent. Many persons have been bitten by animals that were supposed to be rabid and many animals have been lost because of this trouble. Then the anxicty that attends the period after a rabid animal has paid a visit to some one's place is not to be considered lightly. One never knows just how many nor which animals have been the unfortunate ones.

What to do and how? is the everlasting question that we are asked to answer. The dog and all his species is the most dangerous spreader because the saliva contains the poison in greatest amount and only the biting animals can spread it conveniently. Other animals may bite when they are diseased, but they are not likely to do so, since they are confined in corrals and pastures that can noo roam all over the country like the dog. The wild animals are very dangerous spreaders, since they are not controlled by man. If all animals could be controlled the spread of rabies would be easily prevented. This disease can not spread except by direct contract, as it is not carried from one animal to others by intermediate carriers.

One of the factors that make this disease uncertain is the indefinite period that may elapse between the time an animal is bitten and the time that it will show symptoms. If a rabid animal bites a dog today we can not say how long it will be before it is safe to allow this bitten dog his freedom. The disease may appear in three weeks or it may not appear for several months, and the same is true of other animals. If a coyote or dog gets into a herd of cattle and bites some of them we do not know just how long it must be before we are safe in assuming that they are not going to contract this disease. Late developments, however, have given us a method of proceedure that I think is the sensible one to follow under such circumstances.

Don't Kill the Dog.

Dogs sometimes bite people and are killed under suspicion that they are rabid. This is unfair to the dog and very poor policy on the part of the individual that is bitten. If you are bitten by a dog that you think may be rabid don't kill the dog. When you do you destroy the best source of evidence that can be used to find out whether the animal was really rabid or not. Tie the dog up or put him in a cage or confine him any way so that he can not do any more damage, but keep him alive and one can tell with absolute certainty whether he was rabid or not. If he was he will levelop symptoms that can be recognized within a few days and if he was not his continued good health will dispel all doubt as to his having the disease. Dogs are frequently killed and their heads sent to the college laboratory for examination. This consumes several days and when the characteristic bodies are found we do not hesitate to say that the animal was rabid, but when the bodies can not be found we hesitate to say that the animal was not rabid, since there is always a chance that these very small bodies might be there and escape the observation of the man with the microscope.

The brain of the dog or other animal is used to make the examination and this part should be carefully preserved if one expects the laboratory man to make a satisfactory diagnosis. Frequently dogs are killed by shooting them through the head or hitting them with a hammer or ax and in either case the brain may be damaged so much that an examination is quite impossible. Sometimes, too, heads are sent in that are so decomposed that the brain is almost a liquid mass and here again the laboratory man has no chance to give the information that is desired.

In case of wild animals that are suspected it is usually impossible to captture them and keep them to find out whether they were diseased or not and they have to be shot and killed. And in those cases

Champion X is the standard spark plug for Ford cars and trucks and Fordson tractors. Recognized by dealers and owners for 10 years as the most economical and efficient spark plug. Sold by dealers everywhere.

Champion Guarantee A Pledge of Better Service

The guarantee which appears on the carton containing each Champion Spark Plug is a definite pledge of the better service that is rendered by Champions.

Only because Champion is a better spark plug is such a guarantee possible.

Champion is better because of its wonderful new core—identified by the Double-Rib. This core has proved its superiority in literally millions of gasoline engines, including motor cars, trucks, tractors and stationary.

This core stands extreme changes in temperature without yielding. It is practically immune to breakage. It never loses its insulating properties.

A full set of new Champions will save you money, both in first cost and in gasoline and oil consumption. Because more than 65 per cent of all spark plugs made are Champions, the price of the Blue Box Line is 75 cents and 60 cents for Champion X

POULTRY AND RABBITS

Oyster Shell

Important for Egg Production

By HUBERT E. COSBY,

A high grade crushed oyster shell product will show a chemical analysis of about 92 per cent carbonate of lime or calcium carbonate.

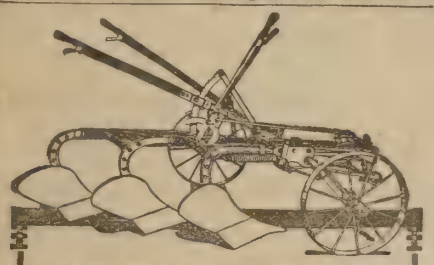
A cow will rob her skeleton of calcium in order to make milk, but the hen seems unwilling to do this. It is quite generally believed that soft-shelled eggs are caused by an insufficient amount of oyster shell. Results of several experiments at the University of Wisconsin, conducted by Professor J. G. Halpin, show, however, that the hen will not lay if not supplied with sufficient calcium; neither will she rob her body in order to supply the shortage of calcium. The hen will cut down her production until she accumulates a supply of shell material.

Professor Halpin reports that better production was secured by feeding the ordinary high grade oyster shell rather than by feeding pulverized oyster shell in the mash. He did not have as good results from feeding calcium carbonate precipitate or dry calcium phosphate in powdered form in the mash as with the ordinary oyster shell.

The oyster shell hopper or hoppers should be placed within easy reach of hens or growing pullets. The fowls soon eat the pieces of oyster shell they like best and very frequently the top of the shell supply is covered with fine powdered shell dust. This is not relished by the hens; they refuse to eat it and production slumps. Keep a supply of the kind of shell the hens like on top. Sift the dust out of the shell if it is too fine. Scatter a few handfuls, occasionally, with the grain in the litter.

Some poultrymen do not feed a sufficient amount of oyster shell because they object to its cost. Others buy an inferior, button-factory by-product, because it is cheaper. Many attempts are made to cheat the hen, but so far none has succeeded. She is a manufacturing establishment that simply quits when not supplied with the raw materials needed to manufacture the finished product.

In 1914 a careful study was made of the results from five egg-laying contests in Connecticut, Missouri and Pennsylvania. Over 3000 birds were considered for a period of one year, and the average consumption of oyster shell per hen was three pounds. The average cost per hen, therefore, is very low, and inasmuch as the hen can not yield profitably without a supply of calcium, this phase of poultry management can not be neglected, with profit.



Where Soil is Stubborn

—where ordinary plows will not stand the strains — that's the place for the extra-strong

John Deere Steel Gang

Built for the Pacific Northwest, and in wide use for many years.

Unusually simple and compact, and practically all steel—nothing to get out of order. Beams guaranteed not to bend or break. Heavy steel braces at front, middle and rear give it lasting rigidity.

Turns corners without tipping. Full-width cut can be easily maintained on hillsides and around curves. Unusual clearance—no stubble too heavy for this plow.

Genuine John Deere steel or chilled bottoms. Quick-detachable shares. Indestructible steel eveners.

Poultry Problems

Will you tell me what ails my roosters. I am enclosing a sample of feathers from their necks. Do you think it is a disease?
Orient, Wash. MRS. M. W. H.

This, from the feathers sent, appears to be a case of depluming mites. Dissolve sodium fluoride in warm water at the rates of one ounce to each gallon of water. Select a warm day and dip all fowls, being careful not to keep the head under very long. Be careful also not to leave the solution standing around for stock to drink. It is poison.

Will stock salt eaten by young turkeys or old ones cause them to get sick and die? They have a yellow diarrhea and refuse to eat and some of them linger longer than others. What are the symptoms of blackhead? What is the cure? MRS. M. C.

Yes, stock salt will kill either turkeys or chickens. The first symptoms of blackhead are a listless attitude, a pale head and a tendency to mope around. This is followed by a slight diarrhea. When the birds are cut open the liver is found to be covered with yellowish-green spots.

My chicks have thick sour milk and plenty of grit and bran which they can get at all times and dry mash of corn meal and oatmeal and range for their green feed. Their water and milk vessels are kept clean. Their droppings do not drop, but adhere in hardened hive-shaped masses. They quit eating and cry incessantly and finally die. Please tell me what to do? MRS. O. B. R.
Burbank, Wash.

There is something wrong with the feed, or the way of feeding it. It is necessary to scald milk vessels as well as keeping them clean. One half of the feed, or more, should be chick starter or cracked grains fed in deep litter. You will find some suggstion on chick mashes in this section of The Washington Farmer.

Intestinal Worms in Turkeys

By R. T. PARKHURST, Head Poultry Department, University of Idaho.

What is the trouble with and a remedy for my little turkeys? I have noticed a few seem to have bowel trouble. Their droppings, which are a dark gray color streaked with white, collect on their rumps and they are unable to have a passage. When the droppings are removed the poults bleed, then they become weak and stand with wings extended. The next passages are watery and the poults have passages very frequently. This condition exists until the poults die. I am feeding boiled eggs mixed with grit, also rolled wheat, charcoal and a little sweet milk. The turkeys are running in an alfalfa field and have plenty of fresh water. MRS. J. T.
Carey, Idaho.

The indications are that the poults are infested with intestinal worms. To make sure, I suggest that one of your sickest birds be killed and the intestines opened the entire length to see if the worms can be found.

To control intestinal worms I suggest that turpentine at the rate of one-fourth pint to seven quarts of water per 250 poults be given. The birds should be starved for 12 hours before this mixture is given. The same treatment should be given two days later, again in 10 days and again in 14 days. For individual treatment give one to two teaspoonfuls per bird with equal amounts of olive oil.

Says Bees Pay

"Every farmer in this community, or in any district where there is logged-off land in the near vicinity, should have a few stands of bees," said Fred L. Jenner of Oso. "They pay well for the trouble of caring for them, and there should be no trouble from foul brood, provided Italian queens are introduced. This practice strengthens the colonies and makes them able to ward off disease of this kind. There are other means of keeping out a disease, but in my opinion it is much easier to go at it from a prevention basis, and keep it out by means of strong colonies. I have 12 stands this year, but am planning on increasing the number as rapidly as possible, since I believe they are one of the most paying practices that a man can take up on the farm."

MONEY FOR EXTENSION WORK.

The extension services of the 48 states last year expended about $18,820,000 in their educational work. Of this about $7,000,000 was federal money appropriated under the Smith-Lever act.

What will your children eat during the hot vacation days?

Too much meat in summer overheats the blood; too much starchy food often interferes with digestion.

Children must have plenty of energy-producing food, but it must be wisely chosen.

Grape-Nuts is a safe and satisfying summer food. It supplies the energizing nutriment of wheat and barley, together with the natural mineral elements which many foods lack.

Grape-Nuts with milk or cream is *a complete food*, crisp and delicious, easily digested and quickly assimilated.

Grape-Nuts FOR HEALTH

"There's a Reason"

Your grocer has interesting details of our offer of over $7500.00 for Grape-Nuts Recipes. Ask him about it TODAY; or write to Recipe Dept., Postum Cereal Co., Inc., Battle Creek, Mich.

ORCHARD AND GARDEN

Small Fruits

Important Crop on Simdars Farm

While the farm owned by Otto Simdars of Sequim, Clallam county, is a general farm and is located three miles from town, it has a four-acre patch of loganberries which promise to convert the owner into a producer of small fruits in the course of a few years. The plants are the same age as are most of the other patches in this neighborhood, that is, they are coming into their second year of bearing, and are in splendid condition, with a good stand of fruit set on.

The first planting was made from 2000 plants secured from Oregon three years ago and the rest of the field has been set from tips that were saved in the original patch. All rows are seven feet apart and the plants set 10 feet in the row. Mr. Simdars said that he now wishes that he had set the rows eight or nine feet apart, so as to be able to get a manure spreader between them. As they are now he must spread all manure on the patch with a small one-horse sled.

"I use a disk, a spring-tooth narrow and a grape hoe for cultivating the patch," said Mr. Simdars, "and find that very little hand work is necessary to keep the weeds down. The land is very fertile, but I find that the application of barnyard manure makes a big difference in the growth of the plants. They have a better color and I know the berries set on better when manure is applied than where no fertilizer is used.

"I have trained the canes with both the double wire and the three wire systems, but I believe that the double wires are best, since there is more room for the berries, and they are just as easy, if not easier, to train. I prefer to put the cane on the wires in the fall if the work can be attended to, but I could not get all of the patch finished and had to do the rest of the work in March and April.

"I find that it takes stronger wires for the top wires in this part of the state, where the snows are heavier, so that they will not fall down under the strain. I am going to put up No. 11 wires for the top ones after this. I am using three sets of wires, since it is better to keep the new canes coming up toward the sun and out of the rows, where they might be injured by the team when cultivating.

In addition to berries Mr. Simdars had 12 acres of field peas, which he intends to harvest for seed. The straw will be used for feed and returned to the soil in the form of manure. There is a demand for both pea straw and other straw in this section, but such a practice is not good for the land and when there is a small patch of berries there is plenty of need for all the manure that can be secured from a farm of this size.

Long Method of Pruning

The long system of pruning is showing unusual results at the C. P. Wickersham orchard near Tietonview, in Yakima county. This system has been in use for the last five years, and Mr. Wickersham declares that the trees have more bearing surface, more leaf surface, and the trees make a large growth, quicker than under the usual method of cutting back each year.

"Practically no objectionable features have been found with the new system," said Mr. Wickersham. "The advantages are so obvious, in my opinion, that I would prune in no other way. The idea is to treat each limb as a separate tree and to permit it to develop with only judicious thinning out and to promote fruit bearing its whole length."

This has been attained in his orchard, and his trees are well shaped and present a large bearing surface. This method permits of the trees opening up under the weight of fruit to let light in.

As an experiment, designed to show what would happen if a tree be permitted to develop its top in its own way, Mr. Wickersham has two Delicious trees which have never been pruned with the exception that some very low limbs were removed this spring. The trees have as good shape as the trees which have been pruned regularly and bear equally well; in fact, one of these trees outbears any tree in the immediate vicinity, but the fruit is of very inferior quality.

Mr. Wickersham has some blocks of Delicious trees, handled according to the long method of pruning, that are very heavy producers. This year they are carrying a heavy crop and will require considerable thinning. Winesaps are loaded this year despite the fact that they bore heavily last year and that this year should be their off year.

Mr. Wickersham puts on two cover sprays only and gets very clean fruit. Efficient spraying figures in such results and the fact that it is a new fruit district also figures in getting such clean fruit. Last year, which was recognized as a bad year for worms, he had only 1-6 of 1 per cent of worms. He pays the thinners 2 1-2 cents for every worm they find in the course of thinning.

Cabbage Root Maggot

By O. M. MORRIS,

Head Department of Horticulture, State College of Washington.

Can you suggest a way to rid cabbage plants of worms? A. J. K.
Chehalis, Wash.

This cabbage root maggot is one of the hardest pests to control. Various materials have been used with some little success by spraying or dusting them on the ground around the plant. After the worms once enter the soil or the roots of the plant, however, there is no method of killing them without killing the plant.

In transplanting young plants from the hotbed to the open field small paper cones can be fastened around each plant and in that way protect the plants. These cones can be made from some paper like thin tar building paper. Simply cut circles about nine inches across out of the paper, then cut to the center and cut out a small piece of paper in the center. Place this piece of circular paper around the plant and draw the outer edge until it laps some two or three inches. Fasten with a pin or a toothpick. This cone should stand so that it closes around the plant some three inches above the ground and touches in the entire circle formed. It seems that the fly, which is the parent of the maggot, will not lay the eggs on the plant, but lays them on the soil close to the base of the plant. The eggs hatch and the worm makes its way into the plant roots.

Two Acres Loganberries

M. E. Land of Port Angeles has two acres of Logans which will bear their first crop next year. The vines are growing in good shape and they will be trained up this summer. Part of the plants were from old hills that had been separated and set out. They made a fine growth the first year, but Mr. Land feels that the plants grown from the tips are more convenient and make as rapid growths if they are given the proper care.

WAR INFLUENCED BEE KEEPING.

Owing to the demand for sweets during the war the keeping of bees greatly increased during that period.

GREAT NORTHERN PAYS TRIBUTE TO LOYAL EMPLOYEES

Justice to the rank and file of earnest and loyal workers in railroad service calls for the correction of an impression created in some quarters by radical leaders that the employees are seeking to destroy the railroads by inefficient and disloyal service. It is true that a comparatively small number of union leaders are seeking to cause a breakdown of the railroads under private operation with a view to bringing about government ownership. We believe that there remains today among the great majority of railroad workers the same fine sense of loyalty and honor towards the companies that has always characterized their service. That this is particularly true of the Great Northern is evidenced by the following resolutions unanimously adopted at a meeting of the Great Northern Veterans' Association on June 22, 1923:

WHEREAS, from various sources it has been learned that the financial affairs of the railroads in the northwest are insufficient to sustain a satisfactory financial condition; that much of the difficulty is due to high operating costs on account, among other things, of the present high prices of fuel and other supplies, and the rapid increase of late years in taxation, and

WHEREAS, it is most important to the employee to know that

His wages will be fair,

That he will be promptly and properly paid, when due, for services rendered,

That he is secure in his employment,

That his conditions of employment are good,
all of which depend upon the financial stability of the railroad, and

WHEREAS, in some quarters there is propaganda which tends toward the government ownership of railroads to secure which the railroad employees are exhorted to assist in bringing about that result by hampering the management through failure to give a full day's work for a full day's pay, and

WHEREAS, we believe it would be dishonorable and also destructive to the interests of the employee for him to adopt a policy of not giving a full and efficient day's work for a full day's pay,

THEREFORE, BE IT RESOLVED, that we condemn all propaganda designed to bring about any such policy as being dishonorable and destructive and that we trust and believe the Great Northern employees will not permit themselves to be led into such an unworthy and futile course.

FURTHER RESOLVED, that for ourselves we believe it is right and also clearly in our interest to support the management in its efforts to provide adequate and prompt service to the public and we pledge ourselves to do our full part in promoting cordial understanding and cooperative spirit in all matters of mutual interest between the company and its employees.

The spirit of enthusiastic loyalty shown by these Veterans of 25 years or more of service with the Great Northern is the spirit that prevails among its 30,000 employees.

LOUIS W. HILL,
Chairman of the Board

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER III.

A Narrow Escape.

The boy rushed forward and asked what had happened.

The small, rough living room in the sheriff's shack was soon crowded with men who pressed forward eager to hear the story.

When Mr. Worth was rested somewhat and thoroughly warmed through, he began:

"After leaving home, I traveled for two days and nothing happened. There were plenty of Indian signs about, marks of moccasined feet and prints of unshod horses' hoofs."

"Where were you bound?" asked some one.

"Up the river near Fort Stevenson. Got a coal mine up there, you know," the narrator answered. "Well, I kept a pretty sharp lookout for hostiles—and all the Indians are hostile around Fort Stevenson—but up to the time I'm going to tell you about I didn't see any. I followed the old trails made by the buffalo and deer across the prairie, and did my best to cover up my own tracks—wore moccasins till the cacti cut 'em too much, then shifted to boots. Of course boots made a much clearer print and would give me away sure if they were seen."

"Why?" whispered Tenderfoot Green to Casino.

"Because, you chump," retorted Casino, "the Indians never wear boots, so they know right away when they see marks of heels and sole that a white man has been that way. See?"

Worth continued, without noticing this whispered colloquy: "I was getting nearer and nearer the river every minute, and I knew that when I got there my chances of getting throughall right would be better, for the brush and banks would afford the cover that the prairie lacked."

His hearers nodded their heads understandingly, and even Tenderfoot Green seemed to take in the situation.

"The wind was getting pretty keen, and I knew my trail would be as plain as a column of smoke in a clear sky, so I hustled for the river at a good pace. In spite of my hurry, though, I managed to keep a sharp lookout for Indians. As I topped every rise I took a good survey of everything in view, and it was well I did, for about dusk I reached the crest of a low hill, and on glancing over saw an Indian village. It lay directly in my path, not far from the river. It was still too light to attempt to go round it, so I lay down behind some sage brush and watched what was going on. The village, which contained about 50 tepees, was placed within easy distance of the river and was well supplied with cottonwood."

"Used the cottonwood for fuel, I suppose?" broke in Green.

"Yes, and the green bark to feed the horses on in heavy, snowy weather," volunteered Mackenzie.

"Excuse me, Mr. Worth," apologized Tenderfoot, "I didn't mean to interrupt."

"That's all right," said Worth. "A lot of squaws were busy doing men's work, as is the way of the poor things, scraping hides that were staked on the ground, mending buffalo skin tepees, pounding berries, carrying wood and water. Some were busy with easier jobs, such as making deerskin clothes and ornamenting moccasins with beads. I could see only a few bucks; the others were probably off on a hunt. There was danger in that, for if they found my trail on their way back to camp they would of course follow it, and then—well, I should be lucky to come out of it alive."

The listening men began to show signs of impatience. All this was an old story to them; they wanted to hear the end of the tale, and how he came to be in such a plight.

"Well, to make a long story short," said Worth, beginning to realize that he was telling much that was obvious to most of his hearers, "while I lay there, planning, and idly watching the Indian camp, the hunting party was actually returning. Suddenly I felt the weight of a man on my back. I struggled and fought, and finally threw him off. Jumping to my feet, I faced two savages who had come in advance of the main party and had stolen on me unawares. Both now rushed at me, but I dodged one and tripped the other. Before I could finish the man I had thrown, the first was at me again. Loaded as I was by my pack, I was soon fagged. My gun had been taken by the redskin when he fell on me. Why he didn't use it on me I can not understand—perhaps I didn't give him time. Now both of them jumped for me, and try as I might I could not dodge or disable them. I had already begun to fear that the game was up, when I saw a whole bunch of Indians, the rest of the hunting party, coming along the trail.

"There wasn't any use fighting a mob like that, so I stopped struggling, let my captors hold me, and waited for whatever might come.

"The redskins crowded around me, and I thought that my time had come.

"'Stev'son, you come in,' says one brave. 'Hoss, pony, you got 'em?' calls out another big scowling savage. I shook my head.

"Then I caught sight of a face I knew—old Chief Looking Glass. (I warmed him up with coffee once when he was near frozen to death. Indians will do most anything for a cup of coffee.) He pushed forward through the crowd and shook hands with me. I could see he was trying to get his men to separate and leave us, but it wasn't any sort of use; they pressed around, and it was very evident that they wanted my pack. Looking Glass finally started alone toward the camp, calling to his braves to come along, but his plan didn't work at all; for the minute he got out of sight over the brow of the hill the thieving gang began to strip me. There was no use resisting; they were too many for me. Before I knew where I was I was stark naked except for a few rags. Even my boots were yanked off. We were almost in the village by this time, for I had been pulled and pushed over the crest and down the slope of the hill. My tormentors then left me and began to divide my outfit, so I crawled off, shivering and sore, anxious to get out of sight as soon as possible."

"Wasn't it cold?" said Tenderfoot Green.

"Rather," said Mr. Worth, a grim smile showing on his weather-beaten face. "A man does not go tramping across the bare prairie in weather like this dressed in a few rags, barefooted, and feel as if he was in a hot spring. It was fully as cold as it is now, and this is a pretty sharp day." He shivered at the mere remembrance, while his listeners gave a general laugh at the simplicity of the question.

"Where's all the people?" he cried excitedly. "Let me take that pony a minute,, sonny."

"Where did you get your blanket and moccasins?" asked Green, anxious to divert the crowd's attention.

He pointed at the articles that Worth seemed to be guarding with unnecessary care.

"These here blanket and moccasins saved my life," continued the latter. "As I was pushing along I heard a woman's voice calling. I turned and saw a squaw running after me with a blanket and a pair of moccasins in her hands. 'Looking Glass blanket and moccasins,' she said, as she handed them to me. Then she turned timidly and ran back to camp.

"It was almost dark now, and growing colder every minute. I put on the moccasins, wrapped the blanket around me, though it smelled strong of Indian, and set out at a dog trot in the direction of a wagon trail. If I could reach that I might be lucky enough to strike a white man's camp or a freighter's outfit, and then I should be all right.

I traveled all that night, keeping in the right direction by a sort of instinct that my knowledge of the lay of the land gave me. It was a pretty tough journey, though, I can tell you. I had to fight hard to keep off the sleepy feeling that comes before freezing, and for hour after hour I dragged myself along, numb and aching with the cold, but hoping against all reason and probability that I might run across some of the boys before it was too late. Toward daybreak I must have got kinder lonely, for I lost track of things, and only came to myself in the freighters' camp that I had run into half asleep."

He paused here, and John saw that his eyes were half closed and his head nodding. The ordeal had told on even his sturdy health.

In a thick, sleepy voice he added: "Ask Jim White; he knows the rest—he brought me in."

Jim White could add little to the story. Worth came into his camp, he explained, more dead than alive and "clean out of his head." He and his partner had cared for him and brought him to town as fast as the teams could go.

John's father was taken over to his own shack, where his wife greeted him like one come back from the dead. Under her good nursing he recovered from his terrific experience in a marvellously short time and became again his own sturdy self. The frontiersman must of necessity be possessed of an iron constitution, for he must be able to endure hardships of all kinds—intense heat and piercing cold, hunger and thirst, fatigue and pain, that would either kill an ordinary man outright or cripple him for life.

It was with inward dread that the little family watched its head start off again, after a few weeks' stay in town. Outwardly, however, cheerfulness, almost indifference, was manifested. This time he went with a party which was going in the same direction; the danger was, consequently, not so great. Then, too, the cold weather kept the Indians pretty close to their own camps, and as the locations of these were generally known, they could be easily avoided.

The boys' hearts were gladdened by the news that, perhaps, the home shack would be abandoned in the spring, when their father returned. If so, the whole family would "hit the trail" to the north and west.

Up to this time the Worth boys had been town dwellers, though in these days Bismarck could hardly be dignified even by the name of village. John and Ben, in common with the few other boys, had enjoyed the comparatively tame pleasures afforded by the town and the surrounding prairie. All large game had been driven west, and only prairie dogs, gophers, coyotes, and occasionally wolves remained; these and the birds the boys used to shoot at day after day with their ever-ready revolvers. The sport in the river was not all that could be wished for, either, for the water was muddy and the bottom was full of quicksands. And if summer lacked diversions, winter was a still more uninteresting season, in that the pleasures were fewer and the discomforts greater.

It was, therefore, with great glee that John and Ben looked forward to this pilgrimage. A hilly country was to be visited, where game of all sorts abounded, where clear streams were plenty, and where new sports of all kinds were in prospect. Marvellous tales of trapping beaver, and hunting antelope, bear, and even buffalo, were brought in by hunters, so the boys were wild to enjoy these new pleasures.

The government was trying to confine the Indians to the reservations that had been set apart for them, but the redskins had been accustomed to roam over the country at will, to follow the game wherever it went, to make war upon each other whenever they felt like it or needed horses; so they resented any attempt to interfere with their entire freedom, and turned fiercely on their white foes wherever they found them, singly or in camps and settlements. The government, in order to better protect its citizens, erected at intervals outposts garrisoned by troops.

There being no railroads across the continent at this time, goods of all kinds had to be carried in wagons from the nearest railroad station to the fort or point of distribution. The supply of fuel, too, was a matter of great importance. It was in the main a treeless country and wood was scarce. The early prospectors and pioneers had noticed the outcroppings of coal from the deep-cut river banks, but little advantage was taken of this store of fuel till the forts were established and the little steamboats began to ply up and down the Missouri loaded deep with skins and buffalo hides.

Mr. Worth was one of the first to see the value of these coal veins, and he was a leader in developing the mineral resources of the section. He opened and worked mines as near the different outposts as possible and at convenient points for the supply of coal to the river boats.

The eastern railroads were stretching their long steel arms westward, and they also needed to be supplied with food for their furnaces.

Mr. Worth had contracted with these coal consumers to open mines which, when in good running order, were to be turned over to them to work. In order to do this it was necessary to travel from place to place, starting the work at intervals along the proposed line so as to be ready when the "steel trail" actually reached them. It was this contract that made it necessary for them to give up the home shack at Bismarck and to journey into hostile country. Mr. Worth could not return to the settlement to his family; the family must, therefore, come to him in the wilds.

Much of the long winter was spent by the boys in talking over the good times they were going to have when they reached the new country. At times a trapper would come in to get a stock of supplies, and John and Ben listened eagerly to every word he said about his experiences. These tales were old stories to most of the men of the little town, who paid no attention to such commonplace matters, but Charley Green, like the boys, was seeking information, and he drank in every word as eagerly as they.

Much of Green's ignorance had disappeared, though "Tenderfoot" was still his nickname, and by that he would be called as long as he lived there. He had changed outwardly as well. The eastern pallor had given place to a good, healthy, bronzed tint, his eye was clear and his hand steady; he had lost weight, but had gained in endurance. His gay, expensive outfit of clothes had been succeeded by the more sober and serviceable apparel of the plains: wide, heavy felt hat, flannel shirt, rough trousers with protecting leather overalls or chaps, and high boots. He had learned enough about western ways to avoid making many blunders, and took a joke at his expense good naturedly when he did occasionally betray himself.

It was not considered polite in Bismarck to inquire anything about a man's past—that was his own business. It was not necessary for a man to give his pedigree and family name in order to be received into the society of his fellows. It was not his past that concerned them, but his present. "Lariat Bill" was quite as good for all practical purposes as his real name, perhaps better, for it was descriptive and identified him at once. In accordance with this unwritten law, no one asked what Charley Green's idea was in leaving the civilization and culture of Boston for the wild, free, albeit rough, life of the plains; but rumor had it that he came there with the intention of going into ranching. If so, he was wise beyond his generation, for, unlike most of his fellows, he looked before he leaped.

Tenderfoot and the two boys had struck up quite a friendship. It was quite natural, therefore, knowing as he did the Worths' plans, for him to say one day, toward the end of the winter: "Do you suppose, John, that your dad would take me along on his mining expition?"

"I dunno," said John, "you'll have to ask the governor when he comes back. I guess he would."

"You see," continued Tenderfoot, "I'm about as tired of this place as you are, and I want to see a little of the country. I guess I could earn my salt as a mule-wrangler, anyway."

So it was decided that the young easterner was to go with the Worths if the head of the house consented.

The dreary winter was beginning to give way to the soft south winds. The snow was fast disappearing and buffalo grass was showing brightly green here and there. The boys had an unusually bad attack of spring fever, for the long-looked-for time of the pilgrimage was drawing near.

Their father might be expected any day, and then—their delight and anticipation could not be put into words.

Mr. Worth at length came in, loaded down with his pack, his arms and his heavy winter furs.

Keen and bitter disappointment was in store for the impatient boys. They were told that it would not be safe to move away from the town, for the whole country was full of hostile, well-armed, well-fed Sioux.

The Black Hills of southwestern Dakota had been found to contain gold in paying quantities. This region was considered almost sacred by the Indians and jealously guarded. It was now aggressively penetrated by the gold miners, and this naturally created much bad feeling between them and the original owners. In order to allay this feeling the government made a treaty with the Indians by which it was agreed that the encroaching miners should be driven out. The disregarding of this treaty or its ineffective enforcement roused the Sioux to open warfare.

The tribes were collecting under the leadership of Sitting Bull and Rain-in-the-Face. Several small skirmishes had been fought and numbers of men on both sides had been killed. Small outfits, too, had been wiped out completely by the savage red foe.

It would have been suicidal, therefore, for the Worth family to venture within the enemy's country, as had been previously planned.

Indeed, while there was probably little danger of an attack at this time on Bismarck, the center of hostilities being many hundred miles to the westward, great precautions were taken even there every night to guard against surprise, and the people,

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

"We live in deeds, not words.
"In feelings, not in figures on a dial.
"We should count time by heart throbs. He most lives who thinks most, feels the noblest acts the best.
"Life's but a means unto an end; that end beginning, mean, and end to all things—God."

Family Circle Girls

Dear Mrs. Barland: May I join your wonderful corner? I enjoy the Circle letters and join sides with the non-tobacco crusade. In addition to all the points against tobacco which have been raised there is the expense of using it. Surely money could be invested to better advantage. A friend said he spent about $2 a week on cigarettes. Think what that means! I'll wager that a good many of the mothers of the smoking boys could use that money to lighten many of their burdens.

Up to the time I began to read THE FARMER I thought I was the only girl who didn't "cut up" after the manner that has been discussed and because of that I am left pretty much to my "lonely."

As I am chief cook and housekeeper, to say nothing about trying to be a home maker for my father and three brothers, I am very busy and seldom get lonesome. I read a great deal and that keeps one from being lonely.

I wonder if that Oregon bachelor would tell me why my bread always cracks, that is, the crust? And how do you keep the crust from getting hard? I always rub the crust with butter, but it gets hard just the same.

Tell "The Cook" that if he never loved anything except his live stock that he had better stick to live stock, as it will take a mighty good-natured girl to live with such a man. I am well acquainted with that class of men and even their children do not come before the stock. Because they have never loved anything else they seem unable to break away. Don't imagine that I don't believe in caring for stock. I do, and I love horses and ride quite a bit. But no live stock fiend for me.

Mrs. Barland, who orders a meal in a cafe, the man or the girl? M. D.
Idaho.

When a man takes a woman to a restaurant he should consult her as to what she would like, then give the order.

Don't have the oven so hot when you put in the bread and when it seems to be too hot put a paper over the bread.
A. W. B.

Dear Mrs. Barland: I have been a reader of the Circle and am so grateful that you have given us a department, also the boys and men, in this happy corner.

I am 16 and have not gone out yet with any particular boy, but we go out in a group, boys and girls, and we have clean, happy times.

I surely agree with "Awake." She says, "If women would demand of men as correct deportment as they do in the women they marry we would have a different world." Believe me, there would be many more bachelors living by themselves, in shacks, too.

Several boys writing to this department have said that if all the girls are like those whom they know, no married life for them. Say, boys, this world is wide and there are lots of nice girls, just the kind you are looking for, not the paint and lipstick variety, either. I, too, have thought good boys were scarce, but have found real "pals" among them. JUANITA.
Oregon.

Dear Mrs. Barland: Will you welcome three farmer's girls from the west to your Family Circle? We have been reading it for years and have always meant to write, but there is always plenty of work to do on a farm.

We are all for a good time, but we don't believe in the jazz music or some of the latest prevailing styles. We stand by M. P. and the things she stands for. We usually go to church and once in a while we go to a dance, but the old-fashioned dances are the kind for us.

It is bad enough for young men to smoke, but we three agree that in the eyes of the world, at least, it is worse for a woman or a girl, so smoking girls are no friends of ours.

We like to crochet, read, sew and do about all the things that go with farm life. Our ages are from 15 to 20 years.
"THREE GIRLS FROM THE WEST."

Dear Mrs. Barland: I am 14 and in the eighth grade and hope to go to high school. I skipped the third grade. I went on with the rest in the fourth all right. I don't think it the best thing to do to skip grades, but, since I had the chance, I did it.

I live three miles out of town on a 17-acre farm. We have three cows, a horse, three dogs, a cat and a car. I can drive the car, too, but am not old enough to drive it. I have two brothers older and two sisters younger than myself.

I don't believe in dancing, although I am not old enough to go to dances. I am invited to most of the parties we have around here, but I don't get to go to all of them. I enjoy myself very much when I go, as we have games and good, clean fun. I am very fond of good music. I love all outdoor sports, but I help my mother in the house all I can. I help my father, too, in the outdoor work, mostly in the garden. I have a garden of my own and I wouldn't exchange my life in the country with that of any city girl.

I used to walk three miles to school, but now we have a school truck and I have only half a mile to walk.

I think it the most disgraceful thing for a girl to smoke and drink. Boys shouldn't do it, either. This is something I shall never do. When girls or boys will hang around pool halls and smoke and drink they will do other things that are bad.
A HAPPY MEMBER OF THE CIRCLE.

To Can Corn

Will you please give me a recipe for canning corn off the cobs without the compound? MRS. A. H.
Pullman, Wash.

The following recipe is from Farmers' bulletin No. 1211, U. S. department of agriculture:

Much depends upon the careful selection of tender, juicy corn before it reaches the starchy stage. Corn that has reached the dosed stage before being canned will have a cheesy appearance after canning. When it has passed the milky stag or is stale it is very hard to can successfully. Corn should not be allowed to stand after being taken from the stalk. Blanch on the cob one to five minutes, according to the sizes of the kernels, that is, dip in boiling water for this length of time. Dip into cold water for an instant, remove and cut the corn from the cob without scraping, i. e., Maryland style, using a thin, sharp-bladed knife. Best results are obtained when one person cuts the corn and another fills the containers. If one person works alone he should cut sufficient corn to fill one jar. Add the boiling water, cook in a sauce pan. Fill the jar and put it into hot water bath or boiler with rack or steam canner at once. A good proportion to use is half as much by weight of water as of corn. Put the corn in a kettle, add boiling water to cover and one teaspoon salt and two teaspoons sugar to each quart of corn. Allow all to come to the boiling point and pour immediately into hot jars, being sure that the water covers the corn well. Fill jars to within one inch of top, tin cans to within three-eighths inch. Process under 10 pounds' pressure for 90 minutes, or 15 pounds steam pressure 60 to 90 minutes if you use a pressure cooker. If you use a water bath or boiler method for pint jars only process intermittently for three periods of one and one-half hours each, or continuously three to six hours. The water should be over the tops of the jars in the boiler method.

Remove the jars from the canner or boiler and finish sealing at once. Tin cans should be plunged immediately into cold water and cooled as quickly as possible. When cool, store in dark, dry, cool place.

Home Recipes

Canned Greens — Wash carefully and blanch in live steam in a cheese cloth bag or a wire basket for 15 minutes. Cold dip them, cut into proper size and pack into jars, adding a teaspoon of salt to each quart and fill the jars with boiling water. Process for two hours, remove from boiler or steam canner, adjust rubbers, tighten caps and keep in cool place.

Beet greens, mustard greens or any edible may be canned in this way.
MRS. J. B. WILD, Idaho.

To Can Peas—Use young, tender, fresh peas and blanch (scald) till they begin to wrinkle, about 5 minutes, cold dip them and pack into jars to within ½ inch of the top and fill with boiling water; use 1-4 teaspoon of salt and 2-3 teaspoon of sugar to each pint jar. Tighten the caps and process in boiling water for three hours after the water begins to boil. Remove from the water, put on new rubbers and tighten the caps air tight. Keep in a dark, cool place.

Rose Jar or Pot Pourri—Gather rose leaves in the morning and spread on a cloth till the dew is dried off them. Put a layer of petals into an earthen jar and sprinkle with a little salt, continue to do this till you have gathered as many as you wish, stirring occasionally. Let them cure for a week or so then add spices or perfumes or oils, as many as you wish. One can use orris root, tonka bean, cardamon seeds, cloves, cinnamon, ground nutmeg, lavender flowers, oil of rose geranium and rosemary, essence of tuberose, cologne, any combination your fancy prompts.

After you have added all you wish, seal up the jar and allow to cure for a couple of weeks, then place in fancy jars and distribute about the rooms. When you desire the fragrance open the jars and allow perfume to fill the room.
MRS. CHAS. MILNE, Oregon.

Gem Cakes—One quart of whole wheat flour, 1 egg, ½ cup sugar, 1 pinch salt, 1 cup sour milk, 1 level teaspoon of soda dissolved in the milk; stir together and bake in gem pans in a moderate oven. Chocolate may be added if desired. L. H.

Just Folks

While in Chicago a few weeks ago a successful teacher in the public schools of that city said that it was his experience that school boys and school girls readily respond to the better things of life. Self-interest in gaining a livelihood and in making money has not yet fastened itself upon their young hearts. This teacher is convinced that the most important factor in civic reform is the plastic mind of the boy and girl.

DISCOVERS NEW WAY TO KEEP KITCHENS COOL ALL SUMMER.

An amazing discovery is claimed to have been made by Mrs. B. B. Oliver of St. Louis. This discovery is a new kind of heat that dispenses entirely with coal and wood. It burns 95 per cent air and 5 per cent kerosene. The device is installed in one minute in any cook stove, heater or range. This new invention is already sweeping over the country like wild fire. It eliminates hours of work, perspiration and drudgery for the housewife in sweltering summer kitchens. Just turn a valve and you have plenty of heat for cooking or baking. Another turn and the heat is off.

It fits any stove without change of parts—simply sets in the firebox. It is absolutely safe and generates its own gas from kerosene. Mr. Oliver will send an attractive booklet to any one interested who writes for it. Just address him at 2121-G Pine St., St. Louis. He is making a special low introductory offer including a thirty-day free trial plan. He is looking for good live local distributors. He will tell you how you can earn $500 a month easily. Request his sales plan.—Adv.

"Granny wishes she'd had such CORN FLAKES when she was little"

Never was such a delicious cereal as Kellogg's Corn Flakes to eat a lot of for breakfast or lunch or as late-evening snacks! Always wonderful in flavor, always crispy and crunchy, Kellogg's are simply the last word in a delightful, wholesome, satisfying food!

Do you realize that through the enormous demand for Kellogg's Corn Flakes, that Kellogg's are one of America's largest buyers of farmer's corn?

Each day more than a million packages of Kellogg's are made and sold. This means more raw corn for one day's use than a 450-acre corn farm can produce in one season!

Kellogg's Corn Flakes are delicious with your favorite stewed fruit, or with bananas or other fresh fruit.

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

High Points in News of the Week

An official statement of worldwide importance was made last week by Prime Minister Baldwin of Great Britain concerning the relationship of the allies and Germany. After having, in an official way, given France some months ago to understand that Great Britain disapproved the occupation by the French of the Ruhr district on the ground that it jeopardized the economic system of Germany, Great Britain assumed what has been termed a passive attitude. The statement by the British prime minister now reopens the situation with a promise of early action on the part of that country. He frankly, though in peaceful language, repeats that Great Britain considers the occupation of the Ruhr injudicious on the part of France and fraught with grave danger to the peace of the world. He denies, however, that England's purpose toward Germany is different from that of France, in that both nations simply desire that Germany shall make reparations payment to the allies to the limit of her capacity to pay. The two countries differ only in the methods of securing these payments, said the premier. He said that peace could not be finally obtained and that industrial recovery of Europe and the world will not be enduring until a solution has been found to the following three problems: Payment of reparations, settlement of inter-allied debts and security of a pacified Europe. He designated four propositions on which he said he believed there was general agreement; that the period of conflict should as soon as possible be terminated; that the indefinite occupation by one country of the territory of another in time of peace is a phenomenon rare and regrettable in itself, to which an honorable end should as soon as possible be found; that the debtor should not merely be called upon to pay his debt, but should be placed in a position where he can do so; and that his capacity, when it is in doubt, should be determined, and that united effort should be made to accomplish these ends.

Premier Baldwin notified France and Belgium that his country contemplated making a separate answer to the recent German note offering new conditions of entering upon new negotiations. One of Germany's propositions is that a disinterested commission shall make full investigation of her ability to pay and that upon the basis of this commission's finding the allies shall agree to final terms of payment.

Leaders in France have received Premier Baldwin's statement with no effort to conceal their displeasure. France clings to her original position that the only way to get reasonable reparations out of Germany is to compel her through economic pressure to pay. She continues to feel that her future safety against German aggression depends upon maintaining herself in a position of equality or superiority to Germany from every angle, economic and military.

On the other hand, German statesmen express whole-hearted approval of the address of the British premier.

* * *

A court decision of much significance was handed down in the Chicago district court last week making permanent the temporary injunction granted by the same court during the railroad strike a year ago. The temporary injunction prohibited approximately 400,000 railroad employees and their officers from doing anything to injure the railroads or prevent their successful operation in the handling of American commerce. It prohibited the use of funds of the organized employees in any way to further the strike. It prevented union officers from issuing instructions or statements to members of a union regarding the manner in which they should conduct themselves during the strike. It prohibited parades or meetings of any kind having anything to do with the strike, and also prohibited the transmission of letters, telegrams or even statements by word of mouth that would in any way tend to interfere with the normal operation of the railroads. It also prohibited picketing of railroad property in all its forms and interference with persons employed by the railroads.

The permanent injunction makes permament all these rulings.

There is still a possibility that the case will be taken to the United States supreme court, but United States Attorney General Daugherty, who secured both the temporary and the permanent injunction, hails the latest decision as one which for all time outlaws railroad strikes. "No extensive strike tying up interstate commerce will ever take place again," he predicted.

* * *

After several months of negotiations beteween the allies and Turkey at Lausanne, Switzerland, agreement is reported to have been reached which is expected to bring about the signing of a peace treaty within a very short time.

Vote on Oleo Bill

Secretary of State J. Grant Hinkle has announced that the petitions circulated for a referendum on the anti-oleomargarine bill passed by the legislature have been found to carry sufficient signatures of qualified voters to hold the measure up and place it on the ballot for the 1924 election.

This is the measure that will, if approved by the people in November, 1924, prohibit the manufacture and sale of milk or butter substitutes from vegetable oils and milk or a milk product. The measure does not prohibit the manufacture or sale of a substitute unless milk or a milk product is used as one of the ingredients. It is therefore known among the dairymen and their friends as a measure prohibiting the adulteration of bona fide dairy products by the mixing into them of a vegetable oil, notably cocoanut oil from the tropics.

Rule Aliens Out

The federal government will be guided largely by state laws in the matter of land ownership and leasing by aliens, according to announcement by Secretary Hubert Work of the department of the interior. This sets aside a former ruling by Secretary Work which permitted the leasing of Indian lands to corporations in which the majority of the stock was owned by aliens. This former ruling seemed to permit the Japanese to maintain their foothold, especially in the Yakima valley, by forming corporations and leasing Yakima Indian lands. The new ruling, however, conforms to the state law which prohibits the leasing of lands to the Japanese or other aliens.

UNITE YOUR EFFORTS.

Pull together or you pull apart.

Slogan Contest Prizes Awarded

As announced in last week's issue of The Washington Farmer, no slogan received a majority of the votes sent in by mail by readers of this paper. Therefore, the matter was submitted to the board of judges, who selected "Balanced Farming" as the slogan best suited to take the place of "Diversified Farming."

This slogan, "Balanced Farming," was submitted by three readers of The Washington Farmer, Fred Forbes of Felton, Cal., Fred H. Troemel of Outlook, Wash., and Mabel Dryden Gavin of Mallott, Wash. The slogan submitted by Mr. Forbes was received by The Washington Farmer April 12 and that by Mr. Troemel the same day, but in a later mail delivery. The third was received May 20. Therefore the prize goes to Mr. Forbes. In accordance with the original conditions of the contest, Mr. Forbes will receive not only the $10 prize, but $5 in addition because his slogan was received before April 14. Mr. Forbes was formerly of Grandview, Wash., continuing to take The Washington Farmer after moving to California.

In inviting the readers of The Washington Farmer to vote on the slogan which they thought best, THE FARMER offered a first prize of $5 and two prizes of $1 each for the first three votes received for the slogan receiving the largest number of votes. "Safe Farming" received the largest number of votes. The first vote received for this slogan was from Miss Frieda Miller of Snohomish, who therefore receives the $5 early-voting prize. A. D. Mueller of Satsop and Arvid Persson of Arlington receive the second and third prizes of $1 each.

There is still another prize to be awarded, namely, $5 for the best explanation of a slogan sent in by the person who sent the slogan. There are so many of these explanations that the judges have not yet awarded this prize. Announcement of the decision of this part of the contest will be made in an early issue of The Washington Farmer.

Beware of Swindling

(Continued from page two.)

earned savings of those who buy the stocks. Even where the company is operating with a good prospect of an oil well or a mine, the high cost of selling stocks makes them a bad purchase from the beginning. Stock salesmen have to be paid a commission of 25 per cent or higher. The market for these stocks is drummed up by the promoters, and the farmer or other purchaser would find, if he tried to sell his stock the next day after he bought it, that he could not get his money back, and, in most instances, could not sell his pretty paper certificate for 50 cents on the dollar.

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and shocks equal Corn Binder. Sold in every state. Only $25 with fodder tying attachment. Testimonials and catalog FREE showing picture of Harvester. PROCESS MFG. CO., Salina, [illegible]

We Believe in Clean Business

The Washington Farmer is a believer in clean business in every phase of every occupation. That is why we are out to expose the unfair, dishonest farm paper agent who, with too great frequency, makes his appearance in the farming towns and communities of the state. We have for some time been trying to put our readers on their guard, so that they need not fall for some of the tricks that the dishonest agent practices. We are not warning Washington Farmer readers against the legitimate agent of any reputable farm magazine, but only against the fellow whose purpose is to get money without giving fair value in return.

It is almost a daily occurrence that we hear of some farmer or farm housewife giving a solicitor money for a farm paper that never begins to come. From their description of the way the deal was made we know that they were merely victimized by what reputable publishers and solicitors call "sheet writers." This class of agents usually gives premiums, like pencils, wallets, goggles, maps and so on, "just to advertise the paper," and they frequently say that they are giving this all away free, including the paper, upon which the victim is merely asked to "pay the postage," which they usually figure up to a lot more than the actual subscription price of the paper.

We want all of our readers to be on their guard. You can tell the field men of The Washington Farmer whenever one appears. He never offers you any premium; he sells you only The Washington Farmer. If an agent shows a map or a pencil or a purse or anything like that and says that he is giving it with The Washington Farmer he is a crook, for our field men never offer premiums. He always quotes prospective subscribers the same subscription price—$1 for five full years of 52 weekly issues each, or 260 copies of this paper. And then here is a final test: If he is our representative he can show you a large button on which is a good picture of himself with the words, "Representing The Washington Farmer" in gold letters.

The Washington Farmer is for everybody who is out after good, clean, worthwhile business. It is everlastingly against the fellow who is out to bilk the public, to get something for nothing and to get it by misrepresentation.

Onions—Red, $3@3.25; yellow, $3.25@3.75.

Potatoes—New Oregon, 2@3c lb; California, 2½@3c.

Vegetables—Cabbage, 2@2c lb.; lettuce, $1.50@2.25 a crate; garlic, 17@20c lb; tomatoes, $1.75@3 a box; celery, $1@1.50 dozen; peas, 7@8c lb.; carrots, $2.75 a sack; peppers, green, 25@35c lb.; cucumbers, $1.40@1.75 box; beans, 9@12½c lb.; corn, 80@85c dozen; bunched beets, 35c@50c doz.; bunched carrots, 35@50c doz.; radishes, 30@40c doz.; green onions, 35@40c doz.; beets, $2.50@3 sack; rutabagas, $2.50 sack; turnips, $3.50 sack.

SPOKANE, July 14.—Poultry, live weight—Hens, 4 lbs. and over, 18c; light hens, under 4 lbs., 15c; springs, 15c; old roosters, 8c; ducks, 15c; geese, fancy, 15c.

Fresh ranch eggs—$5@6 case, according to quality.

Butterfat—42c lb.

Thousands of Farmers Thresh With Wood Bros. Individuals

THE INDIVIDUAL THRESHER

The years of satisfactory service given by the army of Wood Brothers INDIVIDUALS now in use by farmers all over the county stand testimony to their superiority as the lightest running, cleanest separating, most durable threshers on the market.

Because of its overwhelming merits the Wood Brothers 21x36 Steel INDIVIDUAL has been adopted universally as Standard Fordson Equipment and is guaranteed to operate on Fordson power. Our 21x36 Steel INDIVIDUAL is of the same high grade, heavy construction as our 26x46 and 30x50.

Thresh the INDIVIDUAL way--do away with loss from grain wasting in the field. Don't wait. Thresh at your own convenience.

Write today for our richly illustrated free book on growing and threshing grain. Learn how so many farmers make more money on grain with the Wood Brothers INDIVIDUAL.

Sold by Ford Dealers everywhere--price fully equipped, $900, F.O.B. Des Moines--the same low price as last year with latest 1923 improvements. See your dealer now.

Wood Brothers Thresher Co.

Oregon Branch, 345 E. Clay St., Portland, Ore. Dept. 17

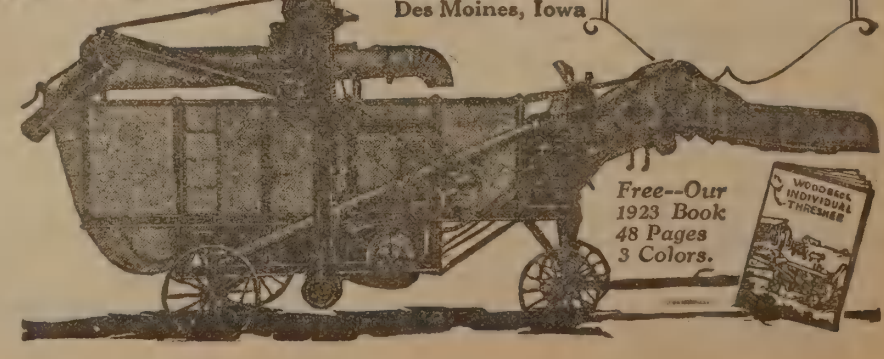
Des Moines, Iowa

IDAHO.

Nezperce, Idaho.

Gentlemen — The Wood Brothers Thresher is the best grain saving thresher I ever had on my farm. My partners and I bought this machine, a Fordson tractor, and a header at a total cost of $2250. We threshed outside jobs and figuring our own crops and counting wages for ourselves and horses, we paid for the machine with the exception of $500. We threshed 27½ days and only lost three hours in the field for minor repairs to the header.

G. F. HENRICKS of Mizer & Co.



Cattle Ranch to College

(Continued from page ten.)

especially the children, never went far afield.

The spring passed and another summer's scorching heat began. Occasionally accounts came in of battles fought and victories won, sometimes by one side, sometimes by the other. It was a time of uncertainty; business enterprise was at a standstill, and, since there was little to do in the frontier town, diversion of any kind was hailed with delight. So the Fourth of July celebration that was to be held at Black Jack's dance hall was looked forward to with great expectations by old and young.

Independence day at length arrived, and was greeted at the first showing of light in the east by a volley of revolver shots. The celebration was kept up with enthusiasm all day. Tenderfoot made a patriotic speech that took the crowd by storm—he was no tenderfoot in that line, for his college debating society experience served him in good stead.

At sundown the guests began to arrive at Black Jack's, and before an hour had passed the ball was in full swing. It could hardly be called a fashionable assemblage: the men, of whom there were three or four to every woman, were dressed much as usual, spurs, and all, except that in compliance with the request placarded prominently, their "guns" were laid aside.

A single fiddler served for an orchestra, and also acted as master of ceremonies, calling out the figures of the dances.

The violin was squeaking merrily and the feet of the dancers thumped the rough boards vigorously, while the lamp lights silhoutted the uncouth figures as they passed between them and the open window.

John and Ben, who were watching from the outer darkness, were suddenly startled by hearing the long, deep whistle of the little steamboat.

"What's that?" exclaimed Ben. "Sounds like the Will o' the Wisp, but she hasn't been along the river for a long time."

"Let's go and see," said John. "Must be something doing to bring her down at this time."

The two boys mounted their horses, which stood already saddled, and galloped down to the landing. In a few minutes the boat steamed up out of the darkness, slowed down and made fast to a cottonwood stump.

Hardly had it come to a stop when a man made a running leap to the platform and dashed toward the boys, who were the only persons at the place.

"Where's all the people?" he cried excitedly. "Let me take that horse a minute, sonny."

"Up at Black Jack's," said John, sliding of Baldy's back without delay, for it was evident that the newcomer brought important news.

The stranger mounted and set off at a hard gallop for Main street. Reaching the brightly lighted place, he jumped off and stumbled through the doorway into the center of the room.

The fiddler stopped in the middle of a bar, the dancers, who were in the full swing of "all hands around," stood still in wonder, and every eye was fixed upon the intruder. He looked like the bearer of bad news.

His clothes showed that he had traveled far and fast, and his manner evidenced anything but peace of mind. For an instant all was still. Then Black Jack broke the silence: "Speak out, man! What's up?"

"I've been traveling two days and nights to bring the news," he panted. "Custer——" he paused for breath.

"Well, hurry up, will you!" exclaimed Mackenzie, shaking his arm.

"Custer and his men have been wiped out by the Indians on the Little Big Horn!"

(To be continued.)

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4439. Boys' Play Suit—Cut in three sizes: 2, 4 and 6 years. A 4-year size requires two and three-eighth yards of 32-inch material. Price 10c.

4446. Girls' Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires two and five-eighths yards of 32-inch material. Price 10c.

4285. Child's Play Dress—Cut in three sizes: 2, 4 and 6 years. A 4-year size requires two and five-eighth yards of 36-inch material. Price 10c.

4444. Girls' Dress—Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires one and seven-eighth yards of 36-inch material. Price 10c.

4430. Ladies' Dress—Cut in eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires five yards of 40-inch material. The width at the foot is two and three-eighths yards. Price 10c.

4438. Child's Coat—Cut in four sizes: 1, 2, 4 and 5 years. A 4-year size requires two yards of 40-inch material. Price 10c.

4431-4448. Ladies' Costume—Blouse 4431 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires two and one-fourth yards of 32-inch material. Skirt 4448 cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29-inch size requires two and one-half yards of 44-inch material. The width at the foot is two and one-half yards. Two separate patterns, 10c for each pattern.

4006. Ladies' House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires six and one-half yards of 36-inch material. The width at the foot is about two yards. Price 10c.

4429. Ladies' Apron—Cut in four sizes: small, medium, large and extra large. A medium size requires two and three-fourth yards of 36-inch material. Price 10.

4097. Ladies' Dress—Cut in six sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A medium size requires five and one-fourth yards of 32-inch material. To make underbody, sleeve facings and vest portions of plain material as illustrated, one and one-fourth yards, 40 inches wide, will be required. The width of the skirt at the foot is two and three-eighth yards. Price 10c.

3834. Ladies' Undergarment—Cut in four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires two and one-fourth yards of 36-inch material. Price 10c.

4144. A Dainty Sack—Cut in four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires one and five-eighth yards of 32-inch material. Price 10c.

Wells, Amalia Schoal, Mary Plummer, Elizabeth Anderson, Rose Edna McAuley, Ida May McAuley, Gladys Kelley, Marie Youngsman, Arla Kirchner.

BEDTIME STORIES

By THORNTON W. BURGESS.

JENNY WREN HAS AN IDEA.

Jenny Wren had been gossiping with Drummer the woodpecker. You know, Jenny is one of the greatest gossips in the old orchard. Of course the thing they gossiped about mostly was the unpleasant

"Something ought to be done about it," sputtered Jenny Wren.

state of affairs in the old orchard since Bully the English sparrow had come out from the city to make his home there.

"Something ought to be done about it," sputtered Jenny Wren. "Did you ever see such quarrelsome, unpleasant people?"

Drummer slowly shook his head. "No," said he, "I never did. While I don't wish them any harm I do wish that they could be made to leave the old orchard. I suppose you heard how Bully was whipped yesterday by Scrapper the kingbird?"

"Heard about it!" exclaimed Jenny. "Why, I saw it, and I never was so tickled in all my life. It served him just right. I wonder if we can't get Scrapper to drive Bully out of the old orchard altogether."

Drummer thought this over for a few minutes. Then he shook his head. "I don't believe it will be of the least bit of ask him," said he. "Scrapper is always ready to fight when he sees any real danger poking around his home as Bully did yesterday. You might ask him, but I dont' believe it will be of the least bit of use."

"Nothing gained in this world without trying," replied Jenny. "I'll go ask him right away."

In almost no time at all she was back. "It was just as you said it would be," said she. "He says that this is a free country, and that Bully has just as much right here as we have. As long as Bully doesn't bother him he has no quarrel with him. We've got to think of some other way of getting rid of him."

"Of course," said Drummer, after they had thought and thought, "we don't want any real harm to come to Bully or Mrs. Bully, but if something could happen to their home perhaps they would go away. Now, if Sammy Jay should take it into his head that their eggs would make him a good breakfast they might, they just might, get discouraged and move away."

"Nothing doing," replied Jenny, promptly. "That hole where their nest is is too deep for Sammy to reach the eggs, as you ought to very well know, for you made it. But the idea is a good one. Now, I wonder if Chatterer the red squirrel wouldn't be interested if he knew that there are eggs there? I believe I'll just put a flea in his ear, as the saying is. There he is now over on the old stone wall. I believe I'll just fly over and pass the time of day with him."

Move a Mountain

(Continued from page three.)

ished their first helping. An army officer who happened to be present at the noon meal remarked that the crowd was fed quicker than ever he had seen a company fed in the army.

But to mention what the men accomplished! The entire field was fenced except for the hill side and the gates. The one-third mile race track was graded and made ready for the finishing touches with a coating of cinders. A new channel was made to divert the course of the small stream and it now skirts the edge of the grounds at the base of the hill. They graded and leveled the ground for the exhibit building, pruned and thinned the shrubs that were already on the grounds. The water mains for the buildings and grandstand were put in and a scenic road 16 feet wide was built along the edge of the hill.

It was a real day's job, and, in fact, it was not all finished the first day, but fully half of the men volunteered to return the following day and complete as much of the work as possible. From estimates made, the work that was completed in the two days could not have been done for $5000 if it had all been done by contract.

But there is plenty of work to be done yet. The people are planning on another day in which they will add a few of the finishing touches and straighten up the grounds before the time to get ready for the fair. Just now a new building is being erected at a cost of $3000 and it will be one of the two main exhibit buildings. The live stock buildings are to be set up before fair time if possible, but many of the permanent plans will have to wait until more of the finances can be attended to.

The part of the grounds immediately in front of the gate will be kept as a park and thrown open to the public at all times except during fair week. The grandstand, which will be erected as soon as possible, will be fitted with dressing rooms and shower baths underneath, while the track and center grounds will be rented to the normal and high schools for athletic events. Later on the side hill will be pressed into service for bleachers.

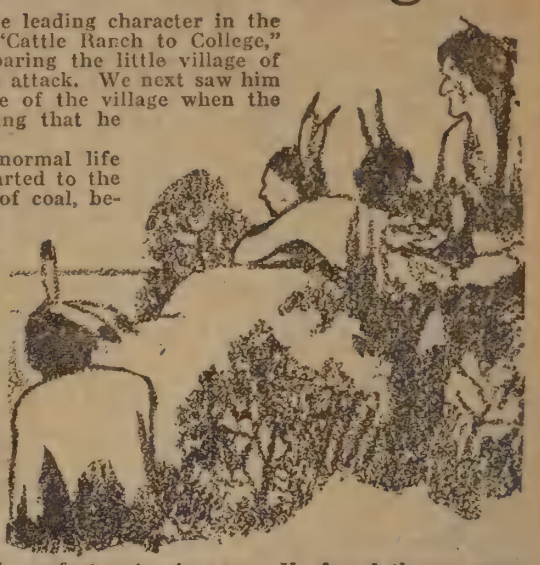
Valued at $67,000.

The entire grounds will carry a valuation of $67,000. There are many improvements that can be made from year to year, but the people in Kittitas county are not afraid of small obstacles of this kind when there is that splendid community spirit that can move mountains and move them with a smile.

When asked where the idea originated, Mr. Davis replied that he remembered the way the boys all worked on "Campus Day" at the state college and accomplished results by all working under an organized system of straw bosses and superintendents. I thought it could just as well be carried out among the people here and it has worked out better than any of us dreamed it would.

During the chautauqua at Ellensburg, which was held only a few weeks after the field day, Tom Skeyhill, the noted lecturer, mentioned the splendid work accomplished at the fairgrounds and said that he had heard of people moving mountains and changing the course of rivers, but that it remained for him to visit Ellensburg to learn that the stories were not all fairy tales. He said he would tell the people of the middle west and other parts of the country what the people of Kittitas county have done and what can be done by other counties if they go at it in the right spirit.

Cattle Ranch to College



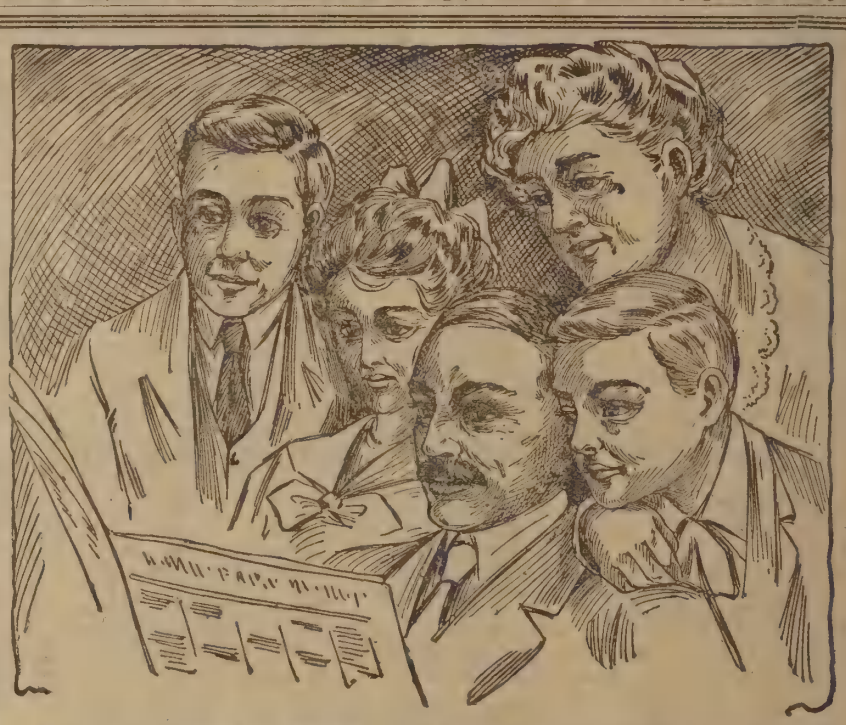
When we first met John Worth, the leading character in the serial story we are now publishing, "Cattle Ranch to College," he was taking an active part in preparing the little village of Bismark, N. D., to withstand an Indian attack. We next saw him playing the part of a man in defense of the village when the red men had appeared, notwithstanding that he was only 12 years old.

With the Indians driven off and normal life restored in Bismark, John's father started to the northwest in search of outcroppings of coal, being a miner as well as a freighter. Mindful of the dangers that beset a traveler in the native haunts of hostile warriors, Mrs. Worth bravely assumed responsibility for the welfare of herself and John, his brother Ben, age 10, and the baby. Mr. Worth expected to be gone several weeks prospecting.

One day Charley Green, the "tenderfoot" of the village, came to the Worth home as a messenger from Sheriff Jim McKenzie, who had sent him for some spare clothing for a man who has wandered into the village in a state of near-nakedness and exhaustion. Mrs. Worth gave them the clothes and John returned with Green to the sheriff's house to see the unfortunate stranger. He found there a man protected by only an Indian blanket, his feet bruised from a long journey with only the protection of a single pair of moccasins, long worn through. He turned his face toward the boys who had brought the clothing, when John shouted in amagement:

"Why, it's my father!"

How Mr. Worth came to be in the plight in which his boy had just discovered him is told in chapter 3 of "Cattle Ranch to College," which is found on page 10 of this paper.



Invest $1.00 in Instruction and Entertainment for Your Family

When you send $1.00 for a five-year subscription to The Washington Farmer, you spend the money, not for yourself alone, but for the good of the entire family.

This home and farm weekly keeps the entire family informed about the farm life of the state, and brings new light to bear on every phase of agricultural progress. The interests of boys and girls are given plenty of space. There is a constant interchange of experiences, ideas, opinions and methods of strong appeal to the housewife. The stories, illustrations and special features appeal to all.

A dollar seems a small sum to pay when you consider how many receive pleasure from its expenditure.

This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

THE WASHINGTON FARMER, ...192

Review Building, Spokane, Wash.

Farm Folk Visit College

(Continued from page three.)

under in such a way as to rot it as rapidly as possible.

They are also told that when the straw has been thoroughly rotted in the soil, the soil will be in about the condition it was before the straw was applied. This is due to the fact that straw adds but little nitrogen to the land and the carbon its adds "oxidizes," that is, unites with oxygen; that is, so far as the rancher is concerned, dries up and blows away.

So, all the while, the farmers have been right when they said that spreading straw over their wheat land did no good. Put on a clover sod, however, it does a great deal of good. And this is one of the things the farm crop specialists and investigators at the state college were able to prove to the farm excursionists last week.

Tillage Truths Told

An extensive system of tillage plots, the work of which is in charge of E. G. Schafer, was on the automobile route over the farm. In one, early plowed and well tilled land was compared with late plowed and badly tilled land. Noticeably, the early plowed and well tilled was the best. It was evident that early plowing and good subsequent tillage keeps the moisture near the surface and offers a chance for the maximum development of plant food.

Another part of the field is devoted to the use of manurial fertilizers. It is evident that manure is much more effective when applied to fall wheat land in the fall than when applied to spring wheat land in the spring. It seems to make little difference whether manure is applied to the fall wheat land before plowing, or as a top dressing afterward.

Other experimental plots give evidence that there is little difference in the effect on crop yield of different depths of plowing: Four inches, six inches, eight inches. All give practically the same yields.

And, lending emphasis to what has already been said, there were plots giving abundant proof that the systems of crop rotation having a legume tucked in somewhere between grain crops, are decidedly to the good in point of crop production.

The Legume a Mainstay.

It is made pretty clear that land having 18 inches of rainfall, or more, every year, should produce a crop every year. The search, therefore, is for something that with maximum advantage to the crops will take the place of summerfallow. Corn, sunflowers, potatoes and peas have been tried. Nothing works so well as the legume. Indeed, the results of years of work tend to show that in the proper introduction into cereal growing of the inter-crop of legume one may look for the mainstay of grain farming.

Many farmers who are thinking seriously of making use of the inter-crop of legumes want to know if there is a nurse crop that can be used with the legumes. That is, first-year clover, or first-year alfalfa does not produce much of a hay crop. If something can be grown with the alfalfa or clover, and be harvested, leaving the alfalfa or clover to come on big and strong for the next year, the farmer will not be out the use of his land while the legume is getting ready to produce a full crop.

Peas Play a Part.

The answer given by one of the experimental plots is peas. Peas planted as a nurse crop with the legume will grow along with the legume, develop ahead of it, and make a hay or a grain crop, leaving the red clover or alfalfa on the ground.

Grain crops used as nurse crops for red clover, alfalfa, or sweet clover, fail, in that they crowd the legumes out of existence. Wheat, for example, has a root system that goes deep into the ground. By the time a wheat crop has matured, there is practically no moisture left in the ground. The same is pretty nearly true for the other grains.

Peas, however, like alfalfa or red clover, are a legume. They do not take so much of the soil moisture as to crowd out the alfalfa or clover.

In using peas for this purpose the farmer should use the same precautions that are always necessary where nurse crops are grown. Whenever it is evident that the peas are injuring the main crop, they should be cut. In a wet year like this the peas might come on to maturity and be harvested for grain. In dry years, it might be necessary to cut the crop earlier, for hay. But in either event, the farmer gets from his field in the year that his alfalfa or clover is getting started, a full crop.

Legumes were an outstanding feature of the field day observations reported above, but there were others of much importance. For instance, the new smut-proof wheat, the potato diseases, and so on and on. But thes ethings will have to be discussed later as separate articles as space permits. We feel that Mr. Ashlock has easily hit the high spot of the day's significance—the importance of building up the wheat growers' soil by the use of legume crops.—Editor.

Rabies

(Continued from page six.)

only should the heads be sent in for examination. They should be shot through the body and the head cut off, packed in ice and sent to the laboratory by express. The laboratory man may be able to tell whether they were diseased or not; at least, he has the best chance that can be given him. (Copyright by E. E. Wegner.)

This is the first of two articles on "Rabies" by Dr. Wegner.

The Cover Page This Week

On the cover page this week is the picture of one of the world's great dairy cows. Her accomplishments as a producer are especially noteworthy because she does not belong to what is known as a strictly dairy breed. She is a milking Shorthorn, a dual purpose animal. Her breed is a producer not only of butter and cream, but of beef as well.

This remarkable cow, Melba 15th of Darbalara, is owned in Australia. She has a record of 29,423 pounds of milk in a year, with a butterfat content of 1316 ponuds. The milking Shorthorn organization claims that this is the world's record butterfat production for all breeds, notwithstanding the fact that for two Holstein cows in Canada a little higher production is claimed. The Shorthorn organization explains the claim for world championship of all breeds on the basis of different methods of computing the butterfat from the quantity of milk and its test. Regardless of the methods of testing and computing for butterfat production, and regardless of breed favoritisms, Melba 15th of Darbalara is a marvelous animal.

HERCULES MODEL DIES.

J. D. McGuire of Tenino, Thurstor county, reports the loss of Hercules Model, his herd sire, from an acute attack of pneumonia. He had been in the herd less than two years, but he leaves his first son, a junior calf, which combines the bloods of Gainford Marquis, Cumberland and Choice Goods, the latter being his grand sire. The calf will be kept as herd sire.

NORTHWESTERN MEN AS JUDGES.

John L. Smith of Spokane and George S. Bulkley of Seattle are the only northwestern men among the judges officially indorsed by the Holstein-Friesian Association of America.

SPAVIN

For bone spavin, bog spavin, thoroughpin or other diseases of the hock (symptoms and treatment explained in direction book with every bottle) Gombault's Caustic Balsam is the reliable remedy to use.

Unequalled for most horse ailments. Supersedes firing and cautery. $1.50 per bottle at your druggists or direct upon receipt of price. Good for humans, too. The Lawrence-Williams Co., Cleveland, Ohio.

GOMBAULT'S Caustic BALSAM

Only $2 DOWN ONE YEAR TO PAY

$44 Buys the New Butterfly Jr. No. 2½ Light running, easy cleaning, close skimming, durable.

EXPERIMENT STATION
URBANA ILL

No man would think of mixing feed with his eyes shut

Yet—that's practically what the poultryman does when he mixes his own feed. Read why!

No matter how clever he is—no matter how cheaply he buys his ingredients—the poultryman who mixes his own feed is "blind" to this glaring fact:

All the things that go into an egg mash may test differently.

All bran, for instance, is not the same. All millfeed, all meat scraps, all oil cake meals, are not the same. There's a heap o' difference in the analysis of each. And it is in the *analysis* that the real value of the ingredient shows up.

Take the single item of *protein,* for example. *Bran* can be 14% or up to 18%—and so can *middlings. Soya bean meal* can be 37% or up to 45%. *Meat scraps* can be 48% or up to 75%. And so on! Remember, too, that you find this great variance true in the analysis of carbohydrates, fat, fiber, etc.

So, how in the name of scientific feeding, can the home-mixer hope to make the same batch of feed for his flock twice in a row? How can he tell whether the ration is too strong this time and too weak next time? How can he know whether he is getting the most egg-making value for his money? The answer is—*he can't!*

He has only two eyes—and he trusts to luck. While the trained Sperry laboratory chemists have a "thousand eyes"—and trust nothing! They make sure—again and again and again—that every ingredient that goes into Surelay is true-to-test every time. That's why Sperry Surelay—mill-made and mill-mixed—is the "cheapest" feed you can buy. It's yes-work *vs.* guess-work! It saves your time, your temper and your till—to say nothing of your flock.

If you haven't sold yourself yet on the poor economy of home-mixing—we have an eye-opening booklet for you. It's called "Why Mixed Feeds" and it's free!

Written by Dr. Kaupp—a great national authority on feed investigation—this new Sperry Service Bulletin is being studied with profit by poultrymen up and down the Coast. Mail the coupon now!

Dairying and Lamb Feeding

Better Stand High Cost of Transportation

To the Editor of the Washington Farmer: I am now back home after my trip to the Pacific coast, and have been thinking a great deal about the situation out there as I found it. I was particularly interested in the proposed development of the great irrigation project for the Big Bend country. With population increasing as it is, and the area of good crop land increasing at a smaller rate, there is no question that in the not distant future there will be a use for all the farm products that can be produced as the result of the development of this project.

W. J. Spillman.

Just at present, however, farmers are suffering from low prices because we are producing more of most products than the public will take at a price that is remunerative to farmers. It may be fortunate, therefore, that it will be some years before the new project can be completed.

Everywhere I went the problems that were in farmers' minds, in addition to the matter of low prices, were our present high freight rates and the difficulty of securing competent labor at wages farmers could afford to pay. Taxation was everywhere a dominant question, and these are problems that must be dealt with in the near future. Their solution will require the best efforts of the best minds in the country.

The apple men were, of course, more or less discouraged by last year's disastrous results and by the prospect of continued high cost of transportation; but these men have had their ups and downs in the past and the feeling amongst them seems to be general that the present difficulty is temporary. They are expecting a return of prosperity and here is hoping they will get it. Just at present, however, I would not advise any material extension of apple acreage in the Pacific northwest. Eastern apple growers can make wages at prices very little greater than present freight rates from the Pacific coast.

While eastern apples do not make so good an appearance on the market as do the western apples, eastern growers are learning from the west, and I am inclined to think that western apple men will feel competition from eastern growers more in the future than they have in the past.

I was very much interested in the situation which I found prevailing in the great wheat growing regions of Oregon, Washington and Idaho. I got the impression from the conditions I saw that in the older wheat growing sections the land has lost so much of its vegetable matter that it is washing more badly than it used to. I noticed, also, that the fall sown wheat had not germinated very well on the upper slopes and hill tops, not nearly so well as it had on the lower part of the slopes. This, I understood, was due to a more or less marked deficiency of moisture last fall, but I was also told that for some years past the yield per acre has not been up to standard. It seems to me that there is a very big problem there in building up the supply of vegetable matter in the soil. The men at the experiment station are working on this problem and I hope they will soon be able to point out its solution. There is no question about the fertility of Palouse soils and their adaptability to wheat. So far as I can see now, that should always be a great wheat country, but some means must be found of insuring good yields in ordinary years.

There was a good deal of talk in the Palouse country of the development of live stock enterprises, particularly dairying and winter feeding of lambs. These seem to be logical developments there, and if the farmers proceed cautiously and feel their way carefully, I think that ultimately dairying and lamb feeding might become important enterprises in that region. They have the advantage that their products are high enough priced to stand our present high cost of transportation.

The dairy industry may develop in two rather distinctly different forms. It may be a large farm proposition with a large herd cared for by hired labor. It takes unusual ability on the part of the manager to make this kind of a dairy farm profitable, but it has been done and can be done again.

The great bulk of the dairy industry is a family farm proposition, where the farmer and his family grow their crops and tend to 10 to 15 cows, sometimes more and sometimes less, according to the available supply of labor in the farm family. The Palouse country is a region of large farms and is not so well adapted to dairying on the small herd scale, and the present difficulty of obtaining efficient farm labor at the wages farmers can afford to pay makes it difficult to develop the larger dairy farm. It is these situations that suggest to me that farmers should proceed cautiously in developing the dairy industry; but it is a good business and its products are high enough priced to ship any distance. I hope therefore that the dairy business will gradually develop in the Palouse.

I enjoyed very much meeting many old friends on my western trip. They treated me so nicely that I shall certainly come to see them again at the first opportunity.

W. J. SPILLMAN, Consulting Specialist.
U. S. Department of Agriculture, Washington, D. C.

More Fruit Cars

On the eve of the Wenatchee Southern railway hearing the Great Northern railway made an announcement of far-reaching importance to the effect that a new private refrigerator car line has been organized, known as the Western Fruit Growers' Express, which will control 20,000 refrigerator cars, a large proportion of which should be available for apple shipment from north central Washington when needed.

Included in the pool, according to advices received here, are the Pennsylvania system, the Southern railway, the Burlington and the Great Northern. The new company is supposed to succeed or to be an enlargement of the Fruit Growers' express controlled by the Pennsylvania and the Southern railway and owning on January 1, 1923, about 11,500 cars. Added to these are a little over 8000 owned by the Great Northern and Burlington combined, of which the Great Northern had 5500.

W. P. Kenney, vice president in charge of operations for the Great Northern, announced the formation of the new refrigerator car company. While here some time ago he stated confidentially that plans for the company included the construction of several thousand new refrigerator cars each year.

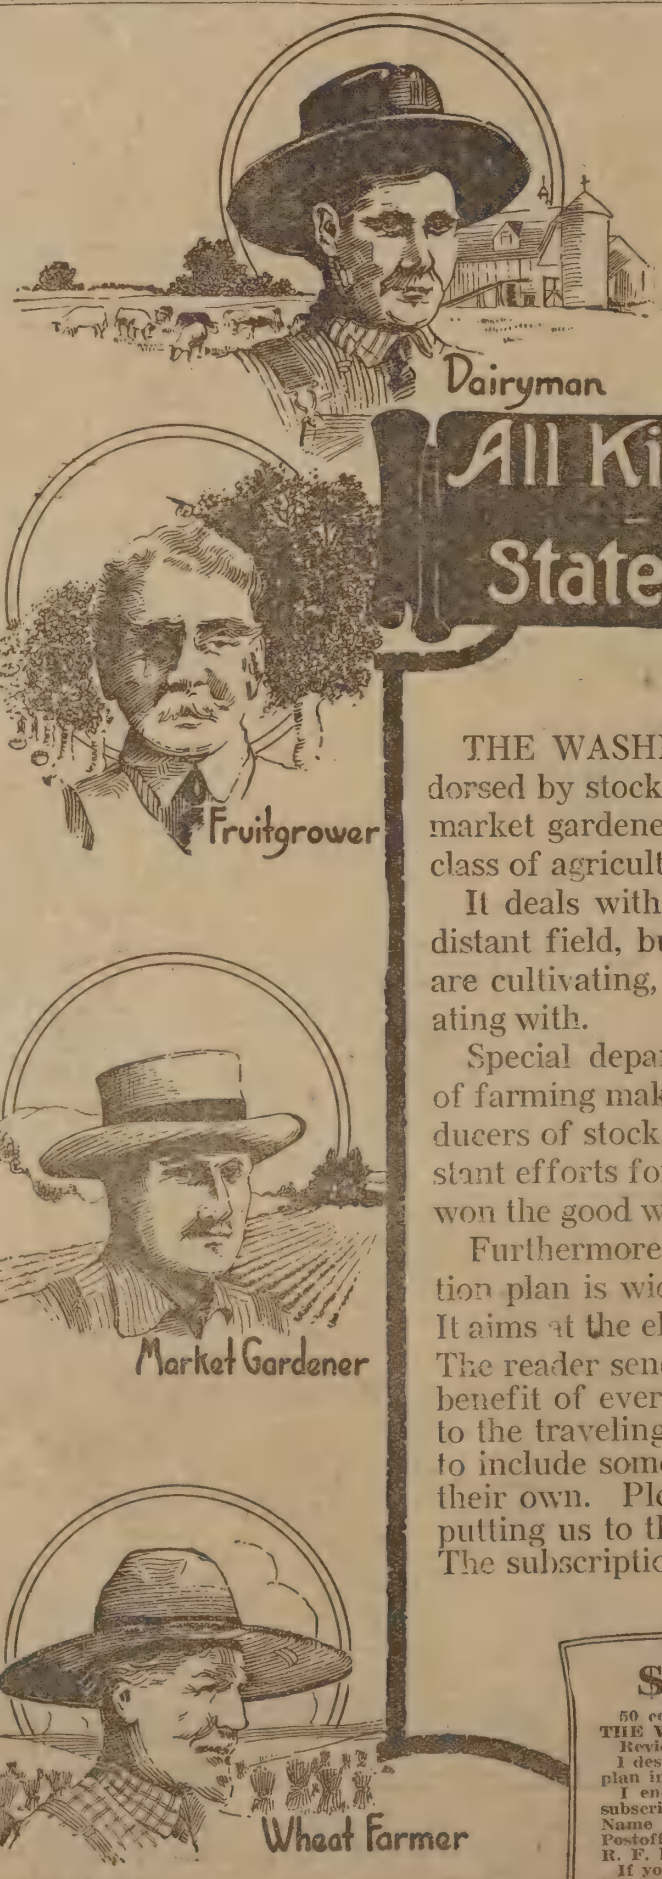
Railways have been reluctant to build new refrigerator cars for the reason that they usually need them only on their own lines for a few months of each year, and when not in actual use by the owners they are subject to the control of the interstate commerce commission and the American Railway association. Frequently they are dispatched to far-distant points and then when again needed it is difficult or impossible to get them back.

When owned by a private company refrigerators are outside the control of the I. C. C. or the A. R. A. and can be used much more advantageously by the owners. This is proven by the experience of the Pacific Fruit Express, which owns about one-third of the refrigerators in the United States. The Western Fruit Growers' Express will be the second largest owner of refrigerators in the country.

Growers and shippers in the Wenatchee district have long urged upon the Great Northern the advantages of putting its cars under private control, and officials of that road have been working on the project for some time. If the plan as proposed is carried out by the addition of several thousand new cars each year the new company should be able to regulate the supply needed to move the apple crop out of this district much more efficiently than has been possible in the past.

MAKE PROBLEMS KNOWN.

Farmers may well sit in with business men of the towns and cities for mutual consideration of problems, but they must not rely upon the towns and cities to solve these problems.



All Kinds of Farmers
– Endorse Their –
State Farm Paper

THE WASHINGTON FARMER is strongly indorsed by stock breeders, dairymen, fruit growers, market gardeners, wheat farmers, in fact by every class of agriculturist.

It deals with all sides of farming, not in some distant field, but in the very state whose soil you are cultivating, and whose citizens you are associating with.

Special departments covering various branches of farming make this magazine valuable to the producers of stock, fruit, milk and poultry; while constant efforts for the upbuilding of agriculture have won the good will of all classes.

Furthermore, this paper's cooperative subscription plan is widely approved throughout the state. It aims at the elimination of the subscription agent. The reader sends in his renewal direct and gets the benefit of every penny which would ordinarily go to the traveling agent. Our readers are also asked to include some friend's or neighbor's order with their own. Please attend to this matter without putting us to the expense of sending you a notice. The subscription rate is only $1 for five years.

$1.00 for 5 Years

50 cents for three years. 25c for one year.

The County Is Small; the Spirit Is Big

Wahkiakum County Is Made Up Largely of Producing Forests and Fertile, Dairy-Farming Valleys

By HORACE ADDIS

That railroad communication is not a necessity for happiness, progress or prosperity is proven by the results attained by the citizens of the little Skamokawa valley, in Wahkiakum county, although they have long wanted rail and wagon roads. This valley is not only entirely without a railroad, but it has never had a road "to the outside world," its only communication with all that is included in this mysterious phrase, as well as even with other parts of the county, until recently, being by boat. The little town of Skamokawa lies on the banks of the Columbia river, while about 70 families people the three prongs of the Skamokawa river, which unite just above the town. The Columbia, that great unpaved but dustless highway, gives a fairly certain, though slightly irregular mail service, possibility of boat connection between the different valleys that make up the county and a way to make a start into the great world outside.

Wahkiakum County.

This is intended to be a story of the Skamokawa valley, but right here I would like to give a little idea of the county in general. Cathlamet, the county seat, is the largest town. It is situated at the mouth of the Elocomon. This valley is credited with 53 farm homes; the Skamokawa with 72; Rossburg, 65; Gray's River, 42; Deep River, 60, and Eden, 17. Each of these has its river, most of them waterways for small boats when the tide is high, and separated by mountains over which there is scarcely more than a trail. Besides these communities, Puget island, in the Columbia river, opposite Cathlamet, has 88 homes. While all these represent land owned by the resident, many of them are much more fishermen than farmers, and this is true of a few of these in each of the localities named. Most of Puget island—about 3000 acres—was dyked in 1916. This was directly the result of the efforts of George A. Nelson, who was then county agriculturist. Since then the amount of farm products on this wonderfully productive area has increased prodigiously and the valuation has jumped from about $35,000 to $155,000. It may surprise some progressive farmers to know that this half isolated county was the first in the state, the first west of the Rocky mountains, in fact, to have a county agriculturist. Mr. Nelson began his duties there in 1912 and it has had an agent ever since. The county is justly proud of this distinction. A celebration of the fact will be held this year. Fred S. Martin, the present county agent, will be in charge, and probably 10 counties will participate and the extension department of the state college will, of course, father the event. More details will be given, soon, in a separate statement.

Lumber Is Leader.

Every one of the little valleys mentioned is extremely fertile and most of them are capable of having the area of cultivated farms greatly enlarged as the land is cleared, though much of it will be upland. Immense quantities of lumber are being cut annually. Some idea of the importance of the lumber industry of the county is glimpsed when it is known that about 120,000,000 feet of logs were cut during 1922. These averaged about $20 per 1000, bringing the snug total of $2,400,000. This represents eight logging camps. Four shingle mills take a small part of the output, working it over into shingles at about $2.75 per 1000, which adds a little more to the above estimate of the amount of timber money to be credited to Wahkiakum's annual total.

Timber is, therefore, at the present time, much the greatest industry of the county. Much of the timber area is fit only for reforestation, but much of the country is good agricultural land, and, in the final analysis, Wahkiakum county must depend on agriculture for permanent development and prosperity. This is being slowly accomplished, but now more rapidly than ever before.

The road question, which has always been acute, shows much hope of improvement. There is a good macadam road between Skamokawa and Cathlamet, but the hoped-for road on toward Kelso seems several years away yet, although it seems sure to come, and be built at least in part by the state. Grays river will reach the outside world first, but out by way of the ocean beach highway, to South Bend. Some of the people still in the county are pioneers, who have hoped and prayed for and believed a railroad would be built down the north bank of the Columbia. With the advent and general use of the auto, they now see their hopes about to be realized, but in a slightly different manner—in auto roads instead of a railroad. Optimism has helped these pioneers and their children to struggle on in the belief of better conditions coming. They are optimistic yet, and if the Washington legislature understood what the waiting of all these years has meant to the fine citizenry of Wahkiakum county, it is doubtful if funds would be withheld, while more favored sections are being served.

Tides Determine Fair Time.

Skamokawa valley, then, is only a part of this progressive, but somewhat isolated, county. But no part has shown a more progressive spirit. The county fair is held at Skamokawa. When I was last there, at a meeting of the Jersey breeders, the manager, Mr. Weist, was figuring with them on the best time for holding the fair. Tides, which vary in height at different times of the year, and affect the Columbia river as far up as Portland, had to be considered. Grays River community, which does all its boating (and this means all its traveling) on the tide, had to be considered, as it is a good exhibitor, especially of Jersey cattle. Other communities ship on the tide, also.

The best idea of the importance of the dairy industry of the valley can perhaps be had by receipts and disbursements at the Skamokawa Valley creamery, located in Skamokawa. Of the 72 families listed as farmers, at least 65 are dairymen. The others have a few chickens and garden. Of these 54 are stockholders in the creamery and over 60 market their cream here. The creamery is a corporation, operating cooperatively. It has been in operation continually for 24 years, its capital stock being $3000. For the year 1922 butter fat purchased totaled 191,429 pounds, for which $84,916.23 was paid. Stockholders' dividends are added to the prices received, but these are included in the figures above. About the same amount of cream was received in 1921, and the amounts for the first half of 1923 are 94,914 pounds of fat, for which $43,294 was paid. Much of the butter from this creamery is marketed in the logging camps in the county, but the larger portion goes to Seattle, and its brand has an established reputation in Portland, where it is decidedly popular.

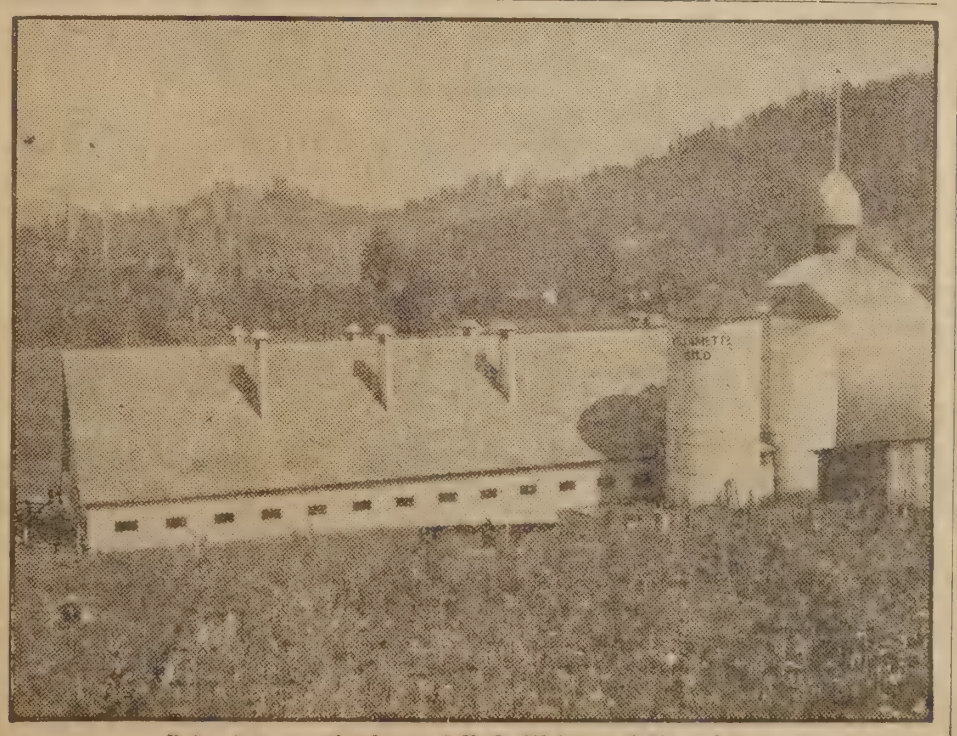
Jersey Breed Leads.

In the Skamokawa valley the Jersey breed is supreme. Most of the herds are grades, but there are a few purebred herds of popular blood lines and others with a few purebred females. One farmer has a few registered Holsteins and a Holstein grade herd; one has a Guernsey herd sire, and there is one grade Jersey bull in the valley. All other herds have registered Jersey sires at the head. Can any other dairy region in the entire Northwest show as near 100 per cent purebred sires?

This valley has one Jersey bull association, and no word except luck will quite account for the wonderfully good lot of blood concentrated in the four bulls included in the association. First must be mentioned Iota's St. Mawes. He is a son of the ex-world record cow, Lad's Iota, 1048 pounds of fat, highest record daughter of the gold medal bull, Rinda Lad, and his sire is St. Mawes Lad. As the sire is a world record bull in that he sired the only gold medal senior yearling and is the only bull to win a gold medal with daughters with first calf, and his sire and grandsire on both sides are gold medal bulls, as well as his dam and both granddams, and his offspring are now commanding high prices, the fact that they secured him (before all these records were made, of course) for $350 makes the word "luck," as well as good judgment, appropriate. Two other bulls, St. Mawes Rosaire Olga Lad's Skamok and St. Mawes Rosaire Olga Lad's Roxana, are by Poppy's St. Mawes Rosaire Lad. This is one of the four full brothers, sons of the great gold and silver medal bull, Rosaire's Olga Lad, and Poppy's St. Mawes, highest record daughter of the great gold and silver medal bull, St. Mawes. This quartette hold a world record far above any other four full brothers as sires of production, with two world record daughters, 13 silver medal daughters, many high register of merit daughters and Poppy's St. Mawes Rosaire Lad himself became a silver medal bull with the first three daughters in milk, one of them a senior yearling. Besides this, they have sired two gold and five silver medal bulls and 16 or more proven sons. St. Mawes Lad, referred to above, is one of the gold medal bulls, and his sire, Poppy's St. Mawes, is a gold medal bull. Poppy's St. Mawes Rosaire Lad died when he had but nine daughters, but part of them have already given him an enviable record and they will do more. He has the breeding to make the members of the association feel they were lucky in securing two of his sons before he died. The fourth of the association bulls is Tootsie's Major, a son of Melia Ann's King and out of Tootsie Wild Rose, with a record of 685 pounds of fat, with two milkings a day and ordinary herd care. He is a grandson of Golden Glow's Chief, the bull that sired "the wonder cow," Vive La France. Her six consecutive years' official tests resulted in over 600 pounds more butter fat than any other cow of any breed in six even non-consecutive official tests. This makes him close kin, also, to the world record cow, Darling Jolly Lassie. It would be hard to find four more desirable bulls in that many purebred herds, let alone being used in a bull association, mainly on grades.

The Largest Dairy Farm.

H. L. Weister, proprietor of Sunrise Dairy farm, has the largest herd of purebred Jerseys in the valley. He has 32 cows in milk and a total of about 60 head. The present herd sire, Spozza's St. Mawes Poppy, is by Gertie's Poppy's St. Mawes. His daughters, all young, are making excellent records. The dam is Spozza's Foxhall of F. O., an exceptionally good cow. He is extra large, of good type, with straight back, deep middle and strong heart. Prior to this bull Mr. Weister had a son of Rosaire's Olga Lad from Ed Cary of Oregon. Only two daughters had been born when he died. One of them has an official record of 562 pounds of fat as a senior yearling, with only two milkings a day. Before that, Mr. Weister had Skamokawa Chief, by Oregon Marigold and out of Brown Mary's Minuette. This bull now has 18 daughters in the Register of Merit, and more on test. One of them, Pocahontas of Sunrise, is a gold medal cow, with a record of 712.22 pounds of butter fat in her year. She exceeded 50 pounds every month of her test but one and now has a daughter on test that is assured of a silver medal, if no accident happens in calving. Spozza's St. Mawes has three daughters on test. Two seem sure of a silver medal. Mr. Weister has 11 yearling daughters of the bull and has no doubt of making him a silver medal bull in the near future. He has sold quite a few bulls in the valley, and some of them have displaced grades.



Dairy barn on the farm of H. L. Weister of Skamokawa.

Probably the next largest purebred herd is that of Thompson & Weist, proprietors of "Breezy Point Jersey Farm." Less than three years ago they purchased from F. H. Jones of Perrydale, Ore., 12 cows and heifers. Most of them are daughters of St. Mawes Golden Poppy, sire of the world record junior 3-year-old, Poppy's Dortha, 994 pounds of fat, and the others carrying his blood. He is one of the great four full brothers referred to above. Unfortunately garget developed in the herd. It has but recently been entirely eradicated, and no big records have yet been made. But at the next freshening the cows will be put on test. The herd sire is a son of the gold and silver medal bull Silver Chimes of S. B., and a few heifers will soon be ready to test.

E. M. Whitten has a few purebreds, besides a good grade herd. Fawn of Amity, that will be 18 years old next October, was milking about 40 pounds when I was at the farm. She has a cow testing association record of 210.9 pounds of fat in five months, when the association was disbanded. One of her great granddaughters sold in the Portland sale last winter for $510. Mr. Whitten has two daughters of Cowslip's Ashley. One has a calf by St. Mawes Rosaire Lad's Roxana and he has one purebred calf by Iota's St. Mawes and one by St. Mawes Rosaire Olga Lad's Skamok. He is just getting started, but he is starting right.

G. E. Sonner has 11 purebred females. He is keeping one of the community bulls, Iota's St. Mawes, and some of these are his daughters. They are excellent dairy prospects, with good dairy type. The bull is not large, but he is a handsome, typy animal and is breeding type as well as the anticipated production.

William Dawson is now keeping St. Mawes Rosaire Olga Lad's Roxana. Mr. Dawson has no purebreds, but does have a good herd of grades. The bull is of good size, extra long of body and hips, has a good head and looks much like his sire.

Theodore Anderson has St. Mawes Rosaire Olga Lad's Skamok in charge. This bull is large, also, and has long body and hips, a good back and is full of pep. Mr. Martin, who was responsible for the bringing in of the fourth bull, Tootsie's Major, has one of the best grade herds in the valley. He had two bulls from Henry Stewart of Albany, Ore., before Major was secured from the Stewart herd, and found both of them to be sires that increased the production of their daughters over that of the dams. He has one grade cow that produced 597 pounds of fat in a year.

Tootsie's Major is now in the hands of Peter Johnson. He, too, is a large bull, is of good type, though different from any of the others. Mr. Johnson has an excellent herd of grades, that have made good records in the cow testing association.

J. A. Martin, county commissioner, has three purebred cows, all of popular breeding, and he has three calves, each by a different one of the community bulls. He has a good start and will build up a herd.

Skamokawa valley, with its wonderful soil and climate for pasture grasses and hay, and its mild climate, should have more purebred females, as well as its fine lot of herd sires.

Club Work Progresses.

Skamokawa valley has a dairy club of 12 boys and five girls. Mrs. Hazel Sonner is club leader and has inspired much enthusiasm into the young people. Five of the members have purebred calves and it looks as if the increase of the number of purebred dairy cattle in the valley will come mainly through calf club activities. Last year eight of the club exhibited at the county fair. Late in June the club gave a dance, which netted about $30. The money will be used to buy cooperatively a clipping machine. An effort will be made, also, to have blankets and halters all alike. Twelve of the club were present at the meeting of the Skamokawa Valley Jersey Cattle club, July 1, and two of their number, Noyes Whitten and Raymond Rasor, were the only ones present who selected the right cow in the judging contest, the object being to choose the highest producer.

This dairy club is not the only one in the county. Fred S. Martin, county agriculturist, has over 150 boys and girls in club work. The projects include dairying, gardening and sewing. As only 450 boys and girls are eligible in the entire county, this is a fine showing. Mr. Martin returned from Pullman June 25, where he had attended the second annual club encampment. Three representatives of the Wahkiakum clubs went with him. They were Gladys Boylon, winner in the sewing club last year; Lelia Houchen, winner in the Cathlamet sewing club, and Howard Martin of the Skamokawa dairy club. So in club work Wahkiakum is well to the front, as well as with its dairy herds.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 4.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916 ,at the postoffice at Spokane, Washington, under the act of March 3, 1879.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

More Live Stock in Prospect

Not only does the wheat crop bulk large in the Palouse country, but there is also promise of an immense crop of all kinds of forage.

This will prove conducive to the development of the live stock industry.

Quick Market Needed

With regard to the new market for split cherries in the Wenatchee valley, J. G. DeBord of the Cashmere cannery says damaged cherries generate an acid that in time eats the cans, and that makes it necessary to sell the fruit at once.

The Cow's Time

Do not use up all the cow's time in eating grass. A part of her time must be spent in chewing her cud and digesting her feed. This is the reason given by Donald C. Saunders, the cow tester in the Snohomish county association, for giving the cow some grain with her pasture to complete the ration and insure maximum production.

Feeding Wheat to Live Stock

Some eastern Washington farmers, among them J. C. Lyons of Walla Walla county and A. F. Alexander of Franklin county, say that with prices down, more money can be made through feeding wheat to live stock than by selling on the market.

The farmer who is alert often finds more than one way of marketing his crop.

Bigger and Better Apples

George Beidler of Manson reports that Lake Chelan apples are larger than for years at this time of the year and that worms are few. He adds that those who are raising fruit on unirrigated land have a good crop this year.

It may not be entirely the season that has brought this good news, for it is related that almost all the growers in that section put on an extra cover spray at the time of the first spray. This means that they are paying more careful attention to their orchards.

Clover and Rye Grass Pasture

The pasture has an important part to play in reducing the cost of live stock production.

A. E. Moore of Falls City, King county, gets a large butterfat average from his cows—62.3 pounds for one month from 15 cows.

Mr. Moore raises all of his own hay from a mixture of clover and rye grass. This mixture makes an excellent early pasture, and also a very good quality of hay. As a general rule he raises corn silage, but this year he expects to have enough clover to fill the hay barn and will put the rest into the silo. Oats and peas have been grown with good results for silage, and he has known them to produce 15, and even as high as 20 tons of silage to the acre.

This farm is along the banks of the Snoqualmie river and each spring the fields are flooded and a layer of silt is deposited. This aids keeping up the fertility, but it also scatters a quantity of weeds. Mr. Moore, however, has been able to keep them down and to keep his fields clean by thorough cultivation during the growing season.

More Berries in Lewis County

The growth of the Lewis county berry industry is indicated by the announcement that 15 full carloads of fresh strawberries have been shipped this season.

The Lewis County Berry Growers, the local branch of the North Pacific Cooperative Berry Growers' association, shipped its first carload of frozen berries July 8, the shipment going to Pittsburgh, Pa. The fruit shipped included 120 barrels of strawberries.

The growers are presenting a petition to the Lewis county board of commissioners for the appointment of a county horticulturist.

Boys and Girls' Club Work

Boys and girls' club work has become one of the big features of the Spokane Interstate fair, which will be held September 3-8 this year.

O. E. Heaton has been appointed general superintendent of the department by Thomas S. Griffith, fair association president. Mr. Heaton will be assisted by Thomas A. Bonser, while Mrs. Harriette Lycette has been particularly assigned to the girls' canning contest work, where the total prizes amount to $118.

W. P. Romans, of the Spokane Chamber of Commerce; F. V. Yeager, retiring county school superintendent, and Mrs. A. V. Overman are also taking an active part in making this year's feature of the boys and girls' club work the biggest yet.

Farmer Who Sticks

Dean Edward C. Johnson of the Washington State college told the Pullman Kiwanis club recently that "the crop prospects make us much better off than last year, despite the discouraging price outlook."

The dean added that in his opinion wheat will always remain the big cash crop of the Palouse country, because of the adaptability of the district to that cereal. But other crops will come.

Diversification is advancing much more rapidly than most farmers realize. There are 160,000 more acres of alfalfa and clover crops in the wheat lands of Washington this year than last, and "the farmer who sticks to it two, three or five years longer has a promise of reward in the future," said the dean.

Quick Need of Fighting Pests

There is a marked awakening among Washington farmers to the quick need of fighting the pests which begin to appear in their fields and orchards. Business men as well as the farmers are interested. Being more used to writing letters, the secretary of a commercial club sometimes is drafted into service. This was the case recently when the wire worm promised serious inroads into the Yakima valley. The Yakima Commercial club sent an urgent appeal to the United States department of agriculture and has received a reply from J. E. Graf, entomologist, that the federal department of agriculture finds financial difficulty in sending into the Yakima region investigators to study the wire worm menace just now, yet he hopes a station will be in operation there by next spring.

In the meantime, Dean E. C. Johnson of the Washington State college reports that Assistant State Entomologist A. Spuler will spend considerable time investigating the wire worm this summer and that Professor A. L. Melander will conduct further experiments at the college laboratory in an effort to combat wire worms.

Putting a bait in the ground and experimenting with various materials and fumigating the worms is one of the lines of approach to the problem of control which has been started. Apples, potatoes and flour dough have been used. The wire worms come to the dough more readily than to other kinds of bait, it is reported. The worms move slowly through the ground, hence the bait is left for a week before again examined. The baits are placed four feet apart and as many as 50 worms have been found about one portion of bait and this at the end of two days.

The dry land wire worm goes into the pupa stage in July and August and remains in the ground until the next spring, when the mature beetles appear. It is assumed that the same is true of the irrigated land wire worm, though the information relative to its life history is not complete in all details.

The wire worms attack all crops. Their inroads into the sugar beet fields have been particularly bad. Of the grain crops, oats are the most immune and barley is not worked so much by the worms as is wheat.

Washington State Gleanings

HOLSTEIN BREEDERS TO ORGANIZE.

A meeting of the Holstein breeders of Stevens county has been set for July 26 at Addy, arrangements of the meeting are in charge of Rolla Fisher, Addy; E. Storey, Valley, and T. C. Bell of Colville. W. E. Meyer, field man for the Holstein Breeders' association, will be present to discuss the work, and plans are being made to organize a Holstein-Friesian Breeders' club in the county.

WILL BUILD DIKE.

Al Leichhardt was elected chairman of the board of commissioners of diking district No. 13, at their organization meeting at Kelso; C. A. Bradt was elected secretary. Fred C. Cramer was appointed engineer of the district recently. It comprises 200 acres west of the railway tracks and south of Kelso and a dike will be built along the bank of the Cowlitz river at once.

PHEASANT CHICKS HATCHED.

The Yakima county game farm has already hatched 1500 Chinese pheasants this year and recently received a shipment of 300 more eggs. Pheasant hens at the farm are laying from two to three dozen eggs daily now and it is estimated the season's hatch will be around 2300 birds. In addition to this the state will send 200 young birds to Yakima from the state hatchery.

CHERRY HARVEST MAKES RECORD.

Completion of the harvesting of the largest cherry crop in its history is reported in Sunnyside. Close to 200,000 pounds of Bings and Lambert's have been shipped to eastern markets, while the Royal Anns have been brought to Yakima to the cannery. The trees have averaged between $40 and $60 each.

FIRST CARLOAD OF APPLES.

The first carload of apples from the 1923 crop was shipped out of Kennewick July 2, according to reports from the O.-W. offices in the city. This was a carload of Yellow Transparents consigned by the grower, I. S. Gleason, to a firm in Denver. The fruit is of good size and excellent quality this year. The shipment is about a week earlier than that of last year, but the first shipment in 1921 was on July 5.

BUYS BULL FROM W. S. C.

Amel Boldman of Pasco has added to his herd the young Holstein bull, Chinook Piebe David, which gives unusual promise because of the excellent record made by his mother recently in tests at Washington State college. In a two weeks' test she averaged more than five pounds of butter a day after having completed a year's test, which was thought to have been the best she would ever make.

POTATO ACREAGE REDUCED

L. M. Holt, supervising engineer of the Wapato project, in gathering material for his annual crop report, found that the potato acreage this year is but little more than half of what it was last year. Last year the project had 9500 acres in potatoes but this year the total is only 5500 acres. On the other hand about 6500 additional acres, much of which is new land, are in alfalfa this year. The yield of grain will be exceptionally heavy and all crops are looking well at this time.

TRAFFIC ASSOCIATION ELECTS.

L. J. Hays of the Hays Fruit company was elected president of the Yakima Valley Traffic and Credit association at the annual meeting held July 2 at the Commercial club rooms. J. Walter Hebert was named vice president, C. M. Moltzinger treasurer, and W. J. Urquhart manager. The report of Manager Urquehart shows that the association handled last year 9862 cars of fruit from July 1, 1922, to June 30, 1923, which was 68.7 per cent of the 14,350 cars shipped from the valley.

C. W. McCABE SELLS FARM.

C. W. McCabe, Lone Pine, in Whitman county, has sold 240 acres and his equipment for $28,000 to S. R. Warwick of the same neighborhood. This is the largest farm deal reported in this district in months. The farm is highly improved. The deal included all live stock.

Mr. Warwick, who owned more than 700 acres near by, gets immediate possession and will harvest the crop this fall, but will not move from his present home.

Mr. McCabe, who has farmed here since 1908, will retire. He and his family will take a trip to the Coast.

PLAN EGG STORAGE PLANT.

A modern fireproof building, to better handle the growing business of the Washington Cooperative Egg and Poultry association's Winlock branch will be erected just as soon as the egg storage season closes in August. Preparatory to this 75 feet of land was purchased from Fred Veness. The new building will be modeled after the one used at Bellingham station. A three-story building, 50x100 feet in size, and a two-story structure, 25x100 feet, are being considered, with full basement construction for cold storage and a poultry killing room.

Farmer Pays Heavy Price for Labor Shortage

As nearly as it can be done from recollection, without the taking of notes, this article will reproduce a debate on the immigration question overheard recently on a railway train. It wasn't a prearranged debate at all. A wheat grower of the Inland Empire was one of the disputants; the other was a leader of organized labor from west of the Cascade mountains. The discussion brought out very clearly two conflicting points of view.

The wheat grower was complaining of the high wages in harvest time. "How can we afford to pay them," he asked, "with the wheat price around 80 or 90 cents, and wages as high as or higher than they were in war time? I am for reasonable restriction of immigration," he added. "If I had my way there would not be any Asiatic immigration at all. But I have been looking into this matter, and I tell you it is the farmers that are paying for the corner in labor that has grown out of our present severe restriction law.

Strong for Restriction

"The labor unions are strong for restriction of immigration. That is to their interest, and I can't say that I blame them. But I am telling you how it works out. There is a shortage of labor in this country everywhere, and the farmer is paying a heavy price for it. In the first place, he must pay high wages on the farm. But that is the least of the cost. He pays for high wages when he buys anything—freight rates, clothing, boots and shoes, machinery, farm implements, automobiles; for the paint that is put upon his buildings, for all the metals that are used on his farm. They are paying high wages in the factories that produce these articles, and the farmer must pay a large part of those high wages.

"But when he comes to sell the produce of his farm, he finds that prices are made in many cases by the surpluses that we must sell abroad. We must sell our surplus wheat, corn, meat, dairy products, to the people of Europe and Asia, who work for low wages and buy only in a limited way and, when they buy at all, only at moderate prices."

Then the labor leader broke in. "We must not make the mistake," he said, "of looking at this big question only from the material point of view. We have been too easy-going in the matter of immigration. We have admitted too freely millions of ignorant men and women who do not know anything about our institutions and are easily led astray by radical, communistic agitators. The American Federation of Labor has constantly to fight these radical elements in our unions. The issue comes up at nearly every annual convention of the A. F. of L., just as it did over at Bellingham the other day.

Foreign Born Population

"As a result of this easy-going policy of immigration the American people have become a conglomerate nation. I haven't the exact figures at hand, but I wish you would look up the statistics of the last census on our negro population, our foreign-born population and the vast number of people now living in the United States who were born of foreign parentage. I think if you'll do that the figures will set you to thinking."

On returning to the office the reporter of THE FARMER looked up the statistics. Here they are: In 1920 there was a negro population in the United States of 10,463,000; an Indian population of 244,000; a Chinese population of 61,639, and a Japanese population of 110,000. The total is close to 11,000,000 of the black, red and yellow races.

The census returns of 1920 further show that there was a foreign-born population in the United States of 13,920,000. Taking the foreign-born population and those born in the United States of foreign parents, one or both, the total is found to be 36,398,000. Add to that the negro and Indian populations and there is a total of 47,000,000 out of the 1920 population of 105,000,000.

But the wheat grower would not give in. "My point," he said, "is that the farmer is compelled to pay the big price for restricted immigration. This country should not be afraid of immigrants of the right type, the kind we were getting when I was a young man—from England, Scotland, Ireland or other northern countries of Europe. Nor am I unduly prejudiced against the people who live in southern Europe. They have their good qualities, and in a way they are a valuable addition when they come to the United States. But I admit that we have made the mistake of admitting them too freely, in such numbers that we can not do our full duty by them of Americanization and education. I want these people to come in as fast as we can Americanize them and assimilate them, and even their friends should not ask for more than that."

Looking up the immigration restriction law of May, 1921, which is operative until June 30, 1924, THE FARMER finds that it limits the number of aliens admissible to 3 per cent of the number of the particular nationality in each case resident in the United States as shown by the 1910 census.

Earlier Census Basis

It is being urged in many quarters that if the quotas were based upon the 1900 census, or the 1890 census, the effect would be to admit a larger immigration from the British isles and the northern countries of Europe and to reduce the immigration from southern Europe, for the reason that back in 1900 or 1890 there were not large numbers of immigrants in this country from southern Europe. These have been coming in larger streams since the beginning of the 20th century.

It is a big and important question, and THE FARMER is frank to say that it can see both points of view, that of the farmer and that of the labor leader. Since listening to the discussion and thinking the matter over we have been wondering if this restriction of immigration may not be the main cause of the unjust spread of prices between what the farmer sells and what he purchases. If there is a labor corner in this country, as some assert, it would work out that way, for there is no corresponding corner in the products of agriculture.

FARM BUSINESS AND MARKETS OUTLOOK

EUGENE MEYER JR., managing director of the war finance corporation, says there is too much talk about dangerously large wheat stocks. Mr. Meyer, who recently returned from Europe, says the stocks there are reduced to a minimum, and that "probably the stocks in excess of the pre-war normal carried in the producing countries are no greater than the deficiencies in the stocks carried in the consuming countries."

My Meyer gives the public some interesting reminders. "Two years ago, when cotton was selling for 8 cents a pound," he said, "we were told in the war finance corporation that there was a stock of 10,000,000 bales and that it would take years to eliminate its disastrous influence. Ninety days later cotton doubled in price and the stocks began to disappear, until now the cry is that they are dangerously inadequate.

"Eighteen months ago the stocks of sugar in Cuba were reported to be so large that some people, otherwise considered responsible, started a movement to force a restriction of sugar production in Cuba. Those stocks disappeared with equal rapidity.

"Two years ago corn was selling at 18 cents a bushel in Nebraska and Iowa and there was much talk about burning it for fuel, although there was little burned. Today corn is selling at 83 cents a bushel in the Chicago market, equal to 65 cents at the interior points of Nebraska and Iowa, and all talk about the calamity of three bumper corn crops of over 3,000,000 bushels has disappeared."

These are timely reminders, for even well-informed people forget that surplusses of agricultural products have usually been quickly cleaned up in this country.

So much for the immediate present.

General World Conditions.

But general world conditions and the return of the wheat-growing capacity of countries of the old world warrant a belief that it will be better for the American farmers to grow less wheat than they have been growing. At the five states wheat conference at Wichita, Kan., last week the secretary of the Kansas state board of agriculture gave one of the most sensible talks on this problem that have come to the attention of THE FARMER. He declared that "in the solution of our agricultural problems lawmakers have done what they could, but the remedy is not to be found in legislative enactments alone." The rest, he declared, lay up to the farmers themselves, and the solution would be found in diversification of farm products. Kansas farmers, he said, have been producing too much wheat and not enough eggs, poultry and dairy products—a friendly indictment that applies with even greater force to many of the farmers of the Pacific northwest.

More Diversification.

It seems reasonably clear, as the Kansas man said, that "the farmer's greatest problem is to help himself, and this can best be done through diversification. It is the farmer's independent method."

It will be said, with reason, that large areas in Washington, Idaho, Oregon and Montana are adapted by natural conditions to the growing of wheat, and that grain growing can not extensively be given up for other crops. But it is not necessary that wheat growing be abandoned altogether, or even be very considerably curtailed. Little reductions here in the Pacific northwest, and a greater reduction in Kansas and other states where diversification can be adopted more easily, would soon wipe out the surplus and give the United States a wheat production that would balance with wheat consumption.

We should not be surprised, as Mr. Meyer suggests, if the record of quick recovery from low prices for cotton, corn and sugar should be repeated with wheat within the next two years.

Corn and Oats.

Corn prices at Chicago are only 12 to 15 cents lower than wheat and are the highest of the season. The committee of economists appointed by Secretary Wallace to consider the agricultural outlook has pointed out the probability of a corn shortage in 1924.

Harvest of the new oats crop is under way in the middle west and primary receipts are increasing. Prices remain close to the low point of the season. In view of the probable continued scarcity of corn, oats prices should average substantially higher during the next 12 months

Cash Grain Markets.

The range of cash grain prices for the week ended July 18 was as follows:

CHICAGO—Wheat—No. 2 red, 99c@$1.03; No. 3, 98 1-2c @$1.00 1-2. Corn—No. 2 mixed, 8b@86 1-2c; No. 2 yellow, 86 1-4@90c; No. 2 white, 85 1-2@88 3-4c. Oats—No. 2 white, 40 1-4@44 1-2c; No. 3, 38 1-2@42c; No. 4, 37 3-4 @40c. Rye—64@66c. Barley—60@69c.

Cattle Market Holding Well.

Cattle markets were well supplied last week, measured by the recent rate of arrivals, but dressed beef trade in eastern cities was brisk, with choice steer carcasses the highest since December. Prices of practically all fat steers, cows and heifers were well sustained at the principal markets. Veal calves were unevenly 50 cents to $1 lower, with the trend downward under increasing receipts at the close of the week.

Feeder demand broadened last week, but most buyers want quality, which is hard to find in present arrivals. Both supply and demand will probably expand sharply in the next 30 days, with but little change in values.

Hog values rallied quickly after the deluge in the second week in July and the $8 quotation was reinstated at Chicago. Volume of receipts considered, the market is doing well, indicating that present prices discount most of the high production.

Lambs and Wool.

A sharp increase in receipts in the last 10 days has taken the wire edge off the lamb market. Receipts from the range expanded and shipments from the southeast took another spurt.

Wool markets are quiet, with buyers and sellers playing a waiting game. The downward trend seems to have been halted.

Seed, Mill Feed and Hay.

Recent bargain prices for red clover seed attracted buyers and values moved up slightly last week. Crop prospects are a little less favorable for both timothy and red clover, according to late reports.

Mill feed markets are easy and prices are declining.

Receipts of hay at both eastern and central western markets are light and barely sufficient to supply the demand. Prices are holding firm.

Eggs, Butter and Cheese.

Dealers are still taking additional supplies of fresh eggs for storing purposes, although warehouses throughout the country are already well filled. Demand for eggs is improving and if they continue to disappear into consuming channels at the same rate as during the first weeks of July storage stocks may not be so burdensome as they now appear.

Light receipts of top scores of butter insufficient to meet the demand for storage succeeded in maintaining prices on a firm basis last week.

Prices on all styles of cheese were well maintained last week. Trading was fairly active, although few large lots were moved.

Business Conditions.

Business conditions retain the two-faced character which they have had in recent weeks. A relatively high rate of activity in manufacture and in current distribution is maintained, but there is a great degree of caution

LIVESTOCK AND DAIRY

Vaccine

Feeder and Stocker Cattle

Dr. J. R. Mohler, chief of the bureau of animal industry, United States department of agriculture, upon his return to Washington, D. C., from a conference held at Chicago, Ill., on June 21 to discuss hemorrhagic septicemia control work, announced that arrangements had been completed for the vaccination of feeder and stocker cattle at public stockyards against this disease, also known as stockyards pneumonia or shipping fever. This is one form of blood poisoning.

Hemorrhagic septicemia, although it occasionally manifests itself in cattle that have not been away from the home place, is most prevalent in animals that have been shipped long distances, especially those that have been unloaded en route at feed, water and rest stations or at public stockyards. Despite the belief to the contrary, outbreaks of hemorrhagic septicemia have been traced to all of the larger public stockyards. While losses have been gradually on the increase for several years past, this disease has become more prevalent and virulent during the last fall and winter than ever before. The vaccination method of treating cattle to prevent their contracting this disease is still in an experimental stage, but it has been used enough to prove that losses from the disease may be greatly reduced and purchasers of cattle at the large central markets are urged by the bureau to have all feeder and stocker cattle they may buy vaccinated before shipment to country points.

Until this work is placed on a stable basis the bureau of animal industry will furnish vaccine produced in its laboratory and also trained veterinarians to administer the treatment at actual cost which, it is estimated, will be approximately 10 per cent per head exclusive of any charge the stockyards company may make for handling the cattle to and from the vaccinating chutes.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

Rabies (Article 2).

I often think of the case of the person who sent in the head of a dog for examination with a letter stating that the head was from the family dog that had always been kind and agreeable to everyone. This dog got into a fight with another dog and when the small girl sought to pet the dog after the battle the dog bit her. He was apparently hot and angry and snapped the child as any dog might do. The parents were afraid the dog was rabid and had it killed and the head sent in. Examination did not prove that rabies was present and of course did not disprove it, either. The whole situation was left in a state of uncertainty. What a pity that the dog was not confined for a week! If it had been there would have been no uncertainty about it and the physician would have known for sure what to do.

The same principle applies when animals are bitten, because for diagnostic purposes the living animal is much more valuable than the dead one. The wild ones have to be killed and examinations of their heads are often of value, but the domestic ones should be kept to see if symptoms appear.

Nature of Animal Changed.

The symptoms in dogs are those of a derangement of the central nervous system. Those first noticed are an unusual disposition, either very affectionate or otherwise—frequently a complete change. The dogs may also pick up different kinds of small objects and swallow them. That was one way of aiding in the diagnosis of rabies years ago when we had no surer way, and it is given some consideration now. Later the animals pass into the exciting stage, when they are dangerous to the community. They may start out and travel for miles and bite animals and people that may be in their way, particularly those that molest them. They have no fear and will fight anything that opposes them. Even the wild animals lose their natural fear of man and will attack him on his front porch or anywhere they may meet.

In his wanderings the dog may go many miles from home and usually travels in a circle and will return to the place from which he started if the next stage, the paralytic stage, does not come on too soon. When the exciting stage is long and the paralytic stage short the cases have been known as furious rabies, and when the reverse is true and the exciting stage short and quite unobserved with the paralytic stage coming on suddenly, the cases have been called dumb rabies. This has led to some confusion in the minds of many who think there are two forms of rabies, when in fact there is only one. In some one stage is more conspicuous than the other.

In the paralytic stage the animal becomes paralyzed. This frequently begins at the mouth and causes the lower jaw to drop. The animal drools saliva and is unable to swallow. Later the whole body suffers and the animal dies in the stage of paralysis. After the jaw drops the animals can not bite and are not so dangerous for that reason. Other animals manifest symptoms that are similar to those described above, though not exactly the same. The period of excitement is similar but the paralytic is not so pronounced, and their actions are not so spectacular.

The Pasteur Treatment.

For many years it has been possible to save the lives of men that were bitten by rabid dogs by giving them the treatment perfected by Pasteur. This was commenced as soon after the man was bitten as it was possible to begin, and by the time the symptoms would naturally appear the treatment had so increased the man's resistance to the organism that he was capable of combating it. The same treatment is now available for animals and while it has been modified so that a smaller number of injections are necessary, the same principle is involved and the vaccine is prepared in much the same way.

This treatment is recommended in cases where a dog or coyote has run amuck on a farm and bitten a number of animals. When this has occurred the whole herd should be treated if there has been any possibility of their being infected. When single animals have been attacked they may be saved by this treatment if it is applied at once. No time must be lost, however.

In some states where rabies is prevalent, the law compels owners to have their dogs vaccinated against rabies before they can be licensed. This protects not only the dog but all people and animals that might be attacked. If we could keep our dogs free the disease would be much less rapidly spread. The wild animals would carry it, of course, but the danger would be very considerably lessened. (Copyright by E. E. Wegner.)

LARD SUBSTITUTES.

The coming of substitutes for lard has given the bacon type of hog increased prominence.

COSTS LESS IN THE END

Wherever you are, on highway or boulevard, look for the signature of the clinging, long-wearing Goodyear All-Weather Tread

The new Goodyear Cord Tire with the beveled All-Weather Tread costs no more to buy than other good tires.

But, by reason of its special and exclusive features, it usually costs less in the end.

The new and improved rubber compound in its tread, for example, assures longer wear.

The beveled feature of this tread saves the carcass from vibration and strain.

The heavier sidewalls offer extreme resistance to curb and rut wear.

These and other advantages make this the best tire Goodyear has ever made—a tire of maximum mileage, traction, freedom from trouble, and economy.

You can buy your size from your Goodyear Service Station Dealer, who will help you get from your tires all the mileage built into them at the factory.

Made in all sizes for passenger cars and trucks

POULTRY AND RABBITS

Poultry Marketing

By HUBERT E. COSBY,

There has never been a time when interest in marketing was as keen as at the present time. Post-war conditions of agricultural depression are responsible, to a large degree, for this general cooperative marketing interest; not only of eggs, but of several agricultural products. Cooperative marketing can never help the ills of hap-hazard production; it will only aid the growers who are producing scientifically and economically. It will never be possible to divorce the problem of efficient production from the problem of efficient marketing.

The domestic hen of today is a creature of achievement. Whether her environment is favorable or unfavorable for health and profitable production depends entirely upon the kind of environment the owner provides. The fitness of her living quarters are in direct proportion to the owner's interest in his poultry flock and his desire to make the flock a profitable side line enterprise on the farm.

Must Command Respect.

Better poultry environment is usually found on farms where the flock is large enough to command respect and demand regular, daily attention, not where smaller farm flocks are simply "kept." A flock of approximately 400 hens maintained by culling out each year and replacing with early pullets is large enough to command respect and small enough to remain a farm side line enterprise. The owner of such a flock is forced to study better feeding methods, soil conditions, sanitary measures, hatching dates, green feed supply and efficient houses. Knowing that an enterprise of this magnitude means a loss that hurts, if not properly cared for, forces such an owner to an economical production; or knowing that a flock of this size means a nice income, if properly cared for, induces the owner to study his problems and work for an economical production.

The average farm flock of 75 to 100 hens presents a very different problem. Such a flock usually does not command the respect of the farmer and when other farm work is urgent the care of such a flock is usually neglected. The income or loss from the average small farm flock cared for haphazardly and irregularly does not usually compel better environmental conditions.

A Per Hour Return.

Despite the fact that many farmers will remark that they can't figure their time worth anything, economical production of poultry products is based upon the return per labor hour. A person might "putter" around five hours a day giving 100 farm hens the best care and show a splendid financial profit, if labor hours were ignored. Regardless of the profit of the flock, the labor return per hour in such a case would scarcely be a slave's wage. The owner of 400 hens devoting three hours of work daily to their care, would certainly show a better profit, because his return per hour of labor would be worth while.

The bulk of poultry products is produced by the out of balance, haphazardly cared for flocks, and not, as many suppose, by the flocks of well-managed units. Will cooperative marketing help the producers whose birds are infested with worms due to soil contamination; the producer whose birds are infected with roup due to damp, poorly ventilated, dark houses; the producer who feeds only grain and no mash; or the producer who hatches his pullets late and feeds a poor growing ration? Will cooperative marketing solve the problem for the producer that "putters" away his time caring for only a fraction of the hens he should care for in the same time; or the producer who hasn't a big enough surplus to market profitably?

The marketing associations of several states have placed a minimum ownership requirement of 200 hens, and some cases more, before the producer may become a member of said association. A broad viewpoint discloses the fact that this is necessary and time and experience in cooperative marketing of eggs may increase the number of hens as a requirement for membership rather than lowering it. This minimum requirement for membership is in reality only an attempt to classify flocks of economical production, because only economical production can be aided by economical marketing.

Good Eggs and Bad Eggs.

A better perspective of the state-wide marketing problem can be visualized by observing the eggs as they come to market at the grocery stores, commission houses and centralized agencies. Brown eggs; white eggs; large and small eggs; clean, dirty, cracked, good and bad eggs; fresh and stale eggs; eggs gathered every day and others once a week; eggs produced on good, wholesome feeds and others on manure pile rations, all find their way to market in quart buckets, baskets, tubs and cases. To untangle this mess is without question a real problem. A severe grading system is necessary, yet who is it that raises the big howl when a quality grade is talked of? It comes largely from those who think an egg is an egg, regardless of its size, shape, color or what is on the inside of the shell. It does not come from the producer with a large flock of well-fed and well-managed hens; he encourages grading. So long as eggs are bought and sold by the old-fashioned dozen and not by the graded dozen, the bad eggs will set the price for the good. The consuming public today demands a quality egg produced on quality feed. No longer does the buying public fall for "the country egg" unless they know it was produced on clean feed. The scavenger hen and her product still finds a market, but she belongs in China, not here.

The farmer who manages economically a flock, for example, of 400 hens has a marketing problem. He may have five neighbors with 80 hens each that are not interested in poultry or marketing problems. These flocks produce more than is needed for home use and not enough surplus to market economically. Yet in the spring of the year, the only time of the year when eggs are hard to market, these smaller flocks throw on the open market a volume as large as the 400-hen flock and in direct competition with this flock in a cooperative organization. One of the hardest problems of cooperative marketing of eggs is the fact that the member of the association has nonmember volume and nonmember producers to complete against.

Consider the Size of Flock.

Each poultry producer should try to establish a flock of a size in keeping with economy of labor and marketing economically. The flock should be large enough to have surplus great enough to market profitably or the flock should be reduced to a size that will supply the home table only. Too many flocks are just an accumulation. Many are not worked out on the basis of a balanced unit in connection with other farm enterprises.

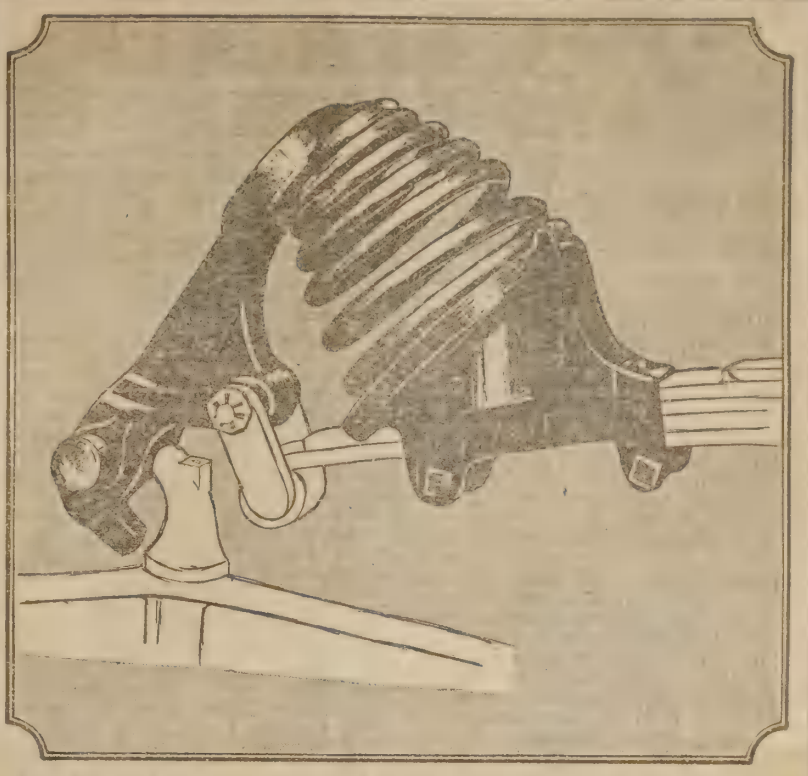
Cooperative marketing is not a straw for drowning poultry keepers to grasp in the hopes of pulling a poorly-managed, out-of-balance flock into prosperity. Cooperative marketing will never make good eggs out of poor ones; it will never get high prices for poor quality eggs. Cooperative marketing will help only the economical producer. Even though the small producer doesn't belong, he is helped by an association, because it holds up the general market by establishing good markets and shipping away the surplus. Balance the flock as to size and care, then cooperative marketing with loyal support of the membership will do the rest. Cooperative marketing will not help the owner of 400 hens or 200 hens with an annual egg yield of 60 eggs per hen. Economical production must come first, then marketing is the next step. Production can not be divorced from the marketing problem.

Chickens Destroy Weevil

What may prove another way of combating the strawberry root weevil was accidentally demonstrated by T. N. Clapsaddle, who has a small farm north of Arlington, Snohomish county. Last year he had two small plantings of strawberries, one of which became infested with weevil before the end of the season. He was short of pen room for the new pullets, and fenced off the entire patch, thinking that they were gone, anyway. It happened that the birds were put onto the patch early in July, as soon as the main crop had been taken off. When the new vines came up this year there was practically no weevil to be found on any of the plants or in the ground.

"I am fully convinced that this plan can be worked out very satisfactorily," said Mr. Clapsaddle, "and I am going to pasture 100 three-month-old pullets on my strawberry bed every year after the crop is off. I believe they will get every weevil and keep the patch entirely free from the pest. I believe that pullets of this age are the best for the purpose, since they are not apt to injure the plants in any way."

It is a well-known fact that chickens will eat the strawberry root weevil. The beetles are known to be above ground only in the month of July. George R. Shoup, poultryman of the western Washington experiment station, advises running chickens on berry patches of any kind in order to give them forage and allow them to pick up any insects that they might find. So far as is known, no definite experiments have been tried along this line, but it seems very probable that Mr. Clapsaddle's result is practical.



The Mark of a Good Farmer

THE farmer today is a business man. And he has figured his business down to the last penny.

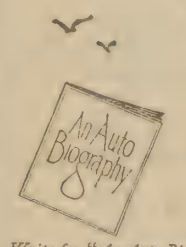
As a farmer, you know that it is very poor business to put your good money into a binder and then let it sit out all winter, or not to insure a barn full of timothy hay, grain and live stock against fire.

Apply this principle of protection and insurance to the finest piece of machinery on your farm—your Ford.

One Ford-owning farmer out of every five today has insured the life of his car with a set of Hassler shock absorbers.

A set of Hasslers under your Ford marks you, with your neighbors, as a man of good business judgment—the kind of man that never neglects machinery—the kind of man that insures his investments.

There is the proper type Hassler for every Ford model and there is a Hassler dealer in your nearest town.



Write for "An Auto Biography." This new Hassler booklet, sent free on request, will grip you with its human interest, no matter what car you drive.

ORCHARD AND GARDEN

Strawberry Fete

Ellisport Holds First Festival

When the people of Vashon island get together to elect a queen for their strawberry festival they do not limit their selection to "sweet 16" girls, but have shown their respect for the aged this year by the election of Mrs. Melissa A. Jaynes of Burton, who is reputed to be 104 years old. The venerable victor secured nearly as many votes as all five rival candidates combined. "The election gave me a chance to show the young girls of today that they haven't anything on their grandmothers when it comes to running," Mrs. Jaynes said soon after the results were announced.

The occasion was the first annual strawberry festival, which was held at Ellisport June 23. There were 4000 people who attended the coronation of Queen Melissa the first, and a great cheer went up when the crown, fashioned like a gigantic strawberry, was placed on her head. At her feet knelt a boy exactly 100 years younger, Master Douglas Hewett, who is 4 years old. The maids of honor were Miss Consuela Ranquist, Miss Frances Blekkink, Miss Julia Hoffmaster and Miss Alphid Nilsen. Pauline Weise and Ada Blekkink were pages, while Miss A. D. Jaynes and Mrs. C. L. Jackson were princesses of the day, and all were mere children in the eyes of the aged queen.

The address of welcome was delivered by P. Monroe Smock, who read one of his own compositions, "Ode to the Vashon Strawberry." He was followed by Colonel Roland H. Hartley of Everett and Mayor E. J. Brown of Seattle. Then followed a full program of sports with prizes for the winners donated by Vashon-Maury merchants. There was 1000 visitors from Seattle and half that many from Tacoma.

A number of exhibits were arranged about the streets and booths were placed where strawberries and cream were served free to all visitors.

The following committeemen were responsible for the success of the festival: R. W. F. Martin, W. Coy Meredith, C. E. Woods, E. C. Thompson, C. E. Bragg, E. H. Miller, L. E. Wenham, Maurice Dunsford and W. E. Gravin.

Flowers for Profit

As a general rule the flower garden belongs to the housewife and it is her pleasure to propagate plants that suit her likes in order to have a fresh bouquet for the Sunday dinner table as well as for other purposes. With Mrs. F. J. Vandermark of Ferndale, the idea developed as a hobby and she kept on increasing the size of the flower garden until now she finds that she can realize a neat profit from it every summer.

Although there are a number of plants of all kinds growing she has found there to be a better profit in growing peonies than many of the other perennials. They grow well for her and there is not much attention needed to have them do their best. She makes a specialty of having the plants bloom for Memorial day and tells of the yearly demand for peonies of almost any color and most of the sales are made at her door.

"I started my patch with only a small planting of a few plants," said Mrs. Vandermark. "I dug up the hill one year and divided the roots and planted them in a long row through the garden. The next year they came up in fine shape and I have had good luck with the new plantings ever since. I now have eight varieties and they are of three colors, but there seems to be little difference as to the color most desired for the market."

Mrs. Vandermark is a poultry lover as well as a florist and she takes care of 800 laying White Leghorns and does her housework as well. She says that the chickens do not take up much of her time, since she has the two boys do most of the heavy work before and after school hours. During the spring months the hens have layed well and her receipts for eggs have run as high as $11 a day, according to her own statement. About half of this amount will be consumed in feed costs, which leaves a good profit for her work and investment.

Sets Four Acres to Logans

James Page has an 80-acre farm six miles east of Port Angeles and he is getting a four-acre patch of Logans ready for their first year crop next season. The plants are set eight feet each way and cultivation has been done both across and with the rows. The posts are being set up and the wires will be stretched before the canes have grown their full length and they will be trained up this fall. By cross cultivating, Mr. Page has kept the patch very free from weeds and intends to keep them all out even if some hand work is necessary.

Due to the rows being unusually long, an aisle has been made through the center, which allows the fruit to be collected at the center of the patch as well as at the ends. This plan will make it easier on the pickers and it is but little extra work in putting the wires up.

A small patch of strawberries contain three varieties and Mr. Page finds that the Marshalls are best, both for the local trade and for shipping. The other varieties were some that were recommended but they either fall down in quality or by being shy bearers. The Everbearings were tried out last year, but they were not as good as the Marshalls for the market.

Apples for Export

Expect Big Foreign Demand

A good demand for apples for export, especially in the United Kingdom, is predicted by J. McPhee Ferguson of the Fruit Export corporation, who has just returned to Wenatchee from England. Mr. Ferguson is a native of Scotland, but has been living in Portland for many years where the office of the Fruit Export corporation is located. Very dry weather followed heavy frosts at blossom time, in the apple growing districts of England, according to Mr. Ferguson, which means a short crop of English apples.

Apple market prospects are excellent in many other countries as well, according to Mr. Ferguson, and he urges the shippers and marketing agencies of north central Washington to prepare for a heavy export movement this fall and winter. Greatly increased facilities for shipment under refrigeration will be available this year.

Dried Fruit Is Safety Valve

Industry Is Largely Carried On by Growers Themselves

"Dried fruit" is a sun dried product, while "evaporated fruit" is the result of artificial heat. This is the distinction made by a bulletin just issued by the United States department of agriculture on "Evaporation of Fruits." Joseph H. Caldwell, plant pathologist of the department, is the author. Because of climatic conditions, California has developed sun drying on a large scale and is the only state which has done so.

The fruits which are dried in commercial quantities in the United States are prunes, raisins, apricots, apples, peaches, pears, blackberries, logan blackberries and raspberries, with very small quantities of figs and cherries. Among these, prunes rank first in point of average annual production, which approximately 400,000,000 pounds. Of this total, sun-dried prunes, made only in California, make up almost or quite 50 per cent; the remainder are evaporated prunes produced by the states of Oregon, Washington and Idaho, which rank in the order given in the quantities produced. Commercial drying of peaches, apricots, pears and figs is practically wholly confined to California, and the method employed is exclusively sun drying, the average annual production approximating 62,000,000 pounds of peaches, 30,000,000 pounds of apricots, 19,000,000 pounds of figs and 6,900,000 pounds of pears for the five-year period from 1915 to 1919, inclusive. While a portion of the prune crop of the Pacific northwest is sold fresh or evaporated according as market conditions may determine, by far the greater portion is grown specifically for drying, individual growers or groups of growers constructing such drying equipment as their acreage may require, says Mr. Caldwell. With this exception evaporation is at the present time distinctly an industry developed by fruit growers as an adjunct to their chief business of producing fruit for market, and its relation to that business is that of a stabilizer or safety valve.

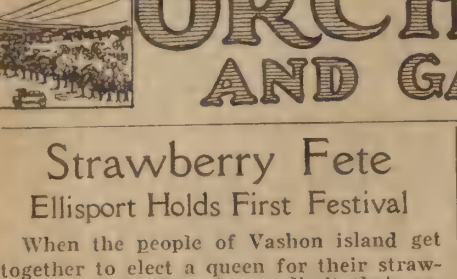
In direct proportion as it has been developed in any given territory it serves to increase orchard returns by converting low-grade and unmarketable portions of the crop into salable products and to maintain fresh fruit prices by absorbing a portion of the marketable grades in years of overproduction.

As a consequence of this safety-valve relation to the fresh fruit industry, the material coming into the evaporators has not been grown with reference to its special fitness for drying purposes, but varies widely from year to year in character and quality as well as in total volume.

For these reasons the drying industry, unlike that of canning, in only a few exceptional cases has been engaged in by large commercial concerns making it their sole business and having definite acreages of material of specified varieties grown under contract for the purpose. The product of such plants constitutes only a very small percentage of the total output.

The drying of fruits as practiced at the present time is therefore peculiarly a farm industry, carried on by fruit growers themselves as a part of the routine of harvesting and disposing of the crop. The plants in which the work is done are mainly small, their size being most frequently determined by the size of the owner's orchard, and there is great diversity in the drying apparatus, the accessory equipment, and the details of the drying methods employed, with a consequent absence of definite standardization of the product. This would be expected in view of the fact that 252,289 farms reported the production of dried fruits in the census of 1919.

The bulletin describes in detail the types of evaporators for fruit growers who have such quantities of surplus fruit as to require the employment of large scale factory methods for its utilization.



Rid Your Home of Flies

These annoying insects, which are a pest in many farm homes and about the barns, can be exterminated quickly and easily with FLY-TOX.

This new spray, which is absolutely fatal to every kind of insect, flies, moths, mosquitoes, ants, etc., is entirely harmless to plants, animals or persons. It has a pleasant odor and will not stain curtains or wall paper.

Sold by druggists, grocers, hardware stores, department stores.

If your dealer hasn't it yet, send in the coupon below with 75 cents for 1 pint. Mouth sprayer free. Convenient hand sprayer, 50 cents.

Concrete Cistern

By L. J. SMITH.

I want to make a cistern to hold water for domestic use. I have it already dug out 30 feet by 20 feet and six feet deep. Would you please advise me how thick the walls and floor should be and what would be the best proportion of mixture? Would it be safe to use sand and gravel from the creek unscreened? And please advise as to the roof and how to make it. Mrs. A. P.

Patterson, Idaho.

I would recommend that you use concrete for your cistern, 6 inches thick at the top and 8 inches at the bottom and that you put in a 4-inch concrete floor for the bottom of the cistern. It would have been much more economical if you had made this cistern round, as it would be easier to build and would not require so much concrete for the volume contained.

For the concrete I would use one part of cement to two parts of sand and four parts of screened gravel. I do not know your conditions, but unless there is a good deal of clay in the sand and gravel, you could use it unscreened, provided that you got down below the surface to get the material.

As to the roof, I would use a very flat roof covering the same with one-inch rough boards and putting ordinary felt roofing on top of the boarding. I would also reinforce the concrete every two feet by means of half-inch iron rods running clear around the cistern and being placed in the concrete within an inch of the outside of the concrete wall.

Pugsley Resigns

Charles W. Pugsley, assistant secretary of agriculture, has tendered his resignation, effective October 1, to accept the presidency of the South Dakota State College of Agriculture and Mechanic Arts at at Brookings. Mr. Pugsley will have filled the office of assistant secretary two years at the time his resignation takes effect.

LET THE PAINT DRY.

When painting, do not place the brush on a surface after the paint has begun to set until it has become thoroughly dry, as by so doing the film that protects the lumber will be broken.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

The first time we met John Worth, the leading character in this story, he was taking an active part in preparing the little frontier village of Bismarck, N. D., to withstand an Indian attack. We next saw him playing the part of a man, although he was only 12 years old, in defending the village when the warriors appeared.

After the Indians were repulsed by the frontiersmen under the leadership of Jim McKenzie, the sheriff, and order was restored, Mr. Worth, John's father, set out for the north to search for outcroppings of coal, he being a miner as well as a freighter. During his absence, Mrs. Worth felt many misgivings owing to the dangers that confronted the wilderness traveler, but bravely assumed responsibility for John, his brother Ben, aged 10, and the baby. Mr. Worth had not been gone many days when he returned, clothed only in an Indian blanket and a pair of worn-out moccasins. He had been the victim of a thieving party of redskins who had taken all his clothing, leaving him naked on the prairie, where early winter winds would have brought certain death but for the friendliness of an old Indian whom he had once befriended. This old warrior's blanket and moccasins saved him.

It was not long, however, before he was on the trail again and when he came back in the spring he reported that the Indians were becoming more and more hostile toward the whites and that it would not be safe for any mining expedition to venture away from the village for some time yet.

It was that summer (July 4, to be exact) when Bismarck was celebrating in true western style, that a small steamboat making occasional trips on the Missouri river, returned unexpectedly and broke up the merriment by startling news.

"Custer and his men have been wiped out by the Indians on the Little Big Horn," said the messenger from the boat to the crowd in Black Jack's dancing pavilion.

CHAPTER IV.

Hitting the Trail.

The Custer massacre threw the whole country into a spasm of fear.

The killing of 300 trained fighters and a general, all renowned for their daring and knowledge of Indian warfare, must give the enemy a confidence that would be hard to overcome.

Every one wondered where the next blow would be struck and who would be the next victim. All enterprises were checked, all peaceful journeys postponed. Not till the autumn of the following year was it deemed safe for the Worth family to carry out their plan of "pulling up stakes" and leaving Bismarck.

During the year which had elapsed John and Ben had grown in mind and body. They were sturdy, strong boys, and were a great help to their father. Perfectly able to take care of the stock, they could ride like centaurs and shoot with their "guns" (as the Westerner calls his revolver) with astonishing accuracy. They used to practice at tomato cans 50 yards away and soon became so expert that for nearly every shot a neat round hole appeared in the tin. If you think this easy, try it. One can will probably last you a long while.

Long before, Charley Green had made a formal request to be included in the migrating party and had been accepted. He was really quite a valuable man now, for he had been tried in a number of ticklish places and had shown a solid strength and coolness in the face of danger.

One bright autumn day the pilgrimage began.

Several men were to accompany the family to a mine that had already been located 50 miles away. Here the winter was to be spent, and then, if all went well, another mine might be opened further westward.

The final preparations for moving were soon complete. The household goods were packed into the great lumbering prairie wagons, canvas topped and wide of beam; the little log-built shack was left intact, its rough, heavy door swinging open.

The frontiersman's household outfit was very simple. The bedding consisted of blankets; cooking utensils of iron and tin, dining table furniture of the same materials, a few chairs, a table or two, and the baby's crib completed the list. The Worth family had the largest library in town. It contained their great brass-bound Bible, "Pilgrim's Progress," the Catechism (and how the boys dreaded it!), "Robinson Crusoe," "Scott's Poems" and the "Arabian Nights." These precious books were of course taken along, for though the boys' father read little and lacked even the rudiments of education, he had the pride of ownership.

It can be seen at once that this simple collection of necessaries would not take long to pack and load. Charley Green remarked that "the whole outfit wouldn't be considered security enough for a week's board in Boston."

"That's true," answered Mr. Worth, as he lifted the sewing machine (the only one for miles and miles around) tenderly into the wagon. "But our household stuff is considered very fine, and people come from long distances to use this sewing machine."

"The first of May can't have any terrors for you," persisted the ex-collegian.

Mr. Worth frowned a little, for although Charley's fun was good-natured, he had a keen dislike to being ridiculed, and had always been accustomed to considering his equipment as something rather grand—as indeed it was, compared with his less fortunate neighbors.

After a final glance around to see that nothing had been left, the head of the family put his wife and baby into the first wagon, but before climbing in himself he called out to John and Ben to go back to the corral, saddle two of the horses, and drive the remaining ones after the wagon train.

The two boys were soon busy catching and saddling the horses. As John was "cinching" up Baldy, he heard the snap of his father's long black-snake whip and the creak of the heavy wheels. Then for the first time he realized that the only home he had ever known was to be left permanently. The old place suddenly became very dear to him, and the thought of leaving it was hard to bear; in fact, he had to bury his face in Baldy's rough, unkempt side to hide the tears that would come despite his efforts.

Ben, on the contrary, was very cheerful and whistled between the sentences of talk he flung at his brother. The two years' difference in their ages showed very plainly in this matter.

"Here, get a move on you, John," he shouted, "my horse's all ready."

The older boy bestirred himself, and in the rush and hurry that followed he soon forgot his momentary regret.

When they caught up with the wagons they found the procession headed toward the center of the settlement and almost in its outskirts.

The town had grown considerably both in population and area since we first saw it, and ordinarily the departure of a freighter's outfit would excite but little remark. The exodus of the Worths, however—one of the few families, and one of the very first settlers—was quite an event. Many of their friends were on hand to wish them good speed. The boys felt like "lords of creation" indeed. Were they not bound on a journey of unknown duration, liable to have all sorts of delightful adventures? They held their heads up and pitied their boy friends who were to be left behind—and it must be confessed that the stay-at-homes pitied themselves.

The wagon train made its way slowly down to the river, where the sheriff bade them goodby.

"I'm sorry to have you go," he said, nodding to Mr. and Mrs. Worth. "And those kids of yours," he added, "I wish you could leave them behind; it will be pretty tough on them, and besides, I'm fond of the little beggars. However," he went on, as the boys' father shook his head, "I suppose you know what you're doing. Well, good luck. So long."

"So long," replied the travelers in chorus.

The whole outfit was ferried over the river, passed through the little village of Mandan clustered around the fort, and then struck out across the open prairie. It made quite a procession, the light wagon in front, drawn by two horses and driven by Worth, then a long string of mule teams hitched to the first of a train of prairie schooners, whose white canvas-hooped tops shone in the sun. The cooking utensils in the vehicles and hung under them banged and clattered, the wheels creaked, the teamsters' long whips, which took two hands to wield, cracked and snapped.

At the head of the party rode Charley Green, with his long-eared charges, busy at his self-imposed task of "mule wrangling." He was new to the business, and it seemed as if the beasts he was herding were aware of this. For a while all would go smoothly, the animals closely bunched, heads down, ears drooped forward, the picture of innocence and dejection; then suddenly a lanky brute would start out from one side as if propelled from a gun, and no sooner had Charley dug the spurs into his pony in his efforts to head it off than another mule would start off on the other side. Then the whole bunch would scatter, radiating from a common center like the spokes of a wheel. John, Ben and one of the men (called Tongue-Tied Ted, because of his few words) took a hand in the game at last, and together they rounded up the stock into a compact bunch again.

All this was very amusing for the old hands, but Charley did not seem to enjoy it.

"Mule-wrangling is no snap," he grumbled. "Why, it's easier to stop a whole rush line than to take care of that gang of long-eared, rail-backed, dirt-colored, horse imitators."

He had to tackle the job alone, however, for only by experience could he learn, and experience is a hard and thorough teacher.

The boys trotted alongside, now riding far ahead, now making their ponies show off near the wagons. Excursions were made from time to time to shoot at prairie dogs, rabbits and coyotes. But even this grew monotonous after a while, and they began to cast about in their minds for amusement. "Let's go to the river where it makes a bend over there and take a swim," said Ben, at last.

It was no sooner said than done. They were left to look out for themselves much of the time, so they went off without saying a word to any one.

Soon the caravan was lost to view, and after a few minutes' more riding even the shouts of the men and the barking of the dogs could not be heard.

They rushed to the knoll and searched again.

The boys had that delightful feeling of entire freedom and half fear which comes to the inexperienced thrown upon their own resources. The prairie was perfectly still and the heat was scorching, for the sun was still high. It was a little awesome, and for a minute John and Ben wished they were back with their friends. The thought of a cool dip was very enticing, however, and they would both have been ashamed to turn back now, so they cantered along, keeping up each other's courage by shouting and laughing. Reaching the river, they scrambled down the steep slope, leaving their horses to graze on the level, and in a jiffy were enjoying a swim in the "Big Muddy." The bottom was free from quicksands, so the brothers enjoyed themselves to their hearts' content.

They swam, ducked, and dug in the mud, as full of glee as could be. For an hour or more they reveled in their sport; then John dropped the handful of dirt he was about to throw and looked around, half scared. "Hallo," he said, "it's getting dark. We'd better get a move on." They slid into their clothes as only boys can, and in a few seconds had regained the top of the bank.

The sun, a fiery red ball, was low down in the western sky and almost ready to drop out of sight altogether.

"Why!" exclaimed Ben. "Where are the horses?"

They looked hurriedly around and then scanned the rolling prairie and sage bushes in every direction.

But the horses were not to be seen. Nor was the wagon train in sight. Not a living thing was visible on the horizon; not a sound could be heard anywhere. On every side there were only monotonous clumps of sage, and the sun was getting lower and lower every moment.

They rushed to a knoll and searched again. All around stretched the prairie—bare, still, hopeless. Then they looked at each other for the first time. Ben began to whimper.

"Come, brace up," said John, taking the elder brother's part. "I know the trail; we'll catch up to them in no time."

His tone was cheerful, but he appeared more at ease than he really was. It was not a pleasant situation for even a full-grown man, one well versed in the signs of the plains, its landmarks, and deceptions.

The boys were in an unfamiliar section of the country, without food or means of transportation, at nightfall. Their lessons of self-reliance stood them in good stead now, and they started off bravely, striking away from the river in the direction of the wagon trail. After walking a half hour they came across the distinct deep rut of wagons.

This was a great encouragement; it was like a friendly grasp of the hand, for they felt that they were now in touch with men and living things, though neither was within sight or sound.

Only the palest kind of twilight now remained, but the trail could be seen quite distinctly and both boys took heart.

"I'd give my gun for a piece of jerked buffalo meat," said Ben.

"Well, I wouldn't mind munching a bean myself," replied his brother. "But say, won't that feed taste good when we get to the camp? Just think of that big fire with the men lying around it, and the wagons drawn in a circle outside all."

"Oh! stop," broke in Ben, peevishly. "I'm hungry enough and tired enough already, and your talk makes me 10 times worse."

Hour after hour they tramped along, their courage ebbing with every step. Expecting when they reached the crest of each little rise to see the bustling camp at the foot of the slope, each time they again took up the weary march with a heavier load of disappointment and uneasiness.

Thirst, as well as hunger, now began to attack them. It was dry weather, and the dust rose into their faces as they walked, tickling throat and nose, and causing the greatest discomfort. From time to time they lingered to rest, but when they stopped the darkness frightened them, and the awful stillness, broken only by the wailing howl of a coyote and the low moan of the rising wind, drove them on relentlessly.

At last Ben declared that he couldn't go any further, but as soon as they stopped his courage failed him and he burst into tears. John comforted him as well as he could, but he was himself at his wits' ends.

"Come along, old man,"-he urged after a while, "let's have one more try at it."

Again they started off wearily and slowly, John with an arm about his younger brother. They had walked only a few minutes when Ben felt his brother's arm clasp him tighter and heard him give a hoarse shout.

He strained his eyes ahead. There in the darkness was an indistinct moving mass. They redoubled their efforts, and presently discovered that it was a wagon drawn by a single team that seemed hardly able to stand and moved forward at a snail's pace.

"Did you see anything of a freight outfit along the trail tonight?" said John huskily to the driver.

The man half raised himself from his

(Continued on page sixteen.)

Bits of Fun FOR Everyone

Paid for Doing Nothing.

Magistrate (to Italian organ grinder)—What do you earn in a week?

Italian—Six pounds, sare.

Magistrate—What! Six pounds for playing an organ?

Italian—No, sare; not vor playing—vor shut up and go avay!

An Ignorant Bunch.

The prosecuting attorney had encountered a somewhat difficult witness. Finally he asked the man if he was acquainted with any of the men on the jury. "Yes, sir," announced the witness, "more than half of them."

"Are you willing to swear that you know more than half of them?" demanded the lawyer. "Why, if it comes to that all of them put together," came the emphatic reply.—The Christian Advocate (New York).

He Finished His Soup.

Diner (to conductor of restaurant orchestra).—Do you play by request?

Conductor—Certainly, sir.

Diner—Then play dominoes.

Now He's a Poor Fish.

"My daughter sprang from a line of peers," said the ardent father.

"Well," said her feller, "I jumped off a dock once myself."—Naval Monthly.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

Dear Mrs. Barland and the Family Circle: I have taken THE FARMER for over seven years and as I am a cripple and don't get out much I look for it every Friday, as that is the day it comes. I always turn first to the Circle page.

We came west in the spring of 1903 from Oconto county, Wisconsin, and I wonder if there are any of my old schoolmates reading THE FARMER. My name was Susan Sylvester before I married.

Let me say to the young people, tell your troubles, big and little, to your mother; you will never be sorry for it.

A READER, Wash.

Dear Mrs. Barland: I have often taken up my pen with the determination to write to the Circle, but have had to put it aside for some pressing duty which is ever present with us farm women. Your columns contain many helpful suggestions for the busy housewife. The letter from the lady who made the "Home Beautiful" out of a homely shack should be an inspiration to all of us. Not from the gilded palaces, but from the lowly cottages come the strongest characters in our national life.

I have been especially interested in the advice given to the girls and boys and have also been interested in the letters written by the younger generation. We should all keep in mind that the affairs of our glorious nation will soon be in the hands of the boys and girls of today.

Mothers are constantly warning their girls against the dangers which surround them as they go out into the world and come in contact with the opposite sex. Why should this be necessary? It is because the double standard of morality has been taught and accepted so long. I have heard girls say, "I wish I were a boy, they can do anything and no notice is taken of it." This is too true and will always be true so long as there is one standard for men and another for women.

We hear people say, "Mothers must talk to their girls." Why, mothers have been talking to their girls down through the years past and it is about time they began to talk to their boys and the fathers take a hand, too, in proper guidance. It is the plain duty of fathers to talk plainly to their sons and give them to understand that the same standard of morality is expected of them as their sisters. A few generations of this sort of training and there would be fewer mothers weeping over the spoiled lives of their daughters.

We see all about us parents who insist upon their girls getting in at night at a reasonable hour, but whose sons are out with or without the family car, "jazzing around." If the attention of the father is called to this he will more often than not reply, "Oh, John will come out all right, he is just sowing his wild oats." Usually he is being assisted in that occupation by some mother's girl whom he wouldn't think of marrying.

We justly mourn the loss of the 80,000 boys who gave their lives for humanity on the battlefields of France, but very seldom do we give a passing thought to the thousands of girls who disappear every year; 60,000 was the toll for the year 1922.

Dear readers of THE FARMER, we shouldn't rest till this country is impressed with the awfulness of the tragedy of this great loss of girls. How swift would be the reform if our boys, like the hero in Sir Walter Scott's beautiful story of "Ivanhoe," should take up the lance of the protection of the young womanhood of America.

A GRANDMOTHER.
Oregon.

Family Circle Boys

Dear Mrs. Barland: I am a boy of 22 and have been very much impressed with the letters written by the boys and girls in The Idaho Farmer. I have lived in the east until a few years ago and I find that the girls there are much coarser and rougher than they are in the west. Of course I do not mean to say that they all are, but as a general rule they are. If you go out with the average girl or boy there, the girl thinks it an insult if you take a cigarette and do not offer her one. The same is also true of anything to drink. Of course the boys are very much to blame also, because they do these things in the presence of the girls. I have found one of the best little girls in the west and hope some day to make her mine, and would think no more of smoking in her presence than anything. We do not go to dances, but go to a good show about once a week. We take our lunches on Sundays and with some other young folks go out for a good time and enjoy it very much. I believe this is very good amusement for Sunday after church. We get back in time for church in the evening. I do not mean to say that we are what some young people call "sissys" just because we go to church.

I have just finished reading "So Long's" letter and I know he has the right idea, and if all girls and boys would live up to the standards set by him we would be a far better generation to take hold and go on with the work when our times come.

My advice to the girls is, don't give a boy the least privilege or he will want more.

I certainly agree with "So Long" that no boy can be trusted all of the time and it is the same with girls, and one should help the other to do the right things always.

I am not in favor of public dances, but have gone to a good many in the east as that is one of the greatest attractions offered there. I should like to see the topic discussed of whether a girl should go with more than one boy at the same time, as I think that is a vital question, and as to myself I do not believe in it.

I am very proud to say that I do not use tobacco in any form, nor intoxicating liquors.

"A WILLING HELPER."
Idaho.

Testing Linens

Housewife Should Buy Carefully

The following suggestions, taken from an extension service circular of the Oregon Agricultural college, will be helpful to the housewife when buying her linens. She is cautioned in the circular not to depend upon one test. Try them all, if in doubt as to the quality of the cloth.

Among the tests are:

1. Notice the number of threads used in the weaving of the cloth. Fine linens will have many more threads to the inch than coarse linen. Using a magnifying glass or linen glass to count the threads and to study their appearance.

2. Table cloths or materials woven with a close, firm weave wear better than those having loose weaves and long "floats." A float is a thread carried across a portion of a pattern on the wrong or right side. These loose threads wear out before the body of the cloth does.

Table cloths with small, close pattern iron more smoothly than others do. The pattern and the satin or twill background do not always shrink the same, thus the cloth may look rough.

3. Linen thread is more uneven and has more luster than cotton. Some cotton threads are spun to imitate linen. Hold the cloth up to the light; compare the differences in the thread.

4. Linen feels cool and leathery. Linen crushes and wrinkles easily. It will hold the wrinkles longer than will cotton.

5. Sized linen feels harsh and stiff. Unsized linen feels leathery, soft, and flexible. Test for sizing by flecking with the finger nail, vigorous rubbing, or boiling. Good linen does not require sizing.

6. Rub linen briskly. If the surface becomes rough and fuzzy it has cotton or tow in it. Good linen fiber is 12 to 20 inches long. Short linen fibers are called tow; these are used for coarser, poorer qualities in linen manufacture.

7. Good linen does not give off lint. Break a thread of linen and of cotton. The former is tenacious and the broken end is erect and the fibers close together. The ends of the cotton thread are spread out in all directions. Tear a piece of linen and of cotton. Linen is harder to tear, and has an uneven torn edge. It gives a dull sound when tearing. The cotton tears easily, with shrill sound, and has a smooth edge. A little practice on this test may be necessary before one is sure of the results.

Imitations and Adulterations.

1. Finishes, such as sizing or high polishes are put on cotton, making it resemble linen.

2. Sizing is used to make the linen seem heavier and of better quality. Cotton thread is spun to resemble the linen thread.

3. Cotton is combined with linen, which is to be sold as "all linen."

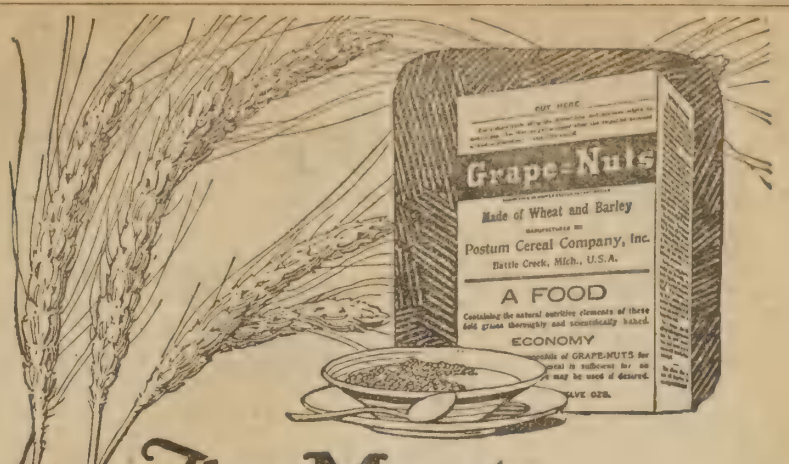
4. Tow is substituted for good long linen fibers. This soon wears fuzzy and the cloth rubs rough.

5. Mercerized cotton is substituted for linen, and sold as linen.

6. Fringings on table linens, towels, or bed linens soon wear out. Machine hemstitching and scalloping do not wear as well as a damask hem.

RADISHES IN WHITE SAUCE.

Take a bunch of radishes, scrape and cut rather thick, boil in salted water until tender, strain water off, have ready a pint of nicely made and well seasoned white sauce, in which put the radishes, make thoroughly hot again, garnish the radishes with olives and a few sprays of parsley.



The Meat of the Wheat

STARCH is the "meat" of the wheat berry. It is the great energy-producing element of the grain. But, in order to do you any good, it must be thoroughly digested, and it is right here that such a food as Grape-Nuts renders special service.

Grape-Nuts, made from wheat and malted barley, supplies the meat of the wheat in most digestible form.

That is because in the making of Grape-Nuts a large proportion of the starch is converted into dextrins and maltose—forms into which *all* starch elements must be changed before they can be assimilated by the system.

Grape-Nuts not only digests easily, but also *aids in the digestion of other foods.*

Crisp, delicious Grape-Nuts with milk or cream is a complete food. It supplies the life-essential vitamin-B; also iron, phosphorus and other important mineral elements for nerve, tooth, bone and other body structure.

The daily use of Grape-Nuts is a form of health insurance which has demonstrated its value for more than 25 years.

Grape-Nuts
FOR HEALTH
"There's a Reason"

Your grocer has interesting details of our offer of over $7500.00 for Grape-Nuts Recipes. Ask him about it; or write to Recipe Dept., Postum Cereal Co., Inc., Battle Creek, Mich.

It Costs a Dollar to Feed a Squirrel. It Costs Two Cents to Kill Him. Let's Kill Him.

Kill The Destructive Squirrel

During the past ten years, the ground squirrel has destroyed more crops than frost, rain, drought, heat or any other destructive agency. Millions of dollars can be saved annually by banishing this rodent. The safe, sure and simple way is to use—AERO BRAND CALCIUM CYANIDE.

Records for this product show from 95 per cent to 99 per cent kill. In contact with the natural moisture of the earth, a small portion inserted in holes generates Hydrocyanic Acid—an extremely poisonous gas which no animal can withstand. 100 lbs. is sufficient for 800 to 1000 holes.

AERO BRAND CALCIUM CYANIDE is nonexplosive, noninflammable and is shipped in tight metal drums. Used and endorsed by farmers everywhere. Most economical.

Detailed information and Price List gladly sent to any address upon request.

High Points in News of the Week

The consensus of opinion of officials in President Harding's party, fixed as the conclusion of an inspection of Alaska approaches, is that the territory will develop gradually, but that no sensational boom can be expected, as a result of the visit of the chief executive.

President Harding, Secretaries Work, Hoover and Wallace and the remainder of the presidential party arrived at Valdez Friday, and are voyaging to Cordova and Sitka, the two stops remaining before Vancouver, B. C., which the Henderson is to reach next Thursday of this week, proceeding to the United States at Seattle the following day.

* * *

A plan to withdraw 200,000,000 bushels of wheat from the market and store it on farms until prices advance is announced by O. E. Bradfute, president of the American Farm Bureau federation. The farm bureau plan provides for financing the project under the new intermediate credit act. President Bradfute declares that farm wheat bins under the intermediate credit act might be designated as government bonded warehouses, for which bonded warehouse receipts could be issued against the wheat stored on the farm. In this manner, he asserts, the grower would be enabled to borrow up to three-fourths of the market value of his wheat with the warehouse receipt as collateral, enabling him at the same time to hold his wheat until prices advanced and it became advisable to sell.

* * *

David W. Davis, commissioner of reclamation accompanied by F. E. Weymouth, chief engineer of the reclamation service, will leave Washington, D. C., in September for an inspection of practically all of the western reclamation projects.

* * *

General Francisco (Pancho) Villa, commander of rebel armies in Northern Mexico for ten years, was shot and killed Friday when he, with his bodyguard, was attacked near his ranch by a hostile party.

Villa's rise to power dates from the day when he started across the Rio Grande with two companions, six "borrowed" horses, $7 in money, and a meager supply of beans, coffee and sugar. Less than a year later he was the head of a well-equipped army of nearly 20,000 men, a war chest of several million dollars, which he had accumulated by the seizure of rich estates, and a full equipment of weapons, including artillery, practically all of which he had seized from the federal forces. Military tactics continued to be those of a raider, but they were eminently successful. From Juarez in the north to Torreon in the south he had control of more than half of Mexico. He was the Robin Hood of Mexico.

* * *

Governor J. A. O. Preus of Minnesota, republican candidate for U. S. Senate was defeated by Magnus Johnson, farmer-laborite by a plurality of about 85,000 votes in election Monday. While Johnson was elected to only the unexpired term of the late Knute Nelson, which ends in March, 1925, he did not deny that he would be a candidate for the six-year term in the 1924 January election.

Pacific Coast Nurserymen

Election of F. W. May of Yakima, Wash., as the next president of the Pacific Coast Association of Nurserymen, selection of Yakima as the next convention city and a trip to Arrow Rock dam, were the closing features of the three-day annual convention of nurserymen at Boise, Idaho, last week. Mr. May takes the place of Charles T. Hawkes of Caldwell, who was president of the association for the closing year. C. A. Tonneson of Burton, Wash., was re-elected executive secretary. S. A. Miller was re-elected to the board of trustees.

David C. Petrie, landscape architect of Boise, was elected vice-president for Idaho. Vice-presidents for the six states and British Columbia, which make up the association are: Fred Walton, Salt Lake; C. B. Miller of Milton, Ore.; C. Malo of Seattle, Wash.; M. R. Jackson of Fresno, Cal.; Richard Laritz of Victoria, B. C.

More than 75 nurserymen for the six states and the Canadian province were in attendance.

Pierce Guernsey Meeting

The members of the Pierce County Guernsey Cattle club are planning on holding their annual meeting at the experiment station grounds at Puyallup, August 17. An extensive program has been arranged for and the committee expects a big crowd of the fawn and white breeders to be present. Last year the members held an all-day tour and visited many of the herds of the county and had a banquet at Puyallup at noon. This year's event will be much different, but is expected to be equally interesting.

MORE TO BUY FARM PRODUCTS.

Development of home industry means more local people to buy the products of the farm.

Farm Business and Markets Outlook

(Continued from page three.)

as to the future and a marked unwillingness to make commitments very far ahead.

The committee of economists selected by Secretary Wallace of the Department of Agriculture to report on the agricultural outlook says that "our credit position is unusually strong and more than equal to any demands which may be made upon it in the crop moving season. There is no present prospect of any money stringency, or a rise in interest rates sufficient to affect business or the farmer unfavorably. The probability of a severe business depression in the near future seems to be slight."

The unfavorable factors in the situation include (1) the higher costs for labor and materials which reduce business profits and make business men less willing to go ahead with production; (2) the fear on the part of distributors that ultimate consumers will begin to hold back when the goods priced to carry the full effect of advances in costs during the spring reach retail channels; (3) the impaired buying power of the farmer, and (4) evidence of a decline of business activity in Europe, notably in Great Britain, Germany and France and the likelihood that Europe's purchasing power will decline further in the next year unless political differences can be quickly adjusted.

Fresh Ranch Eggs—$5.50 to $6.50 case, according to quality.

Butterfat—42c lb.

BOSTON WOOL

BOSTON, July 20.—The Commercial Bulletin will say tomorrow:

"The wool trade has reached a position of greater stabilization than has existed for a number of weeks and looks to the future with increasing confidence.

"In the west consignments make up the bulk of the movement at the moment. Some scattering sales, usually of small quantities, are reported here and there in the range of 40 to 46 cents, depending upon the wool.

The Commercial Bulletin will publish the following quotations tomorrow:

Domestic, Ohio and Pennsylvania fleeces—Delaine, unwashed, 56c; fine, unwashed, 51c; half-blood combing, 56@57c; three-eighths blood combing, 55@56c.

Scoured basis:

California — Northern, $1.37@1.40; middle county, $1.20@1.25; southern, $1.05@1.10.

Oregon—Eastern No. 1 staple, $1.40; fine and fine medium combing, $1.25@1.35; eastern clothing, $1.15@1.20; valley No. 1, $1.15@1.20.

Pulled—Delaine, $1.30@1.31; AA, $1.20@1.25; A supers, $1.05@1.10; mohair best combing, 78@83c; best carding, 70@75c.

SETS NEW STATE RECORD.

In the final week of the yearly test, in which she produced 30,688 pounds of milk and the fat equivalent of 1140 pounds of butter, Steilacoom Inka Posch, the Washington state hospital junior 4-year-old Holstein, set a new state record for milk at that age and produced 28.2 pounds of butter, three pounds more than she produced in the first week of her test. As a seven-day milk producer she displaces Hollywood Segis Belle Ormsby, owned by the F. S. Stimson company, though the latter retains the fat production honors by a margin of 5.5 pounds.

GROW WHAT YOU EAT.

The farmer buys too much of his food.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Today I want to tell you about a condition which becomes serious if not given early attention. Like all other forms of malignant disease, it is unpleasant to talk about. I refer to cancer of the stomach.

Dr. Copeland.

It will be a great thing for this world when the cause of cancer is discovered. We know little about it at present, but fortunately there are great laboratories and devoted laboratory experts working on cancer. Some day we will wake up to read in the morning paper that the problem has been solved.

Until Pasteur's epoch-making discovery there were many horrible deaths from hydrophobia. Until the successful development of anti-toxin there were endless numbers of deaths from diphtheria. Smallpox has lost its horror since vaccination became universal.

The time will come when cancer will be swept away by the discovery of the cause and the capture of the agent. That will be a great day in this world!

There are a few rules which are worth while to bear in mind.

Anything which lowers the bodily resistance creates a condition favorable to the onset ravages of disease.

The blood must circulate freely. The organs of elimination must function perfectly, carrying away the poisonous wastes of the body. The lungs must be filled day and night by life-giving oxygen. There must be no centers of pus development. No form of chronic irritation or interference with local circulation should be permitted to exist.

Living a normal, temperate, well-directed life will go far toward making cancer and all the other diseases unlikely to occur. Such a life from earliest childhood will make less common the cases of cancer of the stomach which now appear between the ages of 40 and 60.

Loss of appetite, frequent vomiting and progressive loss of weight are suspicious symptoms. Perhaps the victim has been very well before and suddenly develops the digestive trouble.

Just Folks

Come with me upward along a leafy lane, through grass knee-high, besprinkled with native flowers and ferns, embordered with moss-covered walls of stone picked up on either side; higher and higher the view broadens over the hills, valleys and glistening lakes of central New England. Then climb over the wall and into a farm field that was of old, now largely grown over with bushes and in which the grass is again besprinkled with wild flowers, and just below, the old sugar maples still yield to moderns the sweets of the household.

Here was the faraway nook where one could, as a boy, sink back on the soft carpet of mother earth and watch the fleecy clouds playing hide-and-seek with the sun, and there sloughing all the fuss and feathers of life, be at one with leaf and bud and flower and tree again.

There in that abandoned paradise of a June day was pointed out to my eyes for the first time two piles of stones, each pillowed in the green, one the filled-in cellar of the pioneer home—for New England had her pioneer days as well—where my father was born; the other was the filled-in well that gave the family its living waters.

As that day and that walk hover over me as a dream, the innate yearning for the open comes and the half-hidden wish nestles in my heart that my father, his father and his father's father might have found their resting place far up on that hillside beside the two piles of moss-covered stones, leaving to the now crowded cities the dead all their glory of engraved marble and granite. A few moss-covered unwritten stones, pillowed in the green, overlooking God's own country—that surely would be the God's acre of our forebears.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4423. Misses' Dress—Cut in three sizes: 16, 18 and 20 years. A 16-year size requires four and one-fourth yards of 36-inch material. The width at the foot is one and seven-eighth yards. Price 10c.

4269. Ladies' Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires two and one-half yards of 36-inch material for the waist and two and three-eighth yards for the skirt. The width at the foot is two and three-eighth yards. Price 10c.

3814. Girl's Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require two and one-fourth yards of 27-inch material for the guimpe and three and one-fourth yards for the dress. Price 10c.

4424. Ladies' Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 nad 46 inches bust measure. A 38-inch size requires six and one-fourth yards of 32-inch material. The width at the foot is two yards. Price 10c.

4081. Ladies' House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires five and three-fourth yards of 32-inch material. The width at the foot is two and five-eighth with plaits extended. Collar and cuffs of contrasting material requires three-fourth yard 32 inches wide. Price 10c.

4441. Girls' Undergarment—Cut in five sizes: 2, 4, 6, 8 and 10 years. A 10-year size requires 1 and three-fourth yards of 36-inch material. Price 10c.

4420. Ladies' Apron—Cut in four sizes: small, medium, large and extra large. A medium size requires four yards of 27-inch material. Price 10c.

4445. Girls' Dress—Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires three and three-eighth yards of 32-inch material. Price 10c.

3687. Girls' Apron—Cut in four sizes: 4, 6, 8 and 10 years. An 8-year size requires one and five-eighth yards of 27-inch material. Price 10c.

2222. Union Suit With or Without Sleeves for Men and Boys—Cut in seven sizes: 26, 28, 32, 36, 40, 44 and 48 inches breast measure. Size 36 requires two and seven-eighth yards of 36-inch material without sleeves. With sleeves it requires three and one-eighth yards of the same width. Price 10c.

4437. Child's Rompers—Cut in four sizes: 2, 3, 4 and 5 years. A 3-year size requires one and one-fourth yards of 36-inch material. Price 10c.

4435. Child's Dress—Cut in four sizes: 1, 2, 4 and 5 years. A 4-year size requires one and seventh-eighths yards of 27-inch material. Price 10c.

NEW YORK SAN FRANCISCO CHICAGO

NATURES GREATEST CLEANSER

Kathryn Fry says she is very proud of a New Testament which was given her for good attendance at the Junior league on Sundays. (Aunt Nellie thinks that is something to be proud of, too.) This cousin in eastern Washington has some little pups and kittens to play with.

Fox and Tip are two white dogs belonging to Frances Higginbotham, in Grant county, Wash. Snowball is her white cat. Frances has other pets, too. One of them is a pony named Dick. Dick is black and has one white foot. Frances says she is glad school is out, so she can have a good time. She is one of our new cousins and we are glad to hear from her. She is 10. Her birthday is August 12.

Birthday Greetings

THURSDAY, July 26—Clarence Hedlund, 9 years old; Helen Howe, 10; Jean Lockwood, Helen Mitchell, 11.

SUNDAY, July 29—John Albert Malone, 11 years old.

MONDAY, July 30—Carrie Buckels, 6 years old; Robert Parks, 11; Ivan J. Putnam, 11.

TUESDAY, July 31—Armas Lampi.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Florence Sicilia, Vina Kimm, Mozelle Van Syckle, Vera Neff, Hilda May Waltner, Dorothy Barry, Gladys Haines, Margrethe Wolburn, Leona Reinhart, Verla L. Dyer, Marian Freese, Frances Haxton, Nina Downing, Bessie Martinson, Dorothy Gebhardt, Esther E. Els, Evelyn Hall, Vesta Rogers, Ruth Carlin, Olive Ruth Olsen, Bernice Jones, Marguerite Hamilton, Margret Kreyssler, Alvena and Violet Matson, Alice Sanborn, Velda and Eva Lindner, Linnie Gammon, Molly McCormack, Thelma Melger, Ella Kemp, Gladys Stone, Lena Townsend, Shirley Aldrich, Floreda Young.

Alice Wolf, Eva Cade, Alice Hunt, Grace Marlatt, Dorothy H. Graham, Ralph Radford, Mildred Dezarn, Marie Jensen, Frances Mae Fox, Ernestine Miller, Bertha Enroth, Ethel Wynecoop, Glenna Loraine Dohrn, Nelle Hill, Matilda French, Stella Cade, Hazel Niva, Bernice Rudrud, Marguerite Wilson, Hilda Wyngarden.

BEDTIME STORIES

By THORNTON W. BURGESS.

JENNY GOSSIPS WITH CHATTERER.

Now, Jenny Wren is a great gossip. Everybody knows that. Her tongue is going from morning to night. For the most part it is harmless gossip, but not always. She didn't mean it to be harmless this morning as she settled herself in the old apple tree nearest the stone wall on the edge of the old orchard and at once began to gossip with Chatterer the red squirrel.

"Good morning, Chatterer!" exclaimed Jenny. "I hope you are feeling as well as you look."

"I should put it the other way," grinned Chatterer, who happened to be in the best of spirits that morning. "I hope I

"Good morning, Chatterer!" exclaimed Jenny.

look as well as I feel, because in that case I must look very fine indeed."

"That red coat of yours is one of the handsomest coats I know of. I always did admire red. You don't know how envious we folks who have to dress so plainly get sometimes. Speaking of plain dressers, have you noticed those upstarts who have come out from the city to live here in the old orchard? I mean Bully the English sparrow and his wife. Goodness knows, my dress is plain enough, but I do try to keep it in order! But Mrs. Bully doesn't. Why, she doesn't seem to care a crooked feather how she looks!"

"I judge by some of the sounds I have heard that they are not altogether easy to get along with," replied Chatterer.

"Easy to get along with!" Jenny Wren fairly danced as she snapped this out. "Easy to get along with! Why, we don't pretend to get along with them. We just don't have anything to do with them! They are beneath our notice."

Chatterer chuckled. "I notice that they stay just the same, and, so far as I can make out, they seem very much at home," said he.

"Yes," sputtered Jenny, "they are at home all right. I suppose you know where they are living."

"No," replied Chatterer, "I can't say that I do."

"You don't say!" exclaimed Jenny. "Well, they are living in that old house that Drummer the woodpecker built two years ago and in which Swimmer the swallow started housekeeping this spring."

"What has become of Skimmer?" inquired Chatterer.

"Oh, they drove him out and took the house away from him. It was the most outrageous thing! That's just what it was—out-rage-ous! Now they've built a nest there themselves, and I heard Mrs. Bully say this very morning that they've got six eggs! Think of that! I've no business to say such a thing, but I can't help wishing that something would happen to those eggs. Well, I must be hurrying home. Don't, for goodness sake, repeat what I have said."

With this off bustled Jenny Wren, leaving Chatterer in a brown study.

Chickens Finance Modern Home

If there is any one in western Washington who still believes that poultry raising when properly conducted is not profitable, he should visit the M. P. Hokenstad farm near Snohomish, on Blackman lake, in Snohomish county. This farm has been built up and improved, including a modern eight-room house, from the proceeds of the commercial poultry flock.

The farm is only 20 acres and is along the banks of Blackman lake, but it has all been built up during the last nine years. The first year it was managed as a dairy farm, when Mr. Hokenstad purchased six cows with which to start a commercial dairy. Before the end of that year he lost some of the cows from disease and sold the remainder at a great sacrifice. He later tried 30,000 celery plants, but lost three-fourths of the crop from poor weather and bad markets. The commercial orchard has made a small share of the income, but not as much as its owner had anticipated.

"It was during our second year on the farm that we decided to try raising chickens," explained Mr. Hokenstad. "We bought 200 day-old chicks and raised them according to the directions laid down by the experiment station bulletins. We had good luck with them and decided

The Hokenstad Home.

to get a larger number the following year. We did so, but felt it necessary to get some better stock, and so we bought a setting of the highest quality of eggs we could find for $75. These were used as a foundation for our present poultry flock, and to this we can credit much of the high production of the flock.

"It was necessary to work up as we went along, since we were already in debt for the farm. We had 200 hens the first winter. We kept chickens and have doubled the number each year since that time. We maintained the high standard from the first, and culled out all hens that did not show the indications of good layers. When we started trapnesting we found it was much easier to pick out the poor layers, and we have kept up the practice ever since.

"We are not making any attempt to raise show birds, but are working for high production. We feel that we should have good stock in the first place, and then cull carefully. The hens always have a good balanced ration, and are given plenty of minerals and green feeds in order that they may produce to their highest capacity.

"We keep accurate account of all costs and know exactly how many eggs we are getting from one pound of grain. We always know what it is costing us to produce a dozen eggs, and we are therefore able to check up on the hens at any time.

"We keep the houses absolutely sanitary, but we do not waste any time overdoing the matter. Sanitation is essential, but it can be overdone. Proper ventilation is also necessary, yet at the same time the birds should have protection from drafts, and we have a large curtain which can be let down over the open front in case of bad weather or extremely cold weather.

"It was necessary to build a new laying house a few years ago in order to handle our increasing flock. We now have a capacity of 2000 hens, and the pullet house, where only the pullets are kept during the first year of production. The main building is on the half monitor plan. Trapnests are all below dropping boards, and the dust bath is below the main floor.

"We make every effort to get all of the white extras we can, and find that this is a simpler matter when the trapnests are used, since the hens stay in the outer part of the nest after laying. When she goes on the nest she closes the trap behind her, and thus keeps out any other hen which might run after her. We have 1400 laying hens this year, and will keep 750 of the best hens for breeders. We plan on adding 750 new pullets each year to keep the flock at its present size.

"We raised all of our own chicks in the large cellar of the dwelling house with individual coal oil incubators. For several years we have been selling day old chicks and find it a good source of income.

"In brooding our own chicks we keep the brooder house where the soil can be changed each year by giving the birds a clean pen, and cultivating the old one. We believe that this precaution is a very important one and will prevent losses from growing chicks, and keep them healthy at all times. It is a simple matter to have the pens arranged in this way and we find it very profitable, since we are not bothered by undue losses with the young stock.

"During the first few years we developed a special trade for eggs, dressed poultry, and other farm produce. We would make special trips to Everett on certain days during each week, and found that in this way we were able to realize a better profit for our products. During the last two years, however, we have changed our plans and are selling all of our eggs and surplus poultry through the Washington Cooperative Egg and Poultry association. This method has done a lot in solving the marketing problem for the producer, and we feel that we are getting as good returns from our eggs as when we sold them direct to our customers. We can better afford to spend less time in delivering the eggs and have more time at home to attend to the flock."

The new eight-room dwelling house, which has only recently been completed on the Hokenstad farm, is the latest chapter in the story of the Hokenstad success with White Leghorns. The house is modern in every way, and has many conveniences which are common in city homes, and can be had at a small expense in farm homes when a special effort is made to put them in. At first thought, it seems almost impossible that such an accomplishment could be made in so short a time, especially when both Mr. and Mrs. Hokenstad were just learning the poultry game. They admit it has been a hard job and it has kept them both busy. They have been raising three children at the same time.

Demand for Seed Potatoes

There is a good demand for seed potatoes in Clallam county and M. D. Wortman of the Ellwah valley is raising five acres which he intends to sell for seed this fall. The patch is on sandy bottom land close to the river and the early growth of the plants was very encouraging. In fact the plants came up two weeks after planting.

Half of the patch is the Burbank variety and the rest is a variety that resembles the Burpee, but is called the Green Mountain by many of the growers in this district. Last year Mr. Wortman had a patch of potatoes that produced 100 sacks to the acre and he looks for a crop that is equally as large this year.

JOIN JUNIOR DAIRY CLUBS.

Thirty-eight boys and girls joined the junior dairy clubs of Skagit county. C. H. Bergstrom, county agent, is assisting club members in selecting their stock, which will be purebred, with 500 pounds butterfat backing or equivalent.

At a dairy judging demonstration held in the Nasel community in Pacific county, on the farm of Ed Simonds, four cows with cow testing records were used. Thirteen dairymen attended the contest and nearly all placed the best cow third.

A Maker of Beef Cattle History

By HOWARD HACKEDORN

There is no beef cattle breeding plant in the west more widely known than Hercules Shorthorn farm, owned by Frank M. Rothrock, Sprague, Wash. Few in America are better known. And in the history of that farm no other individual animal is so well known or has played such prominent part as has Gainford Perfection, now senior herd sire at the age of 10 years. For six years he has been a foundation sire at Hercules farm, and there he is destined to spend the rest of his days if the attitude of his owner toward him does not change. Ere long his years of service will end, but his many sons and daughters will perpetuate his quality in scores and hundreds of Shorthorn herds throughout America.

Gainford Perfection, 442173, grand champion Shorthorn bull of Canada for 1914-16, but never shown in this country, was purchased by Frank M. Rothrock, one of the present directors of the American Shorthorn Breeders' association, in the spring of 1917 to head his herd at the Hercules ranch at Sprague, Wash. At this ranch he is still the senior herd sire and stands out today as one of the greatest sires in the northwest.

He was calved March 22, 1913, and was bred by J. A. Watt of Elora, Ontario, Canada, who retained him in his herd until he was sold to the Hercules ranch. Gainford Perfection is a straight Bruce Fanny and the names of C. and J. Bruce appear several times in his pedigree. His sire, Gainford Marquis, 370987, carries 21.25 per cent of the blood of the champion of England (17526), of which bull A. J. Sanders says, "One after another of the sons and daughters of this, the greatest stock bull Scotland has ever known, grew up into cattle of the real rent-paying sort."

Gainford, as he is familiarly called by those who have made his acquaintance, has demonstrated his merit as a sire of good cattle, which is shown by the winnings of his offspring in the northwest under such judges as Charles Yule. I. F. White, William Hartnett, W. C. Rosenberger and Captain T. E. Robson, and by the prices received for his calves. His get have consistently received the converted blue and purple ribbons. Only twice in four years has his group of four sons and daughters been defeated in the get-of-sire class. These times Uppermill Lord, 391777, owned by John Seely & Son of Mount Pleasant, Utah, was awarded the blue ribbon in 1920 and 1921 at the Western Royal. Both these decisions were reversed at the Pacific International the following week.

The winnings of the sons and daughters of Gainford at the Western Royal and the Pacific International, the outstanding cattle shows of the northwest, for the years 1919, 1920, 1921 and 1922 number 34 first, 16 seconds, 18 thirds and 12 fourths. From these there were selected eight junior champions, two senior champions and five grand champions, not including two grand champion steers.

At the Shorthorn congress sale and show in 1919, one of the largest spring

This picture of Gainford Perfection was taken when he was in his prime.

sales and shows in the United States, he advanced his claim for recognition as a great sire, through his sons and daughter, Hercules Diamond, 705964, first senior yearling and champion bull, Hercules Knight, third junior yearling bull, and Hercules Topsey, 605964, third 2-year-old cow. This group was also awarded the blue ribbon in the get-of-sire class. Hercules Diamond was also the highest-priced animal of the sale, selling for $5000 to John R. Jones of Williamsville, Ill. This same bull the following fall at the International was placed first in his class. Hercules Topsey topped the sale for cows by selling in his class. Hercules Topsey topped the sale for cows by selling for $2650 to H. Reese & Sons of Pilgar, Neb. In the fall this cow was senior champion at the National Western Stock show at Denver and stood forth in her class at the International. Hercules Knight was placed third in the junior yearling class and was sold for $1700 to Charles Plageman of Eckley, Col.

Hercules Matchless, 704703, another of his daughters, has an enviable show record. She has been junior champion three times, senior champion twice and grand champion twice. At the Western Royal in 1920 she was awarded the grand championship over Glide's Little Sweetheart, 378263, the grand champion female of the International held at Chicago, Ill.

Sni-A-Bar farms of Grain Valley, Mo., sent a representative to the last Pacific International to purchase the good junior yearling bull, Hercules Conqueror, 1026690, by a son of Gainford, Hercules Chancelor, 814629. This bull was one of the highest priced bulls sold during the season any where in America, selling for $2100.

Another grandson of Gainford, through his daughter, Hercules Rosabella, 814679, sold for $1225 to Reginald Parson of Seattle for his Shorthorns in northern California.

Hercules Snowstorm, 1026696, by Village Sultan, 650623, and out of the wonderful Hercules Matchless by Gainford Perfection, topped the Hercules 1921 annual spring sale by selling for $960 to J. I. Trimble of Garfield, Wash., in whose herd he now stands as senior herd sire.

Hercules Model, 1043754, another son, and a wonderfully flashy youngster, with a world of promise, shown during the fall (1921) as a junior calf was awarded two junior championships and a grand championships, winning the latter prize at the Pacific International in 1921. Later in the week this bull calf topped the west coast sales for the year by selling for $1575 to J. D. McGuire of Tenino, Wash. This promising young bull met untimely death in June this year.

A large number of sons and grandsons of Gainford Perfection now stand at the head of the northwest herds.

In the fat classes Gainford Perfection upholds his envious record as the sire of seven first prize steers, one second and one fourth, including two championships.

Hercules Topsman, third prize yearling in 1920 in a class of 22 bulls at the Pacific International, one of the good sons of Gainford Perfection, is now in service at the Hercules ranch. He is the sire of the first and third prize junior bull calves, Hercules Brilliant and Hercules Marquis, at the last Pacific International. Also this bull is the sire of Topsman's Type, grand champion steer calf at the Western Royal in 1922, shown by the Washington State college. This calf was taken to the Chicago International by the college herdsman, Mr. Hanna, where he was made champion college steer with some 16 Canadian and northwest colleges competing. He was beaten in his class only by the Shorthorn calf which was later made grand champion of the show. This calf was sold to the Oklahoma Agricultural college and in whose herd he was champion Shorthorn steer at the southwestern spring shows.

BUILDING UP JERSEY HERD.

Robert Trenchman of Elma has an excellent herd of grade Jerseys on his farm north of town, and is gradually building up the number of purebred animals and expects to have an entire herd of registered animals in the course of a few years.

One of the cows, Rosy Buff's Sister, has a record of 413 pounds. Another animal, a 2-year-old, has an unofficial record of 436 pounds, 334.9 pounds of which was produced in eight months and 20 days. Several of the young heifers in this herd are from Lad's Juno, who is the sire of the present herd bull. They are all a good even bunch of heifers, and even the grade cows indicate that they are profitable producers.

There are 225 acres on this place, but only 40 acres are in cultivation. The pasture land is out in the cleared stump land where it is not yet ready for cultivation. There is plenty of grass for the cattle, except during late summer, at which time green crops are fed along with the grain rations.

There is a wood and hoop silo on the Trenchman farm, which was built in 1917. It is one of the first of its kind to be built in western Washington. It was tarred both inside and out, and is still in excellent condition, having been used every year since it was erected. It is 32 feet high and holds 75 tons. It was built at a cost of $125, which does not include labor.

Mr. Trenchman has found time to put in a few home conveniences, such as built-in cupboards in the kitchen, zinc drain boards, farm lighting plant and pressure water system. These have all been added as money and means permitted. Mrs. Trenchman has planned other improvements about the house, which they want to put in sometime in the future.

When they first began building up this farm home, they decided that the necessary home conveniences should be put in before the family car was purchased. They have lived up to their agreement, and they now have the family car. Both Mr. and Mrs. Trenchman have hopes of building up a high-class dairy farm and they have made a long stride in the direction of their goal.

NEW STATE CHAMPION FOR MILK.

A new state champion for milk, at least in the junior 4-year-old class of the 365-day division, is Steilacoom Inka Posch, a Holstein bred and developed by the Western State hospital at Steilacoom. She also makes another in the lengthening list of western 30,000-pound cows, for her total milk production was 30,688 pounds, three and one-half tons more than that of Cascade Piebe, whom she displaces. The butterfat records of the two animals are practically the same, and official confirmation will be required before the championship is determined. Steilacoom Inka Posch is by a son of Sir Johanna Ruth Fayne, selected eight years ago to head the grade herd at the hospital and the means of greatly increasing its average of production.

HERD AVERAGES 62.3 POUNDS FAT.

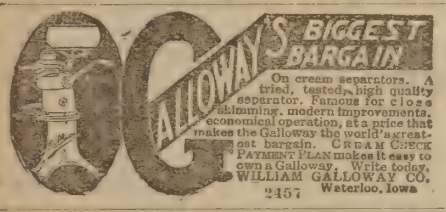
A butterfat average of 62.3 pounds for one month from 15 cows getting ordinary care is exceptional, but A. E. Moore of Falls City, King county, has a habit of keeping his herd producing at their best at all seasons of the year. The entire herd was being pastured on clover meadow when the above record was made during May, but the production dropped off slightly when the animals were changed to blue grass pasture.

One of the cows, a Guernsey, produced 110.2 pounds of fat for the month of May, according to the county cow testing association records, and has been giving around 40 pounds of milk at each milking during her heavy production period.

Mr. Moore has a new herd bull, a registered Guernsey, Belsies Agustus. He comes from the W. A. Goodwin herd at Cornelius, Ore., and is now 3 years old.

THOMSEN SELLS GUERNSEYS.

P. H. Thomsen of Salzer valley has sold 10 head of high-grade Guernsey cows at $150 per head. Mr. Thomsen is to secure the heifer calves from these cows now carried in dam. The Thomsen herd was the high herd last year in the Lewis County Testing association. This is one of the first shipments of Guernsey cattle from Lewis county to outside points.



SAV-A-CALF
(TRADE MARK REGISTERED)

Insures a 100% Calf Crop

IT TURNS YOUR "FREE BOARDERS" INTO GOOD PRODUCERS.

You are losing money if any cows in your herd fail to get with calf or come in heat. If one cow has this disease it will soon spread to the whole herd. Start to eliminate it now. BEGIN USING SAV-A-CALF and kill the contagious germ. Feed SAV-A-CALF to your dairy and range stock and get a 100 per cent calf crop; and get your cows in condition to produce big when prices on milk and butterfat are high.

It is easy to feed—just mix it with the salt or feed. A five-pound can costs $5.00 and contains sufficient Sav-A-Calf to feed 20 cows for one year. If you are not satisfied with it we will refund your money.

READ WHAT USERS SAY.

Gentlemen:

"Last year we had seventeen out of twenty-three cows that failed to get with calf. We tried different bulls with no results and after feeding Sav-A-Calf in the salt they all caught in less than a month, by the first bull. It is so simple and easy to feed Sav-A-Calf. Our stock eat more of the mixture than they do of the ordinary salt."

TOWELL BROS.,
Midvale, Idaho.

NEVER LOST A CALF.

Dear Sir:

I want to say that I had fine luck with my cows since I used your Sav-A-Calf. Never lost one calf, where I lost over half last year, before I saw your ad in the paper. I thought I would have to sell my cows, but after trying your Sav-A-Calf they are doing just fine.

Yours truly,
JACK BRUHNS,
Wheat Basin, Montana.

lounging position. "Freight outfit?" said he, sleepily. "No."

Then he woke up a little more as Ben broke into tears again. Perceiving their woebegone appearance, he sat erect, and for the first time took in the situation. "Why, what are you kids doin' here this time of night? Where's your horses? Where's your people?"

John told the story in a few words, while Ben, quite overcome, leaned his head against his brother's arm and went fast asleep standing up.

"And haven't you had anything to eat since noon?" queried the driver in wonder.

"No, nor nothing to drink," answered John, his voice shaking a little in spite of himself at the remembrance.

"Well, I'm sorry, but I'm afraid I can't help you much. I haven't got a bit of grub myself. Thought I would only be out a little while, and expected to reach the rest of my outfit by dinner time, so I didn't bring any feed myself. One of my nags gave out, so I couldn't catch the teams. I guess I can give you a little lift, anyhow. But see here!" he ejaculated, "I guess you're on the wrong trail, ain't you? Your folks must have took the other branch way back yonder; they wouldn't be likely to come over this side."

Brave John collapsed at this. He and Ben had been traveling all this weary time in the wrong direction!

"Never you mind, sonny," said the man, kindly. "We'll find some way out of it," he went on after a minute's silence; "those trails join again after a piece. Perhaps you may meet your outfit there. This branch follows a bend in the river, while the other cuts across country and meets it. See?"

"Yes, sir," said John, dejectedly.

"Come, help me get this team of mine started; you'll be sure to find your outfit camped near the fork; there's good water there and they'll wait for you."

Encouraged once more by his words, John lifted Ben bodily and laid him in the wagon. Then, after a good deal of urging with voice and whip, he got the worn-out team in motion.

For half an hour they moved along without a word being spoken; their new friend relapsed into his huddled-up position, Ben lay asleep in the bottom of the wagon, and John communed with himself. He wondered what his mother thought of their absence, and he felt the responsibility of an elder brother. He knew that the horses would turn up riderless, and that his father would send back over the trail that had been covered by the train, but would not find them. The thought of their anxiety made him doubly impatient at the slow progress made. He longed for Baldy to gallop on and set their minds at rest. Still, they moved along at a pace little faster than a walk. Each step of the weary beasts seemed as if it must be the last.

At length John, who was the only person awake, noticed that the off horse began to sway as he stumbled along. He roused he man at his side and told him he thought the animal was about done for. But the words of warning were hardly out of his mouth when the poor beast dropped like a lump, made a few fruitless attempts to regain his feet, and then lay quiet.

Here was a pretty mess for all hands!

The man, with one fagged horse and one almost as bad, 10 miles from camp, with no food or water, on a trail over which hardly any one pssed.

The boys, footsore from the long tramp, with a gnawing hunger and parching thirst and nothing to satisfy either, their destination they knew not how far off, and no means of reaching it other than afoot.

There was but one thing to do: set out once more and trust to providence that the camp would be found at the junction of the two trails and that their strength would hold out long enough to accomplish the journey.

John promised to send some one back with horses and food if the stranger did not turn up within a reasonable time, and the youngsters then resumed their weary march, John almost carrying his brother.

The moon had come out and showed the boys the deeply marked road. They had but to follow the track, so it became simply a question of endurance and pluck. The simple, hardy life they had always led and the constant exposure to heat and cold had toughened their little bodies and had given them a reserve fund of strength which now responded to the call upon their utmost powers. Strained as every faculty was, they plodded on doggedly, hour after hour. Just after midnight they topped a little rise, and involuntarily cried out in unison. There ahead of them was a blaze that gave them new life. They had reached the junction of the two trails, and the camp. The wagons were drawn in a circle just as they had pictured to themselves, the camp fire was burning brightly in a shallow pit (to prevent its spread to the surrounding prairie, and some of the men, wrapped in their blankets, were lying like long, bumpy bundles on the ground, while a bunch of mules were feeding at a little distance, guarded by the "night wrangler."

In the center of the enclosure, where the ruddy light of the campfire brought out their anxious faces in strong relief, stood the boys' father and mother. John and Ben ran forward as fast as their tired legs could carry them. They shouted—as loud as their dry, dust-coated throats would allow.

It made them gulp simultaneously to see how the expression of the two faces changed; the woman's growing wholly tender and joyful, the man's altered to that of relief rather than joy. John knew from past experience that while the mother would be glad to comfort and caress, the father would not permit any such soft treatment. They would be lucky if they got off with a sharp rebuke.

Mrs. Worth rushed to meet them, but her husband restrained her. "You boys go over to the cook-wagon and get something to eat, then turn in. We've got to get off soon after daybreak. I'll see what you have to say for yourselves tomorrow."

The cold supper John and Ben indulged in that night would probably not interest the ordinary pet dog of your acquaintance. It consisted of cold, greasy pork and beans, poor cold coffee without milk, and soggy bread, but they thought it was food fit for the gods. Hunger satisfied and thirst quenched, they were glad enough to curl under a wagon, a blanket their only covering and a saddle for a pillow.

Before getting to sleep they heard the teamster who had befriended them come into camp; his team had revived enough to painfully cover the remaining distance to the Worth's outfit.

They had hardly dozed off, it seemed to them, when they heard the cook's shrill call, "Grub p-i-i-i-le," and knew that breakfast was ready and all hands must be astir.

After the blankets had been made into a neat roll and put away in a wagon, breakfast was despatched promptly, for cook, even on the frontier, is an autocratic person, not to be kept waiting.

The meal was much like the supper of the previous night, except that the food was hot. The boys then went down to the creek and soaked off the dust that had gathered during their long tramp. In an incredibly short time the train had broken camp and was on the move again. The cook's few dishes and pots were given a hasty rinse in the creek and packed, the mules and horses driven in, and the fresh ones harnessed and saddled. The "day wrangler" took the place of the "night wrangler," who promptly lay down in one of the wagons and went to sleep.

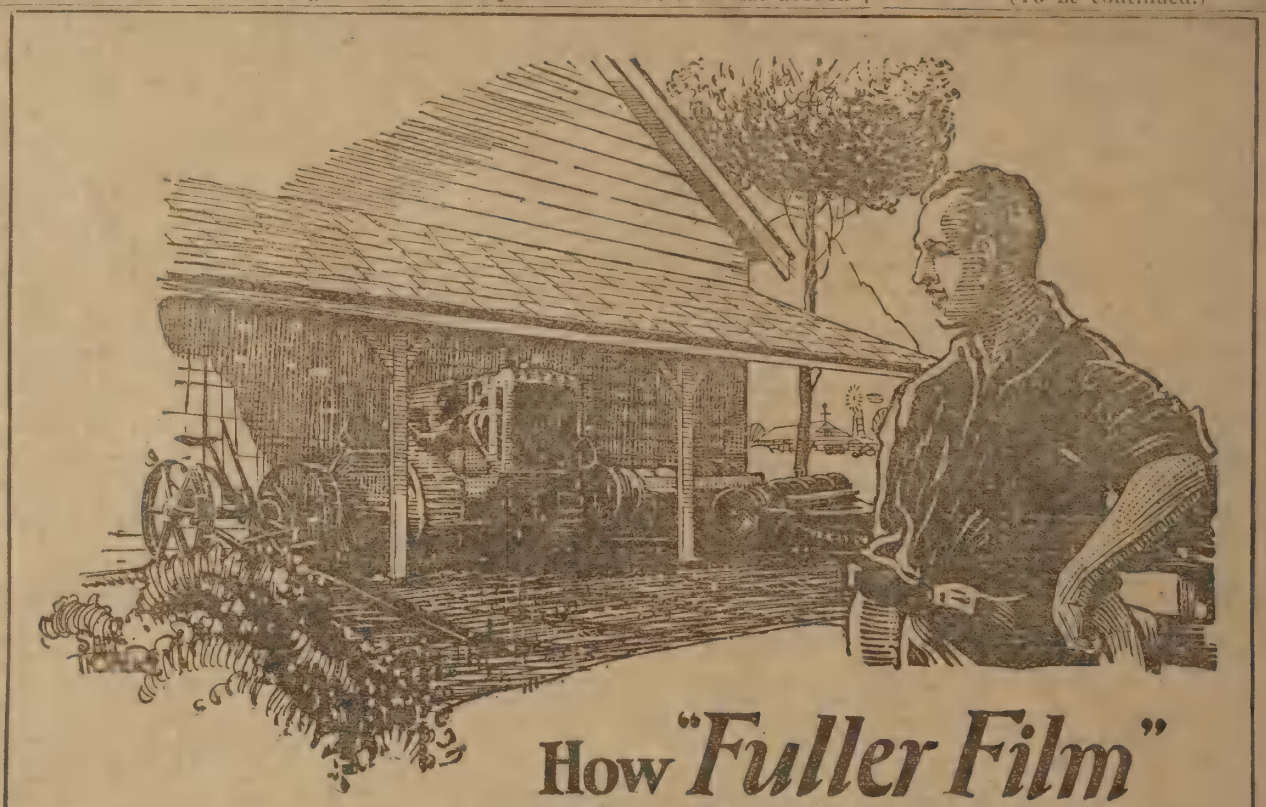
The procession fairly moving, John and his brother were called up to explain their absence of the afternoon and night before. This John did with fear and trembling, for he feared his father's wrath. He got off, however, with a severe reprimand and positive orders not to go out of sight of the wagons at any time, and the boys went off congratulating themselves on their lucky escape.

All that day the caravan traveled steadily, stopping only at noon for dinner and for water. Towards evening they came near their destination, reaching a clear creek bordered with green. Up from the stream rose a hill, and half way up was a strange-looking house, part of which seemed to be buried in the side of the slope.

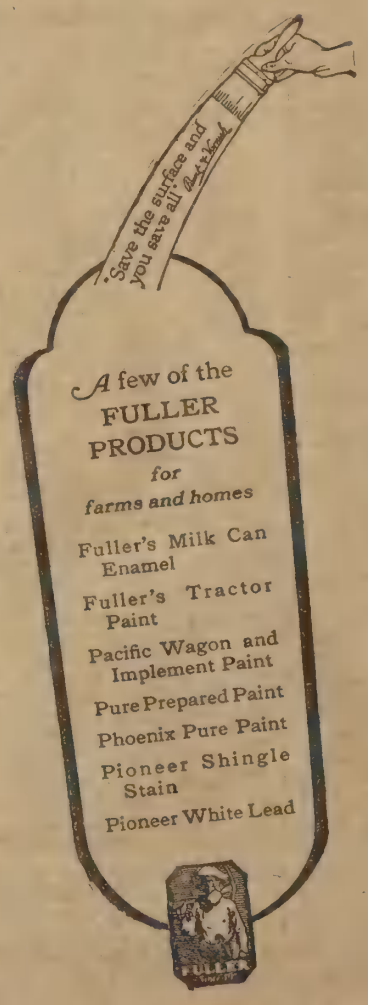
The boys were somewhat surprised when they were told that this was to be their home for the winter.

"Look, John," exclaimed Ben, "we're going to live in a hole in the ground."

(To be continued.)



How "Fuller Film" makes Implements last



"FULLER FILM" is a protection. That is why it makes implements last. It does not add strength to a tool. But it *does* keep rust and decay from weakening equipment.

"Fuller Film" is the "coat" which forms as Fuller Paint dries. It gives better protection than cheaper paints, because Fuller Paint has exactly the correct proportions of Pioneer White Lead, pure zinc, pure linseed oil and pure colors, ground, mixed and intermixed so as to provide the greatest covering and wearing qualities. *Fuller Film* is the result of 74 years of successful paint-making experience.

There's a Fuller Paint or Varnish for every farm and home need. Coat your implements and buildings at regular intervals with a Fuller Paint made for the purpose and you will be surprised to find how much longer they will last. And think of the improved appearance of your farm! Ask a Fuller agent or dealer for further information, or write to our Service Department stating just what you have to paint.

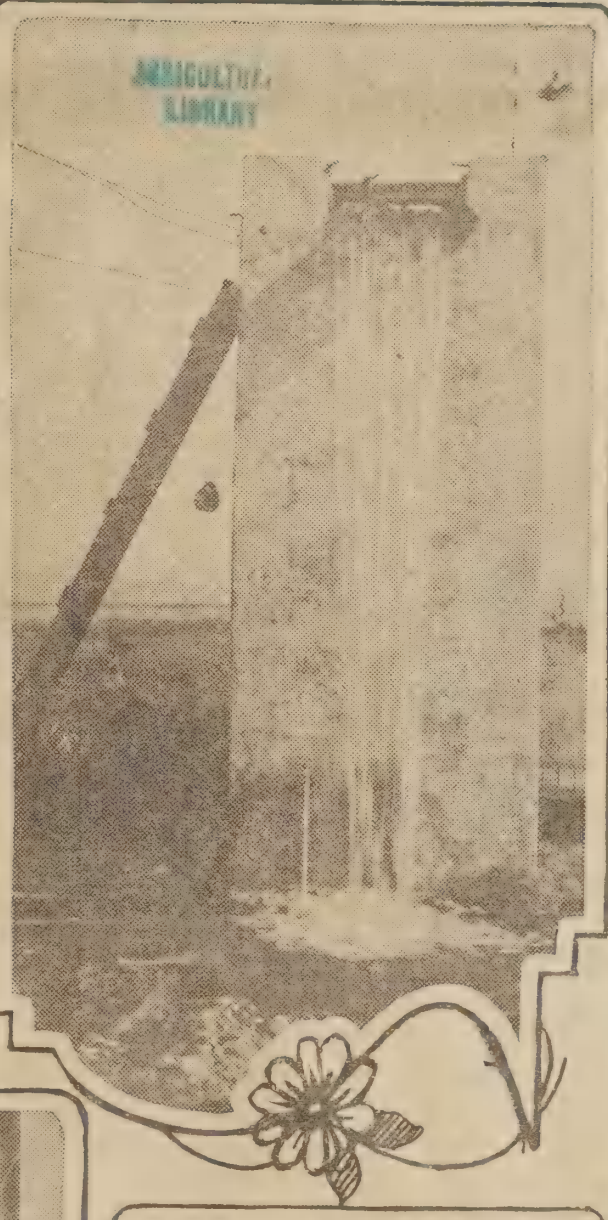
AUGUST 2, 1923. Washington's Great Farm Magazine EVERY THURSDAY

THE WASHINGTON FARMER

ESTABLISHED 1894

SPOKANE. SEATTLE.

AGRICULTURAL LIBRARY



TRENCHES on the battle fields are not much like the irrigation ditches of peaceful America, but men who made good in the former are making good in Washington with the latter. This state is lending its aid to some of those who served it in the World war by locating them on productive farms. Read the story on page 3.

Farm Leader's Message to Pacific Northwest Wheat Growers---Page 5

Urges Export Wheat Bounty

Dr. S. B. L. Penrose Believes It Would Aid Farmer in Stabilizing Market for Home Consumption

"Let the government pay a bounty on this surplus wheat that must be exported and protect the price for home consumption," says Dr. S. B. L. Penrose, president of Whitman college. "Such a system would make it impossible for the price of the export wheat, fixed by the foreign buyer, to fix the price in the American market. That bonus might be 25 or 50 cents a bushel sufficient to protect the wheat grower at home.

"To prevent the dumping of foreign wheat in this country, the government could readily impose an additional import duty of 25 to 50 cents a bushel on wheat coming into this country. That would virtually shut off foreign wheat. The American wheat grower would have the home market for himself.

"To justify the government in adopting these measures in the interest of the wheat grower, the government should ask the wheat grower, in turn, to approve the ship subsidy and furnish an American-owned merchant marine to move his exportable surplus. The wheat grower should do this."

The Wheat Surplus.

Dr. Penrose bases his conclusions on the admitted fact that the 200,000,000 bushels of American wheat normally available for export fix the price on the normal home consumption of approximately 600,000,000 bushels. The disposal of the exportable surplus is the big problem confronting the wheat grower. It is admitted that the price of American wheat under the present system is fixed in Liverpool. American farmers, for years, have protested against this unnatural situation, but thus far their protests have been unavailing in changing the system.

How Plan Works Out.

The Penrose plan would work out somewhat in the following manner: If the exportable surplus should reach the normal figure of 200,000,000 bushels, and the bounty were 25 to 50 cents, the government would be called upon to pay $50,000,000 to $100,000,000 to protect the farmers' market at home, in contrast to an investment of $1,400,000,000 if the government were to take over the entire crop of 800,000,000 bushels at $1.75 per bushel as some are advocating under the price guaranty plan. The latter plan would almost inevitably involve the government in heavy losses.

It is estimated that the remaining 600,000,000 bushels under the Penrose plan would command the Liverpool price, plus the bounty, the increase being far in excess of the $50,000,000 or $100,000,000 the government might pay out in the export bounty.

Farmers Could Pay Bounty.

In this connection, it has been pointed out, that the wheat growers themselves could well be assessed or taxed enough to meet the proposed bounty on export grain because of the much higher return they would get on wheat sold for American consumption. It is argued that it would be good business for the wheat farmers to spend $50,000,000 to $100,000,000 if by so doing they could get $150,000,000 more for the wheat they sell at home. A price only 25 cents per bushel higher as the result of the bounty would increase their revenue $150,000,000 on home consumption of 600,000,000 bushels.

Under the Penrose plan, if the wheat price were 85 cents a bushel, as at present, determined by the price for export wheat, the government would step in with, say, a 30-cent bonus, bringing the price to the farmer up to $1.15. The export wheat would still move at 85 cents, but the farmer would receive $1.15 and would not sell at home for less than that. With 200,000,000 bushels removed from competition in this way, it is reasonable to expect an advance equal to the bounty in the price for home consumption, Dr. Penrose believes.

May Cause Slump

The suggestion of Dr. S. B. L. Penrose, president of Whitman college, that the government come to the aid of the wheat grower in his present situation by placing a bounty on all wheat for export and increasing the tariff on import wheat proportionately, is favorably commented upon by business men and wheat growers' and farmers' representatives. The proposal carried added weight with them because of the absence of any political motive and because of the reputation of Dr. Penrose for conservatism in economic programs.

Walter J. Robinson, general manager of the Washington Wheat Growers' association, admitted that his proposal contained much merit and would undoubtedly be thoroughly discussed because of the position Dr. Penrose occupies and his influence, both with business men and the agricultural interests. Mr. Robinson thinks such a proposal coming from Dr. Penrose is little short of revolutionary and indicates a vastly changed attitude toward the wheat grower and his problems by neutral observers who have studied them.

"I read and reread Dr. Penrose's proposals with great interest," said Mr. Robinson. "There is a great deal of merit in them. If Dr. Penrose or anybody else can assure the wheat grower that a bounty on export wheat will not react by reducing the price on export wheat and leaving us no better off, the wheat grower will not oppose his plan.

"However, that is the thing we fear about his program. It is not new to us, but it has been given no publicity. C. A. Harth of The Dalles, Ore., a director of the Oregon Cooperative Wheat Growers, took that plan back to Washington, D. C., last winter, but it was turned down in favor of some of the other relief measures suggested at that time. The danger in the plan, as we see it, is that it will tend to dump wheat on the export market and shoot that market all to pieces. The foreign governments would take advantage of an American government bounty to make low offers and there is a danger that the American wheat grower would accept these, feeling that the government would reimburse him.

"Our suggestion for this year has been stated before. We believe if the government would merely announce that after June 1, 1924, a certain price would be paid on the surplus wheat remaining at that date, the price would go to that figure now and the government, in all probability, would not be required to spend 5 cents buying wheat. The ultimate solution, we think, is that offered last week by W. J. Brown, president of the American Wheat Growers, Associated, that the wheat growers join the cooperative movement and control 75 per cent of the supply and fix their own price on wheat for home consumption."

Sign Pooling Plan

Grain growers of Dayton and the surrounding country have adopted the contract plan of the American Wheat Growers' association, it is reported by W. J. Robinson, president of the Washington Wheat Growers' association, who attended a Dayton meeting last Thursday.

The farmers in the district favored a plan to pool 75 per cent of the wheat in the United States. This plan, however, was not feasible as far as the American association is concerned, as wheat in but 11 states, with three more pledged for next year.

"Some of the eastern states are operated by the United Grain Growers' association and at this time would not be eligible to a contract with the American," said Mr. Robinson. "They cooperate with the American plan, however, and much of the grain is handled through common channels.

"The American plan calls for a minimum of 65 per cent of all wheat raised in the states affected. In order to compromise with the farmers of the Dayton district it was decided that if it should be proved that 65 per cent was too small a margin, that an additional call for wheat should be made."

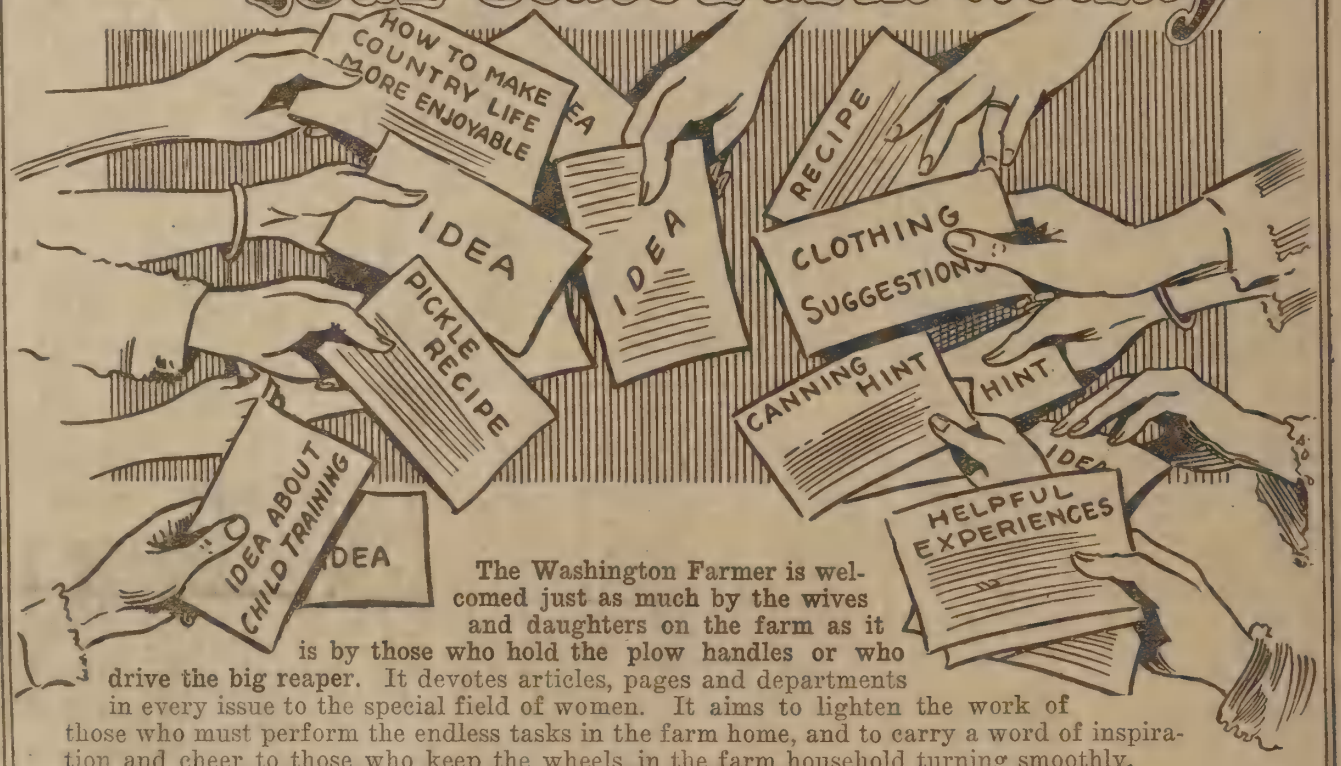
Wheat Growers' Board

The advisory board for the Pacific northwest of the American Wheat Growers' association was announced today by W. J. Brown, the association president, who is here promoting interest in the association among farmers, as follows:

Dr. E. O. Holland, president of Washington State college, Pullman; B. F. Irwin, Oregon Journal, Portland; Charles H. Stewart, vice president Northwestern Na-

(Continued on page fifteen.)

—Helpful Exchange of Ideas and Experiences offered by —Your State Farm Weekly



The Washington Farmer is welcomed just as much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks in the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of money saved by this economical plan. You receive this big, enterprising farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1923 even more successful for cooperation than the past years have been. Please do your part.

Subscription Rates to The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

August 2, 1923.

Ready for More World War Settlers

Tells How the State Will Furnish Farm, Buildings, Well, Irrigation System and Dairy Cows

IT might seem pretty soft to some of us to have the state buy us a farm, equip it with buildings, dig us a well, put in an irrigation system and buy us a herd of dairy cows with which to start business. Soft or otherwise, that is exactly what the state of Washington stands ready to do on its own terms for a limited number of its sons who served in the World war and what it has already done in part for 37 of them. It now has on hand 21 farms waiting the appearance of the right soldier boys to go upon them and make of them going concerns.

On the cover page of this issue of The Washington Farmer are pictures of two of these soldier boys. The one shown with his family is Shaun Kelly, formerly of Spokane, who has overcome difficulties and is making good. The other is shown ably backed by stacks of home-grown alfalfa, holding two Holstein cows that the state has purchased for him. He is Silas F. Murray of Soldier settlement tract No. 36 on the state's project near White Bluffs and Hanford.

The 1919 legislature of Washington passed a law known as the state land settlement act. It carried an appropriation of $150,000, to which the 1921 session added an equal amount, making $300,000 with which to finance this movement of providing homes where ambitious, capable ex-service men might make good as farmers.

Director D. A. Scott of the state department of conservation and development took personal supervision of the working of this act and in November, 1921, authorized the selection of the White Bluffs-Hanford country as the location for the soldier settlement project. This is in the Priest Rapids valley, about 35 miles up the Columbia river from Kennewick and Pasco on the west side of the river. It comprises tracts in an area about 25 miles long and several miles wide in a bend of the Columbia. There are about 200 privately owned and developed irrigated farms in the vicinity, irrigation being necessary for growing any kind of crop.

State Merely Helps.

Let's pause right here to call attention to the fact that the state of Washington is not giving farms to ex-service men. It is merely helping them to establish themselves on these farms.

Every dollar that the state advances to a settler must be paid back, but under such terms as any thrifty, capable young man can meet. The maximum advance which the state will make on a 20-acre tract is $4850, made up as follows: The land at $30 per acre, $600; a dug well, $400; house, barn and poultry house, $1500; pump and electric motor for lifting water, $600; irrigation distribution system, $825; fencing material, $200; clearing, leveling and weeding, $200; electricity at $175 per year for three years, $525. The settler must pay, when he selects his tract, $250 as earnest money. He must then pay $362.50 on or before six months without interest, but before he is given possession of the land. These figures cover cases in which he has chosen to accept all of the financial help which the state is prepared to offer him.

How the Settler Pays.

For the first three years thereafter he must pay the state $1 per year principal and 4 per cent interest on his unpaid balance. After the first three years, he begins paying his unpaid balance on an amortization plan of 20 annual installments, each installment thereafter amounting to $7.36 for each $100 which he owes the state. For instance, if his balance be $4000, his installment will be $294.40 each year for 20 years, by which time the debt will have been completely wiped out.

Must Have Hay.

There is manifestly no reason for having hay if one has nothing to feed it to and those in charge of the soldier settlement project very early ruled that half of each 20-acre tract should be planted to forage crops and be fed on the ground. Hence the necessity of some provision to assist the settler in securing live stock. To meet this situation, the American legion, through its land settlement committee, of which Fred M. Weil is chairman, brought about the passage of a bill in the last legislature known as the "soldiers' cow bill."

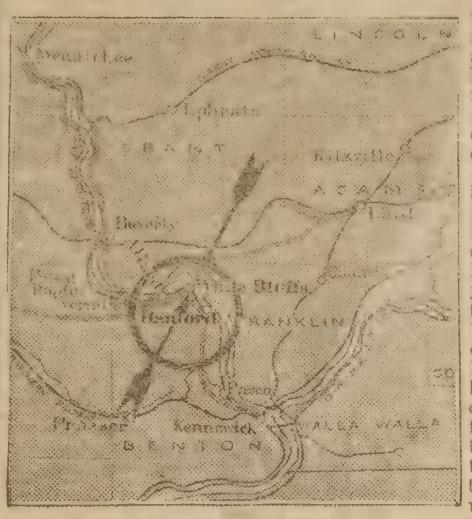
"Cow Bill" Provisions.

The terms under which the state will assist the settler in the purchase of heifers and milch cows, advancing 100 per cent of the purchase price therefor, follows:

The state will advance money to the settler at 6 per cent interest to purchase from one to four milch cows or heifers for each tract, requiring no down payment, under the following conditions, in part:

1. The settler must first have provided shelter, and grown feed for the stock on his own tract.
2. The settler to repay the state the loan made to him by assigning one-half of the cream check each month.
3. The state to hold the milch cows and heifers and their offspring as security until the settler repays the loan.
4. Should the settler dispose of the offspring, either by butchering or selling, any monies received from the sale of the animal or meat, to be paid by the settler to the state to apply on the principal and interest.
5. The project manager may refuse a loan with which to buy milch cows or heifers to any settler, who, in his judgment, can not or will not take proper care of the stock.
6. The settler may buy his own milch cows or heifers, if he desires, but before they are paid for by the state, they must be approved by the project manager, both as to price and value.
7. The cattle brought to the land settlement project either by the state or the settler must be subject to a tuberculosis test.
8. The breed of cattle to be purchased depends on the desires of the settlers in the neighborhood in which the settler's tract is located and on which he lives.

The first settler to avail himself of state assistance in establishing a dairy herd was Silas F. Murray, referred to earlier in this story and whose picture with his cows is shown on the cover page.



The two arrowheads within the black circle in the above map point to lands in the White Bluffs-Hanford land settlement project. The big bend of the Columbia river around these lands is also shown in the map.

The office of J. C. Scott, project manger at White Bluffs, is the meeting place of the Land Settlers' association, the local organization of the settlers. It is the duty of Mr. Scott to guide and assist the settler in the preparation of his land, the planting of crops and to represent the state in the local management of the project under the direction of the state director of conservation and development at Olympia.

Fred M. Weil, chairman of the American legion's land settlement committee, is a pioneer of the Priest Rapids valley. In 1907 he promoted and managed the company that built the town of White Bluffs, and with the exception of two years' service as a captain of field artillery during the years 1917, 1918 and 1919, has been active in the upbuilding of the Priest Rapids valley. It was largely through his efforts as a member of the legion's state land settlement committee that the project was secured for the White Bluffs and Hanford country. Mr. D. A. Scott has appointed Weil the state's colonization agent for a brief time in order that the ex-service men of the state might be apprised of their rights and privileges under the land settlement act on the White Bluffs-Hanford land settlement project.

Further information regarding the White Bluffs-Hanford land settlement project may be obtained by addressing J. C. Scott, project manager, White Bluffs, Wash., or Fred M. Weil, state colonization agent, 6666 Stuart building, Seattle, Wash.

No Isolation.

The soldier settlement is not isolated from the world, as some have been led to suppose, but is, in fact, located in a valley already well populated and served by the little towns of Hanford and White Bluffs, the one at one end of the settlement and the second at the other. The character of these towns may well be indicated by the picture herewith of the Hanford high school building. White Bluffs is not behind its neighbor in up-to-date characteristics.

The tracts upon which the ex-service men are settling are not all adjacent to each other, but lie in groups of two or three up to half a dozen. They are interspersed with developed farms and undeveloped lands, many of the farmers of the district setting worthy examples to the newcomers.

D. A. and J. C. Scott.

The Scott family plays more than a single-handed part in the furtherance of this undertaking. Not only has Director Dan A. Scott of the department of conservation and development general supervision of the undertaking by virtue of his position, but J. C. Scott, formerly Franklin county agent and one of the well-known agricultural experts of the irrigation areas of the state, is project manager. So far as we know, Dan A. and J. C. come from entirely different limbs of the Scott family tree.

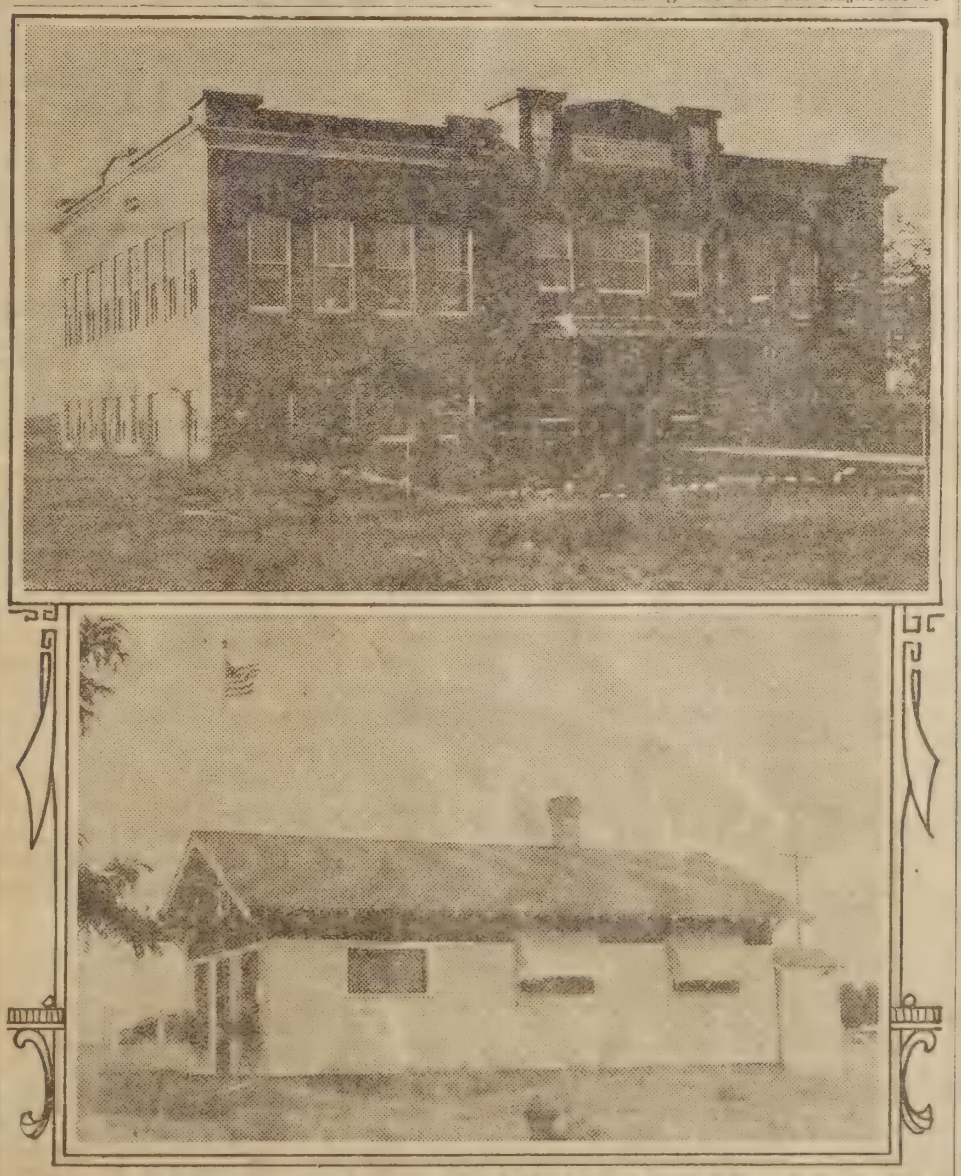
Abundance of Water.

The question may have risen in somebody's mind as to the supply of the water for irrigation. Notwithstanding the fact that the water comes out of wells that average a depth of 38 feet, the Columbia river is in reality the source, and the supply is as dependable as is that mighty river itself.

As stated before, the project lies in a bend of the river. Surveys have indicated that a considerable portion of the waters of the stream have refused to be deflected from their course, preferring to go straight across through a stratum of alluvial gravel which lies from 30 to 40 feet below the fertile surface of the valley. Thus the wells at this depth tap an inexhaustible, purified sheet of Columbia river water. "Place a chip on the water at the upper side of the well in the evening and next morning you will find it on the lower side," says Mr. Weil, who, in addition to being a leading instrumentality in securing the passage of the soldiers' cow bill, is at the present time officially engaged to tell the soldier boys throughout the state of the opportunity that awaits those who are agriculturally inclined and experienced.

Twenty-one Tracts Ready.

There are only 21 tracts available for immediate settlement, but it is the intention of the state to open 42 additional tracts late this year. General Manager Scott is severe in the selection of men to go on these tracts. He must be thoroughly convinced that each individual is sufficiently ambitious, sufficiently determined and sufficiently gifted to make a success in his farming venture. He believes, with many others, that upon the success of this project depends, in large measure, the future of either privately or publicly directed colonization of Washington lands in the future.



The larger of these pictures is of the Hanford high school building, indicating the educational facilities that the settlement country offers. The small building is the office of the manager, J. C. Scott, in White Bluffs, who can be reached there by any ex-service man interested in securing a tract under the project.

Wheat Men

Will be Asked to a Price Parley

J. Quincy Adams, president of the Farmers' union of Washington, announces that he will issue a call in the near future for a massmeeting of wheat growers of the Inland Empire to consider the wheat price situation. The meeting will be held in Spokane, but Mr. Adams has not set the time.

United States Senator C. L. McNary of Oregon has been invited to attend as the principal speaker and will be invited to talk on a guaranteed price for wheat. Other speakers are being sought.

While the Farmers' union has not committed itself for or against a guaranteed price, the subject is being discussed by farmers and their organizations everywhere. Considerable difference of opinion exists as to the proper steps to pursue and few of the farmer organizations agree on the proper program.

The proposed Spokane meeting is intended to clarify the atmosphere in the Inland Empire and crystallize sentiment on some definite program.

Spokane Valley

Vegetable Pool Is Under Way

A tomato and vegetable pool of Spokane valley growers similar to the strawberry pool just closed was decided upon at a meeting of 150 growers at the Opportunity town hall last week. Another meeting will be held at the same place next Thursday night to complete arrangements for the pool and report the probable amount each grower will contribute.

Edward Peirce of Opportunity, president of the Spokane Valley Growers' union, through which organization the strawberry pool was handled, made a partial report on the pool results.

"The pool was formed at the last moment, almost when the berries were red," he said, "but nevertheless, it has been of benefit. Of 300 members who agreed to deliver their berries, only two failed to do

(Continued on page fourteen.)

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must oe sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Promises Record State Fair

A record state fair is indicated at Yakima this fall, according to E. L. French, state director of agriculture, who adds: "We have more room for stock, more space for exhibits and better arrangements for concessions. The track and grounds were never in better shape, and exhibitors from every part of the state are showing an awakening interest in the fair."

Pacific Northwest Development

It has been the contention of The Washington Farmer for years that development of the Pacific northwest as a section, embracing the four states of Washington, Oregon, Idaho and Montana, deserved serious economic study, especially with reference to the future trade on the Pacific.

It is therefore with special satisfaction that it receives the news of the appointment of Dr. E. A. Bryan as research professor of economics and economic history at the Washington State college, who is to give a special course in the economic development of the Pacific northwest.

Here is a fine opportunity to develop leadership among our young men.

What Public Spirit Really Is

At a Spokane luncheon a few days ago, State Senator J. F. Wilmer of Rosalia, Whitman county, gave voice to a far-reaching truth.

He was speaking of the movement on foot in Whitman county to aid the labor situation in the present harvest. This movement included the voluntary contribution of time and effort on the part of the business men of his town. Now and then a man called upon did not see how he could give the time, and yet he was doing it.

"The big value of this," says Senator Wilmer, "is the formation of the habit of giving time for community needs without getting paid for it."

This is getting back to what public spirit really is.

Quality Saves Freight

With a prospect of 16,000 cars of apples from the Wenatchee district this year, R. W. Van Tassell, one of the leading growers, declares it is high time to eliminate the C grade or small sized apples. He figures out that these smaller apples in the past have amounted to about 20 per cent of the crop, or 3000 cars. This would materially aid in obtaining cars for the shipment of the better grades.

"I figure that the C grades and small apples in the past have amounted to about 20 per cent of the crop," says Mr. Van Tassell. "If we could start today and say that we will not ship any C grade or small apples we would immediately reduce the crop of the district for commercial purposes 20 per cent. I believe that if the crop of this district was decreased 20 per cent it would cause an increased value of the balance of the apples of at least 10 cents per box."

It is proving more and more true that quality saves freight.

Prohibition Has Deep, Quiet Strength With the People

Up in the Canadian province of Manitoba the voters at a recent election overwhelmingly defeated, by a vote of two to one, a bill to make legal the sale of wines and beer served with meals in hotels. That was a far northern verdict against the liquor traffic.

On the same day a southern verdict was registered when the temperance committee of the Georgia house of representatives voted unanimously against a bill to repeal the state enforcement law.

The truth is that prohibition has deep, quiet strength with the people, while the more noisy clamor of the intoxicants is out of proportion to its effectiveness. If one were to judge from the assertions of wet politicians and wet newspapers, it might be thought that prohibition was rapidly losing out in the United States. As a matter of fact, the Anti-Saloon league of America pronounces 1922 "prohibition's best year," and points to these convincing victories:

(1) Prohibition won two state fights—in Ohio by 190,000 majority; California changed from 68,000 wet to 34,000 dry.
(2) National administration sincerely dry.
(3) In congress the dries gained five votes in the senate. The house is more than two to one dry.
(4) Better law enforcement in most localities.
(5) In most states good results increase.
(6) Likewise, in most states steady progress is being made in public sentiment.

The anti-saloon league announces the following program:

(1) Go right on with the fight, legislative and legal.
(2) Nominate and elect a dry president, vice president and congress.
(3) Strengthen federal and state enforcement by more education and better organization.
(4) Take at least part of prohibition unit out of partisan and factional politics and into civil service.
(5) Help to defend our boundary by encouraging other nations to go dry.
(6) Double the fund raised for league work.

THE FARMER predicted,when the New York legislature and Governor Smith repealed the state's enforcement law and put New York in an attitude of nullification of the constitution of the United States, that their act of defiance would arouse the friends of prohibition and strengthen the cause throughout the nation. Here is quick verification.

Dairymen Must Fight On

The "filled milk" bill passed by the last legislature has qualified for a place as a referendum measure on the next general election ballot in Washington, according to announcement made at Olympia by Charles A. Foster, superintendent of the election division.

In their eagerness to obtain signatures to defeat the operation of the "filled milk" bill those opposed to the dairy interests of the state are reported to have resorted to duplicate signatures. Prosecuting attorneys of counties where such duplications are found have been notified by letter, Mr. Foster says, in order that criminal actions may be instituted.

The dairymen must fight on. The battle is not yet won.

Believe in Wenatchee Southern

North central Washington fruit growers believe in the projected Wenatchee Southern railroad. They have been hit hard in the past, depending upon a single transcontinental railroad for transporting their fruit to the markets of the east. The Wenatchee Southern will give them another outlet.

That they believe in this is seen in the fact that last week, at a meeting at Wenatchee, 99 growers signed up for 600,000 boxes of apples, agreeing to pay 3 cents a box for three years to guarantee any operating deficit the road might have during the first few years of its operation. A concerted drive is being made to sign up all the tonnage in north central Washington. This would provide a guarantee fund of $350,000 per year for each of the three years, or a total of more than $1,000,000.

The purpose of the fund is two-fold. The first is to satisfy the interstate commerce commission that the Wenatchee Southern should be granted a certificate of public convenience and necessity to build a line to Kennewick. The second purpose is to satisfy the persons who will finance the building of the road that it is a safe investment. By this means the bondholders would be guaranteed interest on their money for the first three years of their operation.

If money counts in an argument, then the north central fruit growers are presenting a pretty strong argument in behalf of further transportation facilities for their products.

Mosaic of Berry Plants

A degeneration disease of berry plants, commonly known as Mosaic, has probably caused some of the damage which has been laid to winter injury in past years, according to Arthur Frank, plant pathologist of the Western Washington experiment station. Growers, however, should not get the mistaken impression that winter injury is not present. This trouble, which is caused by severe cold weather, causes killing, but does not cause weakening of the growth, such as the above mentioned disease.

Although this disease has been known to be present in western Washington for some time, it is still under investigation. Dr. S. M. Zeller, associate pathologist of the Oregon Agricultural college, recently made a trip into the Puget Sound country to investigate this trouble, and expects to put out a bulletin in the near future. Mr. Frank expects to have some definite results to announce from his own office before the berry season is over.

Culling Poultry Flocks

Culling poultry flocks is getting to be the fashion all over the Pacific northwest.

A culling school is announced by County Agent A. E. Lovett to be held at Yakima August 3. W. D. Buchanan, W. S. C. extension poultry specialist, will be present to conduct the school, which will be followed by an intensive campaign in the county.

Pupils are limited to two persons from each community in the county, preferably to persons elected by the poultrymen of each community. Those attending the school must agree to cull flocks in his or her neighborhood at a nominal wage or price and to assist in arranging culling demonstrations if five or more poultrymen desire such a demonstration.

Washington State Gleanings

The first car of the 1923 apple crop from Wenatchee was shipped July 11. The car comprised Yellow Transparents and Duchess, grown near Wenatchee. The fruit is about two weeks earlier than last year.

SELAH MAN CHERRY BOOSTER.

C. J. Samuelson of Selah is a booster for cherries. He has eight cherry trees on his ranch, and each one has been worth a trifle more than $53 to him this summer. From one tree 860 pounds of fruit was picked. The trees are Royal Anns, and the fruit taken from them was of unusually good quality.

ERDMAN WILL LEAVE W. S. C.

Dr. L. L. Erdman, who came to Washington State college last fall as research fellow to devote his efforts to a study of sulphur as a plant food, will leave Pullman August 1 to return to Iowa State college at Ames, where he has been elected assistant professor of soils and soil bacteriology. Dr. Erdman's investigations here were under direction of the national research council.

GROWERS ELECT OFFICERS.

The Graingrowers' Warehouse company of Wilbur recently held its annual election of officers and declared an 8 per cent dividend. The officers are: William Lauritzen, president; H. E. Haden, vice president; Roland P. Short, secretary-treasurer; James Llewellyn, manager; Holger Jorgensen, Frank B. Richardson, Henry Krause and Joseph Kunz, directors.

CANNERY HAS BIG CHERRY RUN.

More than 2,000,000 pounds of Royal Ann cherries, most of them from the Yakima valley, is what the Libby, McNeill & Libby cannery had put into cans when the cherry run was completed, July 14. This represents about $180,000 to growers, as the company paid 9 cents a pound for cherries. About 800 tons of valley spinach have been canned, and following cherries some 3000 tons of Bartlett pears will be put up. A large quantity of cucumbers is being made into pickles.

BUILD NEW WAREHOUSE.

The excavation of the first commercial warehouse to be built in the valley has begun, the contract for the building being let to William Lukens at a cost of approximately $8000, says a report from Anacortes. The building will provide for a power elevator, and will be electrically lighted with convenient switches throughout the building. Electrical power will be installed. The warehouse will be served by its own private spur, which has a capacity of four cars, and the loading platform will be so arranged that all loading will be aided by gravity. It is planned to have the building completed by the first of September.

National Farm Leader's Message to Our Wheat Growers

W. J. Brown, president of the American Wheat Growers, Associated, with headquarters at Minneapolis, was in Spokane last week in conference with the directors of the Washington Wheat Growers' association. In response to a request by THE FARMER for a special message to our wheat growers, on the ways and means proposed by his association for remedying the present deplorable grain marketing situation, Mr. Brown furnished the accompanying article.

In a talk with the managing editor of this farm journal, Mr. Brown expressed his surprise and gratification with the reception he had met in the Pacific Northwest thus far. He made special reference to the conference with the directors of the Washington Wheat Growers' association, declaring that he was amazed at the fund of information, at the grasp of the marketing problem, possessed by every one of these directors. He said this ability was on a par with that demanded of an executive of a big industrial enterprise; that while the men possessed opinions founded on thoughtful consideration, yet they were, one and all, willing to listen and weigh out the merits of any other proposition that might better further the ends in view.

Mr. Brown is convinced that the greatest need is for the business man to get the right angle on the farm situation, then he will be as anxious as the farmer himself that the wheat growing industry shall be put on a satisfactory basis.

MR. BROWN'S MESSAGE.

The American Wheat Growers, Associated, brings a long-awaited message of hope and encouragement to the American wheat farmer. This is the message:

The state wheat associations composing the American, with others have combined for the purpose of quickly securing complete control of 75 or more per cent of the wheat produced in the principal wheat states of the nation, for the purpose of orderly distribution of the same, and for the purpose of fixing the selling price of this wheat and incidentally the wheat of the nation. This selling price is to be the cost of production, including a fair wage for the farmer, plus depreciation and plus a fair return on his investment, taking into consideration the hazards of the business. In other words, the plan is for the farmer to take the place in the economic structure of the nation's business, that his importance as the proprietor of the world's basic industry demands.

During all the years since agriculture became a business the farmer has been an individualist in both production and marketing. From a production standpoint his success has been remarkable. Marketing of his products, however, has become a complex question, a science, as it were, and the farmer has not been able to analyze and employ to his advantage the elements composing it. In this marketing department he has naturally been unable to meet the buyer upon a common trade footing, because the buyer knows all the technical rules of the game, and can make new ones in emergencies, and the seller is not thus equipped or favored.

To Fix a Price.

What the farmer now proposes to do is to make a few rules and regulations himself, based upon safe and sane business usages, and fix a price at which he will sell his commodity, thus enjoying the same privilege had by other industries who produce the things the farmer buys.

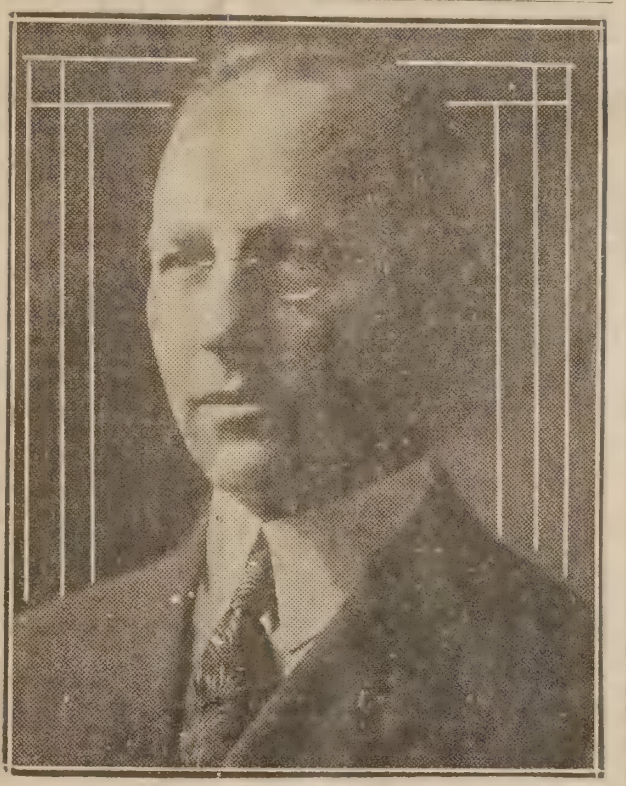
Of course the farmer is going to be scolded and lectured by and at the instance of those interests adversely affected, and he will be counseled and advised that this is impossible and impracticable, and it is safe to say that these interests will prove all these things to their own complete satisfaction.

Fifty years ago in the industrial world the airplane, the phonograph, the wireless and various other scientific accomplishments, now accepted as a matter of course, would have been considered an absurd impossibility, if one had possessed the temerity to propose such a thing.

Export Plan of Selling.

Is it not possible that the economics of the farmer and the plans he has been working under can be revised to place the farmer upon the same footing in the marketing of his products that all other lines of industry enjoy? In other words, is there anything sacred about the present plans of marketing the farmers' products and is there any sound reason why the farmer should not employ this same expert plan of selling his goods that is used by other industrial lines?

The manufacturer of this country sells his surplus product abroad in competition with like products from other countries, where costs of production are cheaper, but the American manufacturer does not permit the selling price of this export surplus to fix and dictate the price of that portion of his output used for domestic consumption. For this latter portion the manufacturer names the price himself.



W. J. Brown.

By W. J. BROWN,
President, American Wheat Growers, Associated

Taught by Mistakes.

This plan has been so successful for the manufacturer in this country that the farmer is going to adopt and adapt this plan in selling the products of the farmer. In adopting the proposed cooperative plan of wheat marketing, the farmer is fortified with the wisdom acquired through the mistakes of the past, and is strengthened in his effort by the many examples of cooperative efforts in marketing many other farm commodities now successfully functioning.

Commitments by the intermediate credit banks, ample for financing the 1923 wheat crop have already been made, and private banking institutions all over the country are offering their aid and assistance in financing the marketing of the crop. It is safe to assure the farmer that the plan proposed can be easily financed at a low rate of interest and it might perhaps be well also to mention the fact that no banking institution or intermediate credit bank has been, or will be, requested to assist in this financing plan except pursuant to safe and sane banking usages and customs.

The Membership Contract.

The membership contract proposed to be executed by the several members of the respective associations is to become effective only when 65 per cent of the wheat is signed up. The contract provides for the functioning of a price-fixing board composed of members of each state organization and others representing the public.

The membership in these state cooperative marketing associations is limited to producers of wheat. The American Wheat Growers, Associated, Inc., is a nonprofit organization and is the central selling agency of these state organizations and is composed only and wholly of two directors from each state organization of growers. Thus the producer keeps control of the whole machinery. The farmer has now learned that if he is to compete with the buyers and the organized middlemen, the selling organization must be expertly equipped. Therefore, the directors have completely equipped every department of American Wheat Growers, Associated, with experts in their several lines.

Success in Signing Up.

The success in signing up the membership in the several states to long-time contracts has been so great that the farmer now realizes that the time has arrived to take the big step and finish the job. It is a movement to which all lines of business, except the vested grain interests, can lend their aid, and this cooperation and support is essential. The great educational farm organizations have in the past been consistently recommending control in the hands of the farmer, and these organizations should and probably will get vigorously behind this movement.

The local farmers and business interests in the several localities of the several wheat states should take the matter up vigorously without waiting for outside help or suggestion. Just write the state organization for blanks and instructions.

This is the message. Analyze it and examine it, and, if the plan seems sound and feasible, get behind it with your most vigorous support.

FARM BUSINESS AND MARKETS OUTLOOK

WHILE the colors are still mixed, at least part of the news of industry and trade is of cheerful hue. The decline in wheat below the dollar level has focused universal attention on that product. Efforts to aid the market by keeping down the amount in commercial channels through greater country storage after harvest, using the new warehouse and intermediate credit machinery, have some promise of bearing fruit.

Financial conditions in Germany are in a bad mess, but, as a result, the countries involved in the Ruhr tangle may be persuaded to get together and adjust their differences.

Building operations, which have been slackening, have perked up again.

Sales of pig iron and of some steel concerns have increased, although they are not enough to maintain the present rate of operations, which is based on old orders.

Further declines in federal reserve loans show that inventories are not accumulating and the high rate of car loadings also indicates that goods are moving from the producer to the consumer in large volume.

Domestic consumption of practically all farm products is at an unusually high rate.

Grass Beef Harvest Starts.

The movement of grass cattle to the shambles started in earnest last week. Combined arrivals at the leading markets were the largest since last December. Kansas and Oklahoma steers filled the southwestern market hopper. Texas cattle are still coming freely and the corn belt appears bent on a partial clearance of short feds and native grassers before the range movement attains a full head of steam.

Prices on lower grades weakened, but better grades of steers, cows and heifers made slight gains for the week.

Big Hog Run Persists.

The hog market is far from being on summer rations. Receipts at 11 markets in the last two weeks have been equal to the usual December and January average and higher than the prevailing level from February to the end of June this year.

Prices are extremely erratic within a fairly narrow range. Values dropped close to the low point for the season early last week, but soon advanced to a top above $8 at Chicago, but the country seems to have more for sale than can be digested at that figure and the market sagged again at the close of the week.

Slump in Lambs Halted.

Lamb prices were on the toboggan for about two weeks and are about $1 lower than a week ago, reaching the lowest point of the season. The supply has let up slightly and, although dressed trade channels remain congested, the decline has halted in the last few days.

Manufacturers, large and small, have entered the wool market on a broader scale and more confidence is apparent in the stability of prices than for several weeks. Growers in the west are consigning their wools rather than sell at the prices offered, which are below the season's high point.

More Confidence in Wheat Values.

Wheat prices averaged slightly higher last week and finished with small net gains. Belief that prevailing prices discount the unfavorable conditions and that further declines, if any, will be relatively small is becoming more widespread.

Crop reports from the spring wheat states and Canada are slightly less favorable and with the change of attitude on the part of the wheat trade, reports of damage by rust and extreme heat have had more effect marketwise. Some deterioration undoubtedly has occurred, and even though harvest has begun on this side of the international line and will start in the prairie provinces of Canada within 10 days, there is much late wheat which could be injured considerably.

Official estimates from European countries as they come in are confirming earlier indications of larger yields than last year and Broomhall has reduced his estimate of the needs of importing nations in the next 12 months to 592,000,000 bushels, a figure which looks reasonable in view of the amount taken the last 12.

Export demand is persistent, but lacks the breadth needed to advance the market.

Cooperative marketing movements promise to have more influence on the international wheat trade than usual. The Australian wheat pool seems to be giving satisfaction to the growers; plans for a Canadian pool are being formulated and in the American southwest the movement to market is being delayed by storing locally, using the new federal warehouse and intermediate credit laws.

Corn Still Hitting the Top.

Corn prices are still around the high point for the year to date. Sales by producers have not increased enough as a result of higher prices, nor has demand been curtailed sufficiently to relieve the congestion.

Cash Grain Markets.

The range of cash grain prices for the week ended July 25 was as follows:

CHICAGO—Wheat—No. 2 red, 99 3-4c@$1.03; No. 3, 99 1-4@$1.02 1-2; No. 1 hard, 99c@$1.03 1-4; No. 2, 98 3-4c@$1.03. Corn—No. 2 mixed, 85 3-4@89 1-4c; No. 2 yellow, 88 1-2@90c; No. 3, 88@89c; No. 2 white, 87 1-2@89 1-4c. Oats—No. 2 white, 41 3-4@46c; No. 3, 40 1-2@44 1-2c. Rye—65 1-2c. Barley—62@69c.

Seed Markets Stable.

Both timothy and clover seed prices have been relatively stable during the last two weeks. The government's estimate on the condition of the clover hay crop was a supporting factor in clover seed and numerous unofficial reports point to a light yield. The alsike seed crop promises to be fairly large.

CHICAGO, per 100 pounds—Clover, $15@17.50; timothy, $5.50@6.50.

TOLEDO, per bushel—Prime red clover, $10.25; prime alsike, $10.15; prime timothy, $3.15.

Prices of wheat feeds and cottonseed meal advanced slightly last week.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $22.25; standard middlings, $26.25; flour middlings, $31; cottonseed meal, 36 per cent, $41; 43 per cent, $46.25; hominy feed, $32; gluten feed, $37.15; old process oil meal, $39.50; tankage, $57.

Hay Markets Rule Firm.

Receipts of new hay in most markets are increasing, but are largely of poor quality, and stocks in cities are low. Demand is fair and supplies are being cleaned up, with slight advances in price on the better grades.

LIVESTOCK AND DAIRY

VETERINARY

By DR. S. B. NELSON.

Scabs.—What can we do for our pigs? They have scabs. H. T.
Sunnyside, Wash.

It is possible that the disease which you call scabs on your pigs is due to the necrosis bacillus. Suppose you try and paint the scabs once daily with tincture of iodine, and if they are loose, paint underneath and the edges of the scabs also.

Sow Is Sick—I have a sow 1 year old that has been running on green pasture and was fed a little chopped wheat. She can not get up. J. C.
Lind, Wash.

Try giving your sow three or four ounces of castor oil in her feed. The next day begin giving her 15 grains of potassium iodide. Be sure to keep her on green pasture and give her exercise. If possible, be sure that she has a place to sleep where she is out of the draft. If she sleeps on a wooden floor and there are cracks in the floor, fix them.

Worm Treatment—I have a kitten that whines continually. It is very poor.
Yakima, Wash. B. P.

Your kitten may possibly have stomach worms. Try the following treatment: Oil of chenapodium, 16 drops; oil of turpentine, two drops; oil of anise, 16 drops; castor oil, three and one-half drachms; olive oil, three drachms. Heat gently and mix. Give the kitten one-half teaspoonful in a little milk. If the bowels do not move in an hour give a purge of a little castor oil. Repeat in a few days if necessary. It may also be advisable to add a teaspoonful of lime water to its milk.

Growth on Cow's Back.—I have a cow with a growth on her back about six inches down from the backbone and four inches behind the shoulder blade. The growth is about two inches thick at the roots and about four inches thick at the end. It is five inches long. A. J. K.
Chehalis, Wash.

Your cow probably has one of those wart growths that occur on cows, sometimes due to malnutrition. I think, in this case, maybe as good a treatment as you could give is to tie the growth off with a heavy silk string; pull it as tight as you can, and then one or two days later put on another one and make it still tighter, until you have completely cut off the circulation and stopped the growth. At the same time give the cow one ounce of Fowler's solution of arsenic in one-ounce doses in her feed night and morning.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

Little has been said about foreign bodies in the stomachs of cattle, which are, nevertheless, responsible for the loss of a great many valuable dairy animals. I say dairy animals particularly because these are kept closely about the barnyards and fed from mangers on feeds that are handled many times and have a good chance to contain bits of wire, nails, pieces of glass or other foreign bodies that may be dropped into the feed accidently. The cow chews her food very little the first time she takes it into her mouth and for that reason she does not encounter these substances with her teeth If she did she would probably spit them out as other animals usually do. Instead, she gives her feed a few vigorous bites and swallows it practically whole to let it soak and macerate in the paunch for a number of hours before it is again returned to the mouth for final mastication.

Then, too, this animal frequently deliberately picks up bits of metal and swallows them to satisfy her craving for some of the elements that are not supplied in her feed. These substances are not returned to the mouth when the other foods return for a second chewing (chewing her cud), but are segregated in a small compartment of the stomach designed, apparently, for that particular purpose (the reticulum or honeycomb).

"Impossible Objects."

It is not uncommon to find in this compartment a large number of foreign substances like nails, tacks, needles, bits of wire, glass, with an occasional umbrella rib or other seemingly impossible objects. The wonder is that these things do not cause more trouble than they do. They are the cause of the loss of a great many animals, however, since they frequently penetrate the wall of the stomach and pass into the surrounding organs of the body.

The symptoms that an animal manifests in such cases are suggestive of the nature of the trouble. They usually lose condition slowly, gradually fall off in their milk production, lose their appetite and waste away without any apparent cause. They move about slowly and frequently grunt with each breath. Later they may swell under the chest or in other low parts of the body. Constipation is a common symptom, especially when the animals are fed on dry feeds, this may not occur if the animals are in green pasture.

The compartment of the stomach that contains these substances is located just behind the diaphragm (the fleshy partition that separates the chest cavity from the abdomen) and it is common for these pointed objects to penetrate this partition and pass forward into the chest. When this occurs the lungs and heart are very certain to be interfered with.

Needle in the Heart.

As these bodies penetrate the tissues they carry infection from the stomach with them and the tract is nearly always marked by a mass of fibrous tissue and pus. It is not uncommon to find the chest cavity containing a great quantity of this material and the lungs and heart very seriously diseased. Recently I found a three-inch darning needle penetrating the heart and the whole chest cavity badly filled with infectious material.

Diagnosis of the exact condition of affairs is very difficult, though your veterinarian may correctly surmise the cause of the trouble. Treatment is very difficult and mostly impossible, since the trouble is far advanced before the body can be located, if it can be located at all. And even if the affected organ can be located, the body that caused the trouble may be very small and hard to find. Even on autopsy the small body may escape observation in the mass of diseased tissue. Sometimes, too, they are badly corroded or quite completely dissolved.

The only protection from them is in careful feeding to see that these small objects do not get into the feed. In opening bailed hay men sometimes clip the wire close to the tie and the short end gets into the hay, or the floor is cleaned and nails are swept into the feed. It happens also that these animals appear to hunt for such substances sometimes and eat them deliberately. Much harm may result, but the only protection is in a systematic attempt to keep such materials away from the cattle.—(Copyright, 1923, E. E. Wegner.)

Dog Days—

"Dog Days" are at hand when dairying is most difficult without a separator, and when the increase in quantity and improvement in quality of cream and butter are greatest through the use of a good separator.

A De Laval Cream Separator bought now will easily save its cost before the end of the year, and it may be bought for cash or on such liberal terms as to actually pay for itself.

De Laval Pacific Company

Cream Separator and Milker

"Saves the big fuel bill"

The OILPULL has won all principal Fuel Economy tests for the past ten years. In addition it has won nation-wide renown for Lowest Fuel Costs among thousands of users. D. B. Brenneiss, whose farm is operated on modern principles, remarks in his recent letter, "I have used quite a number of tractors but the OILPULL is my favorite. I am not afraid to show up with it in any kind of work. It works with low grade kerosene. *It saves the big fuel bill.*"

Owners everywhere are equally enthusiastic over the unusually low upkeep cost, the long life and the absolute reliability of the OILPULL.

POULTRY AND RABBITS

Moulting Time

Only Best Care Is Good Enough

It is the natural instinct of the hen to moult when she has nothing more important to do, according to Mrs. George R. Shoup of the western Washington experiment station. When left to shift for herself she will lay all summer until warm weather sends the bugs below their power of digging, the shade is inviting and the corn they eat is making them fat. Why should they grind out their eternal egg? Better by far drop all plumage and leisurely make new, so the ordinary hens of eight or nine months' laying cycle, known as short cycle birds, do this very thing, moult.

In western Washington there are, however, a great many "new hens," those that are bred to lay 12 to 16 months (long cycles) and fed rations balanced to take the place of natural bugs, thus producing eggs without fattening or overworking them, and keeping them singing the "egg-lay" melody during summer. These layers must be birds of unusual vigor to have this capacity and should be most highly valued by any one fortunate enough to possess them.

During hot weather the feeder should maintain egg production according to the birds' capacity, even until late September or October, by supplying:

1. Plenty of succulent, tender green feed.
2. Cool water several times a day.
3. Clean, light litter in a cool house.
4. Less heating feeds, such as corn, barley and no green bone.
5. By adding 3 per cent sustaining feed, such as sunflower seed or old process linseed meal to the ration.

When natural fall time moult comes, only the best care is good enough for any stock held over to the next year. Many fowls lay while dropping feathers, but most birds do one thing at a time, so when the moult comes they shed their coats, their combs shrink to one-half or even one-third the prior size, the birds become timid, shy and non-talkative.

Even the pets of the flock hide and the best birds are sad looking sights during this trying period. For this reason culling the moult is unjust to the birds as well as to the owner's pocketbook and should have been accomplished before moulting time.

Care During Fall Moult.

Care during fall moult is the means whereby birds are brought into full plumage, strong color of shanks, etc. (so-called pigmentation), and are built up to be able to lay the fertile, hatchable eggs, capable of producing chicks that pop out of the shell, yell lustily for what is needed and live in spite of the many errors of mortals. This care includes housing without drafts, but with good air; grouping birds in moult together to save them from their more aggressive sisters in full feather, as well as from the males; feeding a scant ration of grain, thus making them work and allowing them all the mash they want, with greens either on the range or supplied daily. A good mash for moulters is as follows:

Mill run, 480 pounds; middlings, 90 pounds; cornmeal, 100 pounds; charcoal, 25 pounds; English soy bean, 50 pounds; meat or fishmeal, 50 pounds; linseed meal (old process) 20 pounds.

It will require from 60 to 120 days to complete the moult, and as soon as the tail and wing feathers are full grown the birds are ready for another year's egg laying, at which time they can again be safely put on a laying schedule.

This long rest is no loss to the poultry owner who intends to stay in the business, because many times over the cost involved is the gain to the flock in per cent of good chicks obtained from eggs set, reduction of mortality and in vitality of stock raised.

Nothing is so much needed on a poultry plant as the three gains above enumerated, and the chance to obtain them lies in the owners' hands, largely if not entirely, at moulting time. If birds are urged to lay up to or beyond their natural capacity, allowed the least possible rest in which to moult and recuperate and again are urged into heavy egg production, this is handling for market eggs, pure and simple, and no poultry business can stand up many years by trying to replace the flock from stock so handled.

Birds are natural creatures, given to do one thing at a time, so why not accept this fact and keep in mind just what we wish from each group of birds handled?

Keep the market egg producers together in 500 or 1000 units and get as nearly as possible what will bring the highest money returns, the chalk-white, two-ounce eggs in large numbers.

With even greater care keep the hatching egg producers together in a specially planned breeding house, and work for the much higher product, large, chalk-white eggs, that are above 90 per cent fertile, and also hatchable even up to 80 per cent of the total eggs set.

Males moult and are not fit for breeders during that time. It is necessary, therefore, to mate birds that are in full plumage to help in getting prize hatching eggs.

The False Moult.

The false moult, dreaded by poultry keepers, whether it comes during high-priced winter egg production or during the spring when so many eggs are needed to pay for the feed of old stock and young, in many cases can be averted if understood. As long as birds lay at whatever rate is normal to them whether that be 18, 20 or 25 eggs each per month (according to capacity of birds), there is no danger of the false moult.

When the flock production drops to 40 per cent right then look to the green food supply as first aid, for then only can a moult be prevented by overcoming the slump in egg production.

With literally hordes of amateurs rushing into the business, it is not surprising to find a plentiful sprinkling of false moults. No rule of thumb can be given to prevent them. One thing certain, a serious study of feeds and their purposes as well as the natural conversation of the birds from day to day, is the one safe way to learn to avert an out-of-season moult.

No owner of poultry has become a poultryman until all the unnecessary qualms afforded by the moult of four-month-old pullets have been experienced. Nor is safety reached until the control of all adult fowl moults is understood.

Moulting is the process by which birds are able to drop old feathers and grow new ones. When the baby chicks outgrow their down they grow baby feathers first on their shoulders and then on their backs and bodies and when the feathers completely cover their backs, thus protecting them from the cold, they are ready to perch. Before pullets are mature enough to lay they moult several times, finally coming in full adult plumage when between four and five months of age.

These preliminary moults are tests of the vitality of the stock and the caretaker's skill in meeting the demands for feather making and both the heredity and skillful care are equally necessary to bring the young stock to that dove-like smoothness of feather and 3 to 3 1-2 pounds weight that foretells profitable market egg production during the fall and winter, with capacity left to carry on the complete year's production. When one sees the goodly numbers of flocks showing these characteristics the reason for the large shipments of high-priced eggs out of this state is better realized.

YOUR QUESTION ANSWERED.

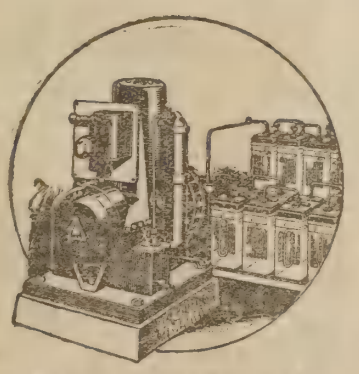
Your question has been answered in these columns, but you have lost the item that contained the information you need. Ask it again by all means, but think how much better it would have been if you had kept the questions and answers as they have appeared in the past and filed them away for reference now.

DON'T CLAIM IMMUNITY.

Before you say you have no mites in your chicken house, tear out the roosts and other possible hiding places and look. Have the oil spray or the grease can ready when you do it.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

When you come from the fields at Sundown



There are 25 styles and sizes of Delco-Light Plants, one to fit your needs. We also manufacture Delco-Light Water Systems, the Delco-Light Washing Machine and Frigidaire, the Electric Refrigerator. All Products made for 32 and 110 volt Direct or Alternating Current Service.

When you come from the fields at sundown, what a wonderful satisfaction it is to know that, because of Delco-Light, you have been able to spend a longer and more profitable day in farm work—when time is at a premium, when every hour counts.

This has been made possible because Delco-Light helps you to do the chores more quickly, more easily and better.

You turn a switch and every corner of the barn is brilliantly lighted with safe, clean electric lights. How easy it is to slip the harness from the tired horses and bed them. How easy to turn a tap at the trough and water them with fresh, cool, running water, until every animal is satisfied.

And the advantages of Delco-Light in the house are just as many and important.

See your local dealer. He will tell you how little it really costs to put Delco-Light on your farm, and about a payment plan made so easy that you cannot afford to be without it.

ORCHARD AND GARDEN

Fruit Byproducts

The University of California maintains at Berkeley laboratories, equipment and a small staff devoted to the study, the teaching and development of fruit products and byproducts. The principal purpose in this laboratory is to find new ways of using and utilizing fruits, in order that impending overproduction in certain lines may be avoided, says W. V. Cruess of the fruit products laboratory of the University of California.

The American public consumes about 5,000,000,000 bottles of carbonated soda pop per year; probably less than 1-2 of 1 per cent of this total contains fruit in any form. The remaining 99 1-2 per cent plus consists of artificial flavor, color, coal tar dye, sugar and fizz water. Experiments have shown that many fruits can be converted into carbonated beverages, which can be sold retail not to exceed 10 cents per bottle. About 5000 bottles of the fruit beverages have been sold in Berkeley without very much sales effort. Those who have used the beverages are vociferous and unanimous in their praise and approval of the product.

The fruit beverages are not only pleasing drinks, but they are far more healthful for the consumer than the products with artificial flavor. Strawberries, blackberries, loganberries, raspberries, apples, raisin grapes, wine grapes, oranges, lemons, pomegranates, figs, raisins and prunes have all been used in beverages. As with many other fruit products, we find the blends of various juices and sirups the most successful products.

The fruit products laboratory maintains at Davis a commercial dehydrater which has cost about $5000 to build and equip. This plant has been operated during the last four seasons. During the last season approximately seven tons of cull Sacramento river pears, six tons of clingstone peaches, five tons of Royal apricots and several tons each of prunes and Thompson seedless raisins were dehydrated. The peaches and pears were peeled and lightly sulphured, the apricots were pitted and lightly sulphured. The prunes and grapes were lye dipped, as for sun drying. These fruits were dried under carefully controlled conditions and were packed in attractive cartons. These have recently been placed on sale and have been very well received and consumers have been willing to pay a premium in price for the attractively dehydrated fruits. It is believed that dehydration can be used in canneries as a means of drying the pie grades of fruit and of preventing such fruit being canned in competition with the better grades of fruit. In this connection dehydration, therefore, is of tremendous importance to pear growers, canning peach growers and to the canners of these fruits.

By means of concentation of fruit juices by vacuum concentration very attractive fruit sirups have been prepared from practically all of the fruits listed above under fruit beverages.

These sirups have proven even more popular than the beverages among housewives and others. They are used in many different ways, for example, in the preparation of home-made fruit punch, gelatin desserts, fruit jellies, pudding sauces, frostings for cakes, cake fillings, etc. The manufacture of these sirups affords a very promising means of utilizing many surplus fruits.

About 120 gallons per ton of very excellent vinegar can be made from cull pears. This product should afford a means of utilizing the waste peels and cores from canneries and small or misshapen fruit unsuitable for other purposes. Cooperative experiments have been successfully conducted with the vinegar manufacturers in increasing the yield of vinegar acid from apple juice by the use of selected pure cultures and by the control of organisms which destroy vinegar acid and alcohol.

The great American public is coming more and more to live out of a tin can; housewives are becoming more finicky and are making less and less jelly and preserves in the home. Anything that can be done to make jelly making certain and easy will increase the use of fruits for this purpose. Accordingly, extensive investigations have been conducted during the last five years on the preparation of and canning of fruit juices for jelly making. These investigations have been successful and a large factory has been established at Santa Clara, Cal., for the commercial production of these products. One of the big fruit organizations of southern California has taken up the preparation of marmalade juice and jelly juice from citrus fruits. The jelly juices have been made semi-commercially and sold to the housewives in Berkeley with very gratifying results. All that the housewife has to do is to open the can, add two cans of sugar to each can of juice, bring to active boiling and pour into glasses—a sparkling, clear, quivering jelly is the result.

America consumes some 600,000 tons of candy per year. Practically all of this is cane sugar, artificial color and flavor. The amount of fruit candy is so small that it would not appear in this total. Investigations have shown that fruit may be used in candy in dozens of ways. One very successful manner of using the fruit in candy has been to combine the fruit pulp with pectin and sugar to give a still jelly with the fruit embedded in the jelly. Pectin is the jelly principle from apples or other fruits. Several canners are investigating the possibility of canning the candy base for the use of confectioners. A large candy factory in San Francisco and many small factories throughout the state are experimenting with and using this new candy process.

CONTROL OF THE WORM.

The best spraying equipment is none too good. Every grower should own the best high-powered spray machine that he can secure. It should be carefully cared for—pump and engine kept in good condition—hose strong enough to carry 200 to 300 pounds' pressure—all couplings tight and the best rods or guns, depending upon the choice of the operator. With large, tall trees it is impossible to correctly spray them without having a tower on the spray outfit from which the operators can reach and apply the solution to the tops of the trees. In serious worm infestations it has been found that two-thirds of the wormy apples are on the upper one-third of the tree. The key to successful control lies in the thoroughness of the calyx spray, proper thinning of the fruit, removing all worm-stung apples and the application of the first cover spray. If the fruit is given a thorough coating and recoated with the poison every 18 to 21 days, clean fruit is the result. Spreaders have been found to be very beneficial in all pest-control work.

Bees in the Orchard

"It is not enough to have bees in some one place in the orchard, but it would be better for the trees if the hives were set at different places about the orchard," according to C. B. Scott of the Fruitvale district of Yakima. "I have always noticed," he said, "that the trees closest to the stands of bees had more cherries on them than trees farther away, and, as regards 20 trees away from the hives, they did not receive a great deal of attention on the part of the bees."

In view of this fact, he had the bees placed this year in two lots instead of one in the cherry orchard, and this gave him better results than from placing them in one place. It is generally supposed that the bees will work evenly over the orchard, but that is not the case, as they concentrate on the trees that are closest. He is therefore convinced that to scatter the bees through the orchard will pay even though it cost the grower more.

Cherries and pears usually bloom at the same time, but the bees seem to prefer the cherries to the pears. They will work on the cherries and leave the pears alone. Having a block of Bartlett pears which have not always set as well as they might, he thought he would make sure of getting them pollenized this year. Accordingly, he had a number of colonies of bees placed among the pears, but the bees instead of working on the pears would, as they came out of the hives, make their circles and gain altitude until above the pear trees and then strike out straight for the cherry orchard. There was a day, however, when a cold northwest wind was blowing and to get to the cherry orchard they had to face it. Instead of so doing they worked in the pears, but that was the only day that they gave them much attention.

Mr. Scott has 200 sour cherry trees and some sweet cherries. From the 200 sour cherry trees he harvested close to 18 tons of cherries. Although sour cherries are sure bearers, Mr. Scott would not plant them, he said, as the growing of this class of cherries can very easily be overdone, for they can be grown almost anywhere in the United States. That is not true of Bings, for they can be grown in only a few localities.

Rhizoctonia in Strawberries

Now comes another enemy of the strawberry crop, that of rhizoctonia. It has been described by M. J. Forsell of Everett, Snohomish county horticultural inspector. This is a factor that strawberry growers must recognize, especially with new plantings, he says. There are many plants that are affected by this disease, which is most common in potatoes.

In early summer this disease can be recognized by the appearance of plants affected here and there in the field. Affected plants will show up in fields which from all other standards of excellence appear the best. At the time of bearing the petioles around the fringe of the plant will appear brown and black. The leaves will soon dry up and the whole plant bear evidence that there is something radically wrong.

The difficulty is to be found on the roots. Here the plant body of the fungus can be seen by the aid of a microscope on the fine roots. On the large roots the difficulty may be located in the form of a white layer immediately under the bark. If a large root is cut squarely off a white ring may be seen and if the bark is removed an abundance of the fungus may be noted.

The plants affected to the extent of the lower leaves and petioles having become darkened produce a small and inferior crop.

Seed used for planting a potato crop which is to precede the strawberry planttation should be treated according to the standard methods for the control of rhizoctonia.

Morning Glories

Difficult Weed to Eradicate

By E. G. SCHAFER,

Will you kindly tell me of a way to get rid of wild morning glories? They are thick in my garden. MRS. W. H. M'G.
Mountain Home, Idaho.

The bind weed, or morning glory, as it is called, is one of the most difficult weeds to eradicate. This is due to the extensive root system which it produces. I believe one of the most successful ways of eradicating this pest is that of clean cultivation. If this method is to succeed, however, it will be necessary to cultivate at frequent intervals throughout the entire growing season. This method involves the actual starvation of the plant by preventing it from manufacturing food which is carried on in the leaves. In its attempt to grow, the energy stored in the roots will finally be extended if no green portion of the plant is allowed to appear above the ground.

I would suggest that cultivation be at a depth of two or three inches, since cultivation at this depth will not need to be as frequent as if at the mere surface only. I realize that this method would not seem economical if the weed exists on a large area. If you have only small patches, I believe it will pay you to eradicate it in this manner, even at a comparatively high cost, in order to keep it from spreading to other parts of your farm. It must be remembered that even though the weed be allowed to produce leaves for a few days only during the growing season, much of the energy expended during clean cultivation will be restored and the period necessary for its final destruction will be increased. In my opinion, if this method is adhered to rigidly, the weed should be exterminated by the end of the second season.

Hail Hit Apples.

Hail damage to apples and some other fruit is reported from a number of different parts of the Wenatchee district. Fortunately it was not too late to escape much of the hail loss by prompt thinning out of hail-pecked apples where they were too numerous. This was done in many orchards, with the result that it is believed no actual damage will occur, unless hailstorms are repeated. There has been a period of hail breeding weather for the last month or more, but this has now seemingly cleared up.

Cattle Ranch To College

Russell Doubleday Copyright by Doubleday & McClure Co

The first time we met John Worth, the leading character in this story, he was taking an active part in preparing the little frontier village of Bismarck, N. D., to withstand an Indian attack. We next saw him playing the part of a man, although he was only 12 years old, in defending the village when the warriors appeared.

After the Indians were repulsed by the frontiersmen under the leadership of Jim McKenzie, the sheriff, and order was restored, Mr. Worth, John's father, set out for the north to search for outcroppings of coal, he being a miner as well as a freighter. During his absence, Mrs. Worth felt many misgivings owing to the dangers that confronted the wilderness traveler, but bravely assumed responsibility for John, his brother Ben, aged 10, and the baby. Mr. Worth had not been gone many days when he returned, clothed only in an Indian blanket and a pair of worn-out moccasins. He had been the victim of a thieving party of redskins who had taken all his clothing, leaving him naked on the prairie, where early winter winds would have brought certain death but for the friendliness of an old Indian whom he had once befriended. This old warrior's blanket and moccasins saved him.

It was not long, however, before he was on the trail again and when he came back in the spring he reported that the Indians were becoming more and more hostile toward the whites, and that it would not be safe for any mining expedition to venture away from the village for some time yet.

It was over a year before Mr. Worth was able to lead the mining party to a mine that he had discovered. It was a great day for the boys when the wagon train started across the wild prairie, but the first few hours out brought an experience that they long remembered. They rode away from the party for a swim in the river, and when they came back to where they had tied their horses they found them gone. Afoot they started after the outfit, now miles ahead and it was late at night when they wearily dragged themselves into camp and went to bed after a suppor of cold beans and coffee.

After considerable traveling the party reached its destination, and the boys looked with some dismay upon the dug-out that was to be their new home.

CHAPTER V.

In a Mining Camp.

"More like a tunnel with a porch to it, I should say," said John, as they approached the "dug-out."

Indeed, the Worths' new home was an unprepossessing abode even after the familiar furniture was in position, the bunks made ready for use, and a fire built in the fireplace.

As its name showed, it was merely a hole or tunnel in the slope of the hill, with a small log house built out from it. But though it was not luxurious, it was warm in winter and cool in summer, the earth protecting it from extremes of both heat and cold. The bare ground packed hard served for a floor, and the fireplace was set far back in the underground portion of the room, its smoke outlet being a chimney of sod projecting through the roof.

Into this new and strange dwelling the household goods were carried, a fire was built, and in a short while the place began to assume the appearance of a home. While this was being done, the men looked up their own habitations, and found that other dugouts, not so large or well finished but fairly comfortable, were all ready for occupancy. The mine had been opened already, and the workmen had previously constructed these huts, half caves, half houses, for themselves and for the "boss'" family.

It was all a new experience for the boys, and they investigated everything with great interest. The idea of living in a hole in the ground struck them for quite a while as very funny, and they made jokes without end about it to each other.

The wagons had been placed in the wide creek "bottom"—the space cut out of the bank by the current, which had since retreated to its present narrow channel. This "bottom" for years and years the stream's bed, was well supplied with rich alluvial soil, and was in consequence luxuriantly covered with fresh grass and vegetation of all kinds.

"I tell you, Jack," called Ben, when the boys scrambled down the steep path to the creek, "this is something like. Why, I can see bottom—and I declare, if I didn't see a fish sneak out of that rooty place there."

He hopped on one foot and then on the other in his excitement, and then, somehow—neither he nor John could ever explain it—he suddenly found himself splashing in the clear stream. John caught hold of his heels and dragged him out face down. His head had scraped the soft bottom and his nose had made a beautiful furrow in the mud.

"What were you trying to do?" inquired John, as soon as he could get his breath. "Catch the fish in your mouth?"

When Ben turned, spitting mud and digging out his nostrils, John almost exploded with laughter. "Maybe you think it's funny," spurted the younger boy, "but wait till you come to make a mud scow of yourself; then you won't laugh quite so much."

John struggled to suppress his mirth, and after a while succeeded—as long as his brother's mud-be-splashed visage was not in sight.

Face washed and good humor restored, the boys wandered further down the stream on a trip of discovery. New delights opened at every turn. A mile or so below the camp a beaver dam was found, and as they drew near, one of those clever, industrious little beasts shot down the slide they had constructed, with a kerflop into the pool. Here was sport, indeed. The boys wondered how many of the curious animals the brown, mud-plastered, dome-shaped houses contained. The doors to these houses were under water, and only the second story was above its level.

"I tell you what," said John, "we'll have to catch some of those beggars. Their skins are worth money." And so they vowed to remember the spot and capture some of the inhabitants of this semi-submarine village.

A little further along they came to a clearly marked path, the edge of which (the center was beaten hard) was indented with small hoof prints of deer and antelope. They saw, too, the cushioned print of the great prairie wolf. Evidently this was the haunt of game of all kinds.

On the way back the boys had little leisure to examine the paradise they had discovered, for the sun was sinking fast and they had wandered further than they realized. An inviting pool was noted, however, that would serve for a swimming hole, and Ben unhesitatingly dubbed this "plumb bully." John prevented him from plunging into it right away only by main force and the reference to his ducking, but he could not keep him from taking off his moccasins and wading in whenever an opportunity occurred.

As they neared the camp the last rays of the sun glinted down on them. The preparations for the evening meal were in full swing; the clatter of tin dishes, mingled with the clatter of tongues, and the smoke pouring from the sod chimneys bore a most savory odor that made the boys realize they were hungry.

"I wish we had a rifle," John was saying. "We could have got one of those ducks we saw down the creek for supper."

"Well, I'm going to have one, and a repeater, too," returned Ben. "I'll have one if I——"

"Look out!" yelled his brother, interrupting him. At the same moment he jumped to his side and pulled him violently back. Ben almost fell, but his brother held him up and dragged him still further.

"Look!" he said, breathless with excitement.

Ben's eyes followed the direction of his pointing finger. There in the trail on which they had been walking, on the exact spot where he had been about to plant his bare foot, lay a big diamond-backed rattler, asleep in the last rays of the setting sun.

"Phew! that was a close call," exclaimed John. "You want to keep a sharp lookout when you go barefoot. I can't watch out for you all the time."

The younger boy, pretty badly scared put on his moccasins without delay and kept his eyes on the trail after that. The rest of the way was covered in almost absolute silence, for the escape had been a narrow one, and both were sobered by it.

The plain, wholesome supper over, the boys were glad enough to turn in, and though the bunks were anything but soft and the surroundings unfamiliar, the exertions of the day before and the hardships of the night preceding it put them to sleep in short order.

It was not long before the whole camp was wrapped in slumber. The stock had been allowed to run free, it being well known that they would not stray far from the good feed that the creek bottom afforded. All was silent without and only the heavy breathing of the sleepers disturbed the quiet within. "Spuds," the dog, from time to time growled and barked inwardly as he dreamed of a fierce chase after a gopher or jackrabbit. At last even he subsided.

This absolute quiet was presently disturbed by a howl—long, wailing and dreadful—that sounded through the low roof as if the thing that caused it must be in the room itself. Ben jumped up so suddenly that he struck his head on his brother's bunk above him.

"What's that?" he cried, shaking with fear at a sound he could not explain. John, his head stuck out of the berth above, was frightened himself, and could not explain the noise.

Again the fearful wail came, this time not so distinct, but quite as awe-inspiring. The boys drew a long breath of relief when their father got up, took the rifle from the two pegs that supported it, and went to the door. His evident calmness reassured them. As he reached the door and fumbled with the latch, John and Ben heard a soft but rapid patter of feet and then his muttered exclamation:

"Plague take those pesky wolves, howling at a man's door in the dead of night."

So the boys made acquaintance with the great, gray prairie wolf at close quarters the first night of their stay afar from civilization.

In a few days the men were in full swing at the work for which they had come to this point. The boys were too young to take part in the mining operations, but even they had their chores to perform at certain times of the day, after which they were at liberty to do much as they pleased, within certain well-known limits. Their first duty on being wakened between 4 and 5 was to round up the stock and drive it in. This was not such easy work as it sounds. The journey in search of the animals was long, and was made on an empty stomach in the cold, raw morning air. Even when they were found, it was difficult to get them moving toward the camp. The animals seemed at times to be endowed with diabolical perversity, and would resist all efforts to start them running in the right direction. The mules and horses once corralled, the boys had an appetite for breakfast that a dyspeptic would give a fortune to acquire. After that hearty meal the brothers supplied the camp with wood and water and did what odd jobs were required about the home. This completed their work for the time.

After these duties were performed one morning John and Ben bethought them of the beaver village, and their spirits rose in anticipation of the sport. A full trapper's outfit had been brought to the camp. They got this out and made up a pack containing several steel traps, an ax, some fishing line and tackle in case a good pool was encountered, the always present revolvers and ammunition and a small store of food.

Though it was their first experience in trapping beaver, the boys were well versed in the theory of the business; they had never let an opportunity go by to learn all they could about such sport. So they started with a fair knowledge at least

He lost his balance and fell headlong.

of the habits and ways of the beaver whom they were to outwit. Their journey down to the dam led them along the creek, and they noted several inviting pools where bullheads and trout were likely to lurk, planning to come back and try to catch a string after they had set their traps.

Reaching the dam, they set to work. John being the elder, at once took command of the expedition. "You chop down some brush," he ordered, "while I go over and punch a few holes in the dam. These little beggars know a thing or two and won't run into an uncovered trap."

"What do you want to cut down brush for?" questioned Ben, as he shouldered the ax and prepared to obey.

"Why, you see, when I break the dam the water will rush out and show up the entrance to the houses; then after we go away the beaver will get to work to build it up again, and will go for the brush you have chopped down and get caught in the traps we will set in it. See?"

Ben's eyes danced at the prospect, and he raced off to do his part.

The boys were soon out of sight of each other, and John busied himself on the top of the dam with a strong stick, poking holes ruthlessly through it. He found it firmer than he had expected, and it took all his strength and skill to tear it open. He pushed his stick in vertically, in order to get a good purchase, and, encountering an unexpected obstacle, put his whole weight into the thrust. All of a sudden the obstruction gave away, the stick sank down till his hands struck the ground, he lost his balance and fell headlong into the deep part of the stream.

The water was well over his head, and after a struggle he began to realize that he was in a nasty situation. The dam was composed mostly of slippery mud, which gave him no hold, and burdened by his soaked clothing, he could not swim to the bank. The water was icy cold, and he felt almost numb at once. He called to Ben, but could not make him hear. Then he sank beneath the surface.

Again he went down, but he kept his presence of mind and struggled with might and main to gain a foothold on the slimy slope. In spite of his efforts to keep on top, he sank a third time, but this time barely below the level of his eyes. His work on the dam had accomplished its purpose and the water was rushing out through a leak, so that the depth was decreasing. He realized that if he could keep up a little longer he would be all right.

Again he sank, too tired to do more, but this time was able to keep his mouth above water by standing on tiptoe and stretching his neck to its fullest extent.

Before long the water had receded so much that he could wade ashore, though at times his feet slipped into holes that let him down until he was entirely under water. Reaching the bank, he dragged himself up and lay down flat, for the time quite exhausted.

He was more breathless than hurt, however, and in a short time was able to get up and crawl over to a sunny spot.

Ben came up presently and was inclined to joke with his brother on his mishap; but after John had told his story he took it more seriously.

The boys noted with satisfaction that the water was now so low that the submerged entrances to the beaver houses were visible. They, therefore hastened to place their traps in the brush that Ben had cut. They then moved up the creek to the fishing hole they had noted, to await developments and at the same time try their luck at fishing. Ben took the line while John stripped off his water-soaked clothes, hung them up to dry, and then lay down in a warm, sunny spot. It was late in the fall and the wind proved too searching for comfort in this condition, so a fire was built, by which he dried and warmed himself.

The fish were hungry and bit early and often, with the result that the pile of bullheads and trout on the bank was soon a goodly sight to behold. A few of them John cleaned and hung over the fire with a forked stick. The meal which followed was enjoyed to the full, and by the time it was finished John's wet clothes were fairly dry. Ben was for looking after the traps right away, but his bother's more experienced counsel prevailed, and they agreed to visit them at the earliest opportunity the following morning.

The first minute after the next morning's work was finished they hurried to the scene of John's accident. After considerable searching (for they had neglected to chain the traps fast to a log) they found one. In it was a beaver's foot, well provided with claws for digging, and gnawed off clean above the joint. The brave little beast had cut off his own leg to save his life.

"Well, I'm jiggered," said Ben. "If that don't beat all. Don't you wish you had come back when I wanted you to?"

"No; the beaver didn't show up till after dark, probably. Besides, there are three other traps, and there must be something in 'em or they would be where we left 'em."

They searched and searched and called each other names because of their carelessness in not making the traps fast. Finally they bethought them of the possibility of the little animals' dragging the cruel steel jaws with them to their houses, which, instinct would teach them, were their only safe refuges.

Sure enough, there were two of them dead, drowned at their own door; the third was alive and full of energy. Timid usually, the beaver when caught or brought to bay will fight courageously. Ben stooped to drag the trap and its captive out, but drew back so suddenly that his head struck John, who was also leaning over, a scientific blow on the nose. That maltreated and indignant organ began to bleed freely, and it did not console John to any great degree to learn that the little beast had turned on Ben and that he had come within an ace of having a finger bitten off by its long yellow teeth. He was so alarmed at this savage pugnacity that, without paying any attention to the rap he had given John, he still retreated, keeping his eyes on the hole. This was needless, however, for the animal was hopelessly entangled. A shot from John's revolver soon put the little creature out of its misery and enabled them to drag it out without danger.

They returned to camp, triumphantly bearing three splendid beavers. But John held his hand over his swelling nose and fast blackening eyes: he could afford to accept with equanimity all taunting references to his injured member, such as, "Your nose is out of joint," and "What a black look you have," for he had turned the tables on Ted, who had laughed at him, calling out: "Sonny, you think you're going on a beaver hunt, but you're really going on a wild goose chase."

Many more trips did the two boys make to this and other beaver villages, and the pile of salted skins grew to quite respectable proportions by the time the ice began to form on the creek.

With winter came many added pleasures and some extra work and discomfort. Paths to the mine and to water had to be

(Continued on page fourteen.)

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

IN GOD'S CATHEDRAL.

In God's cathedral there is naught but praise;
The columned firs uprise in stately trust.
And bear the azure with quiet thrust.
Their plumy capitals in light ablaze:
Below in shade the younger hemlocks raise
A pale green mist like incense smoke that must
Bear upward from repentant, yearning dust
Some prayer for pardon and for hope that stays:
The faithful ferns have spread their pleading palms.
And listen as the organ-wind resounds.
While choral birds chant sweet their holy psalms:
All passion flees and peace alone abounds.
To God's cathedral bring no jarring tone:
Heart of my soul, bow thou before the throne!
—Donald A. Fraser.

Experience Letters

Dear Mrs. Barland: We enjoy very much your department, in fact, all the paper is read with much pleasure and profit.

I am glad to hear the sentiments of the young folk and have great faith in the rising generation who, with the exception of a few, want to amount to something.

The golden rule is the great factor, I believe, that will help us to move ever upward. What calling could be more noble for young people than to fit themselves physically, mentally and morally and then settle in their own homes and raise a large family of good loyal American citizens, these in turn to shoulder the great responsibilities of life and home making, and to learn to enjoy life at its fullest and best?

Young folks, don't be afraid of responsibility, and seize every opportunity for advancement. Honor your fathers and mothers and show them you appreciate what they have done for you. Get out into the great outdoors and don't be afraid of soiling your hands, for work is one of the greatest blessings.

MRS. M. M. M., Idaho.

Dear Mrs. Barland: I am a reader of THE FARMER and enjoy it very much. I want to tell you of a wedding I attended which can be carried out by brides of small means. I have never seen or heard of one like it and I attended this one in the south about five years ago.

The bride was very eager to have a real wedding, but her father didn't have the means to give her one, so her mother suggested that she have a gypsy wedding and the idea pleased her very much. This was how it was done: They sent out small slips of paper on which was written invitations like this: "You are cordially invited to attend my gypsy wedding on June 1. Wear your gayest and brightest gingham gown and a bandanna kerchief on your head. If you can play, bring your stringed instrument with you; if you can sing, be prepared to do that.

"Be sure to be at"—give place and time and sign name.

After all were gathered they were taken in a hay wagon, with bells on the horses and with instruments playing, to the spot selected and prepared with lanterns and a bonfire, where the wedding was to take place.

We arrived before dark and had supper, which consisted of veal stew, bread and butter, hot coffee and sauce. We then played games and sang till dark, when the bonfire was lighted and the bride and bridegroom each retired with bridesmaids and best man and the parents of both, to lay aside the bandanna kerchiefs and for the bride to don instead a wreath of beautiful wild flowers and her bride's bouquet of the same kind tied with yards of baby ribbon. Two fiddles played the wedding march and they were then married by the light of the big bonfire. After this there were more games and a lunch was served about 10 o'clock of sandwiches, doughnuts and the wedding cake, with coffee. Then there were more games and music till 12 o'clock, when the bride and groom opened the packages containing the wedding gifts, thanked the givers and the gypsy wedding was over and it cost only $10. MRS. B. LEYDE, Oregon.

Family Circle Men

Dear Mrs. Barland: I have been a reader of THE FARMER for many years and the longer I read it the more newsy it gets. I am a farmer and a bachelor, but I enjoy reading the skits and spats of the boys and girls who write letters for the Family Circle. Your advice to them should be pleasing to all parents who look upon life and its dangers as they should.

I think that parents of this day need a good deal of advice, too. To turn children out from the home ungoverned and undisciplined is like planting one seed of mustard in a field; in a few years the whole field is foul.

As to the smoking question and any one having a right to smoke, there is no right about it, but a thousand wrongs—it is all wrong.

There have been some stones thrown at bachelors in the letters from time to time. I don't think any man is really afraid to get married, but there are too few girls who will make good farm wives. A good, bright farmer couldn't be happy with a wife of the so-called flapper sort. She would want to be going somewhere all the time and, in fact, this kind of a girl is too expensive for the wife of a farmer.

I have had many families living on my farm and I have had some very poor housekeepers among them, and, of course, some good ones. C. V. E., Wash.

Family Circle Boys

Dear Boys: The following poem was sent to me with the comment that it expresses the feelings of many young men. It is called "The Unattainable" and is taken from "Life." A. W. B.

Sam's album was filled with pictures of belles.
Who had captured his manly heart.
From the "Fairy" who danced for the front row swells.
To the maiden who tooled her cart.

But one face as fair as a cloudless dawn
Caught my eye, and I said "Who's this?"
"Oh, that," he replied with a skillful yawn,
"Is the girl I couldn't kiss."

Her face was the best in the book, no doubt.
But I hastily turned the leaf.
For my friend had let his cigar go out,
And I knew I had bared his grief:

For caresses we win and smiles we gain
Yield only a transient bliss.
And we're all of us prone to sigh in vain
For the girl we couldn't kiss."
—Harry Romaine.

Dear Mrs. Barland: I am an interested reader of the Family Circle and I think it the duty of all of us to help to make it more and more interesting.

I am a boy of 16 and live on a five-acre farm with my father and mother, who are getting old. I started high school last fall but quit in March because I saw I was needed on the ranch, as it is our only source of living.

When I started high school my intention was to become a baseball player, although I always liked to farm. But as time passed I got to thinking; a ball player is no help to the world except to furnish amusement to some people and a farmer is indeed a help to all, as we must all have food in order to live. So I have decided to help to feed the nation instead of helping to amuse it.

I think that more boys should go in for farming. So many go to college and high school to get an education that shall fit them for different lines of other business than farming. The world needs more farmers to supply food for the world.

I will tell you my experience with smoking. When I was about 10 years old, like lots of other kids I got to smoking and kept it up till we moved to our present home and I started to school. There I learned that there was a rule that no boy could play on the baseball team who smoked, and as I loved to play baseball I gave up smoking and have not touched tobacco since, and that was four years ago. It is my intention never to use it again, as I am old enough now to realize what it means to be a smoker. I am very thankful for the rule forbidding smoking for the ball team and I hope many other boys may be helped in like manner.

As for girls smoking, it is my opinion that those who smoke are not worth talking about. E. K., Washington.

Pickle Recipes

Mixed Pickles—One quart of very small white onions, one quart of very small cucumbers, two quarts of string beans, three quarts of green tomatoes, sliced and chopped very coarse; one head of hard white cauliflower, torn into small pieces; one medium-sized head of hard white cabbage, chopped coarse. After all this is ready, mix through all this one-half cup salt and set away for 24 hours.

Then mix together six red peppers, chopped coarsely, four tablespoons of mustard seed, two tablespoons of celery seed, two tablespoons of whole allspice, two of cloves, one large cup of sugar, two-thirds cup of best ground mustard. After 24 hours drain the chopped pickles and stir the spices and the chopped peppers all together, cover with best cider vinegar and cover and set on stove to simmer till tender. Stir to avoid sticking. A. W. B.

Tomato Catsup—Very fine. Cook one gallon of ripe tomatoes tender, strain then and cook again until they are thick About 15 minutes before taking off put into a muslin bag a small level teaspoon of cayenne pepper, one tablespoon of mustard seed, one tablespoon of whole allspice, one-half tablespoon of whole cloves, tie securely and allow to cook and at the same time add a heaping tablespoon of sugar, one teacup of vinegar and one level tablespoon of salt or a little more to taste. Bottle or put away in sealed jars. A. W. B.

Mustard Pickles—Two quarts each of green tomatoes and cucumbers, two bunches of celery, two quarts of small onions, two cauliflowers, three quarts vinegar, five cups sugar, one cup of salt, one quart of water, two cups flour, two tablespoons of turmeric powder, one small spoon of dry mustard, one can prepared mustard. Put all together except the flour in preserving kettle with water enough to cover and cook until tender, then add the flour mixed smooth in water and allow to boil up till it thickens and remove and put in bottles and seal. MRS. W. R. L.

Cucumber Relish—Twelve large cucumbers, three large onions, a little salt, two cups vinegar, one cup sugar, one tablespoon of mustard seed, one teaspoon each of celery seed, ground pepper and turmeric powder. Peel and slice the cucumbers and onions, sprinkle the salt over them and let stand over night; in morning drain them well and put into a granite pan with the vinegar and all other ingredients, bring to a boiling point, then bottle and seal while hot. Do not use ground mustard.—Mrs. L. S. H., Idaho.

Stuffed Peppers—Take two dozen green peppers and extract the seeds by making a slit on the side or cutting a round piece from the stem end, making of it a little cover which can be replaced when the pepper is filled and may be held in place with a toothpick. This will keep the peppers whole.

Pour a strong brine over the peppers and let them stand 24 hours, then take them from the brine and drain and soak them in clear water for a day and a night. Pour off this water, scald some vinegar into which put a small piece of alum and pour over the peppers and let them stand for three days. Prepare a stuffing of two hard heads of white cabbage chopped fine, seasoned slightly with salt and a cup of white mustard seed; mix well and stuff the peppers hard and full. Fasten on the covers, place them in a stone jar and pour over spiced vinegar scalding hot and cover tightly.

Peppers made this way are good and look so pretty, green or a beautiful red. I kept mine nearly a year just in a glass jar with a common cover. I found that peppers stuffed from the stem ends are easy to handle, do not break when stuffing.

Dill Pickles—Said to keep till used: Use fresh, crisp cucumbers, any size or all sizes, wash and pack in a crock or keg. To each gallon of pickles add one pint of salt. Put on dill, all but the root, two inches thick and weight well, so they will make their own brine. When ready for use freshen to taste. I use two fresh waters and give them two days' soaking. Pour over weak vinegar, hot or cold; if hot is used they will be ready for use sooner.—(A French recipe.)

Just Folks

Saying adds to seeing.

Company manners leak out.

Weakness can be capitalized.

Neighborliness modifies beliefs.

Waiting for happiness is a poor job.

The highest benedictions come from the lowliest lives.

Is rapid progress the best kind of progress?

What appears to be rapid progress may be only the visible result of years of foundation building.

If years of preparatory work have not been done, rapid progress means a sandy foundation.

Is Henry Ford the man for president? Does he possess the brain and heart needed in the White House?

During a recent trip through the country I found no subject that would arouse discussion more quickly, or a discussion over which persons would become more heated.

It is well to remember that different political conditions call for different presidential timber. The man who guides wisely may be as valuable as the great doer of things.

A statue of heroic proportions in the Metropolitan museum in New York forced upon me a new interpretation of bringing about world peace. A masterful craftsman, almost a giant, with hammer upraised above his head and with half a dozen swords resting on his left arm was beating them into plow shares, the lower portion of the swords already being hammered into a share.

The only inscription on the statue was the scriptural prophecy—you yourself must interpret.

Those swords were being beaten into the plowshares by the irresistible forces of brain and arm. The foundation industries of the world, rightly directed, are the only forces that shall banish wars and bring peace to all the world. It is not peace manifestoes, but downright honest, earnest and masterful work, which makes home life possible, that can solve world troubles. E. A. S.

Her Grandmother's Wedding Ring Transformed

Add 5% for tax

Grandmother's golden circlet—with its beautiful sentiment and wealth of romance—will be used to plight her troth! But it will be a modernized ring—the original gold band overlaid with platinum and exquisitely carved, at a cost of $15; and to make it more beautiful, flashing, blue-white diamonds, at $5 for each stone—will be set to symbolize each year of wedded happiness.

Our Free Booklet, "THE LUCKY WEDDING RING," tells how old rings may be modernized—and also illustrates all the beautiful new fashions in wedding bands. Send for your copy today—it's FREE Mailed in a plain sealed wrapper.

High Points in News of the Week

Gravely ill with broncho-pneumonia, President Harding was battling for his life in San Francisco, according to Tuesday morning's news. The five physicians attending the chief executive let it be known that they have used the word "fight" advisedly, adding, however, that Mr. Harding was "well adapted" from a temperamental standpoint to make the "fight" a strong one. "We know when the fight commenced," said one of the attending physicians, "but none of us can tell when the objective will be reached."

The entire California program has been cancelled, President Harding's illness beginning with an attack of ptomaine poisoning on the transport Henderson before arriving in Seattle.

For the first time an American president has stepped on Canadian soil and spoken to a Canadian audience. Realizing the significance of the occasion Thursday of last week the people of Vancouver gave him—Warren G. Harding—a reception that was impressive in its enthusiasm.

The president himself frankly admitted that neither he, Mrs. Harding nor the members of his party had been prepared for such a reception and declared that he regarded it as "new assurance that the United States and the Dominion of Canada will go along hand in hand and side by side toward fulfillment of the destinies of the two great democracies."

Speaking at the luncheon, he declared "the United States and Canada are doing more for human kind by the exemplification of neighborly friendship than any other two communities in the world."

* * *

As the presidential party were returning to Seattle from Vancouver, B. C., Friday morning, their ship, the navy transport Henderson, narrowly escaped sinking the destroyer Zellin, one of the escort ships, which, blinded by fog and battling with strong currents in the channel off Port Townsend, Wash., was thrown off its course and into the path of the Henderson. Both engine rooms of the Zellin were flooded, but all on board were safely taken off.

* * *

The chief feature of President Harding's visit to Seattle was his speech discussing the problems of Alaska. The president declared he had found that Alaska "is all right and is doing well." He added: "There is no need of government-managed, federally-paid-for, hothouse development. There must no reckless sacrificing or resources which ought to be held permanent in order to turn them into immediate profits. Where there is possibility of betterment in the federal machinery of administration, improvements should and would be effected. But there is no need for sweeping reorganization." He recommended more restriction on salmon fishing, the territory's greatest industry, while restrictions with respect to the utilization of the forests might well be lightened. Development of Alaska's coal mines must await time and the normal urging of economic conditions, he submitted, but the government should do whatever is necessary to encourage leasing and development of oil lands.

Other conclusions presented by Mr. Harding were that generous appropriations should be made for road building; that the federal government should be more liberal in encouraging the technical, scientific and demonstration work of the agricultural agencies, and that the government should retain ownership and operation of the Alaskan railroad.

The announcement of the president's attachment to the conservation idea is regarded as the first concrete result of his long journey into Alaska.

* * *

After nine months of haggling, the peace treaty with the Turks has been signed. How long it will last no one can forecast. It represents an amazing triumph for Turkey and the humiliation of Europe, is the comment of A. G. Gardiner, the well known editor of England. Turkey was one of the chief criminals of the war. Her treachery prolonged the war two years and cost the allies millions in money and hundreds of thousands of lives. The brunt of the war with Turkey fell on England and the complete defeat of the Turks gave hope that the prolonged infamy of their rule in Europe and the oppression of the Armenians and other subject races in Asia Minor and at last ended.

But this is all a dream. Turkey rises from defeat a rehabilitated and more securely entrenched nation than ever before. Her territory in Europe has been given back, Constantinople has been restored and Asia Minor is once more her own. Germany lies bleeding to death, but the unspeakable Turk rises refreshed from defeat, like a solitary hero of the war.

Farm Business and Markets Outlook

(Continued from page five.)

Prices per ton in carlots: Chicago—Choice timothy, $24@25; No. 1, 23@24; No. 2, $19@22; No. 1 light clover mixed, $19@22; No. 1 clover, $17@19; No. 1 and choice alfalfa, $16@25; midland prairie, $17@20; rye straw, $11@12; oat and wheat straw, $9@11.

Egg Prices Steady.

Heavy accumulations weakened the egg market early last week, but prices recovered on the moderately active demand which resulted and appear to be on a firm basis.

Butter Market Scores Advance.

Limited offerings of good butter insufficient to satisfy the demand and higher prices asked for foreign goods have forced the butter market higher. A material change downward is not probable. Production reports show a small decrease in the make, although weather and pasture conditions are excellent for a heavy production of butter. Storing of butter is going on freely, with accumulations at the four leading markets rapidly catching up with those of last year.

Because of firmer foreign markets, importations of butter were smaller last week, only about 1500 casks arriving at New York city from Denmark, Holland and Esthonia.

Prices on fresh butter on July 25 were, 92 score: Chicago, 39c; New York, 41c; Boston, 41c; Philadelphia, 41 1-2c.

Cheese Prices Lower.

Trading was very quiet in the cheese market last week.

Prices for No. 1 American cheese on July 25:

CHICAGO—Twins, 21 1-2@22c; single daisies, 21 3-4@22c; double daisies, 21 1-2 @22c; longhorns, 21 1-2@23 1-4c.

Fruits and Vegetables.

Potato prices continued to decline last week. Carlot shipments are considerably lighter than at this time last year, but are practically up to normal when compared with previous years. In addition, the supply of home-grown potatoes in the northern states is increasing so that the market for shipped-in potatoes in narrower than a month or two ago. Irish cobblers are quoted at $1.25 to $1.50 and Kansas Early Ohios at $1.25 to $1.35 per 100 pounds on midwestern consuming markets.

The movement of new crop apples is increasing rapidly, with shipments in the week ended July 21 of 910 cars, compared with 639 cars in the corresponding week last year. Prices have declined sharply and Yellow Transparents are quoted at $1.25 to $2 per bushel on the Chicago market.

LATEST QUOTATIONS.

PORTLAND, Ore., July 28.—Cattle—Choice steers, $7.50@8.00; medium to good steers, $6.75@7.50; fair to medium steers, $5.75@6.75; common to fair steers, $4.75@5.75; choice heifers, $5.00@5.25; choice cows and heifers, $4.25@4.75; medium to good cows, heifers, $4.00@4.25; fair to medium cows, heifers, $3.00@$4.00; common cows, $2.00@3.00; canners, $1.50@2.00; bulls, $3.00@4.00; choice dairy calves, $7.50@8.50; prime light calves, $7.50@8.50; medium light calves, $7.00@7.50 heavy calves, $4.00@7.00.

Hogs—Prime light, $8.75@9.25; smooth heavy, 230 to 300 lbs., $7.50@8.75; smooth heavy, 300 lbs. and up, $6.00@7.50; rough heavy, $4.50@6.00; fat pigs, $8.50@8.75; feeder pigs, $8.50@8.75; stags, subject to dockage, $2.50@5.00.

Sheep—Choice valley lambs, $10.50@11.00; medium valley lambs, $9.50@10.50; common valley lambs, $7.50@9.00; cull lambs, $6.00@7.50; light yearlings, $7.50@8.00; heavy yearlings, $6.00@6.50; light wethers, $5.50@6.00; ewes, $1.50@5.50.

SPOKANE, July 28.—Cattle—Prime steers, $6.75@7.25; good to choice steers, $6.25@6.75; medium to good steers, $5.50@6.25; fair to medium steers, $5.00@5.50; common to fair steers, $4.25@5.00; choice cows and heifers, $4.75@5.25; good to choice cows, heifers, $4.25@4.75; medium to good cows, heifers, $3.50@4.25; fair to medium cows, heifers, $2.75@3.50; canners, $1.50@2.50; bulls, $2.75@3.50; light veal calves, $7.00@8.00; heavy veal calves, $6.00@7.00; stockers and feeders, $4.00@5.25.

Hogs—Prime mixed, $8.50@8.75; medium, $8.25@8.50; heavies, $5.50@7.75; fat pigs, $8.25@8.50; stockers and feeders, $8.00@8.25.

Sheep—Prime lambs, $9.50@10.00; fair to medium, $8.00@9.00; yearlings, $6.00@7.00; wethers, $4.00@6.00; mutton ewes, $3.00@5.00.

THE GRAIN MARKET.

SEATTLE, July 28.—Wheat—Hard, soft and western white, $1; hard and soft red winter, northern spring, western red, 97c.

Grain futures: Wheat—Hard white, Bluestem, Bart, July, $1.03; August, $1.02; September, $1.01; soft white, July, $1.02; August, $1.02; September, $1.01.

Western white, July, $1.02; August, $1.02; September, $1.01; hard winter, July, 95c; August, 94c; September, 93c; northern spring, July, 95c; August, 94c; September, 93c; western red, July, 94c; August, 93c; September, 92c.

Can you afford to Waste what other home builders are SAVING?

Get this Free Portfolio showing pictures of Fenner Homes and Plans

The Fenner method of building is saving money for home builders everywhere. Factory Cutting eliminates waste, lessens cost of materials and labor, and gives you the benefit of carload freight rates. You benefit by the wholesale methods of handling.

A Better Home

In addition to saving you money, the Fenner factory-cut method insures you a better constructed home of better materials. You get the pick of the finest lumber, all cut to perfect fit. It makes construction easier and much faster. Factory cutting is the same principle used in building steel skyscrapers. It is the modern, efficient method of building.

Write your name and address in the space below and mail to us. We will send free portfolio of pictures and plans. We will show you how to build better at less cost.

Want a Farm?

Very likely the place you wish is offered at a reasonable price on our "Want Ad" page. Why not look and see?

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Have you ever noted the loss of amiability, the crankiness, the quick temper and the lassitude of a friend who has violated the rules of right living by staying up half the night, dancing a dozen miles and eating a big meal of unnecessary food? The morning after such foolish indulgence is marked by a charged atmosphere and the danger of a social "blowup." One should never have a night like this without bearing in mind the morrow.

Dr. Copeland.

Let me make clear at once that I would frown upon a life of austerity and foolish neglect of entertainment and recreation. "All work and no play make Jack a dull boy," but there must be temperate indulgence in social pleasures or their otherwise beneficial effect is lost in the curse of over-indulgence.

Too much of anything is a crime against nature, no matter what practice is under consideration. Too much food, too much of one kind of food, too much sleep, too much exercise, too much bathing, too much loafing, too much work—too much of anything will do harm.

One reason why country people think city folks lead abnormal lives is because the latter go to bed so late. The country is dull to the city dweller because going to bed at 9 o'clock seems terrible. In hours of sleep there is little actual difference. To bed at 9 and up at 5 strikes the city man as "unearthly." To bed at midnight and up at 8, or to bed at 1 and rising at 9—wicked hours to many a country-bred friend—is a practice which gives exactly the same period of repose the farm dweller has.

After all, then, it is not the number of hours, but the regularity of the life, the following of long-established custom, taking the usual hours and time for sleep—this is the thing which determines the well-being of the individual.

If you are in the habit of retiring at a certain time, you can not delay the matter three or four hours without suffering the effects of breaking a rule. Nothing is worse for your health than irregularity. There must be a regular time for all necessary acts, or trouble is on the way.

Choose your recreation and your social companions with the same care with which you would select your doctor or your lawyer or the stock for your farm. Don't take everything that comes along, and, above all else, don't meekly yield to the invitations of friends to do those things which are obviously bad for your health and efficiency.

Bits of Fun for Everyone

Young husband—Did you make those biscuits, my dear?

His wife—Yes, darling.

Her husband—Well, I'd rather you would not make any more, sweetheart.

His wife—Why, not, my love?

Her husband—Because, angel mine, you are too light for such heavy work.—Front Rank.

One Advantage.

"Which is the way to Ottawa, my lad?

"I—I don't know."

"Which is the way to Topeka, then?"

"I—I don't know."

"Well, can you tell me how to get back to Wichita, then?"

"I—I—I don't know."

By this time the drummer was quite impatient and said to the boy: "Say, you don't know very much, do you?" to which the lad retorted:

"No! But—but I ain't lost!"—Judge.

Getting Even.

Father (spanking Tommy)—Tommy, this hurts me more than it does you.

Tommy (silently)—I thought that board in my trousers wouldn't do you any good!—Answers.

Gave Him a Hoarse Voice.

"Say, Frank, you knew I was in the army, didn't you?"

"Yes, I did, George."

"Well, do you know we had horse meat?"

"How did you know it was horse meat?"

"Well, one day we were all eating at the table, some one said, 'Whoa,' and a piece of that meat stopped right in the middle of my throat."—Boys' Life.

A Fond Farewell.

Tom and Bill were late for school and were called to account for it. "What made you late, Bill?" asked the teacher.

"Please, sir, I was dreaming I was going to California, and I thought the schoolbell was the steamboat I was going on," exclaimed Bill.

"You did, eh!" said the teacher. "And now, sir," turning to the second boy, "what have you to say for yourself?"

"Please, sir, I—I was just waiting to see Tom off."—Onward.

"Come on and sit down. Kellogg's are all ready to eat"

Kellogg's Corn Flakes are all ready to serve. No trouble for little hands or mother's hands to prepare a meal where Kellogg's have won their way! No bothersome cooking, no pots to soak and scrape!

Make your breakfast of Kellogg's Corn Flakes instead of heavy, greasy foods and mark down how much better you feel; how much better you work or play. Kellogg's are satisfying and sustaining, but they give the stomach a chance to get going right!

Over a million packages of Kellogg's are made and sold every day. This means the daily use of more raw corn than a 450-acre farm can produce in a whole season.

As a special treat serve Kellogg's Corn Flakes with your favorite stewed fruit, or with bananas or other fresh fruit in season. Just great!

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

Mary Fassett's home is in the country in Whatcom county, Wash. She is 11 years old. Her birthday is August 16. Mary says she has five brothers. Their pets are eight cats and a dog.

Genevieve Gooley doesn't want the cousins and Aunt Nellie to think that she has forgotten us, and we don't think that, do we? Genevieve is 11. She will be 12 September 3. She says she likes to go to school very much and next term she will be in the sixth grade.

Aunt Nellie was happy to hear from Jesse Henderson of Yakima valley, southern Washington. Jesse is 7. He says he helps daddy with the hay. His birthday is November 27. (Aunt Nellie is going to give the penny to the Salvation Army, Jesse. Is that all right?)

Winona Evans plans to spend part of her vacation picking berries and camping at Jupiter beach, in western Washington, with her sister and her sister's friend. Winona's school closed May 18 and she went to the school picnic on the 19th. She likes to go to the pasture when it is feeding time for the little turkeys and help feed them. There are over 100 little turkeys on the Evans farm and also some little ducks. Winona is 7 years old. She has just completed the first grade. We shall expect to get another letter from her soon.

Mildred Anderson writes: "I have a nice garden. I planted beets, carrots and beans in it. When the vegetables grow large I am going to sell them. I had a nice trip to Long Beach. I am home now. Grace and I found a lot of shells on the beach. Some of the shells had barnacles on them." Mildred's home is in Wahkiakum county, Wash.

Radishes, carrots, beans, cucumbers, beets, lettuce and potatoes are all growing in Elsie Reifenberger's garden. The radishes and lettuce are big enough to use. Elsie, who is a Washington girl, is 11 years old. Her birthday is January 25. She thinks The Junior Farmer is a fine paper for children and little sister likes to read it, too.

This is our second letter from Percy Lawrence, an eastern Washington cousin. Percy passed her grade with a good general average and is ready for sixth grade work at school this fall. For pets she has four cats and a bantam hen that will soon be off with a flock of baby chicks. Percy has a garden with peas, lettuce, radishes, corn, beans and strawberries growing in it. She sends this joke: "Mamma, I want a dark breakfast," said Jimmie. "A dark breakfast! What do you mean, child?" "Why, last night you told Mary to give me a light supper, and I didn't like it," replied Jimmie.

Birthday Greetings

FRIDAY, August 3—Marguerite A. Campbell, 11 years old.

SATURDAY, August 4—Martha Ylonen, 8 years old.

SUNDAY, August 5—Lempi Lakko, 9 years old.

MONDAY, August 6—Camella Gertrude Nelson, 11 years old; Gertrude Betschart, 8.

TUESDAY, August 7—Irene Bernece Beardslee, 9 years old; Gertrude Thoni, 10.

WEDNESDAY, August 8—Magdalene Lindh, 10 years old; Anna Mantey, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Lucile Downing, Milda Holmes, Leora Jobe, Gertrude Thoni, Alfred Miller, Arthur Olsen, Bessie Moon, Sulo Laine, Charles Pendergrast, Ellen Groonroos, Esther Miller, Jewel Field, Louise Roberta Scheel, Sue Eunice Mayberry, Eleanor H. Bemis, Elma Henson, Ethel Lucille Boawn, Mildred Eaton, Esther Walter, Vina Kimm, Alma Butorac, Ruth Davis, Antoinette Davis, Alma Marie Schneider, Ruth Pearson, Bernice Jones, Marguerite Hamilton, Linnie Gammon, Helen Smith, Randall Meyer.

BEDTIME STORIES

By THORNTON W. BURGESS.

CHATTERER DOES SOME SPYING.

Chatterer, the red squirrel, watched Jenny Wren out of sight, and all the time he appeared to be in a brown study over something. You know, Jenny had been gossiping. And Jenny had said that there were six of them! He shut his eyes and tried to picture six eggs in his mind.

"I must have a look at this bully and his wife," thought Chatterer.

Later in the morning Chatterer visited the old orchard quite as if he had nothing in particular on his mind. He jumped from one old apple tree to another, and every time he came near a nest he came in for a round scolding. But he didn't mind this. He was used to it. He scolded back, and to have heard the noise you would have thought that a dreadful quarrel was in progress, when really it didn't mean anything at all.

But Bully the English sparrow and his wife, who had moved out from the city, didn't know this, and they promptly bustled out to see what was going on. Bully noticed right away that Chatterer didn't offer to go very near any of the nests, so right away he made up his mind that Chatterer was a coward.

"If he comes over here I'll show him what is what!" boasted Bully, and strutted up and down for Mrs. Bully to admire his bravery.

Now, Chatterer was far too sly to get into needless trouble. When he saw the size of Bully he grinned in contempt. He wasn't afraid of a little fellow like that. Not much! It was going to be easier to get those six eggs than he had thought. Still, it was foolish to make more trouble than was necessary. Even a little bird could hurt sometimes when thoroughly angry, and then, again, birds had such an uncomfortable way of helping each other. Somehow he had a feeling from what Jenny Wren had said that the other birds

"If he comes over here I'll show him what is what!" boasted Bully.

would not help Bully if he got into trouble, but they might, and it was a great deal better to wait until the coast was clear.

So Chattered kept away from the house of Bully the English sparrow, but all the time he was watching all that Bully and Mrs. Bully did. You see, he was planning in that cunning brain of his to try for those eggs when Bully was away from home, and so he was learning by watching just how Bully spent his time.

That night Chatterer chuckled as he curled up in his snug bed. "Tomorrow," he said, "I will dine on eggs—six eggs! Um-m-m, I can almost taste them now!"

(Copyright by J. G. Lloyd)

Cattle Ranch to College

(Continued from page ten.)

dug in the early morning through the snow that had drifted during the night, and this work was added to the boys' regular tasks. The drawing of water had now become more difficult, for a hole had to be cut in the ice every time. Gathering wood, too, was not easy, since it was necessary to burrow for it through the white blanket of snow.

One of the men of the camp was a Swede called "Yumping Yim," because of his racial inability to pronounce the letter "J." He showed the boys how to make snowshoes or skis, long strips of wood curved up at the front, the bottom slightly concave to give a purchase on the crust and prevent them from slipping sideways, the top convex and rising slightly from toe and heel to the center, where the foot rested. The boys soon became proficient in the use of these and sometimes traveled considerable distances on them.

Exhilarating trips they were, over the crusted snow, when swift, breathless slides were taken down the hills, and skimming jumps from one level to another. It was on one of these trips that John and Ben saw for the first time a herd of buffalo, their great, brown, closely-packed bodies looking like an undulating sea of fresh earth against the whiteness of the snow. With them were large numbers of the antelope, these weaker animals profiting by the ability of the powerful buffalo to break into the drifts and uncover the scanty herbage.

The boys skimmed back to camp, and soon all the men formed themselves into a hunting party. Luck was with them. The whole party crept softly up, using every bit of cover that could be found. Then there was a whispered consultation, rifles were leveled, Mr. Worth kicked a lump of snow as a signal, and five guns barked out together. John and Ben dashed forward in wild excitement to find three antelope lying dead. Without stopping, the hunters pressed on after the flying animals, and by nightfall a row of antelope hung high up against the log portion of the dug-out. Since the boys had no rifles of their own and the family Winchester was in use, they had to be content with long shots with revolvers.

During the excitement following one of the volleys, Ben, who had lingered behind, saw what he thought was a wounded animal. He quickly raised his pistol and fired. As he did so, the figure rose and stood upright. It was Charley Green. His winter clothing, like that of the boys, was made of2 deepskin, his cap of the pelt of the muskrat—even his hands and feet were covered with deerskin, soled with buffalo hide. The deception had been complete, all too complete, Charley thought, when he heard what a narrow escape he had had. Ben shivered when he realized what might have happened, and registered a mental vow to let any future deer get away rather than run the risk of its being deer only in hide and man beneath.

The boys had learned to cut out and make their own winter deerhide clothing, caps, shirts, mittens and "packs," or boots, soled with buffalo hide, hair side in; so they always had plenty to do when indoors. Most of the days were spent on their skis. They learned many new things and many ways of getting along under their new conditions. For instance, a snow house had been dug in a big drift which extended out over the ice-covered creek, and a fire was built inside which speedily melted a hole through to the water. It was so much warmer under the blanket of snow that this did not freeze over. Through it the boys drew the supply of water and caught many a fine string of fish.

The long winter evenings were spent around the big fireplace, where the men made or patched clothes, told stories, played cards and smoked. The camp was cut off from the world by the miles and miles of deep white snow which overspread the land in every direction. There was no danger from Indians, for even they could not move under difficulties so insurmountable. Wolves nightly came down from the hills and left their footprints on the snow about the house, and especially under the row of frozen deer which swung on a high support—the winter supply of meat killed after freezing weather set in. Both night and dag the coyotes howled and answered each other from the high points round about, with their wuh, wuh, wuh-aou-u-u-u-u-wuh-wuh. On moonlight nights the scene from the front door was entrancing. The wide, white valley stretched up and down as far as the eye could see, and the reaching white ridges of snow and utter silence suggested illimitable distance. When the wind blew, the fine snow slid along the encrusted surface, making a noise like hissing water on a pebbly beach, while the finer particles, rising in the air, created lunar rainbows of surpassing beauty. Here indeed was loneliness, loveliness and solemn immensity.

(To be continued.)

Spokane Valley

(Continued from page three.)

so, but these two were large growers and were largely responsible for the break in the local market.

"The pool has handled 61,000 crates, 41,000 shipped out and 20,000 on the local market. As near as we can estimate, there were 20,000 other crates from the valley marketed here and these berries caused the price to break from $2.50 to $1.50 and $1.35 and even as low as $1.25. Had the remaining 20,000 been in the pool, the market would have remained at $1.75 and $2.

"If this pool is continued to handle tomatoes and other vegetables it will mean practically the operation of a jobbing house in Spokane by the growers. The Spokane county farm bureau is considering the same idea, and there is hardly room for two such organizations, I would think."

A. A. Kelly, a member of the farm bureau committee in charge of the work of organizing the cooperative marketing company mentioned by Mr. Peirce, explained the necessity felt by the members of the farm bureau for an organization to market farm products at a better return to the grower.

He said it was the idea of the committee that iron-clad contracts should bind the producer to market all his produce through the cooperative company. The idea of such a contract apparently did not make a hit with his auditors, though his speech was liberally applauded.

Finally a motion was made by N. Samish that the Spokane Valley Growers' union be requested to conduct the same sort of a pool for tomatoes and other vegetables as it conducted for strawberries under the management of Mr. Peirce.

"I have no authority for saying that the board of directors of the union will consent to this," said Mr. Peirce before putting the motion. "In fact, I know some of the members are opposed to it. But we can see what they say and you can meet here again prepared to make an estimate of what crops you will put into the pool. Then we can also have some sort of an agreement drawn up by that time and if the directors don't want the union to handle it, you can go in with the farm bureau."

C. J. Newar stressed the necessity of farmers having some sort of marketing organization, for he said it was rare for a man to be both a successful producer and a successful salesman of produce.

Poor Economy

To Push Raw Products on Market

"It is poor economy to sell crops from a farm in the form of raw products," according to G. H. Covey, of Toppenish, Yakima county. "It is wiser to furnish the products as near as possible on the farm instead of pushing the raw product on the market. Beef cattle, dairy cows, sheep, hogs and poultry are all used to work out my idea of selling the products of the soil, and I aim to have the increase on the place instead of selling the crops off the farm."

Feeding beef cattle in winter is a part of the scheme. Last winter he fed 70 head. Hogs are kept and at present there are 100 head of purebred Poland Chinas on the place. These are run in the orchard of his son, W. H. Covey, the tract being divided into 10-acre pastures.

"I believe in feeding on the place the grain that is grown on the farm," said Mr. Covey. "We are therefore keeping hogs and it pays to feed them out at 8 cents a pound and even at 7 cents a pound."

Chickens, Turkeys, Geese.

There are 600 head of chickens, turkeys and geese on the place. Four hundred purebred Rhode Island Reds are kept and the stock is the finest in the country. This has proved a good investment and Mrs. Covey has found that class of stock in demand.

Mr. Covey's ideas of utilizing sheep on the farm are interesting. He figures on getting range ewes in the fall and keeping them over winter. In the spring, the ewes, the wool and the lambs will all be for sale. In that way crops will be fed on the place in winter and the sheep go off the place in spring, as he does not regard it practical to keep sheep in any large numbers on the farm during the growing season.

Mr. Covey has secured 20 head of purebred Hampshire sheep and these with their lambs he is keeping on the farm. Each fall he figures to have some rams to sell and the ewe lambs will, of course, be kept in the home flock. The range ewes, which he will purchase in the fall, will be bred to purebred Hampshire rams, thus insuring good quality in the crop of lambs which go to market in the spring.

Grade Dairy Cows.

He is keeping a few head of grade dairy cows and does not figure, in his operations, to keep purebred dairy cattle as he does not care to develop the dairy line especially. He, however, said he believes that it pays to keep purebreds and on his own place is applying that idea to hogs, sheep and poultry.

As nearly as possible Mr. Covey plans to feed on the farm the hay and grain grown. "There will, of course, be some years when there will be some surplusage of hay or grain," said Mr. Covey. "There is no money in selling $1 wheat. Last year I retained 175 bushels of wheat and have fed that out to the poultry and other stock. I found that I did not retain enough, and am now having to buy. I think that even wheat can be fed to hogs and yield a profit, and it is better to do that than to sell it at the price offered.

Quick pasture is something which is needed, Mr. Covey said, and he thinks well of sweet clover and may use it to some extent in the future.

Would Eliminate Small Apples

"Ship no C grades during a car shortage" is the first step proposed by John R. Peters, orchardist of the Wenatchee district, toward elimination of small-sized and inferior apples.

Mr. Peters became noted three years ago through his persistent advocacy of radical thinning by Washington orchardists to reduce the proportion of small and inferior apples and to secure better shape and color. He has conducted demonstrations along this line all over his district and has spoken at two state horticultural meetings.

He now proposes the absolute elimination of the C grade apple altogether and claims he can prove that the grower would make more money on his crop if he raised nothing but the better grades. As the start toward the culmination of this objective, he suggests that shipment of C grades be barred by all shippers and marketing organizations during the season when cars are scarce.

Poultry and Egg

To Perfect Marketing Association

For the purpose of perfecting the organization of the Farmers' Union Poultry and Egg association, the organization committee will meet on the fifth floor of the New Madison hotel building, Spokane, Saturday afternoon, August 4, at 2 o'clock. At 8 o'clock that evening a general membership meeting will be held, with any other poultrymen interested in poultry marketing problems invited to be present.

The Farmers' Union Poultry and Egg association was formed some two months ago under the leadership of the Farmers' Union of Washington and northern Idaho, with J. Q. Adams, president of the union, serving as president of the organization committee. This organization committee, formed with a representative for each of the districts in the territory embraced by the farmers' union, consists of the following: A. W. Hoyle of Wenatchee, O. O. Groh of Clarkston, W. E. Hinshaw, Opportunity; D. F. Mitchell, Spokane; Fred Boyd, Garfield; Arthur Cox, Hay; L. S. Crossland, Grandview, and D. J. W. Murdock, Waterville.

It is the intention of this board to incorporate the association as early as possible after Saturday's meeting with a view to putting it in readiness to market the eggs and poultry of its members as soon as the contracts now being signed become effective. Contracts between the association and the individual producers become effective when the membership represents a total of 50,000 hens. There are at the present time between 30,000 and 35,000 hens represented in the contracts already signed and members of the board express confidence that the 50,000-mark will be reached in the near future.

As soon as the incorporation of the association takes place the organization board above mentioned becomes the board of directors of the association.

The state cooperative marketing law, however, requires that after incorporation a popular election by the members of the association must be held to elect members of the board. It is planned that this election of the poultry association will be held within 60 days after incorporation takes place. Under this provision the poultrymen themselves who belong to the association will have complete control of its operation and affairs.

The Farmers' Union Poultry and Egg association contemplates affiliation with the Pacific Egg and Poultry association, which is the marketing body for the cooperative poultry associations of Washington, Oregon and California, including the Washington Cooperative Egg and Poultry association, which operates on the west side of this state. S. D. Sanders, president of the association in western Washington, in a recent issue of the weekly publication of that association, calls attention of its members to the fact that the Pacific Egg and Poultry marketing organization has ceased to operate on the regular exchanges in New York and other eastern marketing centers, owing to what it considers unreasonable marketing charges. It has adopted the practice of marketing independently on what is known as the auction system, the eggs of the west being sufficient in quantity and of a quality to warrant the calling for independent bids by wholesalers.

Owing to the new system practiced by the Pacific Egg and Poultry agency, rumors have become current in the northwest that it has failed to meet the test in marketing the products of the producers of the Pacific coast states. Mr. Sanders' letter, however, and the figures cited therein, apparently deny this rumor, which certain leaders in the Pacific northwest feel to have been inspired by the speculators in poultry products in the eastern centers.

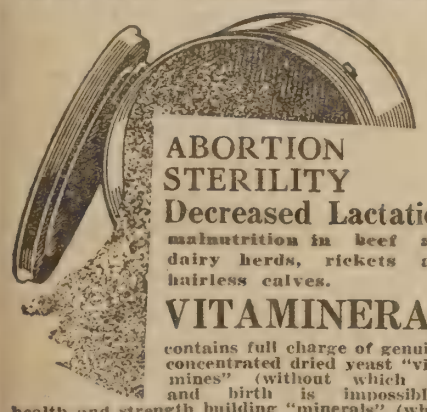
CORRECT TREATMENT FOR



ABORTION
STERILITY
Decreased Lactation
malnutrition in beef and dairy herds, rickets and hairless calves.

VITAMINERAL
contains full charge of genuine, concentrated dried yeast "vitamines" (without which life and birth is impossible); health and strength building "minerals" (which cattle do not get from ordinary natural or prepared feeds).

Vitamineral is indorsed and used by leading veterinarians, farm advisers, county agents and big breeders everywhere. Secretary Axby (Indiana State Vet. Ass'n.) has had miraculous results with VITAMINERAL in entire herds afflicted with abortion; he advises every veterinarian and breeder to use it.

Avoid dangerous, fatal contagion; make more beef; increase milk flow and butter fat; get healthy, sturdy calves.

Ask your veterinarian or write for free illustrated book "Vigorize Your Herd."

News for Breeders

RECORD OF 422 POUNDS FAT.

A good example in Washington of the longevity of the Guernsey cow is found in Neetius, one of the foundation lot of seven females and one bull that Albion L. Gile of Chinook brought out from Wisconsin in 1907. Although 20 years old, she has been producing calves regularly (and a good majority of them heifers) ever since she arrived on the farm until last winter. Now her usefulness is thought to be about over. She has an A. R. record of 422 pounds of fat.

COMPLETES SILVER MEDAL RECORD.

St. Mawes Lad's Roxie, a 3-year-old, owned by Shortley Brothers of Orcas, Wash., has recently completed a silver medal record of 597.48 pounds of fat from 8672 pounds of milk. In this herd is a senior yearling which holds a state record for the Jerseys, and there is good possibilities for other creditable records to be made in a course of time at Channel View farm.

There are three other silver medal cows in Washington that completed their record last month. They are: Gwendola Rosaires Gertie, owned by John H. Taylor of Montesano; Cicely's Golden Dawn, owned by Midfields Dairy farm of Winlock, and Glen Tana Morocco Lois, owned by Mr. T. S. Griffith of Spokane.

Wheat Growers' Board

(Continued from page two.)

tional bank, Portland; J. K. McCornack, president Union Securities company, Spokane; Governor L. F. Hart, Washington; J. G. Kelly, Walla Walla; I. M. Hunt, vice president Ladd and Tilton bank, Portland; George Phillips, expresident Retail Merchants' association, Spokane; H. F. Samuels, Wallace, Idaho; J. Q. Adams, president farmers' union, Spokane; Soren Sorenson, president of farm bureau, Ellensburg, Wash.; Paul Weyerauch, president Blalock Fruit company, Walla Walla; John W. Langdon, vice president Baker Boyer bank, Walla Walla; Ben C. Holt, Holt Manufacturing company, Spokane; William Short, president State Federation of Labor, Spokane, and Nathan Eckstein, Schwabacher Brothers & Co., Seattle.

This committee will act in an advisory capacity to the grain growers. Each man has been chosen, according to Mr. Brown, because of his sympathy for the wheat men in carrying out their cooperative marketing plans.

Wheat Conference

The call has just been sent out by J. Q. Adams, president of the Washington and Northern Idaho Farmers' union, and other officers of that organization for a conference of wheat growers and others interested in the wheat marketing situation to be held in Spokane, beginning at 10 o'clock Monday morning, August 6. The purpose of the conference is to consider the present market situation in the hope of exercising some influence in bringing about congressional legislation or other government action designed to meet the present crisis among wheat growers.

Special invitations have been sent to Senators McNary of Oregon, Brookhart of Iowa, Borah of Idaho, Wheeler of Montana, Dill and Jones of Washington, Governors Hart of Washington, Pierce of Oregon, Moore of Idaho and Dixon of Montana, Congressman Summers of Washington, French of Idaho and others particularly interested in legislation affecting the farmers of the Pacific northwest.

Both Senators McNary and Dill have gone on record as favoring a special session of congress with a view to enacting emergency legislation.

While the call to wheat growers has been sent officially to members of the farmers' union throughout the wheat-growing counties of Washington and northern Idaho, the call extends an urgent invitation to all wheat growers regardless of their membership or nonmembership in the farmers' organization.

Farmers' Market Agency

"A government marketing agency, which is possible by speedy and drastic action at a special session of congress, is necessary to save agriculture from the impending calamity," Senator Smith W. Brookhart said here in addressing the farmers' union picnic in Iowa.

"This government marketing agency will offer only temporary relief," Senator Brookhart said. "A complete remedy is found in cooperative control of production, processing, credit and marketing by the farmers themselves.

Senator Brookhart said that in 1912 the farmer received $6,000,000,000 for his products, but that the consumer paid $13,000,000,000 for them.

"I visited 15 countries in Europe and found crops everywhere better than last year and very much better in Russia. I also found the purchasing power of the people of Europe is reduced because of the Ruhr invasion and the consequent unemployment in England and Germany.

"The speculators know of these facts and have beaten the price down accordingly, but have concealed them from the farmers as much as possible, fearing from them a demand for an extra session of congress. As soon as I return to make such a demand and broadcast it over the country the press says it will not be heeded by the president."

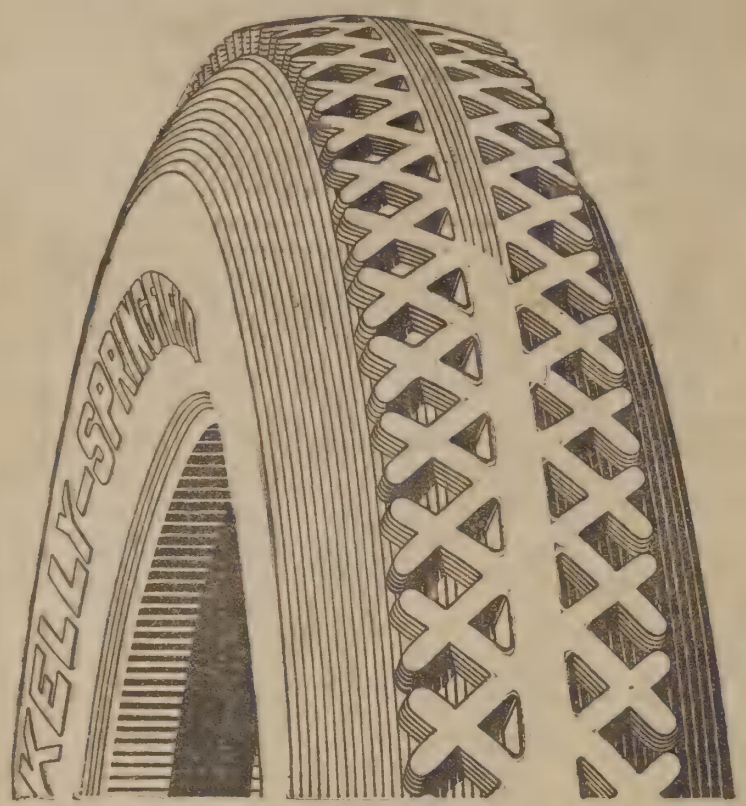
KELLY SPRINGFIELD TIRES



It costs no more to buy a Kelly

This is not an empty catch-phrase, but a cleancut statement of fact.

In dollars and cents Kelly-Springfield Tires cost no more than you are asked to pay for brands that have never borne the Kelly reputation. In some cases Kellys cost you less than you are asked to pay for unknown makes.

Kelly dealers will sell you Kelly-Springfield Tires at a price that will meet any reduction in reputable makes now or hereafter. Learn for yourself that *actually--*

It costs no more to buy a Kelly

Barreling Berries Saves Barrels of Cash

Cooperation Paves the Way for Progress Among the Fruit Growers in and Tributary to Lewis County

By GEORGE N. ANGELL

Fifteen carloads of pre-cooled fresh strawberries shipped to various eastern markets which had never before heard of Lewis county fruit; 1000 barrels of strawberries put up and awaiting shipment; a cannery which had been idle for two years in operation and employing from 80 to 100 people—with a list of accomplishments like this in one month to its credit, there is little wonder that the local branch of the North Pacific Cooperative Berry Growers intrigues the interest and commands the respect of the people of Lewis county and Chehalis. They give it an undoubted air of success.

It was about two years ago—August 21, 1921, to be exact—that the big cooperative was born at Seattle in the midst of the most disastrous berry season that the growers had ever seen, and following a series of meetings to discsus the situation, from Skagit county to Portland, Ore. G. N. Worden, Kitsap county agent, had spent considerable time with the growers of the district on the subject, and it was largely as a result of his activity that the organization meeting was called. By reason of its late start, the association accomplished nothing epochal the first season, and last year it took merely first steps by opening barreling plants at Seattle and Bellingham. This season, choosing central locations for separate units, it operates plants at Seattle, Burlington, Everett and Chehalis, and expects also to operate a cannery at Sequim, to handle the large volume of loganberries now being produced on the peninsula. In general, the success or failure of this association is expected to determine whether or not the bush and cane fruit grower of western Washington is to survive, and this story is of one branch of it which appears to be answering that question in the affirmative.

Southwest Washington Organizes.

The organization of a local in southwest Washington arose purely out of the need of growers in that district, L. G. Colyn, its president, member of the board of 24 directors of the North Pacific and one of five making up the executive committee, was heavily interested in growing berries at Onalaska, 16 miles east of Chehalis. There he and a brother, scions of a sturdy Dutch family that is still growing bulbs in Holland, had 20 acres in strawberries and were compelled last season practically to give away the fruit or let it spoil. They had milked cows for eight years, but quit, discouraged, just before the cooperative plant opened in Chehalis. The small fruit game looked good to them, as it did to others, but fields blood red with rotting berries soon greeted their sight.

"My personal experience with strawberries was such," said Colyn, "that I decided last fall it was a question either of plowing them up or of organizing an association and joining it. I don't need to give details, but wherever a grower has to market his berries independently he is sure to be held up by the retail dealer. The character of the product forces him to sell it every day, and it seems but human nature to take advantage of his helplessness and to offer just as little as conscience will allow.

Feeling thus, naturally Colyn took the stand, when the question of organization came up locally and meetings were being held, that the thing to do was to organize, and after organizing to investigate and decide whether to affiliate with the Growers, which then had no members in Lewis county, or to stand on their own feet. He was chairman of the committee appointed for the purpose, and upon investigation found that the Growers had a larger number of members in southwest Washington and that it would be almost impossible for a local association to thrive, with the North Pacific organized in its territory and competing for membership. Accordingly he went to Seattle for information regarding the "big brother," obtained it, and in January and February got the president, Dr. E. S. Barnes of Port Townsend, and the organizing manager, Carl J. Kallgren, to Chehalis for two meetings. Growers present practically all signed up; Colyn was made a director to represent the local; and since then the Lewis county local has organized further, with Colyn as president, Dr. D. T. Coleman as vice president, Mrs. T. P. Snively as secretary-treasurer and Henry Olson and T. P. Snively as directors, all from the vicinity of Chehalis.

Plant Is Leased.

Pesently the Washington Berry Growers' association of Centralia, which was a fruit and vegetable marketing organization of limited influence, disbanded for the purpose of giving its members a chance to join the North Pacific. This strengthened the latter materially, and after careful consideration it was decided to make Chehalis the center for southwest Washington business. For that purpose the plant of the Lewis County Canning association, a private corporation which had allowed its property to stand idle for two years after eight years of use, was leased for five years and a cold storage plant built for freezing barreled berries and for pre-cooling fresh ones for carload shipment. This began operation June 1, and, as previously stated, in one month 15 carloads of fresh berries were shipped to various markets, including El Paso, Omaha and Chicago, and 1000 barrels of the finest quality of frozen berries were put up. The first shipment of barreled stock went to New York city early in July, and barreling continued until July 15, with a total of about 12,000. It would have been larger had not the growers from Chehalis south in previous years found themselves without a market, and consequently held back their plantings.

Mostly Marshals, of large size, high quality and superior flavor, the strawberries of southwest Washington are particularly well adapted to barreling, and the strategic position of Chehalis points to the conclusion that it will one day be the center of an enormous business along this line. The prairie berry comes in three weeks ahead of the one grown south of Chehalis, hence with three big cold storage rooms, each 20x70 feet in size, the association can handle a tremendous tonnage from the one shipping point. Without casting any reflection on the municipal cold storage plant in Seattle, either, it may be said that the one in Chehalis has it by the heels for effectiveness of operation. Popping 20 or 30 barrels of strawberries and sugar into its arctic interior at night never sends its temperature above zero, and next morning regularly it reports back to 6 below. This matter of time required in cooling is of great importance, for berries and sugar ferment very quickly, and if fermentation even starts in the center of the barrel, freezing is thereupon rendered impossible. An interesting illustration of how the plant is designed to save the growers' money is contained in the fact that at first it was planned to barrel at Chehalis and ship to Seattle for storage. The cost there, however, would have been as much or more than in Chehalis, and in addition there would be freight charges of $2 per barrel, totaling $20,000 in five years on the estimated output of 2000 barrels annually. Freight rates east are the same from Chehalis as from Seattle, and extra handling charges are avoided, hence it may be said that one of the first things the new plant saved was a barrel of cash.

The quantity of strawberries canned was small, but a large pack of raspberries and loganberries was in contemplation, and as many Evergreen blackberries will be put up as can be marketed. The plant is well constructed and its position is advantageous for handling a large pack of this berry economically. Practically all the gooseberries grown in southwest Washington were handled here, and, while the acreage is not large, the industry is of growing importance. The association may or may not attempt apples. Under its organization plan and the state marketing act it can handle only fruit grown by members, but arrangements are being made to handle next year some kinds of vegetables, in order to spread out the "overhead" over a larger part of the year.

Market Is Strengthened.

Probably it is too early to make any predictions as to what ultimate effect the existence and operation of the North Pacific association will have on the berry business, but certain it is, from the testimony both of its officers and of disinterested, competent Lewis county observers that with around 60 per cent of the 700 acres of strawberries in southwest Washington under one control this season, the general tone of the local market has been noticeably strengthened. And by what if not by such existence and operation? President Colyn cites one illustration particularly in point. The Oregon Packing company of Vancouver bought strawberries from independent growers of the district this season, assembling in Winlock and Chehalis and shipping from Kalama. At the latter point its price was 5 1-2 cents, while at Winlock and Chehalis, within the sphere of the association's influence, it paid 6 1-2 cents and assumed transportation charges to Kalama. There is no reason to expect anything else, according to Colyn, who adds that "there is no reason, either, why this Chehalis plant should not develop into a great institution, for southwest Washington has the soil, the climate and all other requirements for raising wonderful fruit. The thing that development of the industry has been waiting upon is for farmers to find a suitable market for their product."

"Are the members pretty well satisfied?" was the question put to D. N. Wehrn, who has general supervision of all the association plants, and who was formerly in the employ of one of the biggest packing concerns in the country. "They are satisfied of this," he came back, "that if it had not been for the association they would have been selling their berries for less than the cost of crating them. I know the canning game from both sides, and I know that the farmer hasn't a chance of the cooperative association."

Example of Dairymen.

"What would the price of milk be in Lewis county now if the dairymen were not together in their big organization that is capable of manufacturing first-class dairy products, advertising them and putting them on the market? It is the same with the strawberry growers," asserts J. C. Bush of the Bee-Nugget. "A year ago, with a much smaller crop of strawberries than we have this season, the market was 'shot to pieces' and many berries were left on the vines. This year the North Pacific Berry Growers are operating the cannery, barreling and selling fresh berries by the carload, and there will be a market for every berry. The association has found markets for the farmers' berries that no individual farmer could find."

"Yes, the Growers are doing an invaluable work here, in my estimation," says T. J. O'Connor, secretary of the Citizens' club of Chehalis. "Independently the farmer can not reach broad markets, and the result is a local glut which returns him no profit at all. I consider cooperatives a necessity if satisfactory returns are to be obtained from farming."

County Agent R. G. Fowler acquiesces and Theodore Albert, district horticultural inspector, says that, while December 31 will be a much better time to answer the question of what he thinks of the Berry Growers than now, still there is no doubt that through their existence and operation this season's market has been stabilized. "One has only to recall the chaotic conditions of last season to be sure of that," he affirms.

Better Homes Lead to Better Community Privileges

By M. MINERVA LAWRENCE
Home Management Extension Specialist, W. S. C.

Community interest is only the result of the development of home interest. A splendid example of this development may be found among the women of Chewelah.

The women of this northeastern community in Washington were anxious to do something for their town, so they met and formed the Women's Civic Improvement club, the first step toward community work.

Through the assistance of the extension service of the state college the members of the club were given help in improving their own homes and later received the inspiration of improving conditions in the community.

A city library had been started, but lacked a permanent abode. Near the center of the town was a two-room house and two lots which had reverted to the city because of failure to pay taxes. It was an old place and had become somewhat of an eyesore to the people.

The idea developed among the members of the improvement club that the house and lots could be fixed up attractively and made into an ideal place for a library and park. The city authorities were approached, with the result that the property and $100 in cash were turned over for library purposes.

Plans were made for repairing the house, finishing the interior and making it into a suitable library building. A color scheme was worked out, using gray paper for the walls, ivory for the woodwork and furniture and the curtains of a light tan, figured with blue and old rose. Linoleum was used to cover the floors. One unique furnishing was the window shades made from wall paper of the same pattern used on the walls.

As the house had only two rooms, a front room and kitchen, all that was necessary was the taking out of the partition between them, leaving a room 16x20 feet for the library.

All the work of repairing and furnishing was done by the women except the taking out of the partition between the two rooms and the building of the bookcases. A local carpenter made the cases of plain finished lumber, using wall board for doors. Different women gave suitable furniture, such as chairs, library table, settee and reading table.

Chewelah city library.

The children of the community were not forgotten in the enterprise, for the women purchased a gate-leg table, cut it down, secured unpainted children's chairs and finished all in ivory to match the woodwork. This equipment is located in one corner of the library room especially for a children's nook.

Paint, floor covering, wall paper and draperies cost the club $34. As mentioned before, the city gave $100, which was added to by the Young Women's Business club to the amount of $10, while the proceeds of the open house tea held at the formal opening of the library brought in $40 more.

A schedule has been worked out among the women to care for the library during the week, so as not to burden any one of the 45 women who are members of the club. Mondays, Wednesdays and Fridays from 1 to 5 o'clock the library is open for adults, while Saturday from 1 to 5 is given over especially for the children. On children's day some one in the club prepares and gives a story hour.

The story of the Chewelah library would not be complete without mentioning the names of Mrs. Van Bennett and Mrs. F. L. Reinoehl, who have held the position of chairman and associate chairman of this community enterprise.

Not satisfied with their efforts in library building, the club women are now fitting up the grounds around the building for a park. Lumber, secured from the old outbuildings, is being made into seats and tables for picnic purposes.

What these Chewelah women have done for their community may be duplicated in many of the rural sections of Washington.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 6

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Busy Bees

Eighty pounds of honey in 10 days is the record announced by M. J. Leak of the Yakima valley for one of his hives. The bees were provided with complete but empty frames.

Mr. Leak reports better success with his bees than for several years. Last year he lost 50 stands of bees from spray poison, but this year he has not lost any.

Community Building for Entiat

Entiat is busy on a community building project, according to E. J. Murphy of the Times newspaper. The American legion post owns two lots and it is now thought probable that a hall will be erected on these lots which can be used as a gymnasium, auditorium and club room for the legion, Boy Scouts and any other organization which wishes to use it.

It is expected much of the work on the building will be contributed by the citizens.

Fruit growing, live stock and other farming interests of that section of the state doubtless will wish to avail themselves of some of the privileges of this community building.

Community spirit generally grows into a community building.

Prove Out the Market

The gooseberry is attracting the attention of the Clallam county growers. P. B. Gedelman of Blyn reports that pickers gathered 2159 pounds of berries from 475 plants on a half-acre tract and that the berries found a ready market at an Everett cannery. J. A. Thompson of Dungeness also reports that he got a total of 2410 pounds of berries from his 570 bushes on his half acre.

Just now the growers are enthusiastic over the returns, the two-year-old plants netting the owners more than $100 to the half acre. In their enthusiasm over the gooseberries, some are estimating a return of $800 an acre from the matured gooseberry plants.

Conservative berry growers in Clallam county will go into gooseberry growing on a rather small scale until they prove out the market.

Hobbies and Hobbies

Men possess all sorts of hobbies. There are hobbies that do no special good to the possessor or the community, like the miser's hobby of counting and recounting his store of gold and bonds. Other hobbies give variety and interest to community life.

There is Charles D. Tuttle of Clarkston, just across the Snake river from Lewiston, in Asotin county, who is an enthusiastic dahlia grower. On his lot of 75-foot frontage he has a collection of 125 plants that he is growing from tubers and 275 plants grown from seed. His neighbors report that he is doing wonderful work in originating splendid new varieties. Others enjoy his plants in the garden, and a throng of visitors exclaim over them at the shows.

It is not related whether Mr. Tuttle is making money out of his hobby. That he is giving much innocent pleasure to others as well as himself goes without the saying.

Tourist Crops as Well

While the Yakima valley enjoys receiving its tens of millions of dollars for its agricultural crops, it should not ignore the beginnings of its tourist crop. According to estimates made of the number of tourists that have been stopping at the Fraternal park in Yakima and at the two privately owned camps on the road to Selah this season, at least $100,000 will be left in the valley.

The government estimates that the average expenditure for each tourist per day is $5. About 15,000 persons, it is expected, will stay at the camp during the season, which would amount to $150,000, since they stay, on an average, two days each.

Tourist travel through Yakima this year is expected to be one-third more than the total for last year.

Sentiment Dominates Life

Sentiment dominates when it gets a good hold on a man's life. Here is the case of James H. Adams, the Ritzville pioneer, whose death occurred the other day.

Over half a century ago Mr. Adams took off his old gray Confederate uniform and religiously saved it for his shroud. During his life he often took out the uniform and looked at it, thinking of the time when he should put it on again for the great campaign, and at last the day arrived. Clothed in the full glory of his old habiliments, he was laid away to his final rest.

Mr. Adams was born in Pennsylvania county, Virginia, 78 years ago and served in the Confederate army throughout the Civil war. He loved the south with an intense passion and was proud that he had fought for its cause.

We are far enough away from that terrible conflict to appreciate the loyalty and the fealty to an idea which dominate men sincerely on both sides.

"Words" in Fruit Marketing

If you are a fruit grower and have not done so already, write to the horticultural division of the state department of agriculture, Olympia, Wash., for the 1923 edition of the grade and pack rules. You will be interested in the definitions given to certain words.

For instance, "mature" means having reached a stage of maturity which will insure proper completion of the ripening process; "clean" means reasonably free from dust or dirt and free from excessive visible spray residue; "well formed" means having the shape characteristic of the variety in the locality where grown.

It is well to be posted on many other words and terms in the grade and pack rules.

Lopsided Clubs

The surest way of building up a community is build up one home after another in a community. That seems to be the method chosen by Miss Lawrence in prosecuting her work as home management extension specialist of the state college, as brought out in her article found elsewhere in this issue of The Washington Farmer.

There is altogether too much attempt these days to make homes better through various homeless social institutions, such as men's clubs, women's clubs, and young folks' societies. These are makeshifts in social progress, waste much effort and produce many misbegotten results.

The home club is the basic club and a federation of home clubs can do things in community welfare.

The home club includes the man, the woman, the child and the youth. Take away any one of these constituent members of the home club and you have a lopsided club.

Present day society is simply overrun with lopsided clubs.

A county agent leader, not in Washington state, said not long ago that he was abandoning the hurrah method of interesting farmers in better farming; that meetings even with big speakers did not give satisfactory results. He was using a different method. Under his direction the county agent was making it his aim to visit as many of the homes in the county as possible, and in the home atmosphere talk over individual farm problems. This apparently much slower method was getting far better results; that the farther way around was proving the shortest way home.

Have we failed to build as we should upon the enduring rock of the family as an institution rather than erecting more showy social structures upon the sands of segregated humanity, segregated by sex, age, politics and what not of classes and conditions among men?

"Oversubscribed"

Probably the requisition made by the United States department of agriculture has been "oversubscribed" many times for 1200 bedbugs at 1 cent each for good, choice specimens delivered at an experiment station in Virginia.

The news item does not state for what particular purpose the specimens are desired.

Alfalfa as a Hay Crop

A. N. Taylor of Jamestown, Clallam county, harvested 42 tons of fine alfalfa last year from seven acres of land and sold the third crop in the field for $60. The production of alfalfa is an advantage in any dairy community, especially in western Washington, since as a hay crop it comes at different seasons from the common hay crops, and often misses the early summer rains.

Washington State Gleanings

Nearly 725 carloads will be shipped out of the Walla Walla valley, according to C. B. Auker of the Walla Walla Gardeners' association. John W. Langdon estimates the receipts at $500,000. Growers are getting 300 to 500 sacks an acre and returns will be about 2 cents a pound

BUYS 800 ACRES OF TIMBER.

The Edwards-Bradford Lumber company, Elk, has purchased 840 acres of timber east of Tweedie and Blanchard. The tract is part of the holdings of the Fidelity Lumber company, bought by A. F. Horton a few weeks ago.

The Elk company's railroad and logging operations are being extended to the headwaters of Blanchard creek to holdings in the vicinity of their recent purchases.

ACQUIRES BIG STOCK RANCH.

The 2760-acre stock ranch of P. R. Bevis and Bevis Brothers of Lewiston, located 12 miles from Anatone, in the Grande Ronde district, has been acquired by R. J. Hilton of Spokane in exchange for a third interest in 320 acres of land, 70 of it in orchard, west of Yakima.

The ranch, which three years ago was valued at $60,000, has five complete sets of farm buildings. A quantity of farm machinery and 140 head of Herefords goes with the property. The land west of Yakima is owned by the Cascade Orchard company, one-third of the stock of which is being transferred to P. R. Bevis and Bevis Brothers.

ESTIMATE CROP YIELD.

The Yakima reservation will set a new high figure for production, according to an estimate being prepared by Lester M. Holt, supervising engineer, for transmission to the federal agricultural department, notwithstanding the general decline in prices for farm produce. There are about 88,000 acres under cultivation, and the average return an acre at present prices is, according to this estimate, $80.

That this is a high average is conceded, when it is known that much of the reservation crop consists of hay, grain and other low-priced produce. Alfalfa is planted on nearly 40,000 acres, this being in excess over last year of 5000 acres, which in turn about equals the difference in potato plantings between last year and this. Last year's potato acreage was 9500, while this year there are but 5570 acres planted.

Wheat, running from 15 to probably 45 bushels an acre, claims 12,250 acres, as against 15,659 last year. There are 2500 acres planted to corn and 20 to hops. The total value of produce is placed at more than $7,000,000 by Mr. Holt, against $6,000,000 last year.

CLEANING UP POTATO BEETLE.

W. E. Johns, deputy horticultural inspector of the state, objects to the publication in The Washington Farmer of a statement that the Colorado beetle is very prevalent on the Pasco side of the Columbia river and that there are enough beetles on the Kennewick side to infest the entire district by next year; that the menace is not so much in the large fields, as the growers there are spraying and keeping the fields clean; but it is in the small patches grown for home use and in the back yards in the towns that there is neglect. In his letter protesting against this publication, Mr. Johns writes: "I gave an interview to the Kennewick Courier, it is true, but I did not intend this article to be published broadcast. As a matter of fact, that article was intended as a warning to the growers of what might happen, rather than a statement of what had already happened, as the article would lead people to believe. Now I would like you to publish an article in your next issue stating the facts in regard to the situation here. The state department of horticulture has put on a cleanup campaign in both Kennewick and Pasco districts and the situation is now well in hand. The department intends to put on a follow-up program next spring and by another year should have the pest entirely eradicated."

Economic Cooperation

Invented by the 23 Flannel Weavers of Rochdale

United States Senator Smith W. Brookhart of Iowa was the chief speaker at the annual picnic of the Trades and Labor assembly at Minneapolis last Sunday. We find much in his address, as reported by the Associated Press, to commend and approve, but also something to question. Particularly we liked that part that urges the farmers to organize and engage more extensively in economic cooperation.

The history of mankind shows that nothing can quite take the place of self-help. As Senator Brookhart said, "This is not a wild and untried theory; it is the oldest, soundest, most enterprising and most successful business venture that has ever been promulgated in this world. It is as aggressive as the spirit of the crusader and it is as gentle as the Sermon on the Mount. It is known as economic cooperation, and was invented by 23 flannel weavers, the equitable pioneers of Rochdale."

What we questioned in the Iowa senator's address was the practicability of his proposed political alliance between organized labor and the farmers. Take the wheat growers, for example. Wheat is selling in the Inland Empire at from 80 to 90 cents a bushel. Before the World war had run up the cost of living and the prices of all the commodities that the farmer must buy, this would have been a profitable price at which to grow wheat in this region. But it is not profitable now, for one plain reason—the cost of growing wheat has increased for the farmer, and also his cost of living has grown. The farmer has had to fall back on the pre-war level of prices of agricultural products; but transportation and manufacturing have not fallen back with him, and the chief reason that they have not fallen back is higher wages, shorter working hours and easier working conditions in the factories and at other places where labor is employed.

It is plain that the farmer must sell his exportable surplus at prices that can be paid by the cheaper labor of other countries. And with wheat, at least, the exportable surplus fixes the price for the American market.

The government has protected the American manufacturers with the tariff, and that also protects the wage earners employed in the factories. It has further protected labor by restricting immigration, the effect of restriction being to help the American Federation of Labor to corner the labor market. We are not saying that restriction of immigration is undesirable; on the contrary, we believe it is necessary. But we are talking about economic facts and the effects of this restrictive legislation.

Nor are we saying that protection has not been a help to the farmers. The emergency tariff law was a great help to American agriculture. But the tariff protects the manufacturers and organized labor more than it protects the farmers.

Now, there is no possible way by which legislation in this country could raise the general price levels of agricultural commodities throughout the world. We have to carry on agriculture in the United States substantially on the basis of the world's price levels, and that is where the farmer is pinched. American labor is not brought down to the level of world wages; it is high above that level. And for that condition, which of course is good for labor, the farmers and all other consumers must pay.

What Others Say

Wallace's Farmer: Our point is that married men and women who are educating their children and accumulating a moderate amount of property to leave to them, should rightfully assume a more direct leadership in national affairs.

Rural Neew Yorker: Much ridicule has been in the past heaped upon the goat, but she is living it down and making good. Continued selection and breeding will increase her milk yield. It may seem a ridiculous statement to some of our people, but as population increases and the cost becomes more thickly settled the goat will play a large part in dairy production. She is what you may call a "comer," and it will not do for us to make any mistake about it.

Orange Judd Farmer: There is also much opportunity for profit awaiting those persons who readjust their hatching schedule, so that pullets will mature in early fall, and the bulk of eggs are laid at the time of highest prices in November, December and January.

National Stockman and Farmer: Anybody notice boys being ruined by companionship with parents in work and play? Is the boy who goes fishing with dad unwilling to work with him? Is the boy who gets a fair deal in his little business ventures anxious to leave home or sorry to return? Is the boy who is taught that things and responsibilities are "ours," not merely dad's, any worse for it?

Wheat Selling Problem

President Brown Says Growers Must Fix Their Own Price.

After a trip through eastern Washington, W. J. Brown of Minneapolis, president of the American Wheat Growers' association, discussed the wheat growers' problem with frankness, understanding and courage. "Even if the special session of congress were called, it is doubtful if the states that produce wheat could muster strength to meet the states that consume wheat," said President Brown.

President Brown concludes that "the only solution lies in cooperative marketing, the growers themselves controlling 75 per cent of the national production and fixing their own price on their own product." He believes that the farmer will be best served by self-help, and that no great reliance can be put on governmental action or the sort of friendship that the wheat growers are offered by self-seeking politicians.

There is the further fact to be considered in this connection, that farmers who grow wheat are but a small minority of the agricultural producers of the United States. One obtains a clearer realization of that fact from a recent statement of the United States department of agriculture, forecasting the production and value of 12 of the principal crops this year. If marketed at the prices ruling on July 1, the department estimates that these 12 crops would bring the growers at the farm a little more than $7,000,000,000. The department's estimates and calculations are tabulated as follows:

Corn	$2,488,605,000
Cotton	1,493,400,000
Hay	1,159,516,000
Wheat	780,771,000
Apples	346,169,000
White potatoes	317,442,000
Barley	110,286,000
Sweet potatoes	106,818,000
Peaches	86,462,400
Oats	54,570,000
Flaxseed	43,506,000
Rye	39,983,400
Total	$7,027,522,800

In round numbers the corn crop exceeds the wheat crop in value by nearly three times; the cotton crop will bring the growers nearly twice as much, and the hay crop about 50 per cent more. Even the value of the apple production will be nearly half that of the wheat crop.

It is well to keep these facts in mind in order that the subject may be considered in its broad national bearings. The wheat growers are but a fraction of the agricultural producers, and a still

(Continued on page twelve.)

FARM BUSINESS AND MARKETS OUTLOOK

URBAN prosperity appears likely to continue for the rest of the year at least. Manufacturing communities are still operating at close to capacity, wages remain at the peak, in most lines goods have not accumulated, and the seasonal expansion of buying during the fall will probably keep the wheels of industry humming and the channels of trade flowing freely. This spurt should help to maintain broad domestic consumption of most farm products, but it promises but little real improvement in the farmer's position.

Beyond this fall and early winter, conditions do not look so favorable. Another wave of demands for increased wages is starting. If granted, these will mean either higher prices to consumers, who already show some signs of balking, or a lack of profit for the employer who will take the alternative in some cases of closing down. In either case some unemployment appears to be in prospect.

A great deal of pessimism over European affairs has been generated in the last few days. German finances are deplorable. Her thirty trillions of marks have depreciated until they are worth only about twenty-five millions American dollars, providing her a circulating medium equivalent to less than 50 cents per capita. French exchange is selling at the lowest point reached in 1923. Other European countries are not making much real progress toward normal industrial output.

Whether these indications of future business prove true or not, it is up to all sensible folk, whether they live in town or on the farm, to husband their resources, to reduce expenses wherever possible, to make every cent count, waiting hopefully for the clouds to roll by.

Prime Steers at $11.75.

Prime heavy steers reached $11.75 at Chicago last week, registering a new high mark since January. Such cattle are becoming scarcer practically every week and are demanding a notable premium over yearlings. Steers not grading better than good took "the low road" during the week and declined 25 cents. The few corn-fed cows and heifers arriving held their own, but undergrade she stock lost ground. Bulls had a sharp setback of 75 cents at Chicago, probably because of the usual early cleanup by the range.

Stocker and feeder prices declined 25 to 50 cents during the week.

Hog Market a See-Saw Affair.

The hog market keeps working up and down rapidly without getting far in either direction.

Low prices for hog products are stimulating enormous domestic consumption and packers continue to report a moderate increase in export business.

Slump in Lambs Halted.

About 15 per cent fewer lambs arrived at the leading markets in the last 10 days and the slump in prices, which has been under way for several weeks, was halted.

Breeding ewes and feeder lambs were slightly higher. Choice thin lambs are selling practically as high as fat ones. Breeding ewes are bringing $6.50 to $11 per 100 pounds at Chicago.

Improved Tone in Wool Persists.

The wool market continued to show an improved tone last week.

In the bright wool states wool is gradually changing hands at a range of 45 to 50 cents, with some delaine clips held at 55 cents. Consignment is the order of the day in the west, although a few sales at 40 to 48 cents are reported. Eight months Texas wools have sold at 39 to 46 cents.

Wheat Prices Cover Narrow Range.

Wheat prices have not been particularly stable in the last two weeks, but the range covered by fluctuations has been relatively narrow. Further declines are unlikely to be severe, but conditions do not seem to favor material advance in the immediate future.

The world's wheat crop in 1923, counting the last harvests in the southern hemisphere, is placed at 3,318,000,000 bushels, or 214,000,000 bushels over last year, according to a compilation by the International Institute of Agriculture. The European crop, exclusive of Russia, is 155,000,000 bushels more than last year and only 33,000,000 bushels short of the record crop of 1921. Broomhall reports an increase of 10 to 12 1-2 per cent in the acreage for the next Argentine crop. On the other hand, a sharp reduction in the area to be planted in the southwest is indicated by official returns.

Corn and Oats.

The corn crop is at the most critical stage of growth when an ample supply of moisture is necessary.

The oats harvest is well advanced and primary receipts are increasing, although low prices are curtailing the movement to some extent.

Cash Grain Markets.

The range of cash grain prices for the week ended August 1 was:

CHICAGO—Wheat—No. 2 red, 96 3-4@99 1-4c; No. 3, 96 1-2@99c; No, 2 hard, 96 1-2@99 1-2c; No. 3, 96 1-2@98 1-2c. Corn—No. 2 mixed, 86@90 1-4c; No. 2 yellow, 86 1-4@90 3-4c; No. 2 white, 86 1-4@90 1-2c. Oats—No. 2 white, 39 1-4@44 1-2c; No. 3, 38@41 1-2c; No. 4, 36@38c. Barley—56@69c.

Seed and Feed.

Prices for red clover seed advanced sharply last week as a result of dry weather and impaired prospects for the new crop.

TOLEDO, per bushel—Prime red clover, $10.80; prime alsike, $10.15; prime timothy, $3.20.

A slight advance in feed prices occurred last week.

Hay Market Steady.

Receipts of new hay are increasing at western markets and prices have weakned at these points.

Eggs, Butter and Cheese.

Good eggs are gradually becoming scarce and are widening their premium over ordinary grades.

Buoyed by a sharp advance in the make, due to unfavorable weather conditions in the principal producing sections, with subsequent defects in receipts, a shortage of more than 5,000,000 pounds in holdings at the four leading cities, as compared with last year, and higher foreign markets, butter prices advanced sharply last week.

Fruit and Vegetables.

The long decline in potato prices came to a halt last week.

Shipments of peaches have increased sharply and prices have been declining.

(Continued on page sixteen.)

President Harding's Legacy to His Country

While Warren G. Harding's father was a country physician, his son was essentially a farmer boy. His boyhood and early man hood were lived in a farm environment. He was a country boy, going to ■ country school, doing the chores that go with country life, and earning his first dollars at odd jobs of farm work.

The new president, Calvin S. Coolidge, also was a farm boy, brought up amid farm surroundings and getting the fine inspiration of wholesome rural life. His father, though running a country store, also had a farm, and the Coolidges were farmers for generations. When President Coolidge took the oath of office last week and the nation's interest turned to the new family that is to occupy the White House, the interesting news came out that Calvin Jr., a youngster of 15, had left several days before for the Coolidge home at Northampton, Mass., planning to earn spending money during his vacation by working on a farm.

Harding and Coolidge, like most other presidents, started life as poor boys and carved their own way to eminence and success by industry, self-denial and thrift. With the constant aid of Mrs. Harding, Mr. Harding had amassed a moderate competence through his newspaper property before he was elected to the United States senate, but the Coolidges can not be said to be possessed of even a moderate competence. When Mr. Coolidge was governor of Massachuseits he had no automobile, and when the family were called to Washington upon his election as vice president, they could not afford to rent ■ house in that city of high rentals and have been living in a boarding house.

We speak of these circumstances in the lives of the president called by death and his successor because they show the fine benefits of the simple rural life and are proofs that we have not drifted from the moorings of the fathers of the republic as some alarmists would have us believe. The farm and its influence still are potent in our national life, in the government of the republic and the states. Wealth can not buy the presidency, and the careers of Harding and Coolidge stand as an inspiration and an encouragement to country boys to follow their shining example.

It is as true now as it was in the days of Andrew Jackson and Abraham Lincoln that the poor boy who has the right qualities can lift his eyes to the shining heights and aspire to the greatest prizes in the gift of the American people.

Facts About Harding.

Facts about Warren G. Harding:

Birthplace—Corsica, Morrow county, Ohio; born November 2, 1865; was therefore, 58 years old.

Education—Attended Ohio Central college; graduated Iberia college, 1882.

Occupation—Newspaper man since 1884.

Business—Ex-president of Harding Publishing company, publishers of the Marion Star at Marion, Ohio.

Church—Baptist.

Family—Married to Florence Kling of Marion, Ohio, July 8, 1891.

Career—Member Ohio state senate 1900-1904; lieutenant governor of Ohio 1904-1906; United States senate from Ohio 1915-1921; republican nominee for president June 12, 1920; elected president November 2, 1920.

Harding Administration.

Here are the constituted high points in the events of the Harding administration:

Reestablishment of peace with Germany and Austria.

The calling of the arms conference which approved the naval limitation treaty and the four-power pact.

Ratification of the treaty with Columbia resulting from partition of Panama.

Revision of the tax and tariff laws.

Restriction of immigration.

Farmer aid legislation with particular reference to easier credits on more liberal terms.

Establishment of the budget bureau.

Veto of the soldiers' bonus bill.

Extension of the program of aid for wounded, sick and disabled veterans of the World war.

Advocacy of American participation in the world court.

Mother and Wife.

For 15 years before she died, Warren Harding's mother never failed to receive from her son his regular Sunday gift of flowers. The Harding family was one in which mother and father did not, in their old age, lost close attachment with their children. George T. Harding, the president's father, was complimented on his influence in raising a son who became the leader of his country. "It was not my influence that governed Warren," he said, "but his mother's. Through all his life he has thought of her in connection with everything he has done."

Phoebe Dickerson Harding was an intensely religious woman, who found her greatest opportunity for service in her skill as a midwife, a skill sorely needed by prospective mothers on the farms of half ■ century ago. She gave religion to her children, and she gave them also the beginnings of their education.

Of the many thousands of people who flocked to see and hear the late president on his trip to the Pacific coast, none will be able to think of him without at the same time thinking of the bright-eyed, eager woman, who was constantly at his side and whose friendly smile and warm handclasp she was glad to bestow on all who came. Florence Kling Harding married a struggling Ohio country editor in 1891, eight years before he entered politics, and with him suffered many tribulations before there were triumphs to enjoy.

Florence Harding threw her energies into the task of helping her husband make the Marion Star a success. She early saw that he had a future in politics, and encouraged him to undertake the hard work that political success in Ohio necessitates. As the Star had prospered, so Warren Harding's political career continued constantly upward, but there were, of course, moments of doubt and discouragement, when her presence at his side was invaluable in giving him confidence to go ahead.

It is a pity that President Harding was called by death before the American people had come to a full realization of his greatness and the beauty of his strong, patient, kind character. The able addresses he gave upon the western tour that brought him to his death by the shores of the Pacific were awakening the country to a clearer understanding that it had shown good judgment when it elected Warren G. Harding in 1920. We say that without partisan bias, because the qualities that made Mr. Harding a fine, dependable president are just as valuable and just as entitled to respect and support when they are found in ■ democratic aspirant.

Warren G. Harding.

The speeches made by President Harding upon his western tour show the depth of his sincerity and his high regard for the home and the institutions and influences that better the home. Believing that his own words reveal more clearly than any that we could utter the fine character, high purpose and devotion to duty of the man who spoke them, we have gone painstakingly through his western addresses and give herewith a worthwhile collection of golden nuggets:

We want the west to be a land of homes.

The use of the streams for power is inevitably tied in with reclamation.

There can be no issue in this land paramount to that of enforcement of the law.

The common weal transcends every other interest and puts aside every obstacle.

One of the troubles with the world today is that it is torn with suspicion and hate.

I believe the destiny of this new world republic was written by an infinite hand in the consciousness of divine intent.

It is doubtful if there is in the world such a region of varied opportunity and universal wealth as this mountain empire of yours.

I may say, in passing, I have come to a new realization of the importance of the study of geography in public schools.

We must have a policy of reforestation that will preserve the national interests, and at the same time permit use of the timber as it is needed.

It is not desirable that the west should fall into the hands of some bonana corporations, seeking to exploit it for the profit of stockholders who live somewhere else.

I tell you, my countrymen, you can prosper no one section of our country and make it a permanent good without its being of equal value to the people of the entire United States of America.

The longer I live and the more I see of communities and human beings, the more firmly is my belief established that the sweetest thing in the world is the friendship of a few dependable friends. This is the happiness that makes a life of contentment.

I should like more of fraternity among ourselves in the United States; I should like more of fraternity among the nations of the world, and if we apply the Golden Rule, about which none of you will dispute, for we all believe in it and admire it— and the only trouble is we do not practice it as we believe it—if we could bring the Golden Rule into every phase of American life, we would be the happiest people in the world.

With all good intention the majority sentiment of the United States has sought by law to remove strong drink as a curse upon the American citizen, but ours is a larger problem now to remove lawless drinking as a menace to the republic itself.

I should like to have America a little more earnest and thoroughly committed in its religious devotion. We were more religious 100 years ago, or even 50 years ago, than we are today. We have been getting too far away from the spiritual and too much absorbed in our material existence. It tends to make us a sordid people.

You people of the Inland Empire might well remind your critics that during the uncounted centuries when the greatest civilizations had their seat on the Euphrates and the Nile, they were nurtured by an agriculture which depended on irrigation; on conserving and utilizing the waters of a few great streams.

No habit is so easy to form, none so hard to break, as that of reckless spending. And on the other side, none is more certain to contribute to security and happiness, than the habit of thrift, of savings, of careful management in all business concerns, of balanced budgets and living within incomes.

If I could urge upon the American people a single rule applicable to every one of them as individuals, and to every political or corporate unit among them, it would be to learn to spend somewhat less than your income all the time. If you have debts, reduce them as rapidly as you can; if you are one of the fortunate few who have no debts, make it a rule to save something every year.

Service is both the inspiration and the accomplishment of quite everything worth while which impels us onward and upward. With service which the Nazarene would approve are associated all our ideals and our finer aspirations. We accept the doctrine for ourselves, as we ought, because we must be firmly established and healthfully and hopefully strong ourselves before we can be effectively helpful to others.

But for the spirit of cooperation, the willingness to be mutually helpfull, the determination to give first place to the interests of the community you could not have made your west what it is. Working cooperations on a great scale, practical in operation and adequate to cope with our problems, can never be possible except where there is this spirit, determination and purpose.

Keep your eye everlasting on those who administer your governmental units for you; your town, your county, your state, your national government. Make them understand that you are applying the rule of thrift and savings in your personal affairs and require them to apply it in their management of your public affairs. If they fail, find other public servants who will succeed. If they succeed, give them such encouragement and inspiration as will be represented by a full measure of hearty appreciation for their efforts.

Because I am holding temporarily a position of official prominence, I have been privileged in being invited into association with many of our so-called secret fraternal societies. I find that each of them has as its foundation and the reason for its existence the furtherance of brotherhood and the Christian virtues of charity, mercy, justice and brotherly love. Moreover, the practice of these virtues has been suggested by the ways of happiness in the daily lives of men. For example—and I am sure it will be no breach of faith to relate it—I was admitted into a fraternity of Alaskan Pioneers and I was obligated never to kick a dog, or to work a horse with a sore back or shoulder

Now that was a simple thing that Christ himself would have urged; it was an expression of mercy and affection by these pioneers for the brutes who could not speak a protest, of considerate concern for a life of service. On the whole, I am well persuaded that many tenders of fellowship have come to me because men wish to have practiced in official life the teachings of brotherhood and friendship and sympathy which have sweeted their own pathways.

Stop getting repair bills for your roofs!

Whether or not *you* keep up your shingle roofs —or *have* it done—you'll be glad to know that Oronite Shingle Oil saves you money and labor in the care of your buildings.

An occasional, inexpensive, easy application to shingled roofs or side-walls fills the pores of the wood with ■ moisture-resisting preservative that retards evaporation of natural oils in the wood and checks warping and decay. With ■ coverage of 85 to 100 square feet per gallon you can double the life and service that ■ good shingle roof ordinarily gives.

Oronite Shingle Oil may be used as ■ stain when mixed with color paste. See our agent about color formulas.

Bee and Honey Exhibits at Fair

By GEORGE W. YORK

I think all will agree that the usual, as well as the unusual, interstate, state and county fairs afford the very best possible opportunities to interest the public in the sweet product of the beehive.

Of all the many insects in this world, there probably is not another that is so entertaining and profitable to study and work with as the little honey bee. Surely there is no other whose main product is so valuable as a food for mankind.

I have yet to see the man or woman who is not interested in becoming better acquainted with the life and history of honey bees. They are an ever fascinating subject of conversation as well as study and investigation.

Attractive Displays.

Bee culture lends itself in so many ways to the possibilities of making very attractive as well as educational displays. What with the live bees under glass, their wonderfully and delicately constructed combs filled with liquid sweetness, and the healthful qualities of their honey, all placed before the amazed view of the public, we have a combination for exhibition that is seldom equaled.

In attempting to give some directions for the preparation of exhibits of bees, honey and beeswax for fairs, it will not be necessary to follow them invariably, for often the suggestions I may make can be greatly improved upon, and will be by the beekeeper who adopts, as well as adapts, them for his own use.

First, I would show bees both in full hives and nuclei. The sides of both boxes (we will call them) should be glass, so that the bees and broodcombs can easily be seen.

The nucleus box should be made to hold one, two or three broodframes, with the queen, worker-bees and comb. Several of these boxes should be with each individual exhibit.

Comb Honey.

Next as to the honey: It should be shown in the comb and in the extracted forms. The comb honey in the usual 4 1-4x4 1-4 square boxes or sections will appear to better advantage if it, too, could be shown back of glass in some way. Artistic designs can be made by piling up the little boxes of honey in various forms. No matter how they are arranged, the result is bound to attract attention, and be admired.

As to showing extracted honey (that removed from the comb), I would suggest that it be put into small glass jars of various sizes, holding from possibly one-half pound to three pounds each. It is also well to have some nicely labeled tin cans and pails of retail size filled with liquid honey. The three sizes of 2 1-2, 5 and 10 pounds are just right.

It will make a more impressive display to omit all labels from the glass jars.

Several completed extracting frames of honey also add to the display. These can be hung on the wall or stood up on a table.

The arrangement of both the comb and extracted honey on shelves rising one above the other on a receding incline is perhaps the best plan. Then if a row of electric lights can be placed back of the shelves it will help to show off the honey to better advantage. Covering the shelves and the space between them with white cheesecloth, starting from the top shelf and going down, helps to give a cleaner and neater appearance to the whole display.

Beeswax Display.

Now as to beeswax: Usually there are two awards offered,—one on a quantity of beeswax (say, 20 pounds) and the other for "designs in beeswax." The quantity may be in molded cakes of various shapes and weights, the whole totaling the required 20 pounds or whatever the amount may be.

As to special beeswax designs, some use home-made molds, such as ears of corn, fluted caketins, or anything else that will make a unique formation of beeswax. I once saw an exhibit of beeswax made into a long chain of large, heavy beeswax links. Another, by the same exhibitor, was a miniature reproduction of the Lincoln monument located at Springfield, Ill., all made of beeswax. This was really a work of art and must have required much time and labor to construct it.

The live bees in hives and nucleus boxes, as well as the beeswax exhibit, may as well be placed on a large table where they can be viewed by the public.

Perhaps from the foregoing the reader, if he desires, will prepare a rather original exhibit, as he will vary the suggested plans by adding his own good ideas.

Of course, there should always be in addition to the bees, honey and beeswax a complete exhibit of the implements or physical equipment used in a modern apiary, such as hives, supers, sections, comb foundation (made of sheeted beeswax), bee smoker, bee veil, honey extractor, etc.

Just Folks

The promisor qualifies the promise.

The biggest thanks are for escapes.

Borrowed clothes promote strutting.

What you can not do may save you.

A dash of carelessness appetizes action.

Memory accommodates the trickster. Memory even plays many pranks with the innocent.

Seventy-five years worthily lived shown out of the kindly eyes of a New Hampshire farmer. I was directed to his home and farm on the top of the hill as the man who could tell me of the folks and happenings of 40 years ago. I found him near the house harvesting hay in company with even an older man. He at once left his work and with an unmistakable fellowship, gave his time and thought and heart to my inquiries. He was born and all his life had lived on that hill. He was sincerely attached to his home and to his church. The world might wag as it would and the world did wag, as tourists traversed this section, but they left no impression on his simple life. "Mother" had just been through a serious illness and his kindness and consideration pervaded the household. I repeat, his farm, his family and his church made up the full complement of his life.

This father in Israel had a sense of humor withal, which had evidently enlightened the years of toil. I asked him about Sam Blackie, the stage driver, his old neighbor across the way. Sam was reputed to be the outstanding driver of coach and six in his day. He was a kindly man, full of nerve as well, but somewhat free of language on occasions. He had been dead some years and his kindly deeds were gathering as moss over the memories of his free speech. "Yes," said the old farmer. "Sam had his good points. Our minister used to say that he would have hope for Sam's future if he should happen to die at a prayer meeting."

The half hour's visit with the old New Englander added something inexpressibly tender to my recollections of his home and I hope I may never forget the benediction of his presence and of his farewell. E.A.S.

HOME SUFFICIENCY.

The home should be self-supporting.

Prizes for 1923 Fairs

Offers of prize money for the fairs of 1923 by the Holstein-Friesian Association of America, conditional upon the awards being made by official judges named, cover northwest fairs as follows: Idaho State fair, Boise, 30 per cent cash to be paid on general classification; Oregon State fair, Salem, 20 per cent cash; Pacific International Live Stock show, Portland, $2000, to be paid as special prizes and $750 as state herd prizes; Washington State fair, Yakima; Southwest Washington fair, Chehalis, and Spokane Interstate fair, Spokane, 25 per cent cash, each. No other dairy show in the country, not even excepting the national, to be held at Syracuse this year, receives more money from this association than does the Pacific International.

The list of official judges contains the names of George S. Bulkley, secretary of Carnation Stock farms, and of John L. Smith, Spokane. That of H. H. Kildee of Iowa State college, who will judge Holsteins at the Pacific International this fall, is in the list also.

SHALLOW, CLEAN LITTER.

Shallow, clean litter is better than deep, dirty litter, but it is far better when both deep and clean.

Keep Silo Profits on the farm

PROFITS from the use of a silo should be kept on the farm—not spent for the repair of decay caused by rain and sun. Silos should be protected from the deteriorating action of the elements by "*Fuller Film.*"

"*Fuller Film*" is the "coat" formed as Fuller Paint dries. The pigments and oils of which Fuller paints are composed form a tough, elastic, waterproof protection for any surface to which they are properly applied. Remember, it's the character of the "film" formed that measures the quality of paint protection.

There's a Fuller Paint or Varnish for every farm and home need. For concrete silos, there is Concreta. For wooden silos, use Silo Paint. For roofs, Fuller's Barn and Roof Paint and for house painting, Pure Prepared Paints and Phoenix Pure Paints. Get the kind and color you want from the nearest Fuller agent or dealer. Keep your profits, instead of paying them out each year for repairs on your silo and your other farm buildings. Our Service Department will gladly send further information on request.

LIVESTOCK AND DAIRY

Milk Goats

In Their Prime From Four to Six Years of Age

By E. V. ELLINGTON, Head of Department of Dairy Husbandry, State College of Washington.

How much milk should a good goat give? Not an expensive goat, but a good grade. How old should she live and give milk? How do you judge a milk goat by points? How do goats compare in price with cows? F. R.
Tacoma, Wash.

The production of milk, of course, depends upon breed and age, but a good milk goat should produce two quarts of milk daily over a period from seven to 10 months. A doe that produces three pints a day is considered only a fair milker. It is more accurate to say that a good doe should produce from eight to 15 times its weight in milk in a lactation period. A doe weighing 120 pounds would produce 1200 pounds of milk.

Goats are in their prime from four to six years of age, but individuals of good producing ability may be kept to good advantage for several years longer. In selecting a milch goat much the same points are to be considered as those found in a good dairy cow. She should have a feminine head, thin neck, sharp withers, well defined spine and hips, thin thighs and rather small bone. The skin should be soft and pliable. She should have large digestion capacity as shown by a well sprung rib and like the dairy cow should clearly show the wedge shape which is indicative of a good animal. Strong constitution is shown by depth and width of chest. The udder should be of good size but should not be meaty and the teats should be large enough to make milking easy. In other words select does of dairy conformation and avoid those that seem to be fleshy.

We have a cow that gives lumpy milk. Sometimes she goes a long time without giving lumpy milk. We give one-half gallon millfeed night and morning and she is on a good pasture. She was fresh last November. MRS. G. C.
Chelan, Wash.

The cow has apparently slight attacks of garget. These attacks may come on when she is in heat or when subject to sudden change. All such light attacks may come from a variety of causes. It is generally believed that certain bacteria of the streptococus group are responsible for udder troubles, but if the animal is in good condition it will resist such attacks. Any condition of the animal that lessens the power of resistance makes it possible for the trouble to start. Such a condition of the animal may be brought about by slight injury to the udder as a bruise, exposure to severe weather, lying with the udder on a cold floor, etc. In many cases, however, no special cause can be assigned.

Whenever this trouble appears the cow should be milked with great gentleness and preferably three or four times a day. A physic should be given at once to keep the bowels open and a tablespoon of saltpeter night and morning for two or three days. Prompt action is always advisable lest the condition become chronic. In such cases it is always well to consult a qualified veterinarian.

Would like information on making cheese from skim milk or separated milk.
Ione, Ore. MRS. E. T.

CHEESE FROM SKIM MILK.

Much the same directions may be followed in making cheese from skim milk as is used in making cheese from whole milk. Use rennet and set the milk at 86 degrees F. A dairy thermometer should be available to regulate the temperature. The amount of rennet used is adjusted so the milk "sets" in 35 to 40 minutes. The ordinary amount is about two teaspoons for each 100 pounds of milk. The rennet should first be mixed with a pint of cold water, then added to the milk. Stir the rennet thoroughly and let the milk stand undisturbed until curdled. If there is even the slightest motion of the milk while curdling the curd will not be firm. The container should be covered to keep the surface of the milk from cooling.

When the curd is firm it is cut with a cheese knife. It is first cut lengthwise of the vat with a horizontal curd knife and then crosswise with a vertical knife.

As soon as the curd is cut it should be stirred to keep the cubes from sticking together. About 15 minutes after the curd has been cut, start to heat the whey. Whole milk curd is heated to about 100 degrees Fahrenheit. Skim milk whey is heated to 90 to 92 degrees. The whey should be heated sowly and raised about two degrees every five minutes. The reason for heating the skim milk whey to a lower temperature than the whole milk whey is that heating expells water, and in skim milk cheese we need more moisture than in whole milk cheese. Skim milk cheese tends to become too dry unless we leave a lot of water in the curd. The stirring of the curd while it is being "cooked" should be done carefully so as not to break up the cubes. They should remain clear.

From four to six hours are required to firm the curd in the whey. The whey is drawn off gradually as the curd firms. The curd cubes are usually about half as large when firm as they were when first cut. A way to test the curd is to take a mass of it and press it between the hands. Then if the pieces fall apart at once when the pressure is released the curd is of the proper firmness.

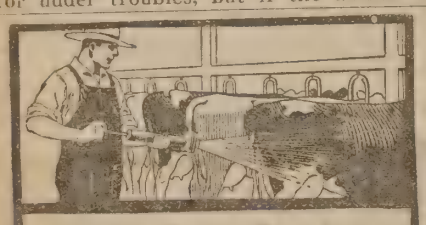
After the whey is drained off salt is added. About three ounces of salt to ten pounds of curd is used. If you like carraway seeds a small amount may be added at the same time as the salt. The curd is now ready to go into hoops or such other forms as you may wish to use. Some precaution is necessary to avoid wrinkles in the cheese, caused from unevenness in the cheesecloth wound around the curd. The cheese is put under light pressure for a couple of hours and then put under high pressure for 12 to 20 hours.

The cheese may be put in a brine bath for one to three days and is then ready to put in the cheese curing room. It should be allowed to cure for two or three months at least before it is ready to use.

Very little skim milk cheese is made in America. People in various countries in Europe use some. But even in Europe the cheese makers say no one has the right to expect them to make a skim milk cheese that is really good. They recommend using from one-third to one-half whole milk. This makes the cheese a fair quality. Skim milk cheese becomes dry and hard and then folks do not want to use it. The rind therefore should not be allowed to crack or get too dry.

SKAGIT COUNTY RECORDS.

Some of the outstanding records made by Skagit county cows for the month of April are: Skagit Susa Pontiac, senior 4-year-old, owned by Lee Brothers, in the Holstein seven-day test produced 488.4 pounds of milk and 27.586 pounds of butterfat. Bluster's Lad's Lily, a junior 2-year-old, owned by H. S. Ruley, in the Jersey AA tests produced 7671 pounds of milk and 440.41 pounds of butterfat.



Fly-Free Stock Earns More Money

Will you let the fly pest worry and torture your stock this season? Will you let it rob you of milk—flesh—work? Spray stock daily with

SO-BOS-SO
KILFLY

and you *rid* them of fly menace.

A harmless, effective liquid. Keeps stock contented, quiet, free from constant worry. Gets more milk from cows, more work from horses, more flesh for slaughter. Earns *you* money! For over 20 years, leading stockmen have proved its value.

Convince yourself by a trial.

Get it from your dealer. He should have it. If not, send his name and ask for our special trial offer.

Haul Heavy Loads on all roads with a
McCORMICK-DEERING
Weber Wagon

When you buy a wagon you want one that will stand up under all kinds of loads, one that you can use for years and years, and one that you will be proud of all the time. On such a basis, consider a McCormick-Deering Weber.

There are two construction features in the Weber which combine with the high-grade materials and workmanship, and which make unusually long service possible. First of these is the *swivel reach coupling* [patent applied for], which prevents twisting and breakage of the reach; second is the *patented malleable fifth wheel,* which prevents breaking the bolster and sandboard. You will find these two features on no other wagon!

If you will go to the store of the McCormick-Deering dealer he will show you these two Weber features, tell you about the wagon in detail, and give you a list of Weber wagon owners in your community. Talk to these owners; you will find them anxious to praise the Weber—a fact which is insured by Weber design, quality, and construction.

Fruit Boxes

Will Cost Wenatchee Growers $2,400,000 This Year

The record-breaking apple crop of the Wenatchee district, estimated at between 16,000 and 17,000 carloads, will require no less than 12,000,000 boxes, costing the grower 20 cents each, or $2,400,000, that must be spent for this one itme alone. The 1200 cars of summer fruit will require over 1,000,000 boxes, costing over $100,000 more, a total of $2,500,000, that must be expended for containers. If all these boxes were shipped in by freight care they would fill over 2000 ordinary box cars, making 20 solid trains of 50 cars each. Most of them are made in the district, however, and only have to be shipped a short distance, either by train or truck.

No less than 200 carloads of wrapping paper must be shipped into the district to be used in packing the apple crop, and this paper will cost the growers about $1,000,000 more, or $3,500,000 for boxes and paper combined. Ordinary paper will sell this season for 10 cents a pound, 1 cent less than last year, a saving of about $100,000 to the growers of the district. About one-third of the crop, however, will probably be packed in oiled paper, which will cost about 14 cents a pound.

Another item of expense that is usually given scant consideration is that of nails to be used in making up the shooks into boxes, and in bulkheading the cars when they are loaded. No less than 17,000 kegs of nails will be used for these purposes, filling 17 cars to utmost capacity when shipped in. The total cost of these nails will add another $100,000 to the grower's costs, making $3,600,000 that must be expended for boxes, paper and nails before the 1923 apple crop is ready for market. And these materials would fill 2117 box cars, more than one-eighth as many as the whole crop of apples would require when ready for market.

Grain Meet Delayed

On account of the death of President Harding, the meeting of wheat growers and public officials called for August 6 by the Farmers' union, to be held in Spokane, was postponed until Monday, August 13. On that date it is expected that a large number of persons, both farmers and others interested in the stabilization of the wheat market and the establishment of a fair price to the producers, will be present. The question will be taken up of ways and means to secure a price for the 1923 crop that will pay cost of production, which it is claimed by growers and others familiar with the facts that present market quotations will not do. The matter of a special session of congress to enact relief legislation along this line will be taken up.

Applies Super-Phosphate

Super phosphate is showing outstanding results on hay and other crops in almost all parts of western Washington. Zeno Blank of Sedro Woolley has a field of hay on his farm and he applied super phosphate on a strip running through the center of the field, making about one-fourth of an acre plot. It was applied at the rate of 250 pounds per acre and the crops yielded from one-third to one-half more hay than any other portion of like size in this field. The super phosphate was applied last spring and harrowed in at the suggestion of H. C. Bergstrom, the county agent. According to Mr. Bergstrom this result as reported by Mr. Blank bears out the fact that phosphate is very often lacking in soils and that its application is a profitable practice.

CLUB MEMBERS AT GRANGE PICNIC.

Members of the Othello Pig club exhibited their pigs and took part in a judging contest at the Bruce grange picnic. Clarence Wilson won first in the judging, with Edith Ruckert second and Paul Fox third. Prizes were provided by the grange. Instructions in club work have been given by County Agent N. C. Donaldson.

Prepare for Crowd

At Southwest Washington Fair

Secretary George R. Walker, Chehalis, is making great preparations for the Southwest Washington fair. He hopes to have the largest entry of cattle ever seen in western Washington. The added 20 acres that the Lewis county commissioners bought last year gives the fair a chance to spread out and cover more ground. There will be plenty of room for parking cars within the grounds, and camping places will be furnished those who want to come for the week. Centralia and Chehalis are both blessed with lots of hotel room and the two towns are making every preparation for the crowds that are coming.

The poultry department will be under the management of Thomas N. Horn, who has handled that department for years. He will be assisted by Fred A. Johnson, the well-known superintendent of the Puyallup fair. Judge W. M. Coats will place the awards.

The amusement features of the fair this year will be the best ever seen on the grounds. H. C. Browne, Portland, Ore., will be in charge of the races.

The pavement from Everett to the fairgrounds has all been finished, and the main highway between these cities and the fairgrounds is in fine shape. Three railroads pass the fairgrounds. Great Northern, Northern Pacific and Oregon & Washington railroads all pass the grounds and they will give a special excursion rate.

TOO MUCH COVER.

There is such a thing as too much cover crop in the orchard. A year or so of clean cultivation may somewhat regulate the supply and availability of nitrogen in the soil.

There's only one Caterpillar Holt builds it

More amazing even than the liberal power of the 2-Ton "Caterpillar" Tractor is its remarkable endurance, achieved by the use of highest grade steels and most exacting standards of workmanship. Write for complete catalog.

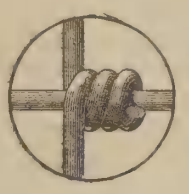
A New Idea of Fence Service

When you buy fence you have a right to expect the dealer to help you choose the best style of fence for the purpose. This service is now a reality. As we now manufacture a complete line of hinge-joint and stiff-stay fences our agent near you is in a position to give you unbiased advice and to help you select the right fence for your inclosures.

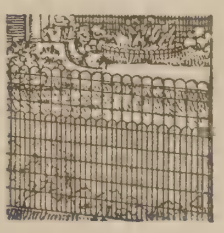


"Columbia" HINGE JOINT Fence

"Columbia" Hinge-Joint Fence is made of open hearth steel wire which is heavily galvanized to resist rust. Strong, flexible stays extend from top to bottom of the fence, gripping the line wires at every intersection by the well known "Columbia" Hinge-Joint. "Columbia" Fence is made in standard farm and poultry styles. It is full height, made of full gauge wires, and the stays spaced exactly as catalogued.

"Pittsburgh Perfect" STIFF STAY Fence

"Pittsburgh Perfect" is one of the most widely used stiff-stay fences on the market. The thoroughly galvanized wires are joined by our perfected electric welding process which produces a one-piece steel fence of exceptional neatness, strength and durability. "Pittsburgh Perfect" Fence is made in a wide range of farm, poultry and lawn styles. Fully guaranteed.



"Pittsburgh Perfect" Lawn Fence

Complete protection for the lawn is provided by our unusual Lawn Fences. They are made of heavy, closely spaced wires which effectively keep out chickens, hogs, dogs, and prevent trespassing.

"Pittsburgh Perfect" Lawn Fences not only enable to you have a nice lawn and a safe place for the children to play, but contribute to the attractiveness of your home. Made in several distinctive designs.

Improve your farm with good fences for diversified farming and greater profit. We have a correct fence for every inclosure. See your dealer, if he does not have these fences write us and we'll see that you are supplied; our *Good Fence Catalogues* sent free.

POULTRY AND RABBITS

Poultry Problems

By W. D. Buchanan, Poultry Extension Specialist, Washington State College.

What is wrong with my young geese? They seem to weaken in their legs and have a sort of droopy look about the head. Milk, when given to them seems to help a little but I would like to know if there is anything to prevent these attacks and what causes them. Mrs. A. D.
Endicott, Wash.

Regarding your young geese, that are weak in the legs, would say, it may be due to overfeeding, or to a lack of something in the feed. Probably the latter. Bread and milk is an excellent feed to start with. They may be fed a mash made by mixing 10 pounds of millrun, 10 pounds of ground corn, one pound meat meal, or sifted beef scrap, and one pound fine sand. This may be moistened with milk or water; but if milk is used the meat scraps may be left out. They should have plenty of pasture, or green feed, and water at all times.

I have 25 hens, mixed breeds. They are laying fine but going blind. There is nothing wrong with them and they still sing until they are so blind that they can't eat. Some of them get lame or stiff legged. Will small chicks contract this disease? They are not with the hens very much. Are the eggs unfit for use from these hens? They are on range now and do not want much to eat. They have had mostly wheat and bran mashes and table scraps. Mrs. E. C.
Cusick, Wash.

In reply to your inquiry regarding your hens going blind, would say, blindness in chickens might be due to disease; but the chances are that it is due to a lack of nutrition. Your flock was probably short of green feed during the winter months. Also an exclusive diet of wheat and wheat byproducts is not good. Add a little corn to the wheat for scratch, and mix a little ground oats and ground corn in the mash. In winter they should have about 20 pounds of meat scrap in each 100 pounds of mash.

If this is due to malnutrition, as I suspect, the chicks have no disease to catch, though they will undoubtedly be weaker than chicks from strong stock. The eggs should be all right to eat.

What is the matter with my young turkeys? They grow fine until between a week and three weeks old. They become stupid of a sudden, refuse to eat, and have a diarrhoea of a brownish color. Some die within a few hours, others live a day. When they first hatch, I give them grit, oyster shell and warm water and on the third day I feed them a chick mash and chick feed. I keep shells before them all the time. I keep the mother hen in a coop until the little ones are able to follow, after that they have free range. Mrs. A. W. Z.
Okanogan, Wash.

This is a case of improper feed, and probably of overfeeding. Young turkeys should not be fed till they are 48 hours old, and then very lightly. On the first feeding day, give them a little grit (but no shell), and sour milk to drink. On the second day, add a little good wholesome chick starter of some kind. Feed very little at any time, and I would give the sick poults, or the whole flock, if you care to, a teaspoonful of powdered Ipecac to each 20 turkeys. Mix this in what mash they will eat in five minutes, and moisten to crumby state.

The yolks of our eggs are dark green. I feed the hens wheat, buttermilk, bran and shorts, and they are running at large. Mrs. F. T.
Elk, Wash.

Regarding the yolks of eggs being dark green, would suggest that you feed the hens a mixture of two parts wheat and one corn in litter, or sowed thinly on the ground. Add a little ground corn to the mash. Give them plenty of buttermilk, in vessels that are washed and scalded daily, and without any patent medicine, your egg yolks will be of proper color. It will be necessary, of course, to give them all the grain they will eat before they go to roost.

I had 530 little chicks and lost 20 of them. I gave them growing feed that was moldy. Their feathers get rough and the droppings streaked with blood. They have a run in a raspberry patch. Am feeding them sour milk, water, charcoal, shells, mash, fish meal and growing feed. Is there anything I can do? Mrs. G. W.
Lynden, Wash.

Moldy feed will cause sickness, and even kill chicks; but it is not likely to produce the condition which you describe.

Bloody droppings are an indication of coccidiosis. There is only one thing to do. Get them on new soil at once, and thoroughly clean and disinfect the brooder house. A good plan is to have a small patch of new soil each day for two weeks, obtained by a portable fence, or by daily scraping off the top soil and replacing it with new. Clean and disinfect brooder house every other day. Then give them two-thirds of an ounce of crude catechu in each 30 gallons of water.

Some of our hens have large swellings on the balls of their feet. On opening it seems to be full of a hard pus. I have also noticed two hens with similar conditions on the sides of their heads. They are all fed wheat two-thirds, and one-third corn, lettuce, alfalfa, egg mash and buttermilk. They all seem to eat well. What can I do for them? Mrs. J. C. W.
Spokane, Wash.

The first condition is bumblefoot, due to bruises from flying onto or off from a high roost, or by thorns or slivers, Remove the cause, if found. Remove the pus as you are doing and paint the wound with tincture of iodine. The swellings on the heads are probably due to colds or roup.

New Birds in the Flock

"When more birds are to be introduced into a laying house there arises the difficulty of getting the new ones accustomed to the house," says George R. Shoup, poultryman of the western Washington experiment station. "The best plan we have found at the station is to make a temporary partition of wire across one end of the house, and keep the new birds in here for four days. This is about the cycle of a chicken's memory, and by the end of that time they feel that this is their home, and they are ready to fight for it. The door is opened and they are allowed to mix gradually, and as a rule no fighting will take place.

"When new birds are simply placed into a new house, the others will fight them, keep them away from the feed hoppers, and not allow them to roost. The new ones realize that this is not their home and they will not fight back. By means of a partition they become accustomed to the new quarters gradually and no trouble of this kind is experienced."

Bald-Headed Hens

"Hens with bald heads are often the source of annoyance to their owner, who in many cases does not know why the feathers should come off. Very often these are the best layers in the flock. It is claimed that these are caused by depluming mites, but examinations of many birds at the western Washington experiment station have shown no signs of such pests," says George R. Shoup, poultryman.

"The nearest we can come to the solution is to keep the floors entirely dry. Damp litter is thought to cause such trouble, which results in itching of the head where the plumage has been removed. We can give no reason for damp straw causing bald heads, but we do know that if the straw is dry the trouble will not occur. It is just possible that we will find some further solution of the trouble in the future."

For

Quick Trips to Town

Ride a Harley-Davidson on your business errands to town, railroad station, creamery, store; when you want to get to a neighbor's place and back in a hurry; when you have to go down the road to the far end of the farm. **Quicker, handier, cheaper** than an automobile. Roomy side-car carries 'most anything. Thousands of Harley-Davidsons on farms average 50 miles for a dollar—gas, oil, tires and all. Ask your dealer, or write us for literature.

CASE FARM TRACTOR

more years of better work

EVERY Case tractor owner soon discovers that he can place absolute confidence in his machine. Years later he again discovers that his tractor has outlasted and outworked many others. These valuable advantages are largely due to the efficiency and durability of the Case built engine. This engine is really remarkable for its power and fuel economy. No other tractor engine has such an enviable reputation for durability.

Reserve power increases durability by preventing overloading of the engine. All Case engines have 20 per cent or more reserve over rated power.

Durability is the result of many Case features. All moving parts are well balanced. All bearing surfaces are large. Lubrication is positive and largely automatic. All working parts are fully enclosed and protected from dust and dirt, including the cylinder barrels and pistons, which are protected by an effective, patented, Case air washer. All parts are easily accessible for adjustment, and all can be readily renewed. The material used is carefully chosen to insure durability, and is tested to uniformly high standards.

For two good reasons, the Case engine is mounted crosswise on the rigid frame. The belt pulley is on the engine crankshaft where no power is lost through gears—a simple spur gear transmission is used, more efficient than any other type of drive.

For these and many other reasons Case Tractors are dependable, efficient and highly durable. An interesting booklet, "Better Farming with Better Tractors", tells the whole story. Write for it.

ORCHARD AND GARDEN

Pruning Trees

Orchardists Adopt Long System

It is interesting to note that some of the fruit growers in western Washington, as well as in other parts of the state, are adopting the long system of pruning in their orchards. R. B. Miller of Startup has come to the conclusion that severe heading back, such as he has practiced in former years on his pear orchard, is not best for the trees. It produces too much water sprout growth, and does not allow for the trees to form a perfect head.

During the last few years he has done practically no severe heading back except on trees under 3 years old. He has only thinned out such limbs as were necessary to allow plenty of light for all parts of the tree and to prevent limbs from rubbing. He is well pleased with the results so far, and expects to have a better growth of fruit spurs and a more even production of fruit on all of the trees.

Miller has over 320 acres on his entire farm, a large part of which is planted to Anjou and Bosc pears. Most of the trees are set 20 feet apart each way, and Bartlett trees have been set at intervals for pollinizers. The entire orchard has been allowed to grow a cover crop, but was disked during July in order to prevent too rank a growth and also to put the feeder roots of the trees lower down into the ground. He finds that a heavy cover crop has a tendency to bring the feeders closer to the surface and there is danger from severe cultivation, if done after the roots have become well established. For this reason the disking is done somewhat early in the season.

Bees are very essential for pollinizers, and Mr. Miller finds that he has best results from taking the hives out into the orchard and placing them at convenient intervals, so that they are not required to go too far for the nectar. He has 29 colonies, and expects to use them all next season in his own orchard. After the blooming season they are brought back to convenient stands near the barn, where they are kept during the remainder of the year. They have all been supplied with Italian queens in order to strengthen the colonies, and make them more disease resistant.

Another reason for moving the colonies about the orchard is that the bees seem to prefer working on one or two varieties of fruit in preference to others. All pears in this orchard bloom at the same time and in a short blooming season it is often difficult to get enough bees to pollinize all of the blossoms. Mr. Miller believes that this can be accomplished by having a sufficient number of bees to cover the entire orchard during blooming season, and there will be enough flora in the woods during the remainder of the year to afford a good supply of honey.

The crop of pears this year will be lighter than usual, which he belives is due to the extreme dry weather last year. It seemed to have a marked effect on the growth of fruit buds for this year's crop. The fact that the dry weather has produced this effect is proven by the appearance of fruit on the trees that are located in spots which are supplied with spring water from underground seepage. Such trees have a different growth of foliage and fruit spurs, and there is a noticeable difference in the set of fruit. The growth this year seems to be normal, and there is little doubt that there will be a normal crop of fruit set on next year.

"I believe in spraying my orchard very thoroughly and have found it very convenient to use my own spray tank for mixing my own lime sulphur," said Mr. Miller. "I can make 300 gallons in a day with one man, and can produce it for one-third less than what it would cost to buy it already made up. The outfit consists of two large tanks, one just above the level of the other. The lower has a fire under it, but it is so arranged that the flame and smoke must pass under the upper tank after leaving the lower one. This plan allows for the heating of the water in the upper tank, which is used in the lower tank as soon as the solution has been thoroughly cooked."

Thinning Fruits

Thinning fruit is profitable in western Washington, according to H. D. Locklin, horticulturist at the Puyallup experiment station. The object of thinning is to remove part of the crop so that the fruit remaining because of improved quality will sell for more than all the fruit that was originally on the tree and at the same time leave the tree in a better condition for the production of subsequent crops.

Mr. Locklin further points out that seed production is a much heavier drain on the strength of the plant than is the development of the fleshy or edible part of the fruit. This being true, if we can cut down the number of seeds developed by the plant, there will be much more food to go towards the development of the edible part of the fruit.

If you are in doubt as to the practical value, select a few trees of the same variety of apples, pears, plums, or any such fruit. All the trees should have about the same crop set. Thin half of the trees as suggested above. At harvest time grade and determine comparative commercial value of fruit from thinned and unthinned trees. If the thinning is charged against the fruit the saving in picking and sorting should be credited to it, to say nothing of the better condition of the trees. Give thinning a fair trial and then decide for yourself.

Plan Orchard Excursions

Four orchard excursions during the week of August 21 to 25 are planned by Chelan County Agent Roy Larsen, instead of one, which has been the rule in the past. Different subjects will be studied on each excursion, such as stationary spray plants; necessity of removal of trees set too closely; pruning and thinning; fertilization and soil management, etc.

The first excursion Tuesday, August 21, will take in orchards around Peshastin, Dryden, Cashmere and Monitor. The next day will be devoted to points near Wenatchee, East Wenatchee, Sunnyslope and Malaga. Following will come Entiat, Chelan, Manson and Orondo, and the final day, Friday, August 24, will include Okanogan and Grant counties.

Professor O. M. Morris will be present from the state college to talk on stationary spray plants, and R. N. Miller, also of the state college, will have as his subject farm and soil management.

FEED THEM TOBACCO.

Nicotine spray is death to aphis.

One good test—

—of the purity and stability of a motor oil is the amount of carbon it forms.

Zerolene forms, on an average, 30% less carbon than other oils. The carbon is soft and fluffy and most of it blows out with the exhaust. For this reason the Zerolene-lubricated automobile may be driven from 25% to 50% farther without having the valves ground or the cylinders rebored.

Zerolene forms less carbon than any other motor oil known to us.

Insist on Zerolene—even if it does cost less. Ask for it by name—Zerolene.

STANDARD OIL COMPANY
(California)

30% less CARBON
5% more gasoline mileage

The Standard Oil ZEROLENE For Motor Cars

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

You need never sacrifice reliability to price when you buy tires.

In the Fisk line—a standard product with a reputation for quality from the earliest days of motor cars—there is a tire to fit your car, your pocket-book and your road requirements.

THE FISK PREMIER CORD is a tire low in cost to you that is yet good enough to be made a part of the Fisk line and to be offered with pride by the makers and the Fisk dealers because the value is so unusual at the price.

It will meet every reasonable demand and give long service at a low mileage rate.

If you need a 30 x 3½ tire to meet the most exacting possible conditions, one that heavy loads and bad roads make no impression on and that defies comparison of any kind, you will buy a FISK RED-TOP.

There's a Fisk Tire of extra value for every car, truck or speed wagon

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

When somebody has been poisoned the first and most important thing to do is to calm the fears of the victim. There have been almost as many deaths from fright as from poison. To reassure the sufferer and to gain his confidence is half the battle.

Dr. Copeland.

Even when the poison has been taken for suicidal purposes, the temporary aberration of mind that made such a foolish deed possible has disappeared, and the would-be suicide begs for life. So he needs calming, just as does the poor chap who has taken poison by mistake.

Poisons differ in their nature. Some are corrosive. They may be acids or like acid in their effects. They burn their way into the tissues and act instantly. There are poisons which act slowly but surely upon the tissues and organs of the body, producing gradual destruction.

Then there are poisons which paralyze or derange the nervous system, rendering the victim unconscious or else throwing his body into spasms.

Sometimes a badly-poisoned person is found with an empty and unlabeled bottle beside him. The nature of the poison is then, of course, unknown. In such a case no antidote can be given, because nobody knows what should be counteracted.

Under these circumstances you must act on general principles. The best thing to do is to give an emetic. If the stomach can be emptied, the poison not already absorbed will be removed from the system.

Mustard is to be found in every house. To a cupful of warm water add two tablespoonfuls of mustard. Make the patient drink this, and repeat the dose every 10 minutes till he vomits.

If the mustard can not be had, use ordinary table salt in the same way. Sometimes the person can be made to throw up by running your finger down his throat. Be careful about this, because you may injure the tissues if you are rough.

If you know the poison is an acid, give strong soda solution. Follow this with milk and white of eggs.

In mercury poisoning white of eggs is the best antidote. One egg for every four grains of the poison is the rule.

Iodine poisoning is rather common. For this, starch, if it can be had, or flour, should be given. Make into a paste and feed a lot of it. Then try to induce vomiting.

Opium poisoning calls for black coffee and artificial respiration.

Food poisoning, from cheese, ice cream, fish, mushrooms or olives, calls for an emetic.

In every case of poisoning send for the nearest doctor, explaining the nature of the accident, so he will be prepared. He will come with stomach tube, antidotes and stimulants.

Keep the patient warm, using hot water bottles or blankets. Needless to say, where the corrosive poisons have been taken there must be wise after-care. Soft foods and fluids must be given, but your doctor will direct you what to feed the patient.

Wheat Selling Problem

(Continued from page five.)

smaller fraction of the population of the United States. Unfortunately, they have not the political influence in the nation at large that they have in the wheat-growing states of the west.

Suppose that a special session of congress should be called. In the light of the foregoing facts, where could the needed majority in the house or the senate be found to pass a law to stabilize wheat prices in any of the ways that have thus far been considered — a guaranteed price by the government of $1.75 a bushel, government financing to withhold 200,000,000 bushels from the market, or a government subsidy on exported wheat?

These and other facts convince President Brown of the American Wheat Growers' association that governmental intervention this year in the interest of the wheat growers is improbable. In his judgment there is no likelihood of emergency legislation, and he is opposed to any government stabilization plan as a permanent policy, believing that it "is almost certain to increase production."

OFFER SHORTHORN MONEY.

The American Shorthorn Breeders' association has announced the offer of over $25,000 to be divided among breeders of Shorthorns and milking Shorthorns at the three big middle western live stock shows during the coming season. The International at Chicago gets $11,205, the American Royal $8600 and the Western Live Stock show at Denver, in January, $5660.

Avoid Motor Oils containing paraffin, asphalt or any other non-lubricating substance. Aristo oil is refined by the most advanced processes, designed to remove everything in the crude which has no lubricating value.

More Than Merely
Lubrication
—Seek This Also in Your Motor Oil

Aristo is as near perfection purely as a **lubricating film** as science can produce today.

All the facilities, all the expert chemists, all the latest and acknowledged best equipment that the Union Oil Company can gather together are employed in the production of **Aristo.**

Great research laboratories at our plants are constantly testing all methods and all oils to be sure that none is better. **Aristo** forms a durable, fine film which penetrates to and **lubricates** all the motor's moving parts in any weather and at every motor heat.

But you should look for more than this in motor oils.

"Carbons" Are Important

All oils deposit some carbonaceous residue in use, as all refiners know.

But some deposit one kind, some another.

One is flinty—**hard.** It attaches to pistons, cylinders, spark plugs and valves. It has a tendency to cling. And it acts as an abrasive, causing wear.

It becomes incandescent and pre-ignites the gas.

It coats spark plugs, short-circuiting the spark.

Its frequent accumulation around valves impairs compression.

Four motor troubles, familiar to all motorists at one time or another, follow.

The Other Kind

The little residue—a half to a third as much—that comes from **Aristo** Motor Oil is of a different kind.

It is soft and fluffy. Its tendency is not to cling, so most of it blows out with the exhaust.

Being softer than the motor's metals it can't cause wear.

Motor cars travel thousands of miles farther and tractors months longer without cleaning. Spark plugs practically never "foul."

Such oil used regularly means a more satisfactory, smoother-running, longer-lasting, less expensive car. This is most apparent after several thousand miles. For sale at all first-class garages and service stations.

Union Oil Company
of California

Aristo Motor Oil

Recommends Fall Calves

Under most conditions on the dairy farm, says the department of agriculture, fall calving is desirable. The calf receives milk for the first few months of its life, and when it is ready to be weaned from this food good succulent pasture is available. During the winter it has learned to eat grain and roughage while it has been getting whole milk, skim milk, or milk substitutes, and when grass comes it can make the change without getting a setback. There is another advantage in fall calving, as the cow gives the largest flow of milk at the season when prices are usually the highest. Also calves are at the right age so that if well developed they may be bred to calve in the fall.

MONUMENTS F

COMPLETE STOCK. WRITE FOR DESIGNS and prices. Inland Monument Co., N1001 Monroe, Spokane.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

The first time we met John Worth, the leading character in this story, he was taking an active part in preparing the little frontier village of Bismarck, N. D., to withstand an Indian attack. We next saw him playing the part of a man, although he was only 12 years old, in defending the village when the warriors appeared.

After the Indians were repulsed by the frontiersmen under the leadership of Jim McKenzie, the sheriff, and order was restored, Mr. Worth, John's father, set out for the north to search for outcroppings of coal, he being a miner as well as a freighter. During his absence, Mrs. Worth felt many misgivings owing to the dangers that confronted the wilderness traveler, but bravely assumed responsibility for John, his brother Ben, aged 10, and the baby. Mr. Worth had not been gone many days when he returned, clothed only in an Indian blanket and a pair of worn-out moccasins. He had been the victim of a thieving party of redskins who had taken all his clothing, leaving him naked on the prairie, where early winter winds would have brought certain death but for the friendliness of an old Indian whom he had once befriended. This old warrior's blanket and moccasins saved him.

It was not long, however, before he was on the trail again and when he came back in the spring he reported that the Indians were becoming more and more hostile toward the whites, and that it would not be safe for any mining expedition to venture away from the village for some time yet.

It was over a year before Mr. Worth was able to lead the mining party to a mine that he had discovered. It was a great day for the boys when the wagon train started across the wild prairie, but the first few hours out brought an experience that they long remembered. They rode away from the party for a swim in the river, and when they came back to where they had tied their horses they found them gone. Afoot they started after the outfit, now miles ahead and it was late at night when they wearily dragged themselves into camp and went to bed after a suppor of cold beans and coffee.

After considerable traveling the party reached its destination, and the boys looked with some dismay upon the dug-out that was to be their new home.

But it was to be a happy home. The boys soon discovered places to fish, trapped beaver, avoided rattlesnakes and hunted wolves. Later when winter set in they led the men of the outfit on an antelope hunt that supplied the camp with meat for the long, cold winter when all communication with the outside world was cut off.

CHAPTER VI.

A Snowshoe Race.

"I tell you what," said Ben, one day when the boys were off on their skees, "if we only had a sled, what fun we'd have down these hills!"

"Well, what's the matter with making one?" answered John, the ever-ready. "It would be great; this crust is smooth as glass; we'd just fly."

At once they turned in their tracks and sped for home to carry out their plan.

"I'll beat you in," said Ben.

"I'll bet you won't."

They started off evenly at the top of a slope. A few long, half-stepping, half sliding strokes gave them impetus enough to slide. Both crouched now in order to lessen the wind resistance and to avoid the chance of losing their balance. They were very evenly matched; for while John was the stronger, his brother was light and not so apt to break through the crust. Down they rushed with ever-increasing speed, the particles of snow rising like spray before them. The swishing, crunching noise grew into a hum as they sped faster and faster. At first Ben forged ahead—he had got a better start—then John's weight began to tell and he gained inch by inch. Ben crouched down still lower, making his body in a compact little ball, but in spite of all he could do his brother gained on him. Now he was even, now a little ahead, and now only his back could be seen by the younger. The end of his scarf was standing out behind him like a painted stick. The distance gradually increased until perhaps 20 yards of glistening snow lay between them. Ben was watching intently for any slight grade of which he might take advantage. All at once he noticed that John had disappeared.

Almost at the same moment he too began to drop. The racers had been watching each other so closely that neither had noticed that they were approaching the edge of a great drift. John had sailed over first and landed right side up some eight feet below, but so solidly that he broke through the crust and stopped short, falling forward on his face. The instant of warning that Ben had, had put him on his guard; he landed lightly and sped on, hardly checked.

"You will beat me, eh!" he shouted derisively to his discomfited brother, as he shot past.

John scrambled up and started again, but the incline was now very short, and by the time he reached the level Ben was far in advance and going well. It was a long, stern chase. However, the older boy's strength and weight were great advantages now, and within half a mile the two were on even terms again. For a time they raced side by side, arms swinging in unison, legs going like piston rods. Their feet were kept absolutely straight, and so the long skates ran exactly parallel, for if either foot should be turned in or out ever so lightly, one skate would cross the other and the skater would be tangled up so quickly that he would not know what was the matter.

The brothers were now sliding along side by side, each straining every nerve to pass the other; breath came in short puffs and showed on the frosty air like the exhaust steam of a locomotive; perspiration began to appear, and the effort they were putting forth was evidenced in the strained look on their faces.

Faster and faster they went, skimming along the level like a pair of swallows. They were going too fast to be careful of their steps, and Ben turned his right foot a little in. Instantly the skates crossed in front, tripped him, and down he went head foremost into the snow. His left ski slipped off, flew towards John, caught between his legs, and threw him over backwards. For a moment there was the utmost confusion. The boys were stretched out, heads almost buried in the snow, feet kicking wildly, and the long skis beating the air like flails. Finally these were kicked off, and the crestfallen racers managed to get right side up. After much floundering they got their skis on again and continued their journey, this time at a more deliberate pace. They disputed all the way home as to which was the faster, and finally agreed that the momentous question could only be settled satisfactorily by another match.

When they reached camp a couple of boards, a saw, a hatchet and some nails were secured. They sawed and chopped out the sides, nailed on a couple of cross-pieces for the seat and a diagonal strip to brace the whole thing. This much was easy, but both were at a loss to find anything for runners until Ben remembered that strips of flat steel had been used on some of the canned meat boxes. These were stripped off, hammered flat, and nailed at each end to the sides of what really began to look like a conventional sled; the seat board was fastened on and holes were bored for the leading rope.

The boys looked at their handiwork with no little pride and pronounced it as fine a cutter as the eastern variety. To be sure it was not beautiful to look at, and did not bear any highly flourished name like "Flyaway" or "P. D. Q.," but it did not lack decoration altogether, for on one side was branded "Use Higgins' Soap," while the other commemorated "Ruby Brand Tomatoes."

In spite of its roughness and clumsiness it was possessed of good speed and strength enough to withstand all the ill-usage the boys gave it. When the snow was soft they used broad runners made of barrel staves, which they made fast to each side, and thus turned their sled into a toboggan.

If John and Ben wanted anything they had to make it or earn enough to buy it—money was not so plentiful that it could be spent on toys and mere amusements, and so they frequently had to devise ways of getting the things they longed for. John had made up his mind that he must have a saddle, bridle, spurs and quirt (a short, flexible, braided whip) of his own; and when he found that none of these things would be given him he determined to earn enough money to buy them. Ben, too, had set his heart on owning a repeating rifle (a style of arm that was rather rare in those days) and so the brothers agreed to work together at trapping, mining, or turning a penny in any way that offered. The sum total was to be divided in the spring, when each would buy the long-desired articles.

As spring drew near Mr. Worth decided to move along and open another mine to the westward, the first one being now in good working order.

Again the family packed up their household goods, abandoned the dugout that had sheltered them during the long winter months, and started off on a pilgrimage. The spring was well advanced and the verdure of the prairie was in its prime. Wild flowers were plentiful and the air was filled with the melody of the song birds, that of the meadow lark being sweetest and most sustained. Robins, thrushes, plover and curlews—all did their share to make spring beautiful.

Many prarie-dog villages were passed. The queer little beasts sat on the mounds of earth beside the holes that served for homes, their curiosity drawing them out. The travelers took snap shots at them, but they were quick as lightning and never stayed above ground long enough to allow of careful aim.

John's industry had made him the proud possessor of a new saddle, whose creaking was music in his ears, and even old Baldy seemed to be pleased with his finery, for he pranced around like a two-year-old and arched his neck in a way that seemed to say, "I'm about the finest thing a-top of this earth." Ben had achieved his aim also, and was the owner of a brand-new repeating Spencer rifle, the result of the sale of the winter's catch.

As the train went further westward the trail grew more and more indistinct, and it became the duty of the boys to go ahead and trace it out. Later, when even the barely discernible wheel tracks had disappeared, it was necessary for them to pick the best route and also to find the camp sites.

This duty was a delightful one, for new country was continually opening before them, and adventures of all kinds might offer at any moment.

"Ain't those antelopes over there by that little hill?" said John one day, pointing to one side.

"That's right," answered Ben. "What's the matter with chasing them?" He spoke with the authority of the hunter. Possessing the rifle, no opportunity to exploit it was ever allowed to slip; nor, if the truth be told, was John slow in calling attention to his saddle, spurs and fringed leather chaps.

"All right," said John. "We've never been on an antelope hunt alone."

The boys went off at right angles from the direction they had been taking and rode down a shallow ravine or coulee in order to keep out of sight of the game. They rode slowly along till they reached the end of the depression; here they dismounted and each tied the forelegs of his horse with the rope he carried on his saddle horn; they were not going to travel afoot again if they could help it. It was now necessary to cross the open prairie in plain view of the animals they sought. Advantage was taken of a well-known characteristic of antelopes—their curiosity. John pulled the handkerchief from his neck and began to wave it slowly to and fro over his head as he walked. Ben followed in his brother's tracks, making himself as inconspicuous as possible and fingering the lock of his repeater to be sure that it was in good working order.

The boys drew nearer and nearer, and the flagging was kept up persistently; but it did not seem to have any effect, for the animals were all looking the other way. Still they drew nearer; their eyes were fixed on their quarry, the rifle held ready, every nerve tense, each heart beating furiously with excitement.

Then it was seen that the antelopes were attracted by the white tops of the wagons, which were moving slowly along over the plain. The wagon train was "flagging" them. Now if the hunters could get within range before the spell of curiosity had been satisfied, all would be well.

The boys moved cautiously along till they came to a sunken "buffalo wallow," a muddy place frequented by the bison for the sake of the moisture. This afforded the shelter that was needed. Attracted by the flapping canvas wagon-tops, the unsuspecting animals drew slowly near the hiding place.

"Oh! if they would only come just a little closer," said Ben under his breath, "I'd have them sure.

Once they stopped and sniffed the air, but just as Ben was about to chance a long-distance shot, they moved on again.

"Now, Ben!" said John excitedly.

For an instant the stock of the rifle rested closely against the boy's cheek—then the shot rang out. Almost simultaneously the biggest of the herd leaped into the air, then fell flat to the ground. The others stood still, bewildered.

"Good! Now for another one," whispered John. Again the rifle was raised and again its deadly crack sounded forth. Another antelope bounded up, ran frantically a few yards, and dropped. At this the rest of the herd made off like the wind, and in a few minutes were mere specks on the horizon.

"Well, I must say," said Ben, exultingly, "I thought once that I would rather have your saddle and outfit, but now—" he slapped the stock of his rifle affectionately—"I wouldn't swap if you gave me Baldy to boot."

"Baldy to boot, eh? Why, I wouldn't slap that horse for a whole stack of rifles." And John moved off in indignation to get the horses, while Ben went over to the spot where the game lay.

The carcasses were packed on Ben's horse, both boys mounting Baldy. They were welcomed heartily at the camp, for fresh meat was at a premium, and any change of diet was an event of prime importance.

"That gun of yours must be chained lightning," said Ted. "I didn't suppose you could hit the side of a hill at 50 yards."

Many days of traveling followed over country that had apparently never been covered by a wagon before.

During this long journey the boys came to know the men of the party very well. They were apt to be sharply divided into good and bad, for in those rough times people showed their real character without reserve.

Charley Green still continued with the company, and he was the boys' greatest friend; but Tom Malloy, who joined the expedition just before it started out for the new camp, soon got into John's good graces. He was a man of varied talents; a gambler and saloon keeper when times were good; a miner, cow-puncher, or hunter when his money ran out. Rough, quick-tempered, and as ready with his fists as with his "gun," he was nevertheless possessed of a great heart and a loyalty to his friends that nothing could shake. Like many of his race he loved a fight and delighted to have a lively "argument" with a man. John's boldness and aggressiveness pleased him greatly, and he looked the boy over, enumerating his good points over to himself; his broad chest, sturdy legs and arms, his clear eyes and fearless look all showed to Malloy's experienced eye that he would make a first-rate boxer.

"I'll show that youngster how to put up his hands sure," he said to himself.

It was a tiresome journey, long and monotonous, but enlivened now and then by a hunt or an excursion. The train was to go by way of the Hart River road, and it seemed to the younger members of the expedition as if it would never be reached. But find it at last they did, a few wagon ruts not very clear nor strongly marked.

The boys' task was now much easier, for the way was marked plainly before them and it was comparatively smooth traveling. Many wide excursions were made on either side of the trail, and many hunting expeditions were indulged in. Ben became a very good shot, and the constant supply of fresh meat gave evidence of his skill.

After many days' journey, the "Bad Lands" were reached. That desolate country, scarred and pitted, was void of vegetation except on the bottoms and near the infrequent water courses. Here the wagon road disappeared altogether, and the pioneers found it necessary in many cases practically to build one, to level some places and make inclines down steep

(Continued on page fifteen.)

All at once he noticed that John had disappeared.

Experience Letters

Dear Mrs. Barland: I am 16 years old and do nearly all the washing, ironing, scrubbing, cooking and baking. I can do all the outside chores, but I can not run any of the farm machinery and can scarcely drive one horse, let alone three or four, though I have lived on a farm all my life. Winnie has me beat there.

I wish some of the club girls and boys would write and I will start the topic by telling about my canning. I joined a canning club the middle of May, 1922. Mamma said I had no chance to win because we had no up-to-date labor-saving devices.

I had a good range, one wash boiler (with false bottom), one 17-quart preserving kettle, one 12-quart kettle, two smaller kettles, one roaster, one large bread pan and one dishpan.

I used the wash boiler to process things that took over 30 minutes and the roaster for things that took less time. The boiler held 14 quart jars and the roaster seven. With these articles and whatever measuring utensils were necessary I canned 202 quarts of fruit, 48 quarts of vegetables, 48 1-2 quarts of pickles and catsups, 19 quarts of meat, 41 1-2 quarts of soup, 90 1-2 quarts of jam and marmalade and four pounds of candied citron.

I had 35 different varieties of products. We bought one box of peaches at $1.10 and one box of apples at $1, all the rest was either home-grown or wild. It cost $18.65 for sugar, the total cost being $20.75. If I had bought all the raw products, plus the sugar, they would have cost $78.95. Had I sold all my canned products at the market price I would have received $213.41, making a profit of $134.46.

I did 89 1-2 per cent of the family's canning and won first place in county and state. I received a one-year scholarship for winning first place in the county and a four-year scholarship for winning first place in the state.

Montana. A CIRCLE READER.

I am certainly very glad to give you this letter from this 16-year-old girl. This is the sort of girls that grow into women who keep our good old Ship of State sailing serenely on with the Stars and Stripes flying. In contrast read the following letter by a girl of the same age, one of the very few "smoking girls" who write and she didn't sign her name. Here it is:

"Dear Mrs. Barland: I have been a reader of the Circle for quite a while and find it very interesting. I have a number of personal friends who smoke and I do also. My first smoke was taken from my best boy friend and I think girls have as good a right to smoke as boys.

"In a recent issue of THE FARMER it was said that the girls are to be the women of tomorrow and will have a lot of influence. What about the boys as the men of tomorrow? They will have as much influence and responsibility as the girls, won't they?

"I am a girl 16 years old and have smoked since I began to go with the 'gang,' which was three years ago. There are a few girls who are too proud to be seen with us and consequently we are a set by ourselves and are bent on having a good time.

"As to public dancing, I think girls should have some recreation, and dancing is the best exercise I know of. I have gone to public dances since I was 13 and shall probably continue to do so, as my folks do not object.

"I agree with Mrs. Barland that it isn't right to smoke, but it is no worse for girls than boys, physically or morally.

"Washington. L. B."

My Dear L. B.: If you had given me your address I would have written you a kind, motherly letter, for you certainly need guidance and supervision. You write well and you are evidently a thoughtful girl and it is a great pity that you allow the "gang," as you call your group of associates, to lead you on at such a pace along the road which, as sure as the sun rises, will end in disappointment and wasted lives or worse. I imagine the 16-year-old girl who won two scholarships by canning 450 quarts of various things got exercise enough so that she didn't feel the need of a dance, either public or private.

This poor little girl, who is only 16 and has had so much experience, says she "has gone to public dances since I was 13 and shall probably continue to go, as my people do not object."

Mothers who read this, don't permit your 13-year-old girls to attend the public dances. Don't do it. You can keep them happy without it. I know, for I raised a girl and a boy; both are grown into useful citizens and neither ever wanted to go inside a public dance hall. There is much learned there beside dancing and it would be better for the young people if most of the present-day dances were never learned.

Not all who attend the public dances smoke, I know that, but those who indulge in the night auto rides, the "petting parties," the paint, the rouge and lipstick, the cigarettes, are always to be found in the public dance halls. It is a part of the regular program in the pursuit of a "good time."

Dear L. B., some girls see the folly of this wild life in time and change their whole course. Listen to these letters:

Dear Mrs. Barland: I have read the Family Circle for some time and I like it very much.

I was once a "flapper," as they are called. I smoked at parties and at dances, I wore unsuitable dresses and I danced and painted my face in the most extreme manner. Now I wouldn't think of doing such things. I am respected by my mother and others. I spend my time now on educational entertainments and am superintendent of our little union Sunday school.

I am 18 years old with light brown hair and fair complexion. I agree with other girls who have written that I wouldn't like to be an old maid, but would rather be one than to marry one of these "fresh guys" that are hanging around corners.

You may print this letter, Mrs. Barland, as it may help some other girls to change their ways. "BOB."

Here is another:

Dear Mrs. Barland: My father has taken THE FARMER for several years and, although I live in Minnesota now, I expect soon to live in Washington. I am very much interested in the subject of women smokers. I am a senior in high school, though I am not yet 16, and I have discussed the smoking question both in school and in church.

I used to smoke, dance and go on midnight rides and I thought it much fun. As I grew older I saw the utter foolishness of it and "turned a new leaf." I intend to attend a seminary and become a missionary after I graduate from high school and I am very sure I shall never regret giving up these wild, worldly things to lead a true, useful Christian life. Many think good times are over if one becomes a Christian and that he must sit with hands folded, but I know it isn't true, because I have had a better time since I joined the church and have been leading a decent life, than I ever had when running with the "hard bunch."

JEANNE.

Here is still another:

Dear Mrs. Barland: I get terribly lonesome very often and I am in one of those moods now and am going to the Circle and tell my ideas and troubles. I am 18 years old and am not married. When I was in high school I had many acquaintances of the "flapper" type of girls and boys, too, and I do not approve of the way they conduct themselves, but I do think they are pretty well matched.

An ideal girl is a self-respecting girl, clean and wholesome, one who likes company and fun; some are jolly and some are not.

Any girl who will allow a boy to persuade her into doing things that are not right (as I have done) should not be classed as very high. I went to dances when I was but 13 years old and I kissed and made a regular fool of myself and all the time I thought I was "being sporty." I became so common that I would as soon kiss one boy as another. I hope girls as young as I was then are reading my letter. I was a fickle sort of girl and liked attention from the boys.

I was generally at the head of my class and was a leader of clubs and other school "doings." I had a jolly time during my school days and graduated from high school at 17.

The people of my community thought that I was a very clean-minded girl, but I wasn't, and was at the very bottom and the lowest girl in school except my chum, and she was on the same level.

I thought then that life meant "just to have fun," but now I realize how I wasted it in kissing boys and smoking their cigarettes. I never asked for the smokes, but always took one when offered.

I do hope I can conquer myself and live up to what I know is right before I enter college next year. I have always been popular with both boys and girls, but I have not been true to the rules of decency and the laws of my country. I hope some of the boys of the Circle will read this and understand how I feel and never have a part in causing any girl to make such mistakes as I have made.

I don't want to give the impression that I have "got religion," because I haven't. I am afraid the "flapper" girls and boys will not be reading this letter because when I was a flapper I was reading novels and wouldn't spend any time whatsoever reading a letter like this; I called it "the bunk."

My mother never knew what I did nor when or where I did it and now I am afraid to confess it. I will have to go through life with this hateful memory of how I spent my life during my high school years.

"The "nonflapper" boys like a jolly girl, clean and fresh like a rose. Of course they think they are roses, anyway, when they are in love.

When two young people are going together they each should consider they have certain duties to perform to keep the social relations on a becoming and dignified basis. They should practice good manners and it is not mannerly for a girl to powder her face in the presence of a young man or for either one to pull up his socks. And it is certainly very ill bred for a girl to give a young man her pretty garters for sleeve holders. (Let me say here that the common use that a young man makes of souvenirs of this kind is to display them in his room and call the attention of his men friends to them with very unsavory comment about the giver.—A. W. B.)

I would say to the boys, life is too short

(Continued on page eighteen.)

Cattle Ranch to College

(Continued from page fourteen.)

banks at others. Often all the teams had to be hitched to one wagon in order to drag it up a sharp ascent or through a miry place.

In many spots the ground was very treacherous, especially at the edge of a cut. The soil was loose, pliable stuff, liable to give way under the weight of a horse. Badger and gopher holes added to the danger of undermining the banks in unexpected places.

One morning John was sent out on Baldy (his constant companion and faithful friend) to pick out, if possible, an easier way. Boy and horse started out on a smart trot, each having full confidence in the other—as was necessary, for almost as much depended on the sagacity of the steed in the matter of picking a way on dangerous ground as in the intelligence of the rider. It was a task of considerable responsibility that was put on John's shoulders; the route was difficult enough to puzzle a professional civil engineer. Baldy was left to find his own way while his rider looked ahead to choose a road that could be traveled by the wagons. From time to time it became necessary to go down the almost perpendicular side of a coulee, when the horse would hunch his hindlegs, keeping his forelegs stiff and stretch out to their fullest extent. Then he would fairly slide down on his tail.

John had found a place that he thought suitable for the night's camp, had traced out a way by which it might be reached, and had turned his pony back toward the wagons.

He thought to himself, as they slid down one bank and scrambled up the other, that it would be a bad place to be thrown. The surface was pitted with half-concealed badger holes, and in the bottoms were many spots where a horse might easily be mired. Baldy, however, knew his business and carried his rider over awkward places safely. John was congratulating himself on the successful conclusion of his errand when he came to the bank of what was in the early spring a roaring torrent, but which now lacked even a trickle of water. To the edge of this cut Baldy approached cautiously. John, anxious to get back to the wagons and report, urged him on. With a shake of his head that seemed to say, "Well, you are the boss, so here goes; but I don't like the looks of it," the pony went forward, gathering his hind legs under him to make his usual slide—when the ground beneath him gave way. Horse and rider went rolling down the slope, but as John felt himself falling he loosened his foot from the stirrup and leaped off, just in time. Boy and steed arrived at the bottom about the same time, but separately. John's mouth, eyes, nose and ears were full of dirt and dried grass; in fact, he always declared that he ate his proverbial peck of dirt then, all at once; but he soon discovered that, barring a few bruises and a badly hurt pride, he was all right. As soon as he got the dust out of his eyes and realized that the earth had not risen, out of special spite against him, he looked for his horse, and was much relieved to find that his four-footed partner had received nothing more than a bad shaking up. Baldy's attitude, however, was anything but dignified. His feet were waving in air, his head was buried in the loose soil, his body was so covered with mother earth that he seemed like some strange freak of nature. As the boy got up, the horse looked at him, he thought, reproachfully and seemed to say: "I told you so."

"Yes, old chap," replied John aloud, "you do know a thing or two, and I'll trust you more next time."

John never told of his mistake and tumble, but explained the dusty appearance of himself and horse by reference to the well-known characteristic of the "Bad Lands," its stifling alkali dust.

Nation Has New President

Sudden Death of Warren G. Harding Elevates Calvin Coolidge to Place of Leadership

The body of Warren G. Harding, whose death occurred suddenly and unexpectedly at San Francisco at 7:30 on the evening of Thursday, August 2, will be laid to rest at Marion, Ohio, Friday of this week, August 10. At the hour THE FARMER goes to press the body of the former president is lying in state in the national capital, where it was taken by special train from San Francisco. The death of Mr. Harding resulted from apoplexy at a time when he was believed to be well on the way to recovery from an illness contracted on his return from Alaska to the states on the last leg of his nationwide tour, which began when he left Washington, D. C., on June 20.

Under the constitution, the vice president immediately becomes president following the death of a chief executive. At the time of President Harding's death Vice President Calvin Coolidge was visiting at his old boyhood home at Plymouth, Vt., where his father still lives and where his mother lies buried. He was notified late at night of the passing of the president. The oath of office was read to him over the telephone and his aged father, who is a notary public, administered it officially, thus performing the formal act which elevated his son to the highest position in the land. The new president paid a visit to his mother's grave before leaving for the national capital, where he arrived Friday evening and took charge of the affairs of the nation.

The first official act of President Coolidge was the issuance of a proclamation announcing the death of his predecessor and designating Friday of this week, the day of the funeral, as a day which the people should observe with mourning and prayer. This proclamation reads as follows:

"BY THE PRESIDENT OF THE UNITED STATES OF AMERICA, A PROCLAMATION.

"To the People of the United States:

"In the inscrutable wisdom of divine providence Warren Gamaliel Harding, 29th president of the United States, has been taken from us. The nation has lost a wise and enlightened statesman and the American people a true friend and counselor whose whole public life was inspired with the desire to promote the best interests of the United States and the welfare of all its citizens. His private life was marked by gentleness and brotherly sympathy, and by the charm of his personality he made friends of all who came in contact with him.

"It is meet that the deep grief which fills the hearts of the American people should find fitting expression.

"Now, therefore, I, Calvin Coolidge, president of the United States of America, do appoint Friday, August 10, the day on which the body of the dead president will be laid in its last earthly resting place, as a day of mourning and prayer throughout the United States. I earnestly recommend the people to assemble on that day in their respective places of divine worship, there to bow down in submission to the will of Almighty God and to pay out of full heart the homage and love and reverence to the memory of the great and good president, whose death has so sorely smitten the nation."

Shortly after having been notified of the death of the former president, President Coolidge in an informal statement indicated that it was his desire to carry out as nearly as possible the fundamental policies which have actuated Mr. Harding in his administration of the public affairs. He is not expected to make any early or sweeping changes in the personnel of the president's cabinet, and it is unofficially reported that he is asking each cabinet officer to remain with him during the term of office which he completes.

There yet remains about one year and seven months of the four years for which Warren G. Harding was elected, he having served since March 4, 1921.

Mr. Coolidge came into nationwide notice several years ago when he, as governor of Massachusetts, ruled with an iron hand in the suppression of the strike of police officers in Boston. He is known as a man to whom law and order are fundamental, in this respect following in the footsteps of his predecessor, who never lost an opportunity to emphasize the necessity of respect for the laws of the land.

Calvin Coolidge was born at Plymouth, Vt., July 4, 1872; Graduated at Amherst college in class of 1895; began practice of law at Northampton, Mass., in 1897; served as mayor of Northampton 1910-1911; served as president of state senate 1914-1915; elected lieutenant-governor of Massachusetts in 1916; served as governor two terms, 1919 and 1920; was elected vice president of United States in 1920, his term expiring in March, 1925.

Farm Business and Markets Outlook

(Continued from page five.)

Carlot shipments of onions are increasing, with Washington the leading state at the present time. Yellow varieties are quoted at $2.50 to $2.75 per 100 pounds in midwest consuming markets.

Apple shipments which have been increasing steadily for six weeks diminished slightly in the last few days. Prices have hardened and No. 1 Duchess and Yellow Transparents are quoted at $1.50 to $1.75 per bushel in Chicago. Gravensteins are quoted at $2.50 to $3 a box in midwestern cities.

This brand

on a pair of overalls is our guarantee of satisfactory wear and our bond that you get

A New Pair FREE if They Rip.

Made of special woven 9-ounce denim, Indigo dyed, cut full and roomy, where the room is needed, fitted at the waist like tailor-made pants, requiring neither suspenders nor belt to keep them up.

Belt loops simply added for convenience. Plenty of big, roomy pockets. Sewed throughout with special thread. Buttons riveted on, to stay on. Finished with care, turn them inside out and inspect them.

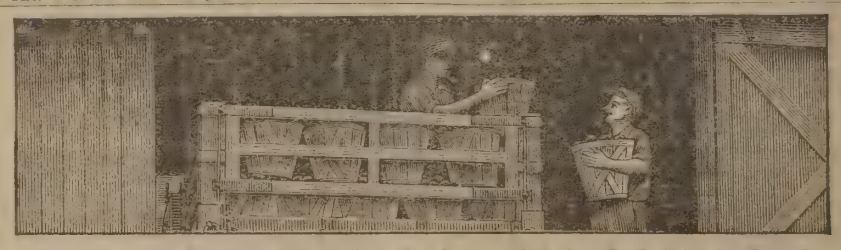
Two-Horse Brand

Copper-Riveted Waist Overalls

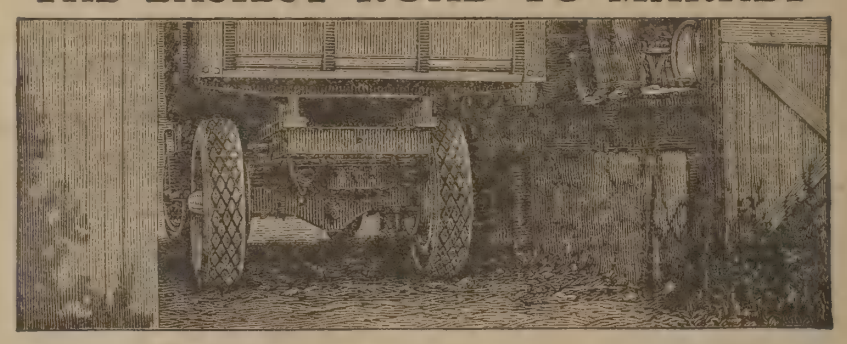
have the reputation of being the strongest, best fitting and longest wearing overalls on the market. Your dealer knows that our guarantee means exactly what it says.

Made by Levi Strauss & Co., San Francisco
Reliable Merchandise since 1853

Makers of Koveralls, Keep Kids Klean.



THE EASIEST ROAD TO MARKET



"Eighteen months of hauling have satisfied me that the only way perishable produce can be got safely, economically and profitably to market, is on Goodyear Cord Truck Tires. I load in the orchard, where sand would make the use of solids impossible, and make two extra trips a day to town."

—HARRY J. CHANT, *Maple View Farm*, Beverly, N. J.

THE difference between profit and loss in carrying perishable things to market, often is a set of Goodyear Cord Truck Tires. Big and buoyant, they cushion the load, preventing damage from jolts and jars, protecting the truck, the driver, and the road. Always active, they get over the miles on schedule time. Ruggedly strong with the strength of Goodyear construction in carcass, sidewall and tread, they give you the wear that means more mileage at low tire cost.

The new beveled All-Weather Tread Cord Tire is made in all sizes for trucks and passenger cars

Bits of Fun for Everyone

Cornfield Overseer, "Say, Sambo, what makes your nose so flat?"

Sambo. "I don't know, boss; but I s'pect it's to keep me from stickin' it into other people's business."—Youth's World.

World Speed Record.

Orchestra Drummer—I'm the fastest man in the world.

Violinist—How's that?

O. D.—Time flies, doesn't it?

V.—So they say.

O. D.—Well, I beat time.—Chaparral.

On the Mend.

Doctor—How do your broken ribs feel today?

Patient—Fine, doctor; but I've had a stitch in my side all morning.

Doctor—Great! That shows the bones are knitting.—Youth's Guide.

Doubling Up.

While Horace Mann, the famous educator, was sitting in his study one day, an insane man rushed into the room and challenged him to fight.

"My dear fellow," replied Mr. Mann, "it would give me great pleasure to accommodate you, but I can't do it, the odds are so unfair. I am a Mann by name and a man by nature—that's two against one."

"Oh, come ahead!" the insane man answered. "I am a man and a man beside myself. Let us four have a fight."—Boston Transcript.

To Keep the Peace.

"Papa, will you buy me a drum?" asked a little lad of his father.

"But, my boy," answered papa, "I am afraid you will disturb me with it."

"Oh, no, I won't," said the little chap; "I'll play it when you're asleep."—Toronto Evening Telegram.

On Board the Ship.

Fair Visitor—Is there some place aboard where I can get a drink of water?

The Gob—Certainly, miss. At the scuttlebutt, on the starboard side of the gundeck, 'midships, just forrud of the dynamo hatch.—Judge.

Keeping at It.

Mistress—Mary, have you cemented the handle on the water jug, which you dropped yesterday?

Mary—I started to, mum, but I dropped the cement bottle.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent dircet from the east, and under present mailing conditions it takes about that time for them to reach you.

4459. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch side requires 6 1-2 yards of 32-inch material. Width at the foot is 2 1-4 yards. Price 10 cents.

Construction Day by Day

So great and so constant is the growth of demand for telephone service that the Bell System invests throughout the country an average of three-quarters of a million dollars every working day for new telephone plant.

New aerial lines are always under construction or extension, new subways are being dug and cables laid, larger building accommodations are under way, more switchboards are in process of building or installation, and added facilities of every description being mustered into service to care for the half million or more new subscribers linked to the System every year.

This nation-wide construction, this large expenditure of funds, could not be carried out efficiently or economically by unrelated, independent telephone organizations acting without co-operation in different sections of the country. Neither could it be carried out efficiently or economically by any one organization dictating from one place the activities of all. In the Bell System all the associated companies share common manufacturing and purchasing facilities which save millions of dollars annually. They share scientific discoveries and inventions, engineering achievements, and operating benefits which save further millions. But the management of service in each given territory is in the hands of the company which serves that territory and which knows its needs and conditions.

By thus combining the advantages of union and co-operation with the advantages of local initiative and responsibility, the Bell System has provided the nation with the only type of organization which could spend with efficiency and economy, the millions of dollars being invested in telephone service.

Your Next Goal

You have finished high school and, like all wide-awake graduates, are looking to college.

The State of Oregon offers you the best of training and a collegiate degree in the leading pursuits and professions, as follows:

Engineering, Agriculture, Commerce, Forestry, Home Economics, Military Science and Tactics, Mining, Pharmacy, Vocational Education and Music.

Student life at the college is rich in opportunities for leadership and personal culture.

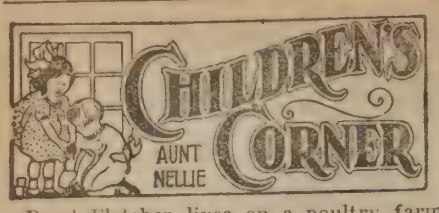
FALL TERM OPENS SEPTEMBER 28, 1923

For information write to THE REGISTRAR Oregon Agricultural College Corvallis

Cuticura Soap —Imparts— The Velvet Touch

Soap, Ointment, Talcum 25c. everywhere. For samples address: Cuticura Laboratories, Dept. U, Malden, Mass.

Please mention THE WASHINGTON FARMER when writing advertisers.



Pearl Fletcher lives on a poultry farm in eastern Washington, Spokane county. They have 1300 chicks and 160 White Leghorn hens. They are doing nicely, Pearl says, and they have lost very few of them. Pearl is 11 years old. She will be 12 January 22, 1923. She sends us the following riddles and a joke. What is taken away from you before you ever get it? Your picture. Why do leaves turn red in the autumn? They blush because they were so green all summer. Mother—How often must I tell you that you can't bite little boys, Charlotte? Charlotte—Oh, but mother, I can! You ought to see Jimmy Park's nose.

Marie E. Kirchner celebrated the Fourth of July at Palmer lake and had great fun boatriding, swimming and fishing, but she did not catch any fish. Her party started out for the lake about 9 in the morning, arriving there at 11 o'clock. Marie is a graduate in Okanogan county, Wash. She likes to cook and says she can make bread, cake, cookies and almost anything. The Kirchners have a large garden and Marie has found plenty to do in it.

June Johnson says she didn't go camping this summer. She spent her vacation at her home in northern Washington and had a good time there. June was 11 years old July 17. We made a mistake in giving her age last time.

Birthday Greetings

THURSDAY, August 9—Jimmy Betz, 11 years old.

FRIDAY, August 10—Emil Hoveling, 11 years old; Catherine C. Lenhart, 9; Grace Marlatt, 11; Ellen Nelson, 11.

SATURDAY, August 11—Ethel Puckett.

SUNDAY, August 12—Florence Bach, 9 years old; Della Evans, 9; Frances Higginbotham, 11; Harold Mott, 6.

MONDAY, August 13—Margaret Bradfield, 9 years old.

TUESDAY, August 14—Joyce Matthews, 11 years old; Hazel Page, 9.

WEDNESDAY, August 15—Clayton Dick, 11 years old; Thelma McTavish, 9; Ella Schrenk, 10; Helen A. Tomlinson, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Alyda Tenbrink, Ellen Moberg, Mary Plummer, Marjorie Mill, Laura Mill, Edna Yochum, Marion E. Warren, June Johnson, Vera Boyd, Leo A. Anderson, Hulda Wood, Zeita Wood, Ruth Rieper, Della Bromley, Lillian Dunning, Pearl Amburn, Lucy Krebs, Elsie Cramer, Carol E. Spencer, Genevieve Gooley, Everil Godfrey, Violet Pflugrad, Impie Steph, Margaret Plett, Levera Viola Bertholf, Marie E. Kirchner, Mildred Wuorinen,

LaVerne George Wolfenbarger, Eva Farrelly, Margaret Kreyssler,

Inez Brown, Vernice Pauline Maurer, Emily G. Maurer, Doris Jones, Elva Blankenship, Ruth Fox, Idell Wolverton, Charles Edward Goetzenbarger, Goldie Richardson, Marion Hamilton, Lempi Lakko, Joyce McDonald, Ivel Reden, John L. Warren, Eda Gross, Olga Gross, Pearl Fletcher.

BEDTIME STORIES

By THORNTON W. BURGESS.

WISHES HE HAD STAYED HOME.

How often when it is too late
We wish we hadn't tempted fate.

That means we wish that we hadn't done the things we did do. It was that way with Chatterer the red squirrel. He wished with all his might that he never had heard of those six eggs of Bully the English sparrow. Anyway, he wished that he hadn't thought of trying to get them, but that he had stayed at home and attended to his own affairs.

Chatterer had gone over to the tree in which Bully had made his nest, chuckling as he went. He had spent part of the day before watching Bully and Mrs. Bully, and he made up his mind that he had nothing to fear from such little birds. Of course, it would be best to wait until only one was at home before he tried to get those eggs, but even if the other should come back it would make no great difference. He had never yet seen a bird as small as they who would do more than scream and make a great fuss when he stole her eggs. Usually this brought all the other birds who were near, and some of them made it very uncomfortable for him; but from what Jenny Wren had said, he didn't think that this would happen this time. In fact he rather suspected that the other birds would be glad to have Bully and his wife robbed of their eggs.

Chatterer was still chuckling as he started to climb the old apple tree in which the nest was. He had seen Bully start for his breakfast over in Farmer Brown's barnyard, and he hadn't the least fear of Mrs. Bully. With the first rattle of his claws on the bark of the tree out popped Mrs. Bully to see what was going on. The instant she saw Chatterer she began to scream, just as he had suspected that she would. And then she had done what he hadn't expected. She had flown at him like a little fury. She had flown straight in his face, pecking at his eyes so that he was only too glad to try to dodge behind the trunk of the tree. But Mrs. Bully was right after him, and in a few minutes Bully himself appeared, for he had heard Mrs. Bully's cries and had hurried home.

For a time it seemed to Chatterer as if the air was full of birds, every one with a stout bill that hurt when it struck. Yes, sir, it seemed as if all the birds in the old orchard must be trying to put his eyes out, or at least tear his red coat to pieces, and yet there were but two, and two little birds at that, for you know Bully and his wife are not very big. The very first chance he got Chatterer darted away for the old stone wall, Bully after him. Once he had reached that, Chattered dodged out of sight between the stones and Bully returned to his home in triumph, boasting loudly of what he had done.

Experience Letters

(Continued from page fifteen.)

to waste by standing back and saying "I'll wait till I see a good one," or "I don't like her." Get out and mix with the girls and see how you like them and don't decide till you do mix with them and get acquainted.

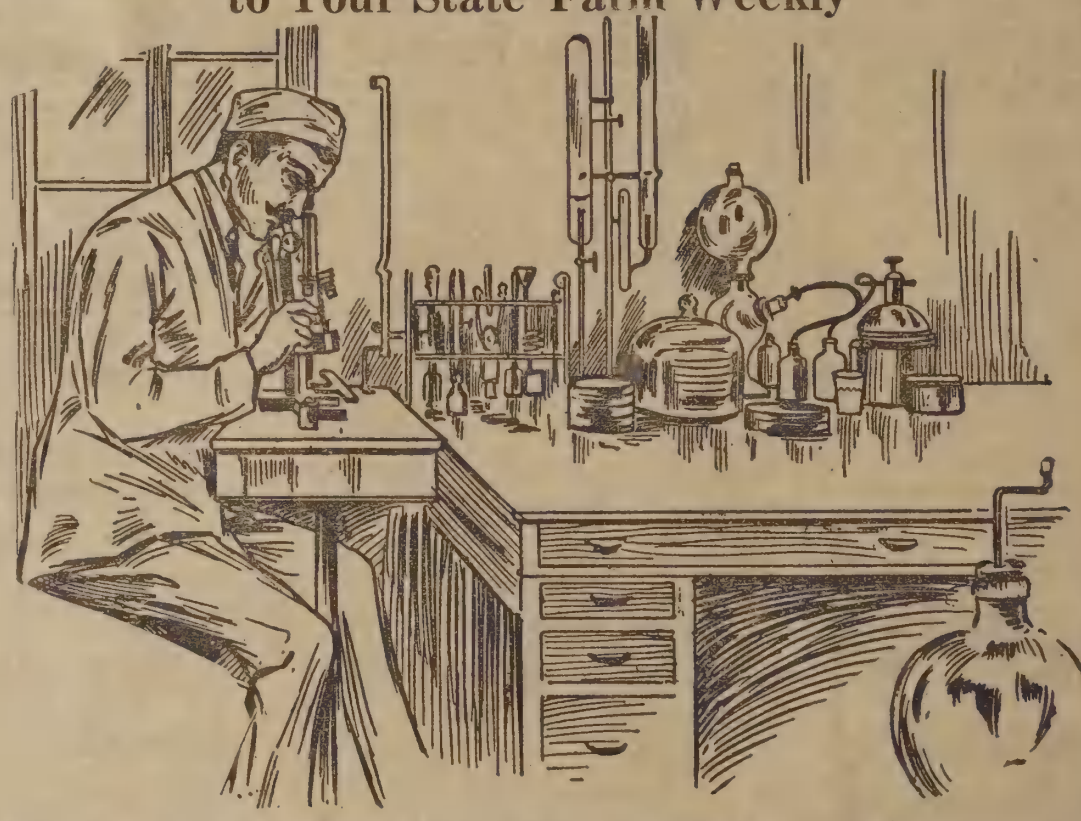
Girls, if you are saving your kisses for the one man, don't let your heart go out to one you like, only to have him turn you down because he don't happen to like you. I would say to you girls also, mix with the boys. I don't mean that you shall seem to be crazy about them or always raving about some one of them, but tell jokes and be a part of the show. Don't wait for the boy to see you sitting in a corner pouting because you haven't been asked to take part in whatever happens to be going on. If you do this you will never have any fun.

I have had more than one boy make a fool of me one night and hate me the next day. This would about break my heart till another boy took me out, then I forgot the preceding one.

I would like to hear from the boys through THE FARMER on their ideas of an ideal boy. I would like to know if boys have trials, too, that they keep hidden away. I remain in my mood till I understand some boys better.

LONESOME PEGGY.

Scientists, as Well as Practical Farmers, Contribute to Your State Farm Weekly



In addition to printing hundreds of articles from practical farmers, fruit growers, market gardeners, stock breeders and dairymen, The Washington Farmer gives space to the scientist and the agricultural expert who carry on careful research work with regard to seeds, plant growth, soils, fertilizers, the care and breeding of poultry and farm animals, the eradication of pests, and many other matters which have a close bearing on agricultural production and prosperity of this state. He has a vast store of information garnered together from many sources which can help solve the farm problems peculiar to this section. What the experimenters at the agricultural schools are finding out, what the scientists who specialize on agricultural problems discover are given to our readers in complete, reliable form. This feature helps round out the paper and gives it greater value to those who make a business of farming

Your state farm weekly gives big value at low cost on account of its cooperative subscription plan.

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

50 Cents for 3 years.
25 Cents for 1 year.
In Canada add 1 cent a copy for extra postage.

News for Breeders

HIGH AYRSHIRE RECORDS.

What is characterized by the Ayrshire Digest as a most remarkable production record for a heifer has just been completed by Lady Scott of Wenatchee, owned by Wenatchee Ayrshire farm, Wenatchee, Wash. Starting test at 2 years and 201 days of age, she produced 12,608 pounds of 4.85 per cent milk, 609.06 pounds of butterfat and qualified for the 50-pound list every month of her lactation period. Starting again at 3 years and 256 days, she qualified again in March, with 48.16 pounds of fat in 22 days.

Two Ayrshires owned by Washington State college completed a trio of good ones. Chinook Peter Pan Bessie produced 15,506 pounds of milk, 649.05 pounds of butterfat at 4 years and 251 days of age, and Willowmoor Ila, a 7-year-old, produced 14,367 pounds of milk, 735 pounds of butterfat.

Wenatchee Ayrshire farm has eight animals in the latest 50-pound list, that for March, and three of them are class leaders. Stewart Girl of Wenatchee 2d heads the list of 17 junior 4-year-olds with a record of 108.4 pounds of fat that was the highest in the United States, regardless of age. Empress Lady of Wenatchee heads the senior 2-year-old class of 54 with a credit of 67.35 pounds, and Wenatchee Bloom leads the 36 junior 2-year-olds with 60.77 pounds. In addition Lady Scott of Wenatchee 2d appears among the 25 senior 3-year-olds on the list, Wenatchee Scottish Queen and Lady Robin of Wenatchee among the senior 2-year-olds, and Stewart Lassie of Wenatchee and Wenatchee Blossom among the junior 2-year-olds. It will be noted that these are all of Van Tassell's own breeding. Oregon Agricultural college, which has one each in the junior four, senior two and junior two, is the only other northwest breeder to appear.

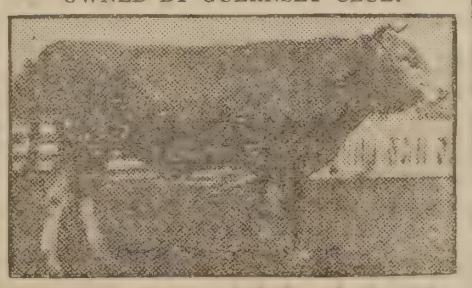
USE A TRIED HERD BULL.

There are 60 grade Holsteins on the Rufus Arland farm near Montesano and a large part of the farm is kept in permanent pasture. In fact 70 acres are used for the cows and never plowed up except when a new rotation is desired. If not pastured too close the grasses hold out well and do not have to be reseeded.

An interesting detail of the Arland herd is the fact that they are using a tried herd bull instead of getting a new one whose prepotency is unknown. Mubroco Colantha De Kol is from an Ohio herd and was for a time in the Ed Valentine herd in the Wynoochee valley. Mr. Valentine has nine daughters from this bull and finds that they all have very uniform udders and one of them will make 300 pounds as a 2-year-old. There are 25 heifers from the bull in the Arland herd and they all promise to be good milkers with straight toplines and the same strong constitution as the sire.

This herd was high in the county cow testing association for four months last year and second for another four months. The average for the year was 352 pounds and one animal was high cow in the association with a production of 548 pounds. Another cow milked 85 pounds in one month and 77 the next, but fell off when she got an attack of foot rot and went down to 30 pounds a month. As it was she made 400 pounds for the year and next year they expect to have some real figures to show for her.

OWNED BY GUERNSEY CLUB.



Here is a picture of the bull doing service for the recently formed Guernsey association, near Shelton, in Mason county. He is Chicona Tamerak, his name indicating A. L. Gile's Chicora farm, near Chinook, Wash., as his original source.

IS AWARDED GOLD MEDAL.

Pocahontas of Sunrise, a Jersey, owned by H. L. Wiester of Skamokawa, Wash., was recently awarded gold medal by the American Guernsey Cattle club upon completing her record of 712.22 pounds of fat from 13,931 pounds of milk in 365 days. Another cow in this herd, St. Mawes Lady Etta, recently completed a record of 523.61 pounds of fat in 305 days, which entitles her to a silver medal. The record was made as a junior 3-year-old, but she has a senior yearling record which stands second in the state. Mr. Wiester expects to make other similar records at the Sunrise farm near Skamokawa.

JUST ENOUGH IS BEST.

An excessive feeding renders digestion inefficient.

It's NATURAL for a hog to wallow
Provide a wallow and add
DR. HESS DIP and DISINFECTANT
then~

1. **Your hogs will be free from lice.**
2. **They will have clean, healthy skins.**
3. **Disease germs will be destroyed.**
4. **Foul odors will be kept down.**

If you do not have a wallow, use the sprinkling can freely. Sprinkle the animals—the sleeping quarters and pens.

Sprinkle the cow barns to keep them healthful and clean-smelling—

The poultry-house to kill the mites and lice.

Use it about the house—in the closets, sinks and drains. Excellent for the sickroom.

This New Fall and Winter Catalogue —Is Yours Free

The new, complete Fall and Winter Catalogue is now ready and will be sent you free. You need merely fill in the coupon below.

You may just as well profit by the saving this big book offers you.

In your home, this book will be a price guide and a shopping pleasure. You, too, may as well know the right price to pay, and you may as well save money on nearly everything you buy.

This Book Offers You a Saving of $50 this Season

Over *forty million dollars'* worth of goods have been bought at the lowest prices especially for this book—a part of our work to *hold prices down* and to make possible this saving for *you*.

So if you write for this book, if you use this book, and if your family uses this book, there will be a saving of over $50 in cash for you this season.

But this book offers you more than a saving—more than low prices. It offers you the satisfaction and the economy of always getting *dependable and serviceable goods*.

Ward Quality and Right Prices

For over fifty years Montgomery Ward & Co. has tried, first of all, to sell only *serviceable* goods that stand inspection and use.

We take great pride in Ward Quality. We always quote the lowest possible price. But we try always to have *our quality a little higher*.

So to write for this book, to use this book every week, not only means a saving in cash, but satisfaction with everything you buy and the saving that long service always brings.

Everything for the Home, the Farm and the Family

FOR WOMEN: Shoes, underwear, hosiery, sweaters, gloves, things for the woman's personal use. It is the woman who saves money and to any woman this book will be the best means of saving.

FOR THE HOME: Carpets, furniture, bedding, electrical devices, everything new for home use, everything used in decoration and to make the home modern and complete. And the prices always mean a saving.

FOR THE MEN AND THE FARM: Everything a man uses or wears, from tools and hardware and famous Riverside Tires, to virgin wool suits —often one-third less than prices you are paying.

The coupon below brings this new, complete Fall and Winter Catalogue to you and your family—entirely free.

You, too, may well profit by its saving. You need simply fill in this coupon and all the saving and satisfaction and pleasure this book brings will come into your home for you and your family.

48 Hour Service from Portland, Oregon

Our big Portland House is ready to serve you quickly. It was built for the convenience of our friends in the Pacific Coast States.

Our new system of filling orders enables our Portland House to ship your orders within 48 hours.

48 hour service is our promise to you. But we do better than our promise — because most of our orders are actually shipped within 24 hours.

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and frequently within 24 hours.

Who Shall Lead in Seeking Wheat Price Solution?—Page 5

State College Honors Five Leaders

For four years it has been the custom of the State College of Washington to confer upon a limited number of citizens of the state at commencement time certificates of recognition for outstanding work done in the interests of Washington agriculture. Last June five such certificates were awarded to the men whose portraits appear on the cover page of this paper, Albert S. Goss, Seattle; Robert T. Reid, Bellevue; Joseph F. Sears, Yakima; John A. Scollard, Chehalis, and John L. Smith, Spokane. In the three previous years this honor had been conferred upon Soren Sorenson of Ellensburg; H. H. Curtis, Pullman; D. Tancred, Kent; A. A. Kelly, Spokane, F. M. Rothrock, Sprague; Alex. Todd, Yakima; J. L. Dumas, Dayton; J. H. McCroskey, Sprague; H. M. Sparks, Vancouver, and H. L. Blanchard, Chimacum.

Concerning the five to whom certificates were awarded this year, the college authorities issued the following brief statement at the commencement:

ALBERT S. GOSS, genuinely interested in the development of rural life and agriculture, recognizes the fact that stability in the field of agriculture is impossible without the development of sound business principles in the management of the farm and in the development of cooperative organizations for the sale of farm products and the purchase of things needed in the maintenance of the farm. Albert S. Goss is recognized as one of the worthy and competent leaders of the northwest.

ROBERT T. REID, a citizen of Washington since his early manhood, is devoting his life to the development of horticultural work in western Washington. He has been unselfish in his endeavor to keep alive any active organizations that are primarily developed for the benefit of the farmers and fruit growers of that section of the state. He has been for three successive times elected to the presidency of the Western Washington Horticultural association, and is now serving his second term of office as secretary of the association. He is also a life member and first vice president of the state horticultural association, and a member of the American Pomological society. He has done more to develop the home orchard and to encourage the growing of the American grape in western Washington than any other one man. Mr. Reid has kept abreast of the times in practical development and up-to-date in the best literature of his chosen field of work. He is known and admired by men from Vancouver to the Canadian line and has contributed largely to the success of his neighbors in horticultural work.

JOSEPH F. SEARS is a highly trained business man and with his many years of experience in safe thinking among the farm interests he has obtained a deep and broad knowledge of the problems which affect all farmers. Since he came to Washington he has become especially interested in many problems concerning the sheep and general live stock industry of the state and northwest. Through this keen insight Mr. Sears has been able to advise regarding, and put into successful operation, several measures that are of vital importance to the live stock industry of this state. He has been one of the leaders who has thought clearly and worked straight toward his ideals for the benefit of the live stock industry and general agriculture.

JOHN A. SCOLLARD is a progressive farmer, live stock breeder and outstanding leader in the cause of cooperation among farmers. As president of the United Dairy Association of Washington he has given his sincere devotion, unusual organizing ability and superior energy to the constructive upbuilding of the economic conditions of the farmers of Washington and the northwest.

JOHN L. SMITH has long been a leader in the agriculture of our state and has been especially active and successful as a breeder and judge of dairy cattle. He has done as much as any other man in America to fix the type of Holstein-Friesian cattle as we now have it. He bred and developed the herd that won stellar honors in the show ring at the national dairy show, Chicago, in 1914 and really blazed the trail for the northwestern breeders in advertising what could be accomplished in dairy cattle breeding in the northwest.

As a former member of the board of directors of the Holstein-Friesian Association of America and of the board of directors of the National Dairy show and exposition his influence has been country-wide.

A loyal friend of agricultural education, his advice has always been constructive and his assistance and help in this cause cheerfully rendered.

August Crop Report

The August 1 crop report for the state of Washington indicates a decrease in total estimated wheat production as compared with the forecast of July 1. The report, as released by G. S. Ray of the federal division of crop and live stock estimates, further indicates increases in the expected crops of oats, barley, potatoes and apples, as compared with July 1 estimates.

The winter wheat crop is estimated at 37,341,000 bushels, as compared with the July 1 forecast of 39,576,000 bushels, the 1922 crop being 23,244,000 bushels and the five-year average 23,368,000 bushels. Spring wheat is estimated at 20,861,000 bushels, as compared with the July 1 estimate of 19,806,000 bushels, the 1922 crop of 9,200,000 bushels and the five-year average of 16,673,000 bushels. For all wheat, August 1 estimate, 58,202,000; July 1, 59,382,000 bushels; 1922 crop, 32,444,000 bushels; five-year average, 40,040,000 bushels.

The oat crop is estimated at 10,969,000 bushels; July 1, 9,799,000 bushels; 1922 crop, 7,959,000 bushels; five-year average, 9,660,000 bushels.

Barley crop, 3,256,000 bushels; compared with 1,813,000 bushels for 1922; five-year average, 3,190,000.

The corn crop estimate is 3,055,000 bushels, against 2,747,000 bushels in 1922.

The rye crop is placed at 288,000 bushels, as against 169,000 bushels in 1922.

The potato forecast is 8,458,000 bushels; July forecast, 8,308,000 bushels; 1922 crop, 9,425,000 bushels; five-year average, 8,276,000 bushels.

Hay crop, 2,609,000 tons. July 1 forecast, 2,583,000 tons and the 1922 crop of 2,341,000 tons.

Apple crop, 29,601,000 bushels, as against July 1 estimate of 29,580,000, while the commercial apple crop is put at 26,049,000 bushels, as against 26,031,000 bushels on July 1.

The pear crop is estimated at 1,881,000 bushels; July 1 estimate, 1,834,000 bushels and the 1923 crop 1,708,000 bushels.

Fears Federal Grades

"The farming interests of this state must view with alarm any standards of their commodities that are being established by the federal government," Director E. L. French of the state department of agriculture told the recent meeting of grain dealers.

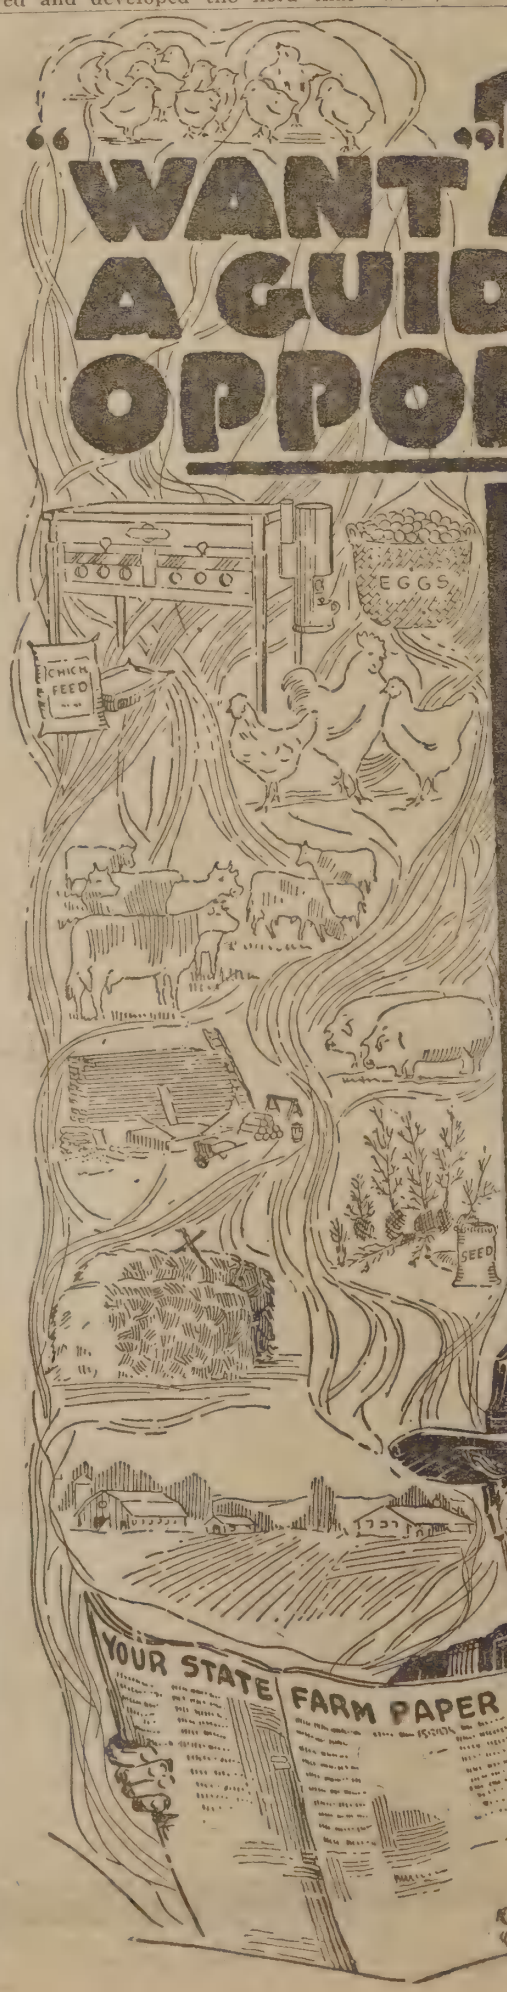
"No matter how conscientious the federal office may be in trying to establish a standard for your crops, no swivel chair artist living 3000 miles away is in as good a position to grade your commodity as is the fellow who is on the job and knows your local problems and markets. A national policy of grading grain has caused the northwest millions of dollars' loss because the standards do not fit the intrinsic value of our wheat.

"Last year we were compelled to hold meetings in the state to explain to the hay growers a proposed federal standard for hay. These meetings were held jointly with the state of Oregon, and it was the consensus of opinion of the farmers at these conventions that none of the hay they produced could be successfully marketed under those standards. In fact, one of the big Ellensburg timothy hay producers said there was not a ton of hay in the Kittitas valley that would measure up to those requirements. Through the insistence of the farmers of this state the standards were not adopted in this state.

"Federal grain standards have been corrected from time to time to overcome local conditions and are now much more nearly applicable to our wheat crop, although there are yet needed changes."

FIELD PEAS FOR PIGS.

Field peas are ideal for hogs.



"WANT AD COLUMNS A GUIDE TO MANY OPPORTUNITIES.

One of the Departments Which Make The Washington Farmer Valuable to Its Readers Is the "Farmer's Want Ads."

A great variety of offers appears under this heading. Here you find opportunities to buy poultry, pets, live stock, seeds, hay, machinery, fresh food products and many other articles. Here also you learn of farms for sale from primitive homesteads to highly developed fruit farms.

If you do not see the article or service advertised that you are interested in, a reasonable sum will permit you to insert an ad of your own and thus reach the man who has what you want or wants what you have.

Read and Use the "Want" Ad Columns. They Will Help You in Your Plans for Success

Wheat Growers Ask Emergency Price Legislation

Farm Organizations Urge President Coolidge to Call Immediate Session of Congress

Following on the heels of similar action by the American Wheat Growers, Associated, a conference of between 200 and 300 farmers at Spokane Monday, August 13, adopted a resolution urging President Calvin Coolidge to call a special session of congress immediately and urging upon congress the advisability of enacting emergency legislation that would fix a price of $1.75 per bushel on No. 1 wheat at primary markets.

The resolution also urges wheat growers to hold their wheat off the market until the president and congress have acted upon the petitions being presented to them for price stabilizing legislation, and urges bankers and business men to support the farmers in the movement for a living price for wheat.

The resolution was written by a committee composed of J. P. Simpson, Ephrata,; J. M. Reid, Pullman; John Brining, Dayton; J. L. Naylor, Moscow, Idaho, and L. P. Turner, Harrington, appointed by President J. Q. Adams of the Farmers' Union of Washington and Northern Idaho, who had called the conference. Mr. Adams presided at the meeting and George P. Mix of Moscow served as secretary.

The Resolution.

The resolution as adopted reads as follows:

"Whereas, the present market price of wheat is far below the cost of production, and not on an equality with the other industries, and whereas, the present condition, which has been steadily growing worse since September, 1920, and whereas, the present condition if continued will ruin a large majority of wheat farmers and the business institutions in the wheat belt, and the present conditions, therefore, constitute a dire emergency in agriculture, and whereas, the government of the United States has already established a precedent of controlling the market of wheat at a time when price control meant lower returns to the wheat farmer and a profit to the government agency handling the wheat.

"Therefore, be it resolved, that the president of the United States be petitioned to call an extra session of congress to consider this matter and take such steps as are necessary to stabilize the price of wheat.

"We recommend that congress shall enact legislation establishing a federal corporation with $500,000,000 capital stock, $50,000,000 paid in and the balance available on call. The corporation shall have power and authority to purchase and sell wheat in any quantity at any time or place at a basic of $1.75 per bushel at primary points. The fixed price shall be available as of a certain date and sufficient variation may be announced from time to time to provide for carrying charges and to control distribution. The fixed price shall be on the basis of clean wheat testing 58 pounds per bushel, and the corporation shall establish a schedule of discounts and premiums in accordance with the milling value of wheats of various subclasses, test weights, mixtures, percentages of moisture and foreign content.

"In order to take care of any loss that might accrue in selling the export surplus the corporation may retain from the original sale price not to exceed 10 cents per bushel in addition to the amount estimated to be necessary to pay operating costs and interest at a rate of 4 1-2 per cent per annum on capital stock actually used. Wheat may be purchased or resold only by the corporation or by concerns licensed by the corporation and operating under rules, regulations and restrictions imposed by the corporation. Every licensed concern shall make reports of its purchases and resales in such forms and at such times as the corporation may direct.

"We recommend that the chair appoint a committee of five to carry on the work of this organization along the lines as set forth in these resolutions.

"Resolved, that we heartily commend the action of our fellow farmers in Idaho calling a meeting to discuss the wheat price situation and we urge all who possibly can to attend this meeting.

"We further request that all wheat growers cooperate throughout the United States in furthering this united effort by selling no wheat nor offering any for future delivery until this or some other definite action is taken for the handling of this crop at cost plus a reasonable per cent above expenses and also ask the bankers and merchants and the public in general to give us their sympathy and support for a square deal that the wheat growers may not be driven to serfdom or leave the farm for other occupations, thereby crowding the laborer from his job."

The Minneapolis Resolution.

The resolution conforms in general to that adopted by the American Wheat Growers, Associated, at Minneapolis last week, which read in part as follows:

"The American Wheat Growers, Associated, Inc., advocates, through immediate legislation, the establishment of a federal agency, suitably financed, to go into the open market and purchase wheat whenever the price drops below a basis of $1.75 per bushel for No. 1 dark northern spring wheat at Chicago, with suitable differentials for wheat of different grades and qualities, this agency to act during the marketing year of 1923 and until July 1, 1924. From that date onward wheat producers, through their organization, will exert sufficient domestic price control to insure capital returns commensurate with their capital and labor investment."

Need Concrete Plan.

One of the principal speakers at the Spokane conference was Senator William E. Borah of Idaho, who urged the farmers to prepare a definite, concrete program to present to congress and unite solidly behind it, declaring that there was such strong opposition in congress from senators and representatives who came from nonagricultural sections that nothing but a solid front and a specific, constructive program of relief would receive serious consideration. He declared that he would support any measure that seemed to him economically sound if it had the indorsement of the united wheat growers. He urged that the farmers do not forget that this is but a temporary measure and that the future depended upon the development of world trade, the opening of the channels of international commerce and the upbuilding of farm marketing organizations. He expressed opposition to any movement for the reduction of acreage or production of wheat, declaring that the reestablishment of a world market would create a market for normal American production.

Congressman French Favorable.

Congressman Burton L. French of Idaho delivered a strong address in which he urged necessary legislation, but suggested that if government purchasing of wheat be resorted to the law provide that the government enter the market on a certain date next spring or summer, say May 1, prepared and under obligation to buy all wheat in the hands of growers at that time at a guaranteed price. He argued that this plan would limit the activity of the government in the buying of grain, inasmuch as the immediate price in the open market would tend to rise to the price at which the government would be required to buy next May less the carrying costs up to that time. Senator Borah inquired if that might not work to the advantage of the speculator or dealer rather than to the grower, but Congressman French said he felt that the ability of the growers to borrow money to cover carrying costs from the intermediate credit banks would enable them to protect themselves against the necessity of immediate dumping at whatever price the dealers offered. He joined other speakers in urging increased unity of effort on the part of growers through cooperative organizations.

Would Fix Selling Price, Too.

George A. Allen of Medical Lake spoke in favor of the Gooding bill, with which the resolution conformed in most essentials, except that he favored an amendment that would fix both the price at which the government would buy and at which it must sell, the latter to be a few cents above the buying price. He said this would result in the government's having to buy no wheat until an actual surplus was found to exist near the close of the season, if at all. He said that unless there were an actual surplus private buyers would rush in to buy from the growers at the price which the government would pay rather than delay until they later would have to buy at the higher price below which the government could not sell.

Others who spoke, in addition to those mentioned and to President Adams, who opened the meeting with a comprehensive statement of the needs for relief in some form, included Dean E. C. Johnson of the state college experiment station; Roscoe Smith, Ephrata; J. M. Klemgard, Pullman; John Brining, Dayton; George P. Mix, Moscow; Director E. L. French of the state department of agriculture; C. E. Spence, state market agent of Oregon; S. B. Hill of Waterville, democratic candidate for congress in the Fifth district; C. E. Myers of Davenport, republican candidate for congress in the Fifth district; F. L. Hopper, president of the Montana farmers' union, and others who spoke informally from the floor. A favorable letter was read from Governor L. F. Hart.

A similar meeting is scheduled for Moscow, Idaho, next Saturday, August 18, at which several of the same speakers, and in addition Senators F. R. Gooding of Idaho and C. C. Dill of Washington, will speak.

Kittitas County Sets the Pace in Livestock Improvement

Live stock breeders of the state of Washington may well receive an inspiration from Kittitas county. It stands first in the states west of the Mississippi river in the number of pledges signed by farmers in the recent purebred sire campaign. It ranks sixth in the United States. Out of 945 farmers in the county, 144 have signed the agreement to use only purebred sires on their farm.

The campaign was a systematic plan launched by the department of agriculture in 1919 in all of the states of the Union. The plan called for the help of the county agents, who were asked to secure as many signatures as possible, either by a series of community meetings or through the different community project leaders in each county.

The pledges in Kittitas county were secured almost entirely by the local leaders, many of whom went from farm to farm as though he were selling something. In fact, he was selling something. He was selling the idea of the purebred sire to the farmers and live stock owners of his own community who theretofore had been content to use inferior animals.

"The influence of these leaders can not be over-estimated," said W. L. Davis, the county agent. "In fact, it was the community leaders who put the plan across. In the districts where we had leaders who were live wires, it was an easy matter to sell the idea to the people, and on the other hand the communities that failed to carry the campaign were those where leaders were not wholly in sympathy with the movement, or there were no leaders to be had who could do the work.

Indirect Influence Counts.

"While our direct results are more than encouraging, we feel safe in saying that the greatest influence of the pledges lie with the indirect influence that the campaign has had on the live stock owners of the entire county. The truth about the purebred sire has spread even to those who have only heard of the term now and then, and they are either keeping purebred sires or take their females to some farm where there is a good sire."

Perhaps the most striking example of this movement is in the number of registered farm flocks of sheep now kept in the county. In the opinion of Mr. Davis, the purebred sheep industry has practically been developed during the last four years, or since the purebred sire campaign has been put on. Before that time there were only one or two flocks that contained purebred animals, although there were a number of flocks headed by registered rams.

While a number of scrub dairy bulls have been eliminated the increase in the number of good dairy bulls has not been as rapid as it might have been. There has been more room for betterment among the beef bulls since there is a state law that prohibits a scrub bull from running on the range. There are a few beef herds in the county that are headed by scrub bulls, but they are few and far between and it is sincerely hoped that these few will soon be replaced by better animals.

Clubs Take Leadership.

In speaking of this purebred sire movement, one should not overlook the influence exercised by the boys and girls' clubs. Of these, the Hampshire sheep club has resulted in the placing of more purebred sires on the farms. They have also done more fair work. The swine clubs, of which there are three in the county, one each for the Chester Whites, Berkshires and Poland Chinas, have a greater membership and have been the cause of establishing more purebred farm herds. This has been done by each member's purchasing a bred gilt and caring for her and the litter of pigs and showing them at the county fair.

The dairy calf club, while ranking third in numbers, is by no means least in importance. The members have taken great interest in their club work and have shown their animals at the county fair for two years and two members took their calves to the state fair at Yakima. The beef clubs were started to get the boys and girls interested and also to dispose of some of the farm roughage at a profit and the movement is still going. They are mainly Shorthorns this year, but there are also a few head of Aberdeen Angus steers in the club.

A poultry club has just been started this year, and although the members are doing good work and are interested in their project, the increase in the number of farm flocks has been due largely to the consistent work of W. D. Buchanan, poultry specialist of the state college. During his short visits to the county Mr. Buchanan has advocated the small farm flock which, if properly housed and fed, will return a comfortable profit to the owners.

The many farms that have a modern laying house and a flock of good layers have demonstrated to the people the fact that chickens don't "eat their heads off because feed is so high," but they find that much of the feed can be obtained from the grain crops and even some of the mashes can be prepared at home if a feed grinder is available.

The addition of the 25 or 30 farm flocks that range in size from 200 to 500 hens may be credited both to the work of Mr. Buchanan and to the influence of the better sires campaign. There are also two larger commercial flocks in the county—one having about 1000 birds and the other over 1500.

Quality Is Increased.

"I would not hesitate to say that the live stock industry has increased from 50 to 75 per cent in quality, due to the better sires campaign," insisted Steve Woodhouse, who is project leader in the Edgmont-Thrall community.

In the Thorp community, west of Ellensburg, 65 per cent of the live stock owners signed the pledges, thus agreeing to use nothing but registered sires on their farms. This was the highest percentage of signatures of any district in the county.

"It has not only been the signing of the pledges, but the campaign itself has had a wonderful influence on the community," said F. P. Newman, project leader for this district. "There are few, if any, who will breed to anything but purebred sires. In fact, the people who didn't sign the pledge have come to the point where they insist on taking their females to registered sires."

In the case of the district west of Ellensburg, where S. P. Wipple is the project leader, there is not a single scrub

(Continued on page fourteen.)

Incorporate Poultry Association

Articles of incorporation are being filed this week by the organization committee of the Farmers' Union Egg and Poultry associations. It is expected by the officers that the corporation will be ready to do business by the first of October, by which time it is believed the full 50,000 hens will be signed up by members as originally planned. The present members of the new association represent 35,000 hens, according to J. Q. Adams, president of the Farmers' union and chairman of the organization committee of the new marketing association.

The new association is a pure cooperative organization formed under the cooperative marketing law of Washington. The organization work is being done by a committee of representative poultrymen selected by the officers of the Farmers' union because of their poultry interests and their interest in improving the marketing of poultry in the Inland Empire. The contract being used is the same as that of the Washington Cooperative Egg and Poultry association, which has been operating successfully in western Washington for several years. Experienced marketing experts from the older association will assist the new organization in getting started in the actual marketing business on a sound business basis when it is ready to receive the eggs and poultry of its members. All the poultry products of the members will be assembled by the association, graded and pooled with returns made each week to each member on the basis of quantity and quality of his product.

Contracts were received by the association last week for about 3000 hens and a considerable number contemplated signing up as soon as the corporation is incorporated.

Shortly after incorporation an election will be held by which the members will elect their own board of directors from among themselves, the law requiring that only producers may be members of a cooperative association and that only members may serve on the board of directors, with the exception of one director to be appointed by the state director of agriculture as a representative of the general public.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX, NO. 7.

Trade Mark Registered U. S. Patent Office.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Honey on Your Hot Cakes

This magazine believes that not only the beekeepers of our territory would profit from increased use of honey by the people generally, but that the people themselves would benefit in two ways thereby. In the first place honey is a delightful and healthful food. Secondly, the liberal use of this sweet would do its bit to prevent unjust prices for sugar, which have been experienced recently and many times in the past. With these thoughts in mind we have communicated with a large number of hotels and restaurants, urging upon them the benefits that would accrue to everybody concerned were they to increase the use of honey on their tables. We have likewise urged upon them the use of this delightful sweet as produced by the beekeepers in their own localities, thus, to this degree, stimulating home industry and helping the local beemen over a period that has been not altogether prosperous.

Beekeepers should strive to produce the highest quality of honey possible, market it in the most cleanly and attractive way possible and thus merit the increased patronage they receive.

Satisfied With Low Returns

Most of us are satisfied with our poor cows or hens or hogs. At least, we are not sufficiently dissatisfied to make a serious effort to increase their production. We go on year after year with the two-gallon cow when we might as well have a five-gallon producer. We keep the hen that lays six or seven dozen eggs a year when we should have no hen on the premises that lays fewer than 10 or 15 dozen.

It is just plain carelessness on our part, and, when we get down to brass tacks, a lot of our financial distress is due to this class of indifference. It costs just about as much to feed and care for the low producing cow as the high producer, and for the hen that gives little return as for the one that gives high return. The low producer does not pay for her keep, much less leave us a profit. The high yielder makes money for us if we give her half a chance.

Let's get out of this scrub rut! Let's get rid of our boarder cow and our boarder hen. Let's build up the kind of herds and flocks that will make us some money and lend a little pride to our daily lives.

Educate for World Peace

It was a wise move on the part of the educators assembled at San Francisco recently to launch a world federation of educational associations, the outstanding purpose of which is to promote world peace through educational means.

Education is the basis of progress in any fundamental endeavor. Differences that lead to conflict between individuals or between nations are usually due to misunderstandings. Misunderstandings may be removed by education. It is seldom that sheer viciousness dominates an educated mind or an educated people.

By education we mean more than just the amassing of knowledge of concrete facts. We must include the training of the moral nature. The simple virtues must be indoctrinated into the hearts of men at home and abroad. The ten commandments must be preached by example and by precept, for he who keeps these commandments is educated in a sense more practical than he whose mind is merely overflowing with material facts.

In our own country we find it impossible to legislate an evil out of existence until the mind and heart of the people at large are educated to a point of willingness to dispense with that evil. Likewise, we will never, by league of nations or court of international justice, be able to legislate world peace into being or enforce international concord until the conscience of the world submits to the appeal of harmony. Education alone, in the broadest, biggest sense, can cure this world of its evils and relieve it of its resultant distresses.

A Noble Life Ennobles Generations Yet to Come

The endlessness of one's influence is a phase of eternal life.

What we as individuals are today is in no little part the consequence of personal influences in generations that have gone before us.

The course of the world down future ages is now being determined by our own lives. If base, they debase the future as surely as they debase the present. If noble, they ennoble the future as they ennoble today, for the influence of the individual upon those about him never dies. Were it not so, the writer of these lines would have to say that he had lost a friend. But the friend is merely at rest; her influence abides and is at work forever.

One of Washington's noble women has yielded to a human ill and reluctantly ceased her active work of service to her fellowman. For many years the work of her wonderful mind and heart has stimulated, uplifted and wholesomely entertained thousands of men and women, boys and girls, in every nook of the state. The more secluded and isolated the farming community or the industrial camp, the more eagerly did she seek it out and minister to it. Multitudes who benefited from her service knew not her name nor even realized that they were the beneficiaries of a carefully planned and painstakingly administered institution superintended by a woman—or by any one. They received as a matter of course, and she rejoiced to serve them. She sought no compensation but a simple livelihood and a consciousness of helpful service rendered to those who needed help.

Mrs. Lou Gertrude Diven, for more than a decade superintendent of the Washington state traveling library with offices at the state capital, will no longer select from its shelves those books most suited to the particular needs of distant communities to whom good literature is not easily available. But the books will continue to go, for she has left behind a corps of workers whose lives have absorbed much of the wisdom and tact and selflessness of her for whom they sorrow. No more will her host of friends gain inspiration from personal contact with her lovely character and her courageous genius. But the inspiration which she has been to those of us who knew her well lives on and on forever, and in numberless hearts who knew her not at all, nor even knew she lived, there is hope and courage and a touch of nobility implanted there by the never-ending influence of her quiet, deep-flowing life of consecrated service.

Lower Rate on Vinegar

Apple growers of the Pacific northwest have gained a point in a decision made by the interstate commerce commission.

This permits the railroads to reduce the present rate of $1 per hundred pounds to 75 cents on vinegar from Pacific coast producing points and the middle west.

Semi-Annual Index Ready

The Washington Farmer publishes an index semi-annually of all articles published in its columns. The index for the first six months of 1923 is now ready for distribution. If you have saved your copies of THE FARMER and wish a copy of the index, send a 2-cent stamp to The Washington Farmer, Room 44, Review Bldg., Spokane, Wash., and one will be forwarded to you.

Washington State Gleanings

EXPECT GOOD HOP CROP.

H. A Kaufman of Klaber, head of the Klaber Investment company, declares the outlook for a hop crop in the 110-acre yard which the company has in bearing this year is at this time most encouraging.

HOLD-OVER PRUNES ARE SOLD.

Manager W. H. Wood of the Washington Growers and Packers corporation, cooperative marketing association of prune growers in Clarke county, announced July 30 that the association had just completed packing for shipment approximately 1,250,000 pounds of prunes. This pack constitutes the last of the "carry-over" from the 1922 prune crop, and disposes of the last of slightly more than 7,000 000 pounds of prunes, which the association received into its warehouses last fall.

THURSTON PLANS HATCHERY.

Establishment of an accredited hatchery for Thurston county was determined on at a meeting of poultrymen at Olympia, July 24, and it was also decided to place this on the highest practical standard by certifying cockerels for breeding purposes only from 250-egg hens, instead of the regular state standard of 200-egg hens.

Sufficient poultry growers signed up to insure the initial success of the venture, and the prospects are good for a large increase in membership.

O. B. Gregory of Olympia was selected to operate the hatchery and a model plant will be put in with total capacity of not less than 12,000 eggs.

CREAMERY INCREASES OUTPUT.

The Winlock Cooperative creamery for the first six months of 1923 shows a gain in its output of nearly 18,000 pounds of butter over the corresponding period for 1922. June 30, 1922, a total of 207,799 pounds of butter for the period named had been made. This year the total was 225,728 pounds.

A fine new plant has recently been built for the home of the institution. Inside 60 to 90 days moving of the machinery and other equipment will begin. When newly housed the Winlock Cooperative creamery will have a plant equal to the very best in the entire country in the matter of convenience and other ways.

BIG ONION YIELD AT PASCO.

Thirty-five sacks of onions from a plot 107 by 54 feet is the record made in an experiment on the A. R. Welch farm, two miles east of Pasco. The trial was made on ground reclaimed from sagebrush two years ago on the Inland Empire highway, near the Snake river bridge.

On the same farm, another experiment with cabbage put out last fall was made and a comparison carried out with other garden communities. The cabbages matured 10 days earlier than they did under the same conditions at Walla Walla. The experiments were made by Italian gardeners from Walla Walla who plan to buy land here for gardening.

CANNERY WORKING FULL TIME.

One of the busy places in Friday Harbor is the plant of the San Juan islands cannery, which is now canning green peas for the market.

The cannery has a capacity of 2000 cases an eight-hour day, and gives employment to approximately 30 people.

The acreage was planted in blocks at different times, so that the crop would not ripen in excess of the capacity of the cannery.

Mr. Henry, manager of the company, is well pleased with the outlook and says this has been an ideal season for growing the crop and that the indications are that a better pack than was expected will be put up.

GROWING RED CLOVER SEED.

Growing of red clover seed in the vicinity of Chehalis is becoming a substantial industry, according to J. W. Elston of Chehalis. The largest field of clover is that of J. A. Scollard, west of Chehalis, where 100 acres of second crop clover presents a beautiful sight. The Cairns Brothers on Boistfort Hill also have a large acreage and it has been determined that Lewis county hill lands are exceptionally well adapted to growing clover for seed purposes. Both Mr. Scollard and the Cairns Brothers have now sufficient acreage to make purchase of clover hullers necessary. Four or five combined threshers and hullers also will work in the Chehalis section. Mr. Elston reports an increase of 500 per cent this season over 1922 in Lewis county.

PLANTING NUT TREES.

Prune orchards are being rooted to make room for walnut and filbert trees in various sections of Clarke county, according to successful growers, who predict that the nut culture is a coming industry in Clarke county.

Some walnut enthusiasts in the county are A. A. Quarnberg, John Spurgeon, Fred Brooker, Henry J. Biddle, Charles Gibbons, A. Ward, R. E. Turk and L. F. Russell, who possess the largest groves, which are yielding good returns.

Mr. Russell is a prominent prune grower, having 60 acres. His plan is to take up every third prune tree and plant a grafted walnut tree in its place until all of the former have been taken up.

Robert E. Turk of Washougal is owner of the largest planting of bearing walnuts in this state, which consists of 900 13-year-old trees, covering 22 acres in one field. The walnut ranch is in the Mount Pleasant community, near the Skamania county line. Mr. Turk expects to plant 20 acres more of walnuts, to be interplanted to filberts as soon as possible. He uses the 40-foot spacing for walnuts and a 10x10 filler system for filberts.

One of the largest walnut groves, consisting of Franquette and Mayette varieties, in this part of the country is owned by John H. Hoff, in the Sara district, seven miles south of Ridgefield, who is a firm believer in the walnut crop as a coming industry for Clarke county.

Wheat Solution Sought

Now a Joint Committee on Research Begins Work

The wheat grower's plight persists in claiming public attention. It is a serious agricultural situation and looms large in the talk of bankers and other business men.

Representative Sydney Anderson of Minnesota believes there are four things that can be done, all of which will be helpful to the wheat growing industry in the future. These are:

An increase in consumption.

An improvement in the quality of grain grown.

A readjustment of acreage.

Better marketing methods.

Mr. Anderson is president of the recently named wheat council, and the joint committee on wheat research is already at work on the problem.

Mr. Anderson believes that the present price of wheat is due to a considerable extent to psychological influences, including bearish reports from Europe, while the actual facts do not justify the depression of the market. Most of the trouble, in his opinion, is due to an increased acreage as a result of war stimulation. This increase amounts to about 11,000,000 acres.

The committee of seven members is made up of Sydney Anderson, president; W. I. Drummond of Kansas City, chairman of the board of directors of the International Farm congress; O. E. Bradfute, president of the American Farm Bureau federation; S. J. Lowell of Fredonia, N. Y., master of the national grange; H. D. Irwin of Philadelphia, a wheat exporter; George C. Jewett, general manager of the American Wheat Growers' association; A. J. Brosseau of New York, president of the Mack Trucks, Inc.

This committee was created as a result of a suggestion made by Julius H. Barnes, president of the National Chamber of Commerce of the United States, at the wheat conference held in Chicago in June, the committee's expenses being borne by the national chamber.

Mr. Barnes believes that the national chamber "can perform no more helpful service to all business than to provide the means by which leaders of the farm organizations can study the question and see if in certain sections and among certain groups of farmers this period of distress can be lightened, until the day of full recovery, which has always come—and which will come again—for intelligent, self-respecting American agriculture," and Mr. Anderson adds that "the work of this committee will constitute an honest effort on the part of farmers and business men, including the manufacturers of wheat products and those interested in associated products, to help the wheat farmer deal with the wheat problem."

Wheat growers themselves can look at this whole situation from two points of view. First, to find some one who can solve the problem for them and, secondly, to dig out a solution for themselves.

Shall the wheat growers, themselves, merely aid the other fellow in solving the problem or shall they use the aid of the other fellow in their own solution?

Who is to take the lead in this work, the one who produces the wheat or the one who buys the wheat? Both are interested, each in his own way. Both can cooperate, but only one can lead.

Shall the wheat grower find leadership within his own ranks or will he trust even to joint leadership?

Successful Farming: When a society or organization is functioning well under trained officers, it is well to continue them in office. When officers form a self-perpetuating clique among themselves, it is time to clean house. When an officer can not hold his job on the merits of his efficiency alone, it is time to make a change. Eternal vigilance is the price of liberty.

Food Value of Meats

Educational Program Outlined at Meeting in Chicago.

It would seem that the American people are especially given to fads in their diet, especially in the matter of not eating certain kinds of food. Some one comes along and says that potatoes are so largely made up of starch that they are to be limited, if not eliminated, in the diet. On the other hand, it is claimed that potatoes are the most healthful of foods. Years ago tomatoes were denounced as conducive to a certain malignant disease. Now they are declared to be most healthful. Wheat flour has its advocates as well as those who object to its use. Perhaps more propaganda has been given on both sides to the subject of meat than to any other class of foods.

In the midst of all these contradictory opinions, what can the average person, with a normal stomach, do? If you are not already in the hands of a physician and if you are enjoying fair health, about the best thing you can do is to eat temperately of a variety of standard foods—cereals, meats, vegetables, fruits. You can easily go to an excess in the matter of sweets, pastry and desserts.

A widely representative meeting of men interested in the live stock and meat industry of the country has just been held in Chicago. It outlined an educational program designed not only to promote a more widespread knowledge of the food value and healthfulness of meat, but also to teach the best methods of preparing and selecting and using meats.

Among those present at the meeting were representatives of the American Farm Bureau federation, the American National Live Stock association, the National Woolgrowers' association and the Institute of American Meat Packers.

FARM BUSINESS AND MARKETS OUTLOOK

A few western cattle have been drifting into midwest markets for the last three weeks, but the season was opened in the last few days, when over 100 loads, mostly from Montana, reached Chicago, where steers sold at a range of $6.90 to $8.25. Later arrivals are expected to show higher finish and bring proportionately more money.

Prices of thin cattle are a shade lower than last year, but corn is 30 per cent higher, while fat cattle average only slightly higher, although the top is about $1 higher. Purchases usually show a sharp increase in August over the July level. Well finished grassers are in demand for short feeding to take advantage of present prices for prime steers.

Hogs Highest in Four Months.

Receipts of hogs have fallen off about 20 per cent in the last four weeks, but the movement remains 50 per cent above normal for this season and every moderate advance in price stimulates free loading by the country. The market has shown a surprisingly good undertone, however, considering the burdensome supply, the stocks of stored product to be vended and the falling off in exports compared with a few months ago. The Chicago top rose to $8.30 last week, the highest since early in April.

More Stability in Lamb Market.

Another moderate decline in lamb prices was registered last week, but the market shows more stability and probably has been readjusted to the western range run. Prices at which contracts for western lambs are being made have not been reduced, but range mostly from $10 to $10.50.

Wool Market Still Hesitates.

While more confidence in wool values has been evident in the last few weeks, the volume of sales to mills remains small and purchases from producers show no special activity, as prices offered are unsatisfactory. In Wyoming 40 to 42 cents are being paid for the finer wools and Ohio and Pennsylvania delaine wools are selling at 55 to 56 cents.

Foreign markets are steady. The new Australian clip, which will begin to come on the market in another month, is about 10 per cent less than last year, as a result of drought. The loss is mostly in fine wools, which already are scarce.

Wheat Crop Estimates Reduced.

While losses in spring wheat prospects as a result of black rust and extreme heat were partly discounted in the par yields used in calculating the early forecasts, the damage during July was greater than the average. The government's forecast as of August 1 was 235,000,000 bushels less than a month previous. Private reports pointed to greater injury as well as indicating a smaller acreage than the official figures. Early threshing returns for spring wheat have been disappointing both in quantity and quality.

The winter wheat estimate was also reduced 18,000,000 bushels chiefly in Kansas and Nebraska, and the total prospect for all wheat is now placed at 793,000,000 bushels, compared with 862,000,000 bushels last year. The smaller crop is only partially offset by a carryover 20,000,000 bushels larger than a year ago.

The Canadian crop is still an unknown quantity.

In spite of plans for holding wheat on farms instead of forcing it on a depressed market during the harvest season, which seem to have some influence on sales in the southwest, the movement to primary markets promises to be a large one. The peak of the winter wheat movement will soon be over, but the more urgent needs of flour mills and exporters have been filled and wheat is arriving at terminals considerably faster than it is moving out. The disappearance of wheat from commercial channels in the first five weeks of the new crop year was only 34,057,000 bushels, against 47,572,000 bushels last year.

It is calculated that there is an exportable surplus of only about 15,000,000 bushels of wheat east of the Rocky mountains outside of the durum, which is used only to a slight extent by domestic mills. The intermountain and Pacific coast states have the remainder. Owing to the small crop of good bread spring wheat, northwestern and eastern mills will be compelled to buy large amounts of hard winter wheat in the southwest.

The rye crop estimate at 65,000,000 bushels also is smaller than a month ago and is 30,000,000 bushels smaller than last year.

Corn Crop Nears Three Billions.

The corn crop has passed through most of the critical period of growth and rather general rains in the last few days have practically made the crop. The government's forecast as of August 1 was 2,982,000,000 bushels.

The oats harvest is well advanced and primary receipts are increasing, although low prices are curtailing the movement to some extent. The crop forecast is 1,316,000,000 bushels or 115,000,000 bushels more than last year. The barley crop estimate is 202,000,000 bushels, compared with 186,000,000 bushels last year, and an average of 192,000,000 bushels from 1917 to 1921.

The flax crop has improved in the last month and is placed at 19,000,000 bushels, the largest since 1912.

Cash Grain Markets.

The range of cash grain prices for the week ended August 8 was as follows: Chicago—Wheat—No. 2 red, 97 1-4@99c; No. 3 96 3-4@98 1-4c; No. 2 hard, $0.97@0.10 1-4; No. 3, $0.97@98 3-4. Corn—No. 2 mixed, 85@87 1-2c; No. 2 yellow, 85 1-2@88 3-8c; No. 2 white, 85 1-4@87 1-2c. Oats—No. 2 white, 35 1-4@40 1-4c; No. 3, 35@39c. Rye—64@66c. Barley—50@64c.

Seed and Feed.

Red clover seed advanced again last week. Toledo prices now show an advance of over $1 from the season's low point as a result of crop damage. Very little red clover is moving, but new alsike is beginning to come on the market. Timothy seed prices have weakened slighly. Chicago, per 100 pounds, timothy, $4.75@6; clover, $15@17.

An easier tone manifested itself in the market for wheat feeds and cottonseed meal last week.

Hay Prices Firm Again.

Heavy receipts of new hay weakened the market for a short time, but the supply has become lighter and prices are firm again. Very little of the best grades of timothy or alfalfa is arriving. Demand is fairly good from eastern dairy districts, where the crop is light, and the southeast also is beginning to buy more freely.

The August 1 forecast of the hay crop was 97,300,000 tons, compared with 112,800,000 tons harvested last year and an average of 99,500,000 tons from 1917 to 1921. The reduction compared with last year is almost entirely in tame hay.

Prices per ton in carlots: Chicago—No. 1 timothy, $25@26; No. 2, $21@24; No. 1 light clover mixed, $21@23; No. 1 clover, $19@21; No. 2 clover, $14@16; No. 1 alfalfa, $16@23; midland prairie, $16@19; rye straw, $12.50@13.50; oat and wheat straw, $10@11.

Egg Values Still Advancing.

Belief that the general trend of egg prices will be toward higher levels was supported by further advances in the market last week. Receipts were fairly liberal, but graded offerings were scarce, although some improvement as a result of cooler weather last week was seen. However, the bulk of recipts fall into medium and undergrade classes, so that the market continues in a strong position on a quality basis.

Larger holdings of eggs on August 1 than expected were shown by the preliminary report, which gave holdings on that date of 10,390,000 cases, as compared with 10,161,000 last year.

Latest quotations: Chicago—Eggs—Miscellaneous, 23@23 1-2c; dirties, 20@20 1-2c; checks, 20c; fresh firsts, 24@25c; ordinary firsts, 22@22 1-2c. Live poultry—Hens, 22 1-2c; broilers, 26c; springers, 29c; roosters, 14c; ducks, 22c; geese, 20c; turkeys, 20 1-2c.

Butter and Cheese.

With supplies of top scores of butter insufficient to meet buyers' demands in all cases, and firmer foreign markets, prices on all grades advanced again last week.

Cheese prices declined slightly at primary markets early last week, but did not reach the level predicted by many dealers.

Fruit and Vegetables.

Carlot shipments of potatoes have fallen off nearly 50 per cent, compared with two weeks ago, as the peak of the early movement has been passed. Prices are firm in consuming markets in spite of the large supply of potatoes grown near by and trucked in and they are considerably higher than last year. Kansas and Missouri Early Ohios are quoted at $1.75 to $1.90 and Cobblers at $1.90 to $2.15 per 100 pounds in midwest consuming markets.

The forecast for the main crop of potatoes shows but little change from a month ago and is placed at 380,000,000 bushels, against 451,000,000 bushels last year and a 1917-1921 average of 388,000,000 bushels.

Carlot shipments of apples are about 30 per cent lighter than two weeks ago. California is furnishing about half of the total at present. Duchess and Yellow Transparents

LIVESTOCK AND DAIRY

Cream Cheese

Good Quality Milk Is Necessary

By A. H. RISHOI, Instructor in Dairy Manufactures, State College of Washington.

Can cheese be made from sour separated cream? How? H. H.
Snohomish, Wash.

Cream cheese is ordinarily made from milk that contains about 6 per cent milk fat and as cream from the ordinary separator will test anywhere from 20 to 45 per cent milk fat, it would seem that cream as it comes from the separator is too rich to use for cheese making unless it is first mixed with skimmed milk so as to bring the test down to about 6 per cent. An easy way to figure how much milk and cream to mix in order to get milk of a test you can use in making cheese, is as follows: Draw a square with the sides an inch or two and put the desired test of the milk in the center of the square. Then in the upper left-hand corner place the figure representing the test of milk. Whole milk tests about 4 per cent, skimmed milk 0. Now subtract the per cent of fat in the milk in the lower left-hand corner from the per cent of fat in the milk you have in the center of the square. Put that figure in the upper right-hand corner of the square. Then subtract the per cent of fat in the milk desired, which is in the center of the square, from the percentage of fat in the cream, which is in the upper left-hand square. This difference is to be placed at the lower right-hand corner. The figures you have at the two right-hand corners indicate the proportion in which you must use the cream and the milk. To show just how this would work, we might figure an easy example. Let us say we have cream that tests 30 per cent, whole milk that tests 4 per cent and we want the milk to test 6 per cent. Draw the square as directed. Place the figure 6 in the center of the square, the figure 30 at the upper left-hand corner, the figure 4 at the lower left-hand corner. Now subtract 4 from 6, giving 2, and place that figure in the upper right-hand corner. Then subtract 6 from 30, leaving 24. Place that in the lower right-hand corner. We now have the proportions in which we must mix the cream and milk, which is 2 to 24, or 1 to 12. When 30 per cent cream and 4 per cent milk are mixed in the proportion of 1 to 12, the resulting test will be 6.

In order to make good cream cheese, it is necessary to use milk which is not sour and also it is necessary to use milk which is in all respects of good quality.

The cheese is made by allowing rennet to act on the milk on the same time that the milk is souring. If you have very good milk it might be well to add a small amount of sour milk so as to hasten the ripening of the milk.

The following directions for making the cheese are based upon using about 3½ gallons of milk.

If you want to use any sour milk to hasten the ripening of your milk it is well to use about 1 or 1½ per cent sour milk to add to the sweet milk. First heat the cream or milk to about 83 degrees Fahrenheit, then add about 10 drops of commercial liquid rennet diluted in half a cupful of cold water and stir this thoroughly into the can of milk. If you wish you can use fresh tablets in place of rennet. In this case you dissolve one tablet in 10 tablespoonfuls of cold water and use about four tablespoonfuls of the solution. After the coagulating agent has been added you should set the milk away for from 15 to 18 hours so as to give the rennet a chance to act. When about one-half inch of whey collects on the surface of the curds and on the top of the whey is a scum of fine curd particles the curds is sufficiently coagulated. It is well to set the milk in the evening so that the curdling occurs during the night and is not disturbed for from 15 to 18 hours. The milk should, of course, be well covered during the night. When the milk is firmly clabored the contents of the can or pail are poured on a strong grained cloth. The can be shaken slightly before pouring in order to loosen any curd which has a tendency to stick to the side or to the bottom of the pail. The curds should be left undisturbed for three or four hours, after which you can work it toward the center of the cloth so as to hasten the draining. The draining should be allowed to continue until most of the visible whey has escaped and the curd appears dry as compared with its former mushy condition. Then the four corners of the cloth are drawn across and tied. If you want to cool the curd you can place it on ice for a few hours. This will help to expel water or whey from the curd. The curd is then ready to be put under pressure. A weight of about 50 pounds is sufficient. After having been pressed the cakes of curd are salted and worked (for working you can use a potato masher or butter worker or run it through a food chopper). Fine dry salt is sprinkled over the curds, using about two level tablespoonfuls of salt to the curds from 30 pounds of milk. This amount may, of course, be varied to suit your taste. These should then be put away at a temperature as near 50 as you can get it and kept there until you are ready to use it. Under favorable conditions the cheese should keep in good condition for from six to 12 days.

How to Avoid Milk Fever

By E. V. ELLINGTON,
Head Dairy Division, State College of Washington.

Would it be safe to have a 10-year-old cow that had milk fever when her last calf was born raise another calf? Would she have trouble because of her age?
St. John, Wash. J. C.

It would be entirely safe to have your cow raise another calf. Of course, age is rather a strong accessory cause of milk fever. This disease usually appears with the third, fourth or fifth calf after the growth of the cow has ceased and when all her powers are devoted to the production of milk.

Before your cow calves again special care should be given her to prevent a recurrence of this disease. The well-nourished cow is more subject to it than the underfed cow. Consequently she should be put on a laxative ration as parturition approaches. Ground oats or a bran mash should be given her for a week before calving. A free access to salt and water is most important and a dose of Epsom salts (1 to 2 pounds) should be given 12 to 14 hours before calving. We follow the practice of not drawing any milk from the udder for 12 to 24 hours after calving from cows that we feel are susceptible to milk fever or have had milk fever at some previous calving.

Foot and Mouth Disease

Today foot and mouth disease is sweeping Europe and it exists in Asia and South America, and ahs traveled as far north as Honduras. It has on several occasions been introduced in the United States, always to be eradicated not without much work and frequently at great cost, the last outbreak totaling something more than $5,000,000. At the present time every effort is being exerted to cause a proper disposal of all foreign packing materials, such as hay, straw, etc., used in packing crockery and other imported breakables, that might in any manner convey the virus or infection material of foot and mouth disease to our live stock.

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and shocks equal Corn Binder. Sold in every state. Only $25 with fodder binding attachment. Testimonials and catalog FREE showing picture of Harvester. [illegible] MFG. CO., [illegible], Pa.

**60 Cents and 75 Cents—
Price of Dependable Champions**

The price of Champion X is but 60 cents and the Blue Box Line 75 cents because of Champion's tremendous production of more than 125,000 spark plugs every working day.

Because 65 per cent of all spark plugs made are Champions, great economies in manufacturing are possible. These are passed directly on to the engine owner.

For motor car, truck, tractor or stationary engine, a full set of Champions gives much better performance and saves oil and gas.

And yet Champion prices are lower, even though it is a better spark plug.

At dealers everywhere. A type and size for every engine. The genuine has the Double-Ribbed core

Champion Spark Plug Company, Toledo, Ohio
Champion Spark Plug Co. of Canada, Ltd., Windsor, Ont.

Opportunity Calls from CANADA

Visit Canada this summer—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near railways and towns, at $15 to $20 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

POULTRY AND RABBITS

Ship Poultry

New York Gets Washington Birds

The Bellingham branch of the Washington Cooperative Egg and Poultry association has handled over 125,000 pounds of live poultry this season, most of which were broilers and were frozen and shipped to the New York market. The association requires that all cockerels be brought to the central plant, where they are fattened, killed and dressed, when all are of a uniform weight.

A pool is made of all dressed poultry brought in by the members and partial payments are made on a weekly basis. At the end of each year each member receives a deferred payment for the balance of his share of the dressed poultry supplied to the pool. (The plan is an excellent one, since all feeding and dressing can better be managed cooperatively and done by experts.) Few of the producers are fitted to carry on this work at their farms, even if they have the time to do so. By marketing the cockerels through the association they get better results because of the standardized market which prevents glutting, and consequent low prices during the spring season.

The association is located in its new building on the water front at Bellingham. It has a capacity for handling 1500 birds daily, and cold storage room which can store several carloads of dressed poultry for an indefinite period if desired. So far there has always been a market for broilers and from three to four cars have been shipped to New York markets each year.

Storage, Candling, Processing.

Since eggs are the main output for the association the greater part of the new building has been devoted to storage, candling and processing of the eggs that are brought in by the members. From both Bellingham and Lynden plants there were 64,000 cases, or 128 cars shipped out during the first five months of this year. Practically all shipments were sent to the New York and Detroit markets. A large per cent of the eggs that were received during the rush season were processed and shipped direct to storage. All departments have had much better facilities for carrying on their work since the new building was ready for occupancy early in June, 1922. The new structure was built entirely of concrete, has plenty of light and was erected at a cost of $45,000. Fully half of the 1200 members in the county association bring their eggs and poultry to this plant for disposal.

When the association vacated the old building they turned it over to a new and rapidly growing department known as the Washington Cooperative Poultry Feed association. While this is entirely a separate organization, it is made up only of association members with the exception of a few dairymen who have expressed a desire to purchase their dairy feeds from this organization. The membership is about the same size as the poultry association; namely, about 600.

"There are practically 900 tons of feed sold through this organization during each month," said H. G. Smith, manager of the association. "This, of course, includes all poultry feeds and a few dairy mashes that we have put up for the special trade. There have been times when we have used two carloads of grain a day to keep up our supply of mashes and other feeds. We find that by operating the plant on a small margin basis we can save about $5 a ton when compared with prices in other markets, or where there is no competition from a cooperative organization.

Machinery Worth $5000.

"We are handling our feeds on a smaller margin than are some of the other plants, but we believe that this is because we have better facilities for handling them. There is $500 worth of machinery in the Bellingham plant alone, and we have practically everything that is necessary for cleaning, grinding and mixing all kinds of grains.

"We have thrown our store open to any producer who desires to deal through our warehouse, but he is charged a fee of $5 a year for the privilege of dealing with the association. Members of the Egg and Poultry association are given full privileges in the feed association and are allowed to buy all their feeds from us if they so desire.

"We do not claim to be selling our feeds at cost," continued Mr. Smith. "But we have to plan on a small margin in order to maintain our plant and make such improvements as are necessary. Last year, however, we made 12,000 profits and made a rebate to our members of 4 per cent on the amount of their purchases. We are now incorporated for 20,000 and are gradually redeeming all deferred stock."

The association is scarcely two years old, having been organized in October, 1921. The officers of the feed association are: John R. Gill, president; B. C. Young, vice president; R. T. Hawley, secretary-treasurer; A. D. Foster, G. E. Van Horn, directors.

Poultry Diseases

"What good is it to know how to breed, feed and house chickens if one can not control their diseases?" says Dr. W. T. Johnson, veterinarian at the western Washington experiment station. "How can any one logically hope to successfully raise their stock without some knowledge of the fundamentals in the prevention and control of intestinal parasitic diseases?"

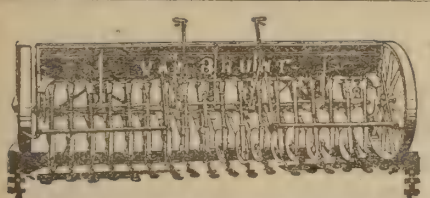
"If one is successful in raising the young stock, how is egg production to be consistently maintained without adequate knowledge of the agents working to undermine health and thus bring about a slump in egg production? Yet, how many in the poultry business or those who are contemplating entering upon such a venture realize the necessity of informing themselves regarding even the common diseases of fowls?

"One of the worst diseases that affect mature fowls is chickenpox. There has been an increase in this disease and it has done its most damage in the curtailed production of the flock rather than the loss of birds from the flock, as is often supposed. The only practical method of controlling this disease is to innoculate when the trouble is anticipated. We do not advise innoculation of healthy flocks with the idea of preventing the disease, but the breeder should watch for any symptoms of the trouble and be prepared to take immediate actions in case they are necessary.

The loss of young stock in the state for the last year has totaled actually $100,000 to the poultry industry. The most of these troubles can be traced to insanitary conditions of the yards and can be avoided by placing the brooder houses on clean soil. There is only one disease that can be traced back to the breeding stock and that is white diarrhoea. This is a disorder that can only be determined in the mature stock by means of a blood test. The hens can not be vaccinated to prevent it in the chicks, but when one gets chicks from flocks that he knows are clean he can be assured that he will have no trouble of this kind.

SUCCESS IN SMALL QUARTERS.

Success is obtained with poultry in small quarters, but give us a good range every time when practical.



Drills Either Treated or Dry Seed Evenly

Every size and kind of seed can be planted without bruising or cracking it, in the desired quantity per acre, in trenches of uniform depth and width, by using the

JOHN DEERE
Van Brunt Grain Drill
with double-run feed

Adjustable gates of the Van Brunt double-run feed, together with multiple gear construction, make it possible to plant 48 different quantities of grain — no wire reducers or other contrivances are required.

Built strong like a bridge — angle steel reinforced frame — the Van Brunt cannot buckle or sag. Gears always in mesh—guaranteed disc bearings; tilting levers, single or double discs —shoe or hoe furrow openers.

Sold by John Deere dealers.

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

Ever stop to think of this?

We are what we eat!

It's a startling fact, yet a simple truth.

This is the reason every one should know that his food is *really nourishing*—not merely filling.

Grape-Nuts—made from wheat and barley—is one of the few cereal foods that includes the vital mineral salts so necessary for supplying proper nourishment for nerve and bone structure.

In Grape-Nuts, too, is retained the important vitamin-B of the wheat.

No food has greater influence in strengthening the body of a growing child than Grape-Nuts. And remember, children need *the very best* there is in the way of nourishment.

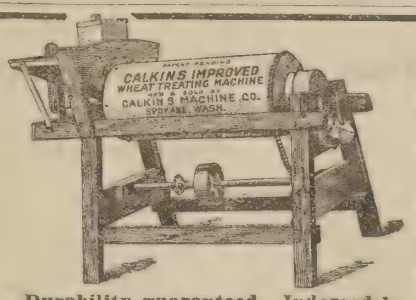
Grape-Nuts is just as delicious as it is healthful, whether served right from the package as a breakfast cereal with milk or cream, with fresh or stewed fruit, or made into an appetizing recipe. Try the suggestion given below.

GRAPE-NUTS ICE CREAM

Prepare plain flavored ice cream in the usual way. Just before the cream hardens in freezing, add Grape-Nuts as it comes from the package, in the proportion of one-half cup of Grape-Nuts to one quart of ice cream. If you buy ice cream ready-made add Grape-Nuts in place of nut meats. You'll find the resulting flavor unique.

Where you don't find Grape-Nuts, you won't find people—

"There's a Reason"



SUPPLY LIMITED

As seeding time approaches, more and more farmers are showing interest in our device for treating wheat with copper carbonate. Soon our factory facilities will be taxed to the limit in supplying orders.

The CALKIN'S IMPROVED
Copper Carbonate Machine
enables you to treat your seed wheat much more speedily and effectively than by hand.

Capacity up to 60 to 70 bushels per hour. Durability guaranteed. Indorsed by state colleges and many individual users. Mr. H. P. Barss, plant pathologist, Oregon Agricultural college, said of grain treated at the rate of 60 bushels per hour it was as thoroughly coated as it has been possible for them to treat even in the laboratory.

ORDER NOW TO INSURE DELIVERY

The saving of seed on 275 acres more than pays the price of the machine, $67.50. FREE descriptive literature on request.

ORCHARD AND GARDEN

Apple Prices

Range Higher Than Last Year

Opening apple prices quoted by north central Washington marketing agencies are ranging from 25 to 50 cents per box higher than quotations made last year under similar circumstances. The actual market on apples is not established here until after the International Apple Shippers' convention, which took place this year, August 7-10, in Detroit.

The prices quoted by the Northwestern Fruit exchange are typical of those asked by various agencies. These are as follows for extra fancy grade, best quality packed in oil wraps, f. o. b. shipping station:

Winter Banana, $2.75; Grimes Golden, $1.75; Jonathan, $1.75; Delicious, $2.75; Spitzenberg, $1.85; Rome Beauty, $1.65; Black Ben, $1.50; Black Twig, $1.65; Staymans, $1.75; White Winter Pearmain, $1.75; Yellow Newtown, $1.75; Arkansas Black, $1.35; Winesap, $2.

H. G. Fletcher, sales manager for the northwestern, in a statement accompanying the quotations, declares that conditions favor a good market, provided the fruit can be picked and delivered in prime condition. The cooperation of growers and packing units can help bring about this result.

The oiled wrap will probably be used on one-half the apple crop shipped out of the district this year, according to the estimate of local dealers and marketing agencies. The great success attained last year with late keeping apples has given a great impetus to the use of oil treated paper. In the quotations of the Northwestern Fruit exchange given bove, only the Winter Banana and Jonathan varieties are exempt from oil wrapped specifications.

Most growers, however, will only wrap Winesaps, Arkansas Blacks, Black Bens, Staymans, Yellow Newtowns and possibly Spitzenbergs. But experts declare that Rome Beauties, Jonathans and Delicious will be greatly benefited by the use of the oil wrap.

Large Apple Tonnage.

The Northwestern Fruit exchange handled the apples grown by the American Fruit Growers as well as that of 15 local units in north central Washington and one or two in the Yakima valley. Altogether this is one of the largest, if not the very largest, single block of apple tonnage in the northwest.

The district will be represented at the International Apple Shippers' convention by C. E. Chase, district manager for G. M. H. Wagner & Sons; O. B. Webb of the Wells & Wade Fruit company; R. L. Shultz of the same firm; W. F. Gwin of the Federated Fruit and Vegetable Shippers' association and Dwight L. Woodruff, general manager of the Wenatchee District Cooperative association.

At the hearing as to the adequacy of car supply, held in Spokane July 30, the Wenatchee Valley Traffic association presented a mass of evidence regarding the delay in shipping the 1922 apple crop and the damage claims that resulted running into the millions. Attorney Fayette B. Dow of the International Apple Shippers' association represented the local shippers and those who attended and testified were: Secretary Bert L. Baker of the association, Conrad Rose of the Wenatchee Produce company, W. E. Miller of Gwin, White & Prince, and J. A. Meade of the Northwestern Fruit exchange. Much of the same testimony that was presented at the Wenatchee Southern hearing went in to the interstate commerce commission at the adequacy hearing, and also some that was deemed inadmissable by Commissioner C. B. Aitchison.

Mice and Moles

BY LEO K. COUCH.

I am having trouble with pocket mice in my garden. They are simply ruining everything. Would you please give me some advice as to how to get rid of them?
H. R.

Pocket mice have been only recently causing trouble in some sections. They are, however, easily controlled. Dust 1-8 ounce powdered strychnine alkaloid on three quarts table rolled oats and mix thoroughly. Sprinkle this bait along the fence runs and under weeds wherever indications show that mice are running. This formula is good only on a small scale. On a large scale, you should mix one pint laundry starch paste with one ounce strychnine alkaloid, to a creamy mass. Pour this over about 16 pounds of heavy recleaned steam rolled oats or table oats.

Pocket mice, as a rule, confine most of their damage to grain crops, and growing corn and peas. They are active almost entirely at night, traveling over a considerable area. Two applications of the poison baits should prevent any further damage.

Please tell me how to get rid of moles in a field of cow beets and potatoes.
MRS. W. N.

The only satisfactory method at present is to trap them. There are two types of traps on the market which we recommend. One is called the scissors jaw type, the "Out O' Sight"; the other the choker loop type, named "Nash." These traps are designed to hide in the soil and to capture the mole when he reopens his burrow.

The mole feeds almost entirely upon earth worms and the larvae of insects. The damage they cause to crops is largely physical; that is, drying them out. Other small rodents, usually field mice, inhabit mole runways and do the damage which is laid to the mole. To test for the presence of field mice in a mole burrow, place in it a trap baited with rolled oats. If there are many mice infesting the field, they can be controlled by a poison bait consisting of 1-8 ounce powdered strychnine alkaloid dusted upon three quarts of table rolled oats thoroughly mixed. It is necessary, however, to capture the moles first, as it tends to discourage the presence of mice in the garden.

Orchard Problems

By A. C. HILDRETH, Department of Horticulture, State College of Washington.

In my orchard I have several 5 or 6-year-old apricot trees that bloom every spring and get quite a bit of green fruit, but a few weeks after blooming they begin to dry. The leaves fall off and large bubbles of sap form and run down the branches. After the trees have been bare a few weeks the leaves again come out and after a time the whole thing is repeated. Yet the trees seem to grow from year to year. The peach trees are afflicted with the leaf-curl. Is there a remedy for that? I find tiny white worms eating the fine roots of my young kale, causing the main root or stalk to decay, killing the plant.
H. T.
Bothell, Wash.

We are unable to tell what is the trouble with your apricot trees from the brief description which you gave in your inquiry to The Washington Farmre. If you could write us more in detail describing the symptoms, we might be able to offer some suggestions.

The white worms that have been causing trouble on your kale are cabbage maggots. This pest attacks not only kale, but cabbage, cauliflower, radishes, turnips and even wild mustard. There seems to be no very satisfactory remedy for this pest. Tobacco dust sprinkled around the plants at planting time sometimes acts as a repellent. Commercial cabbage growers now generally use small disks, cut from tarred felt, about four inches across, and with a slit to the center so that they can be slipped around the young plant easily. These are put on at the time the young plants are set and although somewhat expensive and tedious to install, give good results. I doubt if it would be profitable to use this method on a crop of such small value as kale. Burn all crop refuse after harvest and plow deeply. Plant none of the above crops on the same ground next year. Stir the soil frequently around the plants.

Could you tell me what is wrong with my cherry trees and what to do for them? They begin dying at the tops and also crack, not only the bark, but the trunks simply split down. We have some apple trees that are bearing. The branches grow long spaces with no leaves on them. We spray often, but there seem to be no insects.
C. E. G.
Yakima, Wash.

The cherry trees are undoubtedly suffering from winter injury. Trees growing in unfavorable locations, especially where they make growth late in the season, are likely to be affected in this way. The only treatment would be to remove the dead wood after you are certain it is not going to recover, and provide good growing conditions for the trees in the way of culture and irrigation. A good application of barnyard manure or some nitrogen containing fertilizer, as ammonia sulphate or nitrate of soda, could be added this fall or early next spring before growth starts.

Your apple trees seem to be suffering from apple rosette, a disease about which little is known. Where the trees are growing in an orchard the planting of a permanent alfalfa crop has generally given relief after about the third or fourth year. An application of nitrogen fertilizer, about three pounds to the tree, should help in establishing the alfalfa. Where it is not possible to grow alfalfa, heavy mulch of manure and straw about six inches deep could be applied to the soil and left without any cultivation.

Two Acres in Cherries

W. H. Cushing, of the Haller Lake district in King county, has two acres of cherries, most of which are the Late Duke, English Morella and Montmorenci. While both of the sour varieties find a ready market from the commission houses in Seattle and from buyers who stop at the farm to buy direct, the English Morella, a dark colored sweet cherry, is perhaps the most popular variety of the three.

All of the trees on the place, which is owned by W. E. Fellows, are the dwarfs, thus affording more convenience in picking. All of the fruit is picked with the stems on, even for cannery use, since they will keep better than where the stems are removed.

The trees were sprayed twice this year with arsenate of lead, which prevented much possible loss from insects. The heavy rainfall during July this year caught many of the sweet cherries, and caused much loss from cracking. This, however, is unusual and it is only during an exceptional year that such loss occurs.

In addition to fruit, Mr. Cushing is raising a large variety of flowers about the place, but as yet there are none raised for sale. A few water lilies have been started along the edge of the lake, and it is hoped that within a few years there will be enough of these and other flowers growing to warrant a part of the income.

MANY KEEP BEES.

It is estimated that nearly 1,000,000 persons in the United States have bees.

This Fall Give the Seed a Better Chance

Use a Hoosier-Empire Jr.-Kentucky Grain Drill

No matter how good your soil nor how good the seed bed, if the seed is not properly put into the ground the yield is sure to suffer. You can prevent this happening to your crop. Safeguard *your* investment by using a good grain drill.

When you drive into the field with one of these dependable drills you may rest assured your seed will be planted right. None will be cracked, nor will there be any skipping or bunching. The seed will be evenly distributed in uniform seed trenches and covered to the correct depth. Every grain will get a square deal.

Hoosier, Kentucky, and Empire Jr. Drills are built for horse or tractor power. Grass seed attachments always available. Furrow openers for any soil—the McCormick-Deering dealer will show you the style that is suitable for your soil.

Tomato in Third Rank

The tomato now ranks third in importance among truck crops, according to the department of agriculture in a recent report from Washington, and the demand for high quality or slicing tomatoes is increasing. Because there is need for improvement in the cultural methods and quality of tomatoes grown for the early market, the department has published a summary of the methods and results of tomato growers who have been especially successful.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

$15,000—CLEAR TACOMA INCOME PROPerty for clear farm, equipped, same value. Write owner, 3200 N. 27th st., Tacoma, Wash.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

The first time we met John Worth, the leading character in this story, he was taking an active part in preparing the little frontier village of Bismarck, N. D., to withstand an Indian attack. We next see him playing the part of a man, although he was only 12 years old, in defending the village when the warriors appeared.

After the Indians were repulsed by the frontiersmen under the leadership of Jim McKenzie, the sheriff, and order was restored, Mr. Worth, John's father, set out for the north to search for outcroppings of coal, he being a miner as well as a freighter. During his absence, Mrs. Worth felt many misgivings owing to the dangers that confronted the wilderness traveler, but bravely assumed responsibility for John, his brother Ben, aged 10, and the baby. Mr. Worth had not been gone many days when he returned, clothed only in an Indian blanket and a pair of worn-out moccasins. He had been the victim of a thieving party of redskins who had taken all his clothing, leaving him naked on the prairie, where early winter winds would have brought certain death but for the friendliness of an old Indian whom he had once befriended. This old warrior's blanket and moccasins saved him.

It was not long, however, before he was on the trail again and when he came back in the spring he reported that the Indians were becoming more and more hostile toward the whites, and that it would not be safe for any mining expedition to venture away from the village for some time yet.

It was over a year before Mr. Worth was able to lead the mining party to a mine that he had discovered. It was a great day for the boys when the wagon train started across the wild prairie, but the first few hours out brought an experience that they long remembered. They rode away from the party for a swim in the river, and when they came back to where they had tied their horses they found them gone. Afoot they started after the outfit, now miles ahead and it was late at night when they wearily dragged themselves into camp and went to bed after a suppor of cold beans and coffee.

They finally reached their destination. The mine was opened and worked throughout the winter, during which the boys enjoyed many sports in the adjacent region. The following year, however, camp was broken and the start made for a new mine far to the westward.

CHAPTER VII.

A Buffalo Hunt.

Many weeks were spent in the migration, and it became exceedingly monotonous and tiresome before their destination was at last sighted. When, one beautiful afternoon, Mr. Worth pointed ahead to a rolling knoll covered with trees and announced that there was their future home, John and Ben set up a wild cheer and dashed ahead to examine the spot. Camp was pitched on the banks of the Yellowstone, and dug-outs were made—the cave part first and then the outer portion of substantial logs. Two large cabins were constructed for the family's dwelling and kitchen, and several more for the men, of whom there were many, this being an important mine.

No time was lost in settling, and in an incredibly short while the household belongings were in place, the provisions stowed away safely, and the regular camp routine begun. It was necessary to get a considerable portion of the tunnel driven before frost came. The opening was made horizontally into the side of the hill and continued in a straight line until the vein of coal was struck, when the tunnel had to follow it in whatever direction it went.

The boys were to be initiated into real miner's work at this camp. They were well grown, strong lads, fully able to do their share. During the preliminary digging of the drift they did little beyond their regular chores, except to drive the teams that carted away the earth from the mouth of the cave.

The important duty of supplying the camp with fresh meat was also entrusted to them, and it was not long before every haunt of furred and feathered thing that lived within a radius of miles around was known to them.

Within a few weeks after the establishment of the camp all preliminary work had been completed and the mine was ready for business. To facilitate the delivery of coal to daylight, a rough railroad had been built; its tracks were of wood, its rolling stock one small, four-wheeled box car, its motive power, Jerry the mule. Of this underground railway John was installed as president, board of directors, general manager, inspector general, passenger and freight agent, chief engineer and superintendent of motive power. One day he was engaged in his many brain-taxing duties, the most trying of which was keeping the motive power "moting." The flaring lamp in his hat showed but little of the mule's tough hide, but that little the superintendent belabored lustily. The little car rumbled and bumped along the rough wooden rails on its way to one of the rooms where the coal was being dug. John whistled cheerily to himself and occasionally interrupted the melody to shout into the mule's wagging ears: "Git up, Jerry!" Soon a point of yellow light appeared far off in the darkness, and as the lumbering car went on it grew in size and strength until its nature could be made out distinctly.

"Hello, Ben," shouted the young driver to his brother, whose cap-light had showed him clearly up the tunnel. "You'd better oil the hinges of that door; they squeak like a hungry rat."

The mule had stopped before a great door which blocked the way; it was so placed as to change the ventilating current of air, and it was Ben's duty to open and close it after each loaded or empty car. He sat in a little recess of the wall and pulled the door open and shut with the aid of a rope.

"It's mighty lonesome here," said he. "Seems as if I couldn't stand it sometimes, so I brought along the 'Arabian Nights' today. Been reading about Aladdin; he was underground, too, but all he had to do was to rub a lamp and he just wallowed in pearls, diamonds and things, while I sit here all day for half a dollar, and do nothing but open and shut this door for you and your old mule."

"Yes, I know all about him," answered John, as he drove through the doorway.

"'Tisn't true, any way," shouted Ben after him. "Couldn't be. Aladdin was a Chinaman, and no Chink ever made even a dollar a day."

"Guess you're right, but don't get lonesome," the voice came echoing back through the darkness, mingled with the rumble of the car and the sharp slap of the stick on poor Jerry's flank.

For a month or more John continued to drive the mule and Ben tended the door. It was late one afternoon, and the younger boy was feeling very tired of living away from the sun and the bright fresh air; the darkness and dankness oppressed him not a little, so he was glad to hear John's strong voice singing:

"Down in the coal mine,
Underneath the ground,
Digging dusky diamonds
All the year around."

"I'd sing too if I was getting a dollar 'stead of a half, and had a chance to see daylight once in a while," grumbled Ben as his brother stopped to talk a bit.

"Hold on a while and don't get excited," counselled the elder. "I'm going to be promoted, and what's the matter with you moving up, too?"

"Why? How?" inquired the discontented one eagerly.

"I'm going to be a regular miner; going to work with Bill Cooper, best miner out, father says."

"Then I'll drive Jerry and gather in the dollar," cried Ben. "But who'll tend door?"

For a minute the boy's face showed his disappointment; then he smiled again as the thought came of a way out of the difficulty. A friendly Indian camp was located across the river, and the boys, white and red, often came together for all sorts of sports.

"Why not get 'Coyote-on-a-hill' to work the door while I run the car?" said Ben exultingly. "He'd be scared to death at first, but I'll tell him about the 50 cents a day and that will brace his nerve."

And so it turned out. The Indian boy took Ben's place, while John turned over Jerry to his brother and cast in his fortunes with Bill Cooper.

"Coyote-on-a-hill" was pretty badly scared the first day, but Ben gave him a word of encouragement whenever he went by, and never failed to remind him of the money he was making, so he stuck it out like a man, and presently got quite used to the dreary darkness.

Both of the Worth boys expressed themselves as pleased with the change; what Jerry thought of it he never remarked.

John found his new work anything but easy. Bill Cooper was a fearless miner and a hard worker, and his assistant had all he could do to keep up with the task set for him. It was necessary first to cut under the mass of coal that was to be dislodged; to do this John had to lie on his side and so swing his pick in a cramped position. To make the vertical cut was not much easier, for he found it hard to work squeezed in between the walls of coal as the crevice deepened. The bottom and side cuts made, he bored holes (round holes with the flat drill, the knack of which he acquired only after long practice and a choice collection of smashed fingers) and then tamped in the paper cartridge of powder. When the fuse was in place, all that was needed to complete the work was a light from his lamp. The former was plain, straightforward hard work, the latter sport. The fuse lay like a snake just sliding into its hole, the place was quiet as death and as dark as a tomb, except where the flickering glare of the young miner's lamp shone; his face was covered with coal dust, through which his eyes peered with unnatural prominence.

He would take the lamp from his cap, stoop down and touch the bare flame to the end of the snake fuse; it would immediately begin to sputter sparks, and as John drew back for safety he could watch it eat its way towards the black wall and the powder within it. The red sparks drew nearer and nearer the hole, then, after a spiteful little shower, disappeared. It seemed a long time to the miner waiting behind his protecting shield before the rending, shaking report sounded, followed by the glare of the explosion and

"Come out if you want to save your skin," Bill."

the rattle of the falling coal. Then Ben soon turned up with Jerry, and both boys shoveled the loose coal of varying-sized lumps into the car.

Bill Cooper, though insisting that John must do his share, generally took the hardest and most dangerous places himself; so it came about one day that the boy worked at the vertical cut while his partner cut under, propping up the mass of coal (with wooden logs cut for the purpose) as he went in deeper.

The work was hard, and neither man nor boy spent any breath in talking. The dull ring of the pick was the only sound. Deeper and deeper grew the crevice; soon only John's foot was visible and Cooper had disappeared entirely under the overhanging ledge of coal; only the faint glowing of the light and the sound of the tools betrayed the workmen. It was dirty, tiring, dangerous work. At any moment that great mass of mineral might fall if the supports were not properly placed or the king-brace happened to be lodged in a soft spot.

"Come out if you want to save your skin, Bill," cried John suddenly. "I hear it popping and working all around, and it's beginning to move."

"In a minute. Wait till I dig out this far corner." His voice seemed to come from the bowels of the earth and had such an uncanny sound that John shivered.

"Hurry! Never mind the corner—it's going to fall. Come out, quick!" John's voice had such a note of fear and entreaty in it that the man below was impressed.

"All right," he said, "I'll come right along."

The boy stopped working and listened. There was a peculiar sliding sound that filled the air all about him, and from time to time a stone dropped to the floor with an echoing rattle.

"Come out." With an appalling roar the great mass of coal came down. John was badly squeezed, his light was extinguished, and all the breath was knocked out of him, but he managed to work himself free and make his way to the room. His only thought was of Bill, under that heap of coal somewhere, and of the need of help.

He rushed along blindly through the solid darkness, his hands outstretched before him, shouting as he went, "Help, quick!"

Some men who were working in the entry answered him.

"What's up?" they asked.

"Help!" Bill lies under a whole lot of coal."

They hurried to the coal face, and John showed them where he thought the imprisoned man lay, buried under tons of coal; the men, seizing picks, wedges and sledges, began working frantically to rescue their comrade.

For half an hour they toiled as they never toiled before. Then there was a cry of horror. The body was found. The poor fellow's arms were raised in the very act of swinging his pick, and he evidently had had an instant and well-nigh painless death.

"Well, boys, I hope mine comes as easy as his," said old Mike McGuire, who had witnessed many a similar scene.

They took up the body gently and tenderly laid it in the car, the mule was unhitched, and the miners pushed it slowly to the open air, the whole force following.

On Sunday Bill's sorrowing comrades buried him. Mr. Worth read a few verses from the camp's only Bible, offered a short prayer, and the simple ceremony was over.

Of Bill Cooper, like many of the men of that time, little was known, and if any one should question as to his origin he would probably be answered with, "Came From the East, I guess." He had many friends, but none felt his tragic death more than his young partner.

After this the work became irksome. John did not get along so well with his new partner, and often when he stopped to rest the sight came before his eyes of his dead friend as he lay under the black shroud of coal. Nevertheless, he toiled away faithfully, and seemed in a fair way of becoming an expert coal miner.

It was now well toward midwinter, and the boys began to long after some skating on the clear ice which had for some time covered the river completely. Alec was a handy blacksmith, and at their entreaties he set to work and fashioned them two pairs of rough but very serviceable skates. Since skating on the ice was something the boys had never learned, they had to get Yumping Yim, the Swede, to teach them how to use these new acquisitions. Though they were rude affairs, the boys, whose muscles were developed by snowshoeing, soon managed to make good headway on the river. In a sharp spin down the glassy surface after the day's work was over they could forget that their backs ached and their arms were heavy as lead. The brisk wind and change of exercise was like a tonic to them, and though the air holes in the ice made night skating rather dangerous, it only added zest to their enjoyment.

As the boys skimmed past the Indian camp, which was a large one, they sometimes found a whole delegation of young savages out to watch their progress. The Indians had never seen skates before, and their wonder and interest were great. This camp, in turn, greatly interested the white boys; as they lay in bed they could hear the bum-bum-bum-bum of the medicine man's tom-tom come booming monotonously over the river. This sound continued so everlastingly every night that the boys' curiosity was aroused and they determined to see what the medicine man did beside making such a row.

After dark one night they stole out and over to the red men's lodges, traced the booming noise, and finally, after great care and much dodging—for the Indian will not tolerate any spying on or interference with what he considers sacred—they reached the tepee from which the sound came; then they crept round to the opening flap and John cautiously thrust his head in, but quickly withdrew it.

"What's the matter?" whispered Ben.

"Old Crow Hat's facing this way. I was afraid he'd see us," John answered. "Let's look under this side."

Suiting the action to the word, the boys lifted the side of the tentlike lodge and

(Continued on page fourteen.)

Bits of Fun for Everyone

An Optimist.

The pessimist was suffering from rheumatism. "Every bone in my body aches," he complained.

"You ought to be glad you are not a herring," said the optimist.—Farm and Fireside.

What Is the Joke?

"Has your wife a sense of humor?"

"I don't think so," replied Mr. Pynhead. "I have told her the same joke over and over, and I don't believe she has laughed at it more than twice in her whole life."—Washington Star.

As Time Flies.

Manager (to applicant for office boy vacancy)—Aren't you the boy who applied for this position a fortnight ago?

Boy—Yes, sir.

Manager—And didn't I say I wanted an older boy?

Boy—Yes, sir. That's why I'm here now!

He Knew Them All.

The class composition was on "Kings," and this is what one boy wrote:

"The most powerful king on earth is Wor-king; the laziest, Shir-king; one of the worst, Smo-king; the wittiest, Jo-king; the quietest, Thin-king; the thirstiest, Drin-king; the slyest, Win-king; and the noisiest, Tal-king."—Youth's World.

Convinced of Error.

Teddy—I wish I hadn't licked Jimmy Brown this morning.

Mamma—You see how wrong it was, don't you, dear?

Teddy—Yes; 'cause I didn't know till noon that he was going to give a party.—Western Christian Advocate.

How Big Is a Bean?

Tommy is fond of squeezing toothpaste out of his shiny new tube.

"Don't take too much this time, dear," his mother said to him one morning when he was cleaning his teeth.

"How much may I have?" asked Tommy.

"Well, I should think a little bit, perhaps as big as a bean."

Tommy gave a great pinch and out shot the paste.

"Oh, oh!" exclaimed his mother, "not all that, Tommy. Didn't I say as big as a bean?"

"Yes," replied Tommy. "This is a string bean."—Youth's Companion.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

If we would check the speaker
When he spoils his neighbor's fame:
If we would but help the erring,
Ere we utter words of blame:
If we would, how many might we
Turn from paths of shame.

Ah, the wrongs that might be righted
If we would but see the way!
Ah, the pains that might be lightened
Every hour and every day,
If we would but hear the pleadings
Of the hearts that go astray.

In each life however lowly,
There are seeds of mighty good.
Still we shrink from souls appealing,
With a timid, "if we could":
But a God who judgeth all things
Knows the truth is "if we would."
—Author unknown.

Experience Letters

Dear Mrs. Barland and Family Circle: I have been wanting to write for a long time. I find many helpful suggestions and I am sending in a few of my own. First I want to express my appreciation for the interesting and inspiring messages which Mrs. Barland gives us and I wish we had them oftener.

I use pasteboard boxes laid flat on top of the springs; they protect the mattress from being worn from contact with the springs. I use a light weight canvas 72 inches wide and long enough to lap well under the mattress on all sides; it keeps the mattress free from dust which always gets into the places where it is stitched. I find the silk floss mattress the best, as they are very comfortable and hold their shape. They are light in weight and easy to handle. I use a 30-pound weight, but think 27 pounds is about as good.

I cover all my pillows with unbleached muslin, which protects the ticks and is very easily removed to wash. The white underneath also gives a better appearance when the slips are on the pillows.

I would like to hear from the Circle women telling me of the west. I would like to know what is raised and how much to the acre and what kind of grass is raised for stock. I would like to know of the kind of soil and the climate. We have become quite interested in the west through reading THE FARMER, which was handed us by a friend. We have gotten much information from it.

MRS. HENRY MARX,
Dalton, Neb., East R.

Dear Mothers and Fathers of the Circle: In the letters published last week you were given an insight into the ways of girls and what is in the minds of some of them. I want you to read the letters this week, for further enlightenment concerning your girls.

I hope I can get some frank heart-to-heart letters from the young men, too, and perhaps we will be able to let some light into this social muddle that seems to be dragging some, yes too many, of our young people into the mire. If by this free and open discussion we can help even a few young people to keep to the safe path or to induce some who have started wrong to turn back to safe and sure traveling, we shall have accomplished the deep desire of my heart. Perhaps, mother, it will be your girl that needs help. Read carefully and think over the letters signed "Brown-Eyed Bell" and "Lucille" and if you are hindering your girl from confiding in you, change your attitude at once. Never, never abuse the confidence of any one and especially a young person. Nothing grieves them more. Your friend,

ALICE W. B.

Family Circle Girls

Dear Mrs. Barland: I have been reading the Family Circle for the last eight months and now I just can't help expressing my opinion. Of all the letters I have read, I think that of S. I. S. of Oregon is one of the few who have really expressed her mind. Who wouldn't enjoy speeding on a good piece of road?

People can gossip and preach around about the immorality of the young people of today, but who is to blame? The young people will have their fun; if it isn't given or provided for them they will take it. Why don't the older people provide a decent place, a club house, where boys and girls can entertain and be entertained?

Many adults and most boys seem to be very alert for an opportunity to find something about the appearance of a girl that shall call forth some smart (?) remark about her. If she is up-to-date in dress she is called a modern flapper, if she isn't up-to-date they say she is a "stick" or a "dead one."

I am thankful that most girls have too much self-respect to smoke or drink, but if she does do these things it is certainly not a man's place to censure her.

If all the girls would adopt bobbed hair and a short, one-piece dress it would increase the health and happiness, I believe. To my mind a long mass of hair which takes hours to care for is more ridiculous than short hair.

Some new fashion is considered outrageous until the new has worn off and by that time a still newer custom is introduced and so the tongues keep wagging. People just must have something to talk about and so they select us girls.

I will have to admit that there are extremes in the ways and dress and manners of both sexes, but I will also affirm that in my experience it is a greater treat for a girl to meet a decent boy than for a boy to meet a good girl.

Many thanks for giving me a chance to "explode." LUCILLE.

Dear Mrs. Barland: I am 19 years old and am not a flapper. I am an interested reader of the Circle page of The Farmer.

The various letters printed have set me to thinking and I have come to the conclusion that the boys and the mothers are principally to blame for the flappers. I don't want you to get the idea that I think that the girls are perfectly innocent of all wrong doing because I don't think they are—but:

If more of the mothers would be more truthful with their daughters and hold more sacred their confidences, and try to advise instead of nag at them, and wouldn't object quite so strenuously to the work that goes with a party or a dance in the home, there would be fewer girls going out on the streets or in cars for their pleasures.

But, of course, you can't expect a girl to tell her mother anything when she knows that it would be held in confidence only until her mother saw the neighbor woman, and unfortunately that is as long as a great many mothers hold their daughters' confidences.

Besides, who likes to be nagged at? But that is the trouble with most mothers; they complain when their daughters don't stay at home, but they don't realize that they make home life unbearable by that everlasting habit of nagging.

As for the boys; if they were not more than willing and didn't encourage it, there would be no wild night rides and kissing parties. The girls think that the boys demand it of them and they think right.

What I think is that these boys who have been writing to The Farmer and condemning the girls had better be sure that their own house is clean enough to receive company before they start criticizing the girls, and by the way, while they are cleaning their house it might be well to help the middle aged men (both married and single) clean their houses. Many a good girl has placed her trust in one of these old-young kind of men, with a big car and lots of money, only to find after it was too late that he was a regular Judas.

I don't believe any one will have to worry about the girls if the men and boys will raise their standard of morals. Women are quick to notice and adopt new ways and standards.

BROWN-EYED BELL.

Pickle Recipes

Pickled Peaches—One gallon peeled peaches, three pounds sugar, one pint good cider vinegar, two dozen cloves, six sticks cinnamon.

Boil vinegar, sugar, cinnamon and cloves 15 minutes then pour it over the peaches and let stand over night in a stone jar covered with a plate. Next morning pour off the liquor and heat to the boiling point, then add the peaches to the boiling liquor and let cool slowly till tender. Seal in glass jars.

MRS. W. R. S., Kansas.

Spiced Pickles—Put fresh cucumbers into fruit jars or stone crocks, make a brine of 1 gallon of boiling water, 1 cup of salt, allowing enough to cover the pickles. Scald this same brine and pour over for nine mornings, then wash cucumbers and cover with spiced vinegar to taste, pouring it over hot and seal. I add a piece of alum to keep pickles firm.

I make some pickles by adding to the cucumbers small onions and bits of cauliflower. I pour the hot brine over these for two or three mornings, then mix with the cucumbers and add spiced vinegar same as for the cucumbers alone. This is an old and tried recipe.—A Subscriber, Oregon.

GIRLS LEARN TO BAKE.

Over 31,000 girls learned to bake bread in the baking clubs last year. It is estimated that they baked 37,000 loaves of bread. At 10 cents a loaf this would be worth $3700.

REST WHILE COOKING.

A fireless cooker is a labor saver.

Just Folks

Change thrives on misfortune.

Those who count their steps have a hard time in reaching the goal. They are using up valuable figures.

It is even more difficult to get along with those who are addicted to lies than with those who are addicted to narcotics.

The "why" points the way to the "how." You have not really learned how to do a thing until you have learned why it is done.

During my recent visit to the east I met a young lawyer who asked me why Portland, Ore., was located above the mouth of the river. "I know there is a reason," he declared.

In fact, people may be divided into the hows and the whys. The hows are the big majority. Now and then there is a why and he has the first quality of leadership.

I had a refreshing talk with the young Maine lawyer to whom reference has been made. "I am surprised every day of my life with the common people I meet," he said. "It is up to you to write up to them; don't try to write down to them. Only use plain words and they can understand the best. I had a client come into my office the other day. He was a workingman earning common wages. I caught a glimpse of a book he was carrying in a bag. After considerable persuasion I found he had three books with him which he had bought at a second-hand book store. One was a book of adventure and the other two would be classed among the books of solid information. He is building up a home library and I have no doubt is a better informed man than many of those assuming a higher social position." EAS

New Use for Worn Sheets

Mrs. Bertha Keech of Monroe, Snohomish county, tried a novel plan of making home-made curtains and dyed them a light blue for one of her rooms, which she is working out entirely with that color scheme. The curtains are made from worn bed sheets, and remodeled in such a way that it is difficult to tell what their former use had been after they are completed. Mrs. Keech is very much pleased with the outcome, and intends to try other similar suggestions given by Mrs. Harriet B. Stowe, county home demonstration agent.

MODERN THINGS DESIRABLE.

The farm home should be filled with labor-saving equipment, home-made or otherwise.

High Points in News of the Week

It is doubtful if President Calvin Coolidge will at any time during the administration which he is now entering experience a more trying week than the first one following his elevation to his high position. With numerous grave problems facing the administration, he was compelled to brush them aside and devote his thought and energies to the funeral services and memorials in honor of his former chief, the late President Harding. With this week, however, he returns to the national capital from Marion, Ohio, where he attended the final burial services, and shoulders the responsibility for guiding this country through the remainder of the reconstruction troubles which his predecessor so vigorously combated for the two years and five months which he served.

One of the new president's first problems is the handling of the threatened anthracite coal strike, which is scheduled for September 1. He is known to be a disbeliever in strikes where the public welfare is at stake and, therefore, predictions are freely made that federal intervention will be used in an attempt to prevent the strike and in the control of it should it occur.

Agricultural interests, especially the wheat growing industry, has been bringing pressure to bear for a special session of congress immediately to enact emergency legislation designed to insure the wheat farmer a price at least equal to the cost of production for his 1923 crop. President Coolidge has given no definite intimation as to whether or not he looks with favor upon an early session. Many who are in close touch with him believe he is not inclined to call such a session.

* * *

The thoughts of the American people were largely engaged last week in paying appropriate respects to memory of the late President Harding. After the coast trip of the special funeral train from San Francisco, the body lay in state in the rotunda of the capitol building for several hours, where the formal official funeral services were conducted and where many thousands of his personal friends and official acquaintances were permitted to pass by and look upon his face. The body was then taken to his old home town of Marion, Ohio, where the less formal funeral services were conducted in the presence of thousands of his former townspeople, neighbors and personal friends. On Friday afternoon the body was placed in a temporary vault where it will remain until a mausoleum is erected where it will lie permanently. The funeral service at Marion occurred at three o'clock, central time. A widespread movement was carried out for a five-minute memorial at the corresponding hour throughout the entire nation when all industrial activities should cease.

Great Britain has made public her note to her sister allied governments proposing new methods of settling the reparations controversy. The outstanding points in the proposal are as follows:

"1. The German government to undertake to abandon the policy of passive resistance.

"2. Steps to be taken upon the cessation of passive resistance for the resumption of the civil administration of the Ruhr, and to provide for the progressive evacuation of those areas.

"3. A body of impartial experts to be set up charged with the duty of advising the allied governments and the reparations commission respectively as to Germany's capacity to pay and to the mode of payment to be prescribed. The cooperation of an American expert to be sought, and arrangements to be made for German experts to be consulted and heard.

"4. The same body, or a body similarly constituted, to be asked to advise the reparations commission as to the economic sureties and guarantees to be pledged by Germany to the allies.

"5. Interallied discussions to be opened with as little delay as possible, whether by conference or otherwise, for the purpose of elaborating a comprehensive plan of a general and final financial settlement.

"6. So soon as the economic sureties and guarantees which Germany will have pledged to the allies have been put into effective operation, the occupation of all German territory outside the limits laid down in the treaty of Versailles to come to an end."

* * *

The government of Germany is undergoing a sweeping change as a result of industrial and political unrest, which in turn has developed a strong socialistic and communistic tendency. Chancellor Cuno and his cabinet have resigned, and President Ebert has accepted their resignations. The socialists demand that a new cabinet be formed on a coalition basis, giving the socialists and communists liberal representation.

The money situation in Germany continues to be exceedingly unstable. A strike in the government printing department threatened to disrupt the printing of paper money with which the country has been flooded. The value of this paper money is indicated by the fact that the ministry of labor awarded the strikers a weekly wage of 6,500,000 paper marks, when their demands had been for 20 gold marks. It is said that most of the Hamburg shipyards are closed because the managers can not grant the demands of the workers for increased wages. A London dispatch from Berlin says, "Reports from all parts of Germany show that unrest among the workers is increasing alarmingly, so much so that in political circles fears are not concealed that a revolution may break out as suddenly as that in November, 1918 did."

* * *

On the ground that two terms of four years each are too great a strain for any human being to bear as president of the United States, Senator Cummins of Iowa has gone on record favoring a constitutional limitation to one term.

* * *

The navy department has ordered the scrapping of the uncompleted battleships Indiana and South Dakota, that were in the process of construction at the time of the signing of the international agreement for limitation of armament. The two vessels, if completed, would have cost $70,000,000 and have been the two largest afloat.

* * *

Notwithstanding the high cost of building construction in this country a report issued by S. W. Straus & Co., investment bankers of Chicago, says that in 239 leading cities building activities were over 14 per cent greater during the month of July than during July 1922. Building permits for these 239 cities aggregated buildings that will cost about $234,000,000.

The Railway Age, in an article just made public, says that up to July 21, this year, the number of cars of freight hauled by the railroads of the country was 11 per cent greater than during the same period of 1920, when all records for heavy traffic were broken. The article says that the railroads have this year effected the greater increase in operating efficiency in their history.

Farm Business and Markets Outlook

(Continued from page five.)

are quoted at 75 cents to $1.25 per bushel at Chicago.

The commercial apple crop is estimated at 32,900,000 barrels, compared with 31,000,000 barrels a year ago and an average of 25,700,000 barrels in the preceding five years. The total crop is placed at 188,000,000 bushels, against 201,,000,000 bushels a year ago.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Summer indiscretions in eating and drinking are responsible for lots of trouble. One such disturbance is inflammation of the lining membrane of the intestines, a condition called "enteritis." Any part, or all, of the intestinal tract may be involved. The chief symptom of this trouble is diarrhoea.

Dr. Copeland.

Even the mental condition has its effect upon the bowel action. The muscular contractions of the walls of the intestines are given the name "peristalsis." Their movement may be increased by fright or worry. The result is "nervous diarrhoea."

The first indication of trouble is "stomachache," or pain in the bowels. This may be colicky in character, coming and going, or it may be cutting, quite knifelike, indeed.

In acute cases there may be fever, loss of appetite and intense thirst. If long-continued, there is great prostration and real illness. In chronic diarrhoea, there may be loss of flesh and interference with the general health.

In infants and young children the cause is usually found in the quality of the milk. In older children, ice cream, iced lemonade, "soda-pop" or over-indulgence in candy or pastry, may be responsible.

In adults the cause is found in indiscretion in diet, such as excessive indulgence in ice cream or ice water. Bad meat, unclean food, contaminated food-handlers, may be responsible for the attack.

If the disease does not yield in a day or two, you should see your family doctor. It is so easy to overlook typhoid fever or some other serious difficulty which may begin the same way that no chances should be taken.

If diarrhoea appears in a child, the milk should be stopped at once.

Many adults suffer from chronic diarrhoea or from frequent attacks of enteritis. In such cases there is some underlying cause that must be found by the doctor.

The baby must be given particular care, especially in the summer season. Fresh air, all the time by ventilation and every day by out-or-door life, is most important. Sunlight at all seasons is vital.

All the water given to a child should be boiled unless it comes from a source of known purity.

If the baby is bottle-fed it must be from a sterilized bottle, equipped with a sterilized nipple.

I have said that the milk should be stopped at once if diarrhoea occurs in a child. Many mothers, especially young mothers, are so fearful that the child will starve to death that this advice seems cruel. It is far better, however, to give the child nothing but water for a day or two. So long as the temperature continues, your doctor will probably advise against food, and it is good advice.

The colic may be relieved by hot, moist compresses to the abdomen, by a hot-water bottle or a hot tub-bath.

Remodels Her Kitchen

Mrs. George Cass of Monroe is remodeling her kitchen and entire first floor of the farmhouse under the supervision of Miss Minerva Lawrence, home management specialist of the state college, and Mrs. Harriet B. Stowe, county home demonstration agent. The entire plan is being worked out with the idea of greater convenience for the housewife, such as more cupboard room, better light, and generally a better arrangement of all the kitchen equipment.

Hiram on "The Ladies"

They used to keep our buttons on, and darn our heavy socks;
They used to dress in closer-fitted, neater-looking frocks;
But now they wear these baggy, bulgy, blousy, bunchy smocks
And rat and rough and roll their once serene and glossy locks. —J. M. M.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4476. Girls' Cape. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. A 10 year size requires 2 3-8 yards of 40-inch material. Price 10c.

4452. Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. An 18 year size requires 5 3-4 yards of 40-inch material. The width of the skirt at the foot is 2 yards. Price 10c.

4477. Girls' Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. A 10 year size requires 3 7-8 yards of 36-inch material. Price 10c.

4457. Ladies' Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. To make the dress as illustrated requires 2 1-8 yards of figured and 4 3-8 yards of plain material. The width of the skirt at the foot is 2 yards. Price 10c.

4454. Ladies' House Frock. Cut in 4 sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. NATURES GREATEST CLEANSER

Every day Daniel Ainardi goes swimming in the Yakima river near his home. Daniel is 9. He has three kittens, three ducks and a cow. School will start soon where he lives in Washington and Daniel says he likes to go to school. His teacher this year is to be Mrs. Van Syskle.

Mildred Wuorinen likes to go swimming and wishes there was a good place to swim near her home. She has only been swimming once this summer, but she is having a fine vacation just the same. Mildred is a southwest Washington girl. She passed into the seventh grade when school closed with an average of 90 per cent. She picked blackberries this summer.

Birthday Greetings

THURSDAY, August 16.—Carrol Cushman, 10 years old; May Fassett, 11.

FRIDAY, August 17.—Alma Cook, 11 years old.

SUNDAY, August 19.—Clara Engelson, 11 years old.

TUESDAY, August 21.—Fay Cochrane, 8 years old; Marie Townsend, 11.

WEDNESDAY, August 22.—Sylvia Nasi, 11 years old; Beryl Snyder, 11; Paul Ylonen, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Gladys Hartzell, Mildred Gerber, Harriet and Elizabeth Cook, Hulda Pouttu, Esther Pasche, Lila Hill, Hilda Pietila, Geraldine Bee, Septema Bee, Elizabeth Watkinson, Verla Dyer, Alice and Irvin Faber, Frances Fishback, Astrid Rusdal, Thelma C. Gentis, Helen Werttemberger, Etta Rochester, Lillie Puffert, William Goetzenberger, Daniel Ainardi, Josephine Sanders, Evelyn Olsen, Esther Simila, Rosale Staehell, Martha Keiski, Laverne Cox, Lillian Ward, Billy Watson, Lueen Marie Herndon, Doris, Reta and Bernis Godsey, Edith Puckett, Eugene Kanta, Senvi Naranen, Esther Schorzman, Vera Bice, Helena Reiche, Helen D. Top, Pieona K. Johnson, Matilda Louise Guler, Irene Swegle.

BEDTIME STORIES

By THORNTON W. BURGESS.

DECIDE TO LEAVE THE ORCHARD.

Have you ever noticed now some people seem born to make trouble for others? Bully, the English sparrow, and his wife, Mrs. Bully, are not very big. In fact, they are small. But they can upset an entire neighborhood in less time than it takes to tell about it. They seem to just delight in a fuss, and when they can not stir up a quarrel among their neighbors they quarrel between themselves, so that where they are there is very little peace.

At first the other people had hoped that after a little Bully and Mrs. Bully would settle down and things would be as peaceful as before. When matters went from bad to worse they began to hope that something would happen to drive Bully out of the old orchard, and when Chatterer the red squirrel appeared and tried to get the six eggs in Bully's house for the first time in the history of the old orchard the other bird folk didn't offer to help drive the would-be thief away.

But Bully and his wife had needed no help from any one. They had been quite equal to giving Chatterer such a punishment as he had not had for many a long time, and then when they had made him run for the safety of the old stone wall how they did brag and boast! This was too much for their neighbors.

"Just listen to them!" cried Welcome Robin. "They are common, just the commonest kind of common people. I simply can not live in such a noisy neighborhood. This is my last season in the old orchard. I hate to do it, but next spring I shall look up another neighborhood in which to live."

"That is what I am planning to do," announced Winsome Bluebird. "I don't want to, but I simply must. I've spent every summer since I can remember right here and my parents lived here before me, but I can not stand such goings-on. Another year I shall not come back."

"I feel just the same way," sputtered little Jenny Wren. "I like my house. It is the best I ever had, but I am going to give it up and look somewhere else. This is no neighborhood for honest, quiet-loving people, and all on account of those upstarts from the city. It is an awful thing to say, but I do wish that Chatterer had got their eggs. It would have served them just right."

All the other birds living in the old orchard, including Drummer the woodpecker, Goldie the oriole, Pewee the flycatcher, Skimmer the swallow, and Chippy the sparrow, own cousin to Bully, agreed that this would be the last summer they would spend in the old chard. They would leave it to Bully and his family, for it was very clear to all that they could not live in the same neighborhood with them. And this is how it came about that the old orchard was in danger of losing the little feathered people who loved it so and whom it loved.

Cattle Ranch to College

(Continued from page ten.)

gazed at the old medicine man. He was seated before the fire, his tom-tom between his knees, his head bowed low, and his long hair hanging over his face (an uncommon condition, for the red men generally keep their hair most neatly parted). Crow Hat swayed to and fro in time with the slow beating of his drum, and as he swung he chanted, "Eeyuh! Eeyuh! Eeuuh!" raising and lowering his voice as the tom-tom was beaten loudly or softly. Long the boys watched him, fascinated by the weird sound. Suddenly he began to thump his drum furiously and his voice rose from a low half-grunt to a shriek. The "Eeyuh! Eeyuh!" was now like the wail of a fierce wind.

This was too much for the boys' strained nerves. They backed away hurriedly and made for home, and it was some time before the sound of that last frenzied cry died out of their ears.

Bill Cooper's end had a great effect on John, and he was glad of the first opportunity to get out of the black hole and into the open air. Indeed, both boys welcomed the work of cutting and hauling props for the mine, which fell to them soon after their night visit to the Indians.

The elder was busily working unloading props at the mine entrance one day when Ben came down to him excitedly: "Say, John," he cried, "a squaw just came down from the big flat and she says she saw some buffalo over beyond the camp. The Indians over the creek are saddling up to go for them. Can't we go?"

"I don't know," said John excited in turn. "You'll have to ask father. Go on up and see him while I finish this job."

The youngster went off on the run, and in a moment returned. One look at his face was sufficient to show John that he had the desired permission.

The mules were unhitched and turned out for the day. Baldy and Ben's horse were quickly saddled, rifles, belts and cartridges were slung on, and in a twinkling the two young hunters were off after the biggest game the country afforded.

When they got to the camp they found that most of the bucks had already started, but old "Wolf Voice," a minor chief with whom the boys had made friends, still remained.

"There's Wolf Voice; he'll let us go with him," said John. "Hello, can we go with you?" he shouted to the old man.

"You got good horse? Me go quick," grunted the brave.

"I guess we'll keep up," and Baldy danced as if to show his mettle. In a few minutes they were on their way up the slope to the plateau which surrounded the camping place. Baldy kept up easily with the Indian's pony and Wolf Voice turned after they had covered a mile at a round pace. "Heap good horse," said he.

"Yes," replied John. "He can beat anything around here in a half-mile run. Want to try now?"

The temptation was great, for the pony the chief rode was his best, but the thought of the chase restrained him. "Plenty ride soon," he said.

The level reached, the boys found that the great shaggy beasts were already surrounded, so they took a place in the circle and waited impatiently for a chance at the game.

With a yell the Indians rode toward the dazed animals, who now separated and began to run frantically in all directions. The party of hunters, of whom there were about 25, also split up into little groups, and each party chased a buffalo. One of the animals came toward the boys.

"Get out of his way," yelled John to his brother, "and let him pass between us. Then fire as he goes."

The great lumbering beast came nearer and nearer, and as they watched, ready to spring away in case he should charge them, noticed that he was being followed far off by an Indian.

"Now shoot," shouted John, as the quarry rushed by. Both rifles rang out, but the buffalo passed on without showing a sign of being hit. Immediately Ben's horse bolted with him, but Baldy stood his ground till his rider urged him after the fleeing game. John held his rifle ready to make a safe shot when opportunity offered. The horse was now gaining rapidly, but hearing the thump of hoofs behind him and then an Indian yelling, he turned his head and saw that Big Hawk, a young brave, was shouting something. He could not hear what it was, however, and paid no attention.

The race continued, and John's whole thought was to get in a good shot. Zip! it was the unmistakable sound of a bullet, and as the boy turned to see from whence it came, zip! another bullet went humming by: the Indian was firing from behind, and the shots were coming unpleasantly close. John drew Baldy to one side just in time to get out of the pathway of another leaden pellet.

This last shot caught the buffalo in the leg, and he lunged forward on his massive head. Big Hawk then rode up and riddled him with bullets.

John was angry clear through.

"The coward," he muttered. "Might have hit me—'twasn't his fault he didn't, either. Anybody could do up a buffalo from behind. 'Fraid I'd get him, I guess. See that?" he added as Ben camp up.

Ben was indignant, too, and both boys went up to where the young buck was skinning the scarcely dead beast, determined to have his share. The Indians protested against sharing the game, but Wolf Voice happened to come up at this moment, and, with the authority of a chief, soon settled the dispute by giving the boys a fine hind quarter. This they lashed securely with a lariat on Ben's horse. Then both rode off triumphantly on Baldy.

(To be continued.)

Kittitas County Sets Pace

(Continued from page three.)

boar in the community, according to Mr. Wipple's own statement, where there were at least a half dozen in use four years ago.

"There have been 50 per cent more sows brought to my place for service since the campaign started," said Mr. Wipple, "and I am sure the other breeders have noticed the same tendency of the stock owners to discard the use of inferior sires. As for rams, I don't know of one grade ram that is in use in the neighborhood, where there were several of them four years ago."

Ernest W. Wilson speaks for the Denmark district when he says that the campaign has resulted in at least 25 per cent increase in the use of purebred sires. There is only one grade ram being used and only one scrub bull. The boars, however, are all registered and even though kept by men who didn't sign the pledge, they have yielded to the influence of the campaign on the whole community.

"There were a few grade stallions in this part of the county, but there are none in use now," he said, "and I feel that they have come to realize that the horse owners want the best and are willing to pay for it."

In the district just east of Ellensburg where J. Alva Bull is the project lealer, the people have gone a step farther, and are taking to the use of purebred herds as well as the use of registered sires.

The history of the live stock industry in the Kittitas district really started in 1893 when the farmers began to realize that they could not sell all of the hay that they had been raising for the prices that it had been bringing. The country was overstocked with hay and the growers were left and there was nothing to do but hold it. They had all gone into the game and had been left holding the sack.

It was but natural that they then turned their thoughts toward some means through which they could dispose of their hay. The solution was live stock and they all got the idea at the same time. Most of them took to dairying, since at that time there seemed to be a better prospect for the sale of butter and butterfat than for some of the other products. Consequently it was but a few years until there were three creameries in Ellensburg and there was a large amount of cream shipped to other towns.

True it was that there were some who took up beef cattle, but these did so largely because they preferred them to milk cows. For similar reasons there were others who began with sheep and they found that even a small band of feeder lambs would consume much of the surplus hay and return a profit to the owner. There were a few who went a step farther and took to raising registered sheep with the idea of selling ram lambs to the range men and ewes to others who desired to get started with registered sheep.

As time went on and there was a growth in population in some of the larger cities of the Puget Sound country and other parts of the state, there was a stronger demand for hay. This demand has grown and has caused a tendency for the growers to sell as much of their hay as possible and still have enough left to feed through the winter.

From all appearances the purebred sire campaign is already having an influence on the type of farms that are being built up in this district. Farm owners are coming more and more to the realization that their farms must be built on a more permanent basis and there must be a better balance in the kind of crops raised. They can readily see that they can not expect to sell hay in as large quantities as they did when there were fewer farms and a smaller acreage of alfalfa.

"Leila, when you have plenty of KELLOGG'S in the pantry you're ready for company"

You're always right when you eat Kellogg's Corn Flakes. Kellogg's are so delicious and so crispy, crunchy that they hit the taste spot, universally! Besides, Kellogg's are ready to serve, which saves cooking and scraping and scouring of pots!

Every day more than a million packages of Corn Flakes are made in the Kellogg factories. Just one day's supply of raw corn takes more than the annual crop of a 450-acre farm.

For the sake of family health, serve Kellogg's generously and eliminate the greasy, heavy, indigestible foods. Just see how much better every one will be.

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

Pasture Crops

Sweet Clover Becomes Popular

Sweet clover is gaining in popularity as a pasture crop, and many are finding it to be superior to bluegrass. A. F. Bernard of the McKinley district, west of Toppenish, believes that sweet clover has three times the carrying capacity of bluegrass, and besides has many advantages over that grass for pasture purposes. It lends itself better to rotation; it can be grown in ground that is slightly alkaline, and does not require so much irrigation.

Having had experience with sweet clover for pasture purposes for four years, Mr. Bernard does not hesitate to recommend it. Late this summer he seeded 10 acres of corn land to sweet clover. That amount will take 75 pounds of seed. Sweet clover will carry two head of cattle to the acre the first year and the second year three head. At one time he kept as many as 20 head of cattle of different ages, mostly yearlings, on four or five acres of sweet clover pasture. The maximum capacity is secured the second year from seeding.

"Sweet clover has three times the carrying capacity of bluegrass pasture," said Mr. Bernard. "The philosophy is this," he continued, "it will take a cow all day to eat 60 to 100 pounds of bluegrass. A cow will eat that much in a day of green feed in a pasture. The bluegrass is short and the cow, cropping it, takes all day in getting what she requires.

"The sweet clover, however, grows higher when pastured, even 10 to 12 inches high, and the cow can get all she wants in an hour and then lie down and rest during the day. An hour in the morning and an hour in the evening is all she needs for feeding.

"Bluegrass is very shallow rooted and, therefore, requires irrigation often. My experience is that bluegrass pastures have to be kept continuously moist. One has to irrigate once each week. With me that used to be Saturdays and Sundays. Sweet clover, however, roots deeply, and if it gets four to five irrigations each season it will make a satisfactory pasture. Although the surface of the ground may get a little dry, it is drawing moisture from the deeper soil and will keep on growing.

"Bluegrass is hard to seed and it often takes two years to get a stand. Then it is hard to plow out, if one wants to grow some other crop on that ground. Sweet clover, on the other hand, is readily seeded and it makes good pasture even the first year, and the next year it affords a great deal of pasture.

"It is easy to plow up and it leaves the ground clean, for it soon overcomes the weeds that start along with it when it is seeded. I am trying it this year in corn, and I believe that it will work out all right. It is a pasture crop that one can sow in grain and get pasture the same year following the grain harvest.

"It is much more satisfactory for pasture than alfalfa because it is nonbloating. While it is true that every kind of feed at some time may bloat some animal, yet I have never in my four years' experience with sweet clover had an animal bloat on it."

While Mr. Bernard's experience is very similar to results which other eastern Washington growers have had with sweet clover it should be remembered that it is not the best crop for west Washington farms, since alfalfa has shown better results for both hay and pasture crops.

GRADE GUERNSEY MAKES GOOD.

It is unusual that an animal in a grade herd makes a production of 110 pounds in 30 days, but A. E. Moore of Falls City has a grade Guernsey cow that reached that figure for the month of May. She was on pasture and received a balanced grain ration in addition, and was given the best of care in the meantime. In the month of June she produced 104 pounds. She is sired by Paddy, Mr. Moore's former herd sire, who was butchered before any of his daughters were tested and his true worth realized.

The entire herd averaged 62.2 pounds for May and 50 pounds for June in the local cow testing association. Mr. Moore has an interesting example of the value of a good herd sire in the production of two cows, one of which made 444 pounds of butterfat at the age of 7 years, while her daughter produced 458 pounds as a 2-year-old. The increase was due, he believes, to the improvement from the blood of the better herd sire.

POLL EVIL

FISTULA OR SWEENEY

THE reliable remedy is Gombault's Caustic Balsam. Used for over forty years. Supersedes firing and cautery.

Symptoms and treatment of most horse ailments fully explained in direction book with every bottle. $1.50 at druggists or direct upon receipt of price. Good for humans too. The Lawrence-Williams Company, Cleveland, Ohio.

GOMBAULT'S Caustic BALSAM

TRACE BACK TO ROYALTY.

Harvey R. Shoultes of Edna, Lewis county, president of the Washington State Holstein-Friesian association, has 19 granddaughters of King of Pontiac's. They are all calves of his former herd bull, a son of the only double century sire. The picture herewith shows one of these descendants of King of Pontiac. Her sire started a weight-guessing contest among the breeders who visited the farm during the recent northwest tour. She tipped the beam at 1780 pounds.

HOLSTEIN BUSINESS GROWS.

The Holstein business is better than it has been for several years in the northwest, and Holstein breeders generally in this territory are feeling extremely optimistic. Sales made through the efforts of the Washington Holstein Breeders' association in two months reached the total of $9000, and W. E. Meyer, northwest fieldman, reports that orders are coming in faster than ever. Four carloads of grade and purebred black-and-whites went into Idaho and Utah, one of grades being selected from Whatcom county herds by R. T. Davis, Weiser, Idaho, and one of purebred bulls and heifers by R. P. Greenwood of Roy, Utah, from the herds of Ed Hoem, Snohomish; Lee Brothers and Youngquist Brothers, Mount Vernon; Hollywood farm, Hollywood, and Carnation Stock farms, Seattle. The Teton valley, Idaho, which is in the shadow of Yellowstone park, took two full carloads selected by Dr. M. H. Knudsen from the herds of Hoem, J. C. Burnham of Kirkland, Yarr Brothers and R. A. Anderson of Chimacum, T. R. Yarr of Dabob, Chris Hendrichsen of Onalaska, Elmer Sanders of Forest and E. M. Moses and E. W. Klaus of Chehalis.

HEADS SKAMOKAWA HERD.

This is a picture of Spozza's St. Mawes Poppy, the herd sire of the H. L. Weister Jeersey farm at Skamokawa, in Wahkiakum county. Mr. Weister is one of the leading dairymen of that section.

WESTERN GUERNSEY EVENTS.

August 17 Pierce county Guernsey breeders hold their annual meeting at the western Washington experiment station at Puyallup, Wash.

September 19 will be Guernsey day at Washington State fair, Yakima, Wash., at which time the Guernseys will be judged. On the evening of that same date the Yakima Guernsey breeders will have their dinner and meeting at the Hotel Commercial.

October 3 will be Guernsey day at western Washington fair at Puyallup, at which time the Guernseys will be judged. The Washington State Guernsey Cattle club will have their annual meeting at Puyallup this year. On the evening of October 3 there will be a dinner for Guernsey breeders and their friends at Paul's Pantry, Puyallup.

WITH SEATTLE MILK SHIPPERS.

The Seattle Milk Shippers' association has secured the services of A. O. Young, who will act as field man and licensed tester and will cover all territory where there are members. He took up his work August 1. Mr. Young was formerly employed by the Carnation Milk company

Breeders' Dept.

American Hampshire Sheep Association
has a valuable booklet with illustrations telling you the superiority of this breed. We believe the Hampshire to be the best all round sheep in the world. Also have list of breeders; some near you. This literature is free. Write
COMFORT A. TAYLOR, Secretary.
72 Woodland Ave., Detroit, Mich.

Shropshire Sheep
Yearling and lamb rams, ewes of all ages. Sired by best rams obtainable.
FELZER BROS., Tangent, Ore.

Shropshires, Oxfords and Dorsets
Fitted show rams for good registered flock headers; range rams in lots to suit.
20 Shropshire ewes, sired by imp. Brewin 92; 20 Oxford breeding ewes, 40 Dorset breeding ewes and ewe lambs. All priced according to value.
FLOYD T. FOX, Silverton, Ore.

Shropshires and Berkshires 12 yearling rams, good size, blocky, good condition, well bred. Few Berkshire early spring pigs.
J. H. McCONNEL, Shedd, Ore.

BRED GILTS
Modern type and good blood lines.
Poland Chinas, Duroc Jerseys, Berkshires.
Bred to farrow in September.
ANIMAL HUSBANDRY DEPT. OREGON AGRICULTURAL COLLEGE.
Corvallis, Ore.

Poland China Boars
About 25 "tops" out of 100 head, sired by Kin-Son Fashion, full brother of The Monarch, and by Paramount, the boar whose get has never been defeated, from 800 pound sows, every one a breeder. Every one of these is a herd boar prospect. Priced so that farmers or breeders can buy them. First come, first served. KIN-SON LIVE STOCK CO.
A. L. Wilson, Mgr., Route 5, Nampa, Idaho.

Whitman County Poland China
Breeders' Association, offers you real big type boars or sows, young or matured stock of the very best blood lines obtainable. Satisfaction guaranteed or money back.
A. H. HALLING, Secy., Colfax, Wash.

O. I. C. Swine High class, quick growth, large type, large litters, easy fattening at all ages. Choice weaned pigs at reasonable prices. Register free. Will ship C. O. D.
RINGGOLD FARM.
J. H. WEST, R. 1, Centralia, Wash.

Choice Duroc Jerseys
Gilts, bred to farrow in September. Service boars. Sensation breeding.
GEO. DEBOK, Oregon City, Ore.

Richly Bred Holstein Bull
Corda Prince Pontiac 241,002
Calved March 16, 1918; great grandson of King of the Pontiacs. Dam, Corda 95347, has record of 22.15 lbs. butter and 549.2 lbs. milk in 7 days. Sire's dam, Bovud 159692, made 22 lbs. butter, 452 lbs. milk in 7 days. Weighs 2130 lbs. Tuberculin tested under federal supervision. His daughters that have freshened with the first calf are averaging 5 gallons milk per day.
$400 F. O. B. GOLD HILL.
G. W. JACOBS, Gold Hill, Ore.

Linn County Holsteins
Cows, heifers, bulls and calves.
LINN CO. HOLSTEIN ASSOCIATION.
GEO. A. McCART, Sec. Harrisburg, Ore.

Hollywood Holsteins A well-marked, fine individual heifer calf, reasonably priced.
HOLLYWOOD FARMS, Hollywood, Wash.

Milking Shorthorns
FARMERS! Why not diversify, work from both ends? Produce beef as well as milk at a minimum cost. We are offering bull calves from profitable milking cows of approved Shorthorn type. Herd headed by Gretna Challenger, grand champion Washington state fair and Western Royal, 1922. Visit the herd or write
NORTHWOOD FARMS. Redmond, Wash.

Richly Bred Guernsey Bull
Red Wing Jennie Van Yeksa Starlight, four years old last May. Sire, May Rose Yeksa Starlight; dam, Jennie Van, 664 lbs. fat. His three nearest dams average 748 lbs. fat. A show bull; was second at Pacific International in very strong competition. Would consider calf of good breeding in part pay.
F. H. STANGLE, Sherwood, Ore.

May Rose Pure Bred Guernseys
Calves, both sexes. Heifers and cows at prices farmers can afford to pay.
NOBLES BROS. Bow, Wash.

Registered Ayrshire Bulls Sired by Willowmoor Peter Pan 16th; dams of excellent breeding. Attractive prices.
J. U. Smith, Rt. 1, Box 135, Newburg, Ore.

Brown Swiss Stock Farm
Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.

POLAND CHINA DISPERSION SALE, AUGUST 24TH
Nampa, Idaho

THIRTY HEAD—14 bred sows to farrow in September and October, bred to Ambition Equal 2 Young Cycicotte, by the World Grand Champion The Cycicotte, dam by Chi Hit, by Rainbow Big Peter, by Peter Pan and Designer Giant, by The Designer.

Eight fall gilts, open, by Cycicotte and Designer Giant; four fall boars by Cycicotte and out of a Hit dam. These are real herd boar material; one yearling herd boar, sired by Ambition Equal, by Big Bill. If we were not dispersing you could not buy this boar.

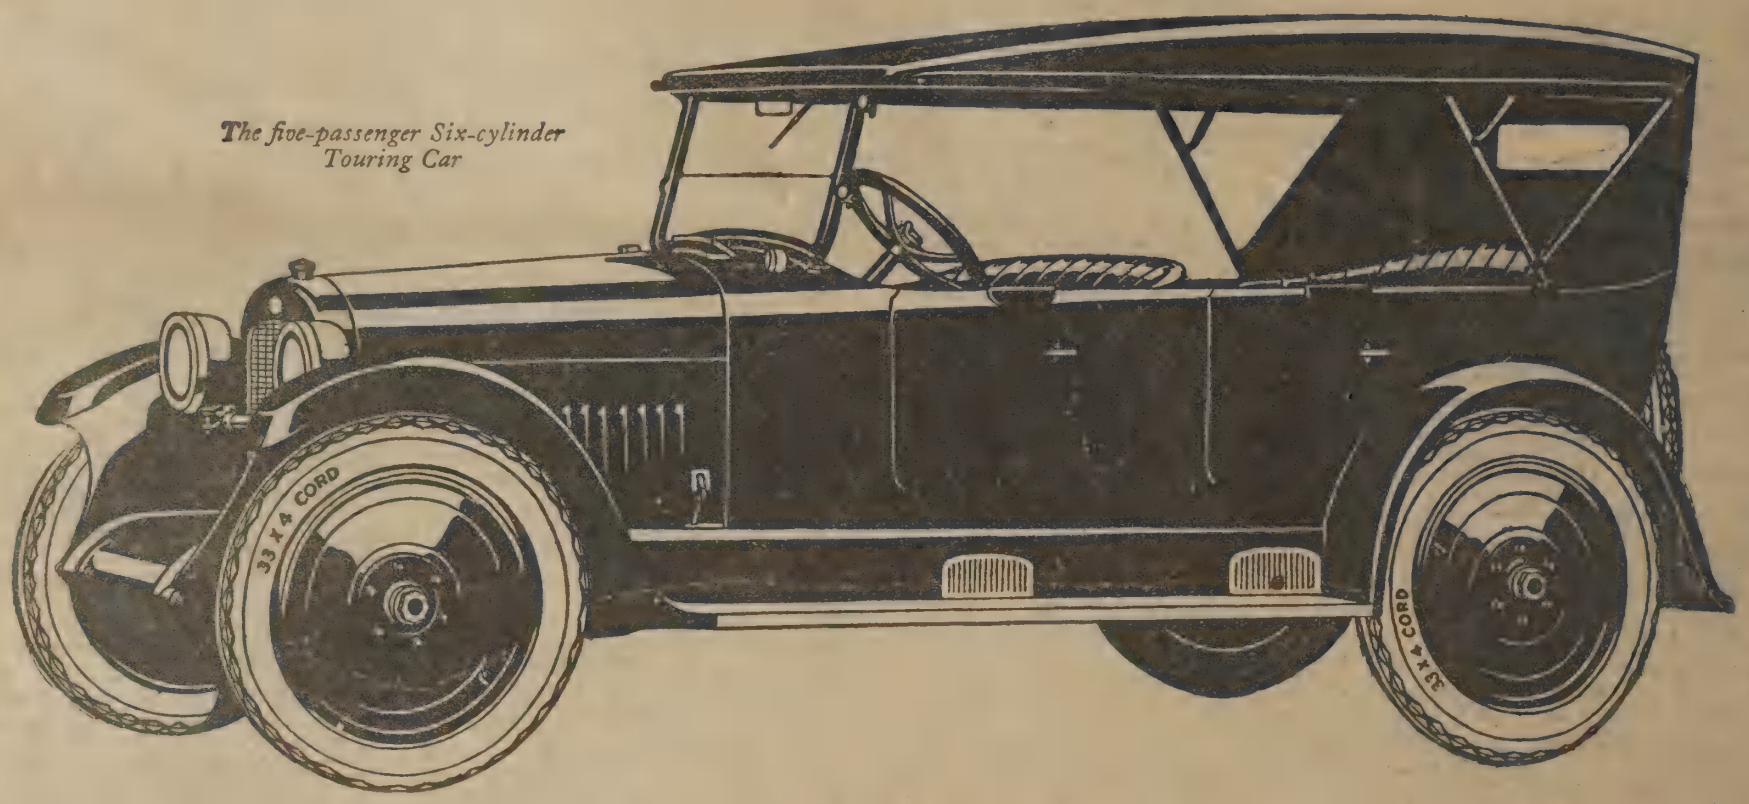
Write for catalog giving full details.

Also several spring boars by above boars.

Remember the date, August 24, Nampa, Idaho, in the Sale Pavilion. If you can not come send in mail bids to A. L. WILSON, Sale Manager.

BERT M. WILSON, JOE DICKINS, Auctioneers.

NASH



The five-passenger Six-cylinder Touring Car

ANNOUNCING

A Wonderful Group of New Fours and Sixes

Never before in a long history of fine achievement has Nash resourcefulness and creative originality revealed itself with such downright decisiveness as in this *complete new line of open and enclosed models.*

They offer in point of appearance a dignity and beauty of body line that is of arresting and distinctive individuality.

They provide a performance so brilliant and so remarkable as to engage your immediate and unqualified admiration.

And from the seriously practical investment viewpoint they can truthfully be said to set a new and far higher standard of motor car value.

All that Nash engineering stands for, all that Nash factory practice represents in the way of accuracy and excellence, is embodied in these new cars in advanced and distinguished degree.

The new Six group includes the *Roadster*, five-passenger *Touring*, seven-passenger *Touring*, *Sport* model, *Victoria*, five-passenger *Sedan*, Four-door *Coupé*, and *Sedan* for seven.

And the new Four line embraces the *Roadster*, the five-passenger *Touring*, the *Sport* car, the *Carriole*, and the *Sedan*. (1830)

The Nash Motors Company, Kenosha, Wis.

THE WASHINGTON FARMER
SPOKANE. SEATTLE.
ESTABLISHED 1894

Education and Fun Mark Club Tour

By RALPH ERSKINE

A few weeks ago the club boys and girls of Kittitas county got their heads together and, with the aid and leadership of County Agent W. L. Davis, laid plans for what was destined to be one of the best club events ever held in this state. The affair was scheduled for August 3, and on that date about 130 boys and girls and their parents toured the county, visiting several of the club members' homes and enjoying a picnic that was a real one.

One of the purposes of the tour was to give the members practice on all kinds of farm animals in order to prepare them for the club contests at the fall fairs. Mr. Davis had arranged for four judging demonstrations, one each with dairy cattle, swine, sheep and beef cattle.

The first contest was in the R. L. Rutter Jr. herd of Holsteins on the Mrs. Olive Sanders farm, northeast of Ellensburg, where Mr. Davis had arranged a class of three milk cows, and, with the assistance of C. M. Hubbard, extension live stock specialist of the state college, gave the members an interesting demonstration on dairy judging. They were then asked to place the three animals according to their own judgment and afterward explain their placings.

A class in fat swine was judged at the Steve Woodhouse farm near Thrall, southwest of Ellensburg. Two pens of four

Continued on page six.

The upper left-hand picture in this group shows a flock of purebred Hampshire ewes on the farm of Mrs. Olive Sanders, near Ellensburg. The sheep picture at the right shows some of the ram lambs of the same breed on the Peter Wipple & Son farm. Some of them were being held for the club boys and girls to judge. The club group at the lower left shows, from left to right: Front row—Leonard Newman, Marie Skiffington and Florence Robinson. Back row—Steve Woodhouse (local leader), Ray Bronson and Ivan Hutchinson. With Elmer Harvey, president, who is absent, they form the Kittitas County Chester White club. At the lower right is shown Marie Skiffington and her Chester White sow and litter. In the center are shown Mr. Woodhouse's 10 pigs entered in the state college 10-ton litter contest.

Farming State of Mind Is the Same, East and West—Page 5

Can Grow a Crop Every Year

Legume Crops Make Entry Into Palouse Farming System

In attempting to work out a system of continuous cropping and of permanent agriculture for the Palouse country, the soils division of the college experiment station has developed many interesting facts, of which the following were demonstrated on field day at Pullman, July 11:

That the Palouse country receives sufficient rainfall to make it possible to grow a crop every year and that summer fallowing is not practiced primarily to conserve moisture, but to make plant food available.

That the soils are being depleted and that nitrogen is already so limited in the soil that pronounced increases in yield of wheat can be produced by using a commercial nitrogen fertilizer on wheat when grown on poor summer fallow.

That effective summer fallow conditions can not be developed unless the tillage is practiced early in the summer fallow year. The type of tillage makes little or no difference, provided the work is done early in the spring.

That the organic matter or humus in the soil can not be maintained unless the nitrogen is also maintained and the present practice of cropping where no attempt is made to return anything to the soil will not only exhaust the fertility, but is rapidly developing an unsatisfactory physical condition in the soil.

That legume crops can be grown in place of summer fallow and that alfalfa, sweet clover, red clover or peas when so grown will not only maintain the soil fertility and develop a good physical condition of the soil, but will also assure as good a yield in the succeeding wheat crop as is obtained on average summer fallow land.

That the small amounts of straw and strawy manures at present returned to the soil can not be depended upon to maintain soil fertility.

That wheat can not be grown after a legume without danger of "burning," and that this "burning" can be almost entirely controlled if straw is applied on the legume sod just before it is broken up before the next wheat crop. This fact is important from another standpoint, viz., the farmer has learned from experience that he invariably gets a decreased yield of wheat after heavy amounts of straw have been turned under when practicing a summer fallow system of cropping. By returning the straw in combination with a legume sod he eliminates the depressing effect on the yield as well as the danger from burning while he is providing for the maintenance of soil organic matter.

That peas can be used as a very satisfactory nurse crop for alfalfa, sweet clover and red clover, thus making it possible to get the full return from a profitable crop during the year that the legume is started.

That the milling quality of wheat is directly associated with the nitrogen content of the soil and that a depletion of this element of plant food will not only cause decreases in yield, but will also have a pronounced detrimental effect on quality.

That the tillering of wheat is directly influenced by the available nitrogen in the soil and that a clear understanding of soil fertility should play a very prominent part in deciding on the rate of seeding.

That harrowing of winter wheat in the spring is a loss of time and labor and the practice should be discouraged.

Result of Treated Potato Seed

Albert Hansen of the Renton district has some outstanding results from the use of corrosive sublimate on six rows of Beauty of Hebrons. The entire patch consists of one acre, but the seed from the first six rows were given thorough treatment with corrosive sublimate solution before planting, while the rest of the field was planted with untreated seed. The plants from the treated seed showed up fully 50 per cent better when the plants reached full bloom during mid-summer.

The patch was planted on the 8th of May and cultivated thoroughly in order to keep free from weeds during early growth. The rows were hilled as soon as the plants became too large to allow excessive cultivation, and will be left in this manner until digging time. Mr. Hansen is well pleased with the trial, and intends to treat all of his seed next year and will possibly put out a seed plot for growing his own seed next year. This plan is strongly recommended by the extension service of the state college to secure clean seed potatoes.

FOR COOPERATIVE SUCCESS.

Organize the commodity, not the community.

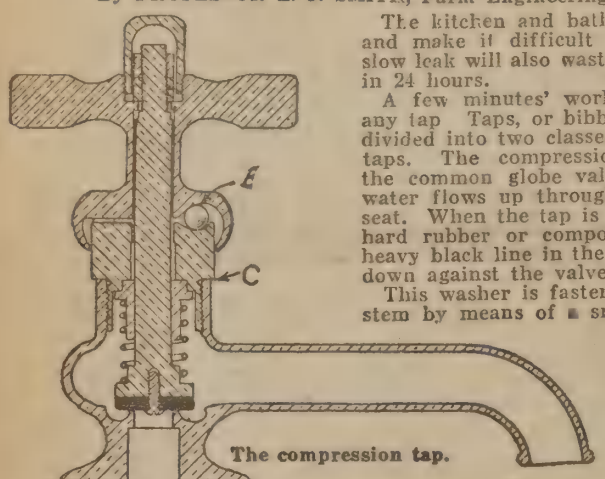
How to Keep Taps From Leaking

By PROFESSOR L. J. SMITH, Farm Engineering Department, W. S. C.

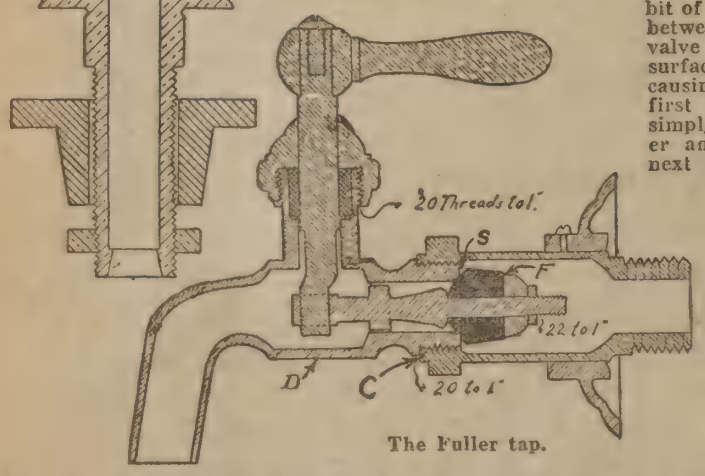
The kitchen and bathroom taps often start leaking and make it difficult to keep the enamel clean. A slow leak will also waste a surprising amount of water in 24 hours.

A few minutes' work will be sufficient to repair any tap Taps, or bibbs, as they are often called, are divided into two classes—compression taps and fuller taps. The compression tap is a good deal like the common globe valve used on pipe lines. The water flows up through an opening called the valve seat. When the tap is "shut off" it is because a flat, hard rubber or composition washer (shown by the heavy black line in the illustration) has been screwed down against the valve seat.

This washer is fastened to the bottom of the valve stem by means of a small screw. At the top of the valve stem is a handle which is turned to lift the black washer from the valve seat. If this type of tap leaks it is because the washer no longer fits smoothly down against the seat. Sometimes a bit of scale or sand lodges between the washer and valve seat and nicks the surface of the washer, causing a slow leak. The first time this occurs simply take off the washer and reverse it. The next time a new washer should be put in the tap. To make this repair, unscrew the upper part of the tap at "C," having first turned off the water in the basement or at the valve under the sink or bowl, if one is there.



The compression tap.



The Fuller tap.

The compression tap shown is an "automatic closing tap" and operates as follows: When the handle is turned to lift the washer from the valve seat three small balls (one shown at B) roll up little inclines and lift the value stem and washer. When one releases the handle the heavy spring below "C" twists the valve stem back, the balls rolling down their respective inclines and closing the tap. Automatic closing taps save thousands of gallons of water annually.

The Fuller tap operates upon an entirely different principle. The valve stem is really a small eccentric. To the lower end is attached a horizontal rod which has a fuller ball, "F," at the right end. This round fuller ball presses against the valve seat, "S," thus shutting off the water. To replace or tighten up the fuller ball unscrew the tap at "C," applying the wrench on the six-sided portion of the valve at "D."

Either tap is easy to repair. Every householder should have a few proper sized washers and fuller balls on hand for this purpose.

GENERAL ADVERTISING. GENERAL ADVERTISING.

Farmers Should "Stop, Look and Listen"

Many Farmers in western states are suffering because the prices of their products are lower in proportion than the prices of things they buy. As a remedy they are being urged to support a radical and revolutionary policy of regulation of railroads.

The conditions from which farmers are now suffering are **temporary.** Prices of farm products were low after the panic of 1893, and western farmers suffered severely. The bad conditions of that time passed away, the development of the railways made possible later a vast increase in production and wealth in western territory, and its farmers enjoyed a long period of great prosperity.

Thirty Years' Increase in Farm Wealth

In 1890 there were 1,809,471 farms in Illinois, Wisconsin and the states west of the Mississippi river. Their value was only $7,900,000,000, or $4,366 per farm.

In 1900, the 2,421,987 farms in these states had a value of $11,800,000,000, or about $4,900 per farm.

In 1910, their 2,734,924 farms had a total value of $27,000,000,000, or about $9,900 per farm.

In 1920, their 2,862,325 farms had a total value of almost $54,000,000,000, or about $18,800 per farm.

In the thirty years from 1890 to 1920 the increase in the value of all farm property in the western states was 575 per cent; the increase in the average value of each farm, 330 per cent.

Great Increase in Railroad Service

This great increase in the wealth of western farmers would have been impossible but for the great increase in railway trackage, locomotives, cars and other facilities.

Between 1890 and 1920 the miles of railways in western states increased from 86,000 to 146,000. Railroad freight business handled in 1890 was equivalent to carrying 26 billion tons of freight one mile. In 1920 it was equivalent to carrying 145 billion tons of freight one mile, an increase of 457 per cent. The vast increases in the facilities of the railways and in the business handled by them for the people of the western states was made possible solely by the investment of billions of dollars of new capital in the railroads.

Western Railways Not Prospering

Advances in wages, in the prices of fuel, materials and supplies and in taxes—most of which occurred under government operation during the war—made it necessary to advance railway rates in 1920. The freight rates of the western railways have been reduced an average of 16 per cent since then, the largest reductions having been made in freight rates on farm products. **The reductions of rates on the western railways alone since 1921 are costing them and saving the public $320,000,000 a year.**

Freight rates are still higher than before the war. But operating expenses and taxes still remain so much higher very few western railways are earning anywhere near a "fair return." The average earned by the western railways upon the valuation by the Interstate Commerce Commission, was, in 1921, only 3.59 per cent; in 1922, only 4.03 per cent, and in the first five months of 1923, only 4.20 per cent.

If their rates had been 12 per cent lower, they would not, as a whole, have earned a dollar in the first five months of 1923 with which to pay interest on their bonds, much less dividends on their stock.

These facts show that a large majority of the western railways are suffering with the western farmers from adverse conditions.

A Permanent Destructive Policy to Remedy Temporary Condition

As a remedy for the **temporary** conditions from which the farmers are suffering they are being urged to favor a policy of regulation which would **permanently** reduce and restrict the net return of the railways to less than it ever has been, even in years of panic and profound business depression. This would be the effect of the arbitrary reduction of more than one-third in the valuation placed upon the railways by the Interstate Commerce Commission which is advocated by certain public men.

If such a radical and confiscatory policy of regulation had been adopted a quarter of a century ago it would have stopped the development of the railways. Stopping the development of railroads would have made impossible the great prosperity and increase in wealth the farmers enjoyed in the twenty years between 1900 and 1920.

If this policy should be adopted now it would frighten all investors away from railway securities. It would immediately stop all railroad development. And, it would prevent railroads from increasing their capacity to haul your freight.

Then, when the **temporary** conditions from which the western farmers are now suffering had passed, they would find there had been adopted as a **permanent** policy a scheme of regulation, which, by preventing an increase in the railroad service that could be rendered, would make it impossible for the farmers or any other class of people to prosper and increase their wealth as they did for a quarter of a century prior to 1921.

"Stop, Look and Listen!"

It is high time the farmers of western territory should "Stop, Look and Listen!"

They will need increased transportation in future as much as in the past. The radical, confiscatory and destructive policy of regulation of railways now being advocated is a deadly menace to the future prosperity of every farmer in the western states.

How to Borrow From Agricultural Credit Banks

Northwest Manager Gives Instructions for Those Who Want to Take Loans

The manager of the Federal Intermediate Credit bank, operating in the four states of Washington, Oregon, Idaho and Montana, W. M. Buckles, gives The Washington Farmer assurance that this new rural credit system is now in operation with headquarters in connection with the Federal Land bank in Spokane, Wash., and that the Intermediate Credit bank is ready to give any information desired regarding the method of obtaining credit

The agricultural credits act of 1923 permits the Federal Intermediate Credit bank—

To accept loans from banks (state or national), live stock loan companies and agricultural credit corporations, with their indorsement.

To make direct loans to cooperative associations, secured by STAPLE agricultural products or live stock.

The operations of banks and live stock loan companies are generally understood.

The organization and operation of cooperative associations present many complex and technical questions, and it is the advice of the Federal Intermediate Credit bank of Spokane that those desiring to engage in such enterprises should obtain the services of a competent attorney, and, if possible, one who has had special training along these lines.

Agricultural credit corporations are little understood, but comparatively simple in their organization and operation.

Suggested forms of articles of incorporation, by-laws and stock certificates, which are drawn to meet the requirements of the general laws of Washington and which, if followed, will aid in perfecting the organization of such corporations in a manner that will make them easily operated may be obtained by addressing the Federal Intermediate Credit bank, Spokane, Wash.

The following suggestions are made as to organization of an agricultural credit corporation:

When it is desired to form an agricultural credit corporation, the incorporators should meet and formally execute articles of incorporation.

It should be borne in mind that the investment of these incorporators should not be less than $10,000, since under the regulations of the federal farm loan board, which board has general supervisory powers over federal intermediate credit banks, such banks may not accept rediscounts until it has a paid-up capital of at least $10,000.

The state of Washington has a so-called "blue sky law" and should the company after incorporation desire to sell additional stock, it will be obliged to secure permission from the secretary of state Therefore, if you place your stock on the market, it will be necessary for you to communicate with the secretary of state, and secure the necessary permission to do so.

The procedure necessary to execute the articles and adopt the by-laws is as follows:

The articles should be executed in triplicate by the incorporators, and duly acknowledged. (Remington's Compiled Statutes of Washington, 1922, Section 3803). One original of the articles should be filed in the office of the secretary of state, and the necessary filing fee paid ($25 for filing fee; $15 annual license fee for corporations organized with a capital of $50,000 or less). Another original should be filed in the office of the county auditor in which the principal place of business of the corporation is located. The third copy of the articles should be retained in the possession of the corporation.

As soon as the secretary of state has notified the incorporators of the filing of the articles, then the first meeting of the stockholders should be held. Notice of this meeting should be given in case consent to the holding of the meeting can not be secured by all the stockholders of this corporation.

The better practice, however, is for all the stockholders to sign a waiver of the notice of this meeting.

At this meeting the general plan of business should be determined upon and by-laws adopted.

Immediately following this meeting the board of trustees should meet. Notice of the meeting should be signed by one or more of the persons named as the trustees, setting forth the time and the place of the meeting, which notice shall be delivered personally to each trustee, or published at least 20 days in some newspaper in the county in which the principal place of business of the corporation is located; or if no newspaper is published in the county, then in some newsaper nearest thereto in the state. (We furnish herewith a waiver of this notice, which should not be used unless signed by all the trustees.)

Officers should be elected at this meeting by the trustees, as provided by the by-laws.

A corporation minute book should be secured, and all the papers, together with the minutes of all meetings of the stockholders and trustees, should be securely fastened in same.

It would be well when mailing the original articles of incorporation to the secretary of state to send an additional copy to be certified to by the secretary of state and returned to the company, so as to avoid delay when application is made to this bank for rediscount privileges.

The following points should be remembered in incorporating:

1. That two or more persons may incorporate.
2. That all the stock must be subscribed before transacting business.
3. That one of the trustees at least must be a resident of the state of Washington, and that the trustees must take and subscribe an oath of office.
4. The law requires two or more trustees. We recommend five as being a workable number for the average corporation of this character.

Growers Continue Demand for Wheat Price Stabilization

In the better slogan contest carried on by THE FARMER recently, the prize was awarded to "Balanced Farming," in place of the commonly used, "Diversified Farming." This idea was thrust upon one as he listened to Senator Frank R. Gooding's talk to the wheat growers at Moscow last Saturday. He was referring to the unbalanced condition of affairs throughout the world today, the unbalanced condition in America, and especially the unbalanced condition of those engaged in the farming industry.

The greatest need in the world today is more balance in its affairs, more balanced thought in industry, more balance in the world politics, more balance in the world's every day talk.

Must Organize.

The senator also contended that the farmers must meet organization with organization, that the industries organize, labor has its great organization and these must be balanced by equally effective organization by the producers. Only by organization can the scale be lightened which holds down prices paid the farmer, or the scale be weighted to bring down the prices paid for things which the farmer buys. It does not matter much how you restore the balance provided the balance is restored.

The gist of the Moscow, Idaho, meeting was the same as that of the wheat growers' meeting at Spokane the previous Monday—stressing the need of emergency legislation by a special session of congress providing a fixed price of $1.75 for this year's crop of wheat according to the provisions of the Gooding bill.

Emergency Measure.

Senator William E. Borah emphasized the emergency nature of the remedy necessary to send other poisons into the system to get it. The senator insisted, however, that this emergency legislation should be hooked up with measures to prevent a return of the calamitous conditions now present in the wheat marketing situation.

Permanent Remedies.

One remedy of a permanent nature suggested by Senator Borah was to take away from the federal reserve board the power of increasing or decreasing the currency of the country, that this is a sovereign power which should be zealously and exclusively exercized by the government itself.

Both Senator Gooding and Senator Borah reviewed the secret meeting of the federal reserve board May 18, 1920, at which it was decided to call in farm loans with a consequent deflation of farm prices to pre-war levels and in some cases even lower. Senator Borah declared in this connection that the stenographic notes of the secret meeting of the federal reserve board in 1920 has been published. There can therefore be no doubt of the nature of the action taken at that meeting.

Effective Water Competition.

Another remedy of a permanent nature mentioned by Senator Borah was more effective water competition by the Panama canal. He declared it to be an astounding masterpiece of diplomacy by the British government to obtain passage for its vessels through the canal with the same tolls charged American coastwise shipping from coast to coast. After paying $400,000,000 in the building of the Panama canal, $25,000,000, to the Colombia government and other payments bringing the total up to $500,000,000, citizens of the United States are certainly entitled to the use of this property on terms more favorable than other countries who paid nothing in its construction and have no share in its ownership.

As to Over Production.

Still another remedy of a permanent nature mentioned by Senator Borah was in accordance with his well known views regarding the opening up of world markets. He said he could not subscribe to the doctrine of overproduction of wheat, dairy and meat products when millions of people were having meat only once a month, seldom wheat flour and when children were becoming subjected to tuberculosis because of undernourishment.

As to the emergency legislation desired by out and out wheat growers, both of the Idaho senators declared that precedents abounded. The price of silver was stabilized for five years under the Pittman act. On the same principle the returns to the railroads were stabilized to a large degree, and it was added that the advocacy of ship bounty was based on the same doctrine.

The Moscow meeting was strikingly similar to the one held in Spokane in the fact that most of the audience was composed of men directly from the harvest fields, the number estimated as between 700 and 800.

Dean E. J. Iddings of the university, presided and Dr. A. H. Upham, president of the university, delivered a brief address of welcome.

Much applause greeted Herbert Egbert of The Dalles, Oregon, president of the Farmers' Union of Oregon and Southern Idaho, when he insisted that the Gooding bill should be named in the resolution as the gist of what the farmers wanted, because that bill is knowa to the country, having deceived favorable action in the senate in the last congress.

Ralph D. Nichols, special representative of the Port of Seattle, made a stirring speech and the farmers greeted his utterances with much applause when he declared that it was up to the farmers to organize and help themselves and see that they obtain what they want.

Ward M. Buckles, manager of the federal intermediate credit bank of the northwestern district was present and explained the new method of affording credit to the farmers, answering several questions asked by Senator Borah and others in the audience.

The Resolution.

"We, 1000 representative farmers and business men of the states of Oregon, Washington, Montana and Idaho, assembled for special consideration of wheat price stabilization, call your attention to the fact that the present price offered for wheat is far below the cost of production; that wheat, the most generally grown farm product in America, has been marketed below cost of production for five years in succession; that this continued loss and drain on the farmers' resources has brought a crisis that means disaster to both farmers and business men of these states unless immediate and drastic measures may be adopted for relief. We call attention to the fact that 2,000,000 people left the American farm last year and it is estimated 3,000,000 will leave next year. This presents a national problem in which all, regardless of avocation or profession, must be deeply concerned. This demands federal intervention in this emergency to save the wheat growing and related industries:

"Since immediate action is necessary we request with all the power at our command that you immediately call the congress of the United States into special session to take action to meet this great emergency. While federal intervention is necessary as the only method to meet this emergency for immediate relief, we recommend as a permanent solution that all farmers, business and professional men organize a national body for the purpose of stabilizing the agricultural industry; that we may avoid for all future times a recurrence of the present critical situation; and that this organization should be for the purpose of constructive action and not for the purpose of opposing any other legitimate industry.

"We recommend that congress shall enact legislation establishing a federal corporation with $500,000,000 capital stock, $50,000,000 paid in and the balance subject to call; that it shall have the power and authority to purchase and sell wheat in any quantity at any time or place at a basic price of $1.75 per bushel at primary points, along the lines of the Gooding bill. The fixed price shall be available as of a certain date and sufficient variation may be announced from time to time to provide for carrying charges and to control distribution. The fixed price shall be on the basis of clean wheat tested 58 pounds per bushel, and the corporation shall establish a schedule of discounts and premiums in accordance with the milling value of wheat of various subclasses, test weights, mixtures, percentage of moisture and foreign content, as embodied in the Gooding bill.

"In order to take care of any loss that might accrue in selling the export surplus, the corporation may retain from the original sale price not to exceed 10 cents per bushel in addition to the amount estimated to be necessary to pay operating costs and interest at a rate of 4 1-2 per cent per annum on capital stock actually used. Wheat may be purchased or resold only by the corporation or by concerns licensed by the corporation and operating under rules, regulations and restrictions imposed by the corporation. Every licensed concern shall make reports of its purchases, and resales in such forms and at such time as the corporation may direct.

"We further request that all wheat growers cooperate throughout the United States in furthering this united effort by selling no wheat nor offering none for future delivery until this or some other definite action is taken for the handling of this crop at a cost plus a reasonable percentage above expenses and also ask the bankers and merchants and the public in general to give us their sympathy and support for a square deal that the wheat growers may not be driven to serfdom or leave the farm for other occupations, thereby crowding the laborer from his job.

"We deplore the attitude of many of our great papers who have built up to their present power and standing by the support of the farmers in general and now at this time when every assistance possible is needed that we might again return to a normal condition we find these papers using every argument at their command to defeat the lines of legislation which the farmers themselves desire and have every reason to believe would restore their industry and help them solve their problems."

The resolutions were signed by G. P. Mix, Moscow; P. C. Jensen, Lewiston J. M. Reed, Pullman; George Sievers Moscow; Jack Collins, Palouse; Mark Greene, Orofino; G. W. Jewett, Pomeroy

Tells How New Wheat Is Produced

There is nothing difficult or mysterious about the production of a new variety or wheat hybrid. A few simple instruments and a little patience are all that is necessary. A small pair of forceps, some porous tissue paper and a box to sit on will do. Two or three days after the wheat begins to head out it is easy to find the flower parts in the right condition. By prying apart the chaff with the forceps the three anthers or the male elements of the flower are seen just beginning to turn yellow. All flowers not in this condition should be broken off, and the three anthers in each of the remaining ones removed. From 4 to 20 of the flowers on a wheat head are in this condition at one time. The entire head should then be wrapped in tissue paper and left for a day or two, until the stigmas, or female elements, develop and are ready to be fertilized. Then a head of the variety of wheat to be used as the male parent in the same stage of development should be brought and the anthers taken out and put into the treated flowers in the place of the ones that had been taken out the day before.

The treated head may then be wrapped up again and left for a month or until the straw turns yellow. When it is collected any seeds that have grown inside the wrapper should be hybrid seeds. They may be shriveled or shrunken, but probably will show some characteristics of both parents. The plants arising from such seeds will also show the dominant characteristics of each parent. If these plants are allowed to produce seed by self-fertilization in the natural way all the possible variations in seed between the two parents will appear.

The second generation plants arising from them will also show all possible recombinations of the parent characteristics. This is known as the "wild generation" because of the great variability found. Some of these types will breed true in subsequent generations, and it is from the best of these that a new variety may evolve having the desirable characteristics of both parents.

More Winter Wheat Next Year

It takes courage to keep on producing when little or no profit results from one's efforts. It takes exceptional courage to increase production under such circumstances. Yet the United States department of agriculture makes an informal forecast that the wheat growers of Washington will increase their winter wheat acreage this fall five per cent over last fall's seeding. It is especially noteworthy that this is true when other states are expected to reduce their acreage an average of over 15 per cent, and no other state is expected to seed as large an acreage as a year ago.

New Fair Grounds for Kittitas

Downright self-help does much for the people themselves as well as for the community. Kittitas county folks wanted a fair this fall. Naturally, Ellensburg and the surrounding community were immediately interested in its success and they gave practical evidence of their interest. A field day was held on June 14 and also on June 15. "The entire town closed its doors and every one turned out and reported in organized gangs and willingly did any work that was assigned to them."

In the two days the 500 men with 220 teams cleared and leveled off an area large enough for the one-half mile race track and two football gridirons in the center. This will be used for the racing program, while two large exhibit buildings and some cattle sheds are being erected for the main exhibits of the fair.

It is needless to say that the Kittitas county people will be proud of their first fair to be held on their own grounds which was prepared with their own hands.

Help Yourself, Mr. Beetle

There are just lots of bugs and things in our orchards and on our farms that deserve to be slain by any method that our experts can devise. Not so every bug, however. The gay little ladybug has long been recognized as a valuable aid to the farmer because of its warfare against such pests as aphis. A fly of a certain family has been imported from foreign lands in the hope that it will combat for the alfalfa growers the weevil that menaces the production of this important crop. Comes now M. A. Yothers of the United States department of agriculture, who has been working in the Yakima valley, with the report that a small beetle has been discovered feeding upon the larvae and the adult of the red spider, one of the orchardist's troublesome pests. No doubt many a farmer has heartlessly swatted or put his foot upon members of this beetle's family, fully convinced that here was just another bug that ought to be killed.

Irrigation Settler Must Be Enabled to Succeed

It was significant action that Secretary Hubert Work of the department of the interior took recently in reorganizing the United States reclamation service when he accepted the cabinet position through appointment by the late President Harding. It is too early to say how the service will succeed under the new plan, but certain fundamentals set forth by the secretary of the interior as his reasons for the reorganization are worthy of thought.

It will be remembered that Mr. Work accepted the resignation of Director A. P. Davis and created a new office, to which he appointed D. W. Davis, former governor of Idaho, under the title of commissioner of reclamation. He explained this action about as follows:

That when reclamation first began in this country it was largely an engineering problem—the surveying of land and the construction of dams, canals, laterals and so forth; that, as soon as this engineering work had progressed to a certain point, the problems became one not only of engineering, but of business administration designed to insure to the thrifty settler success on his irrigated farm; that the government must be reimbursed for the money which it has spent for reclamation development, and that settlers can not so reimburse it unless they are truly successful in their farming operations.

The Washington Farmer can wholeheartedly indorse the secretary's basic principle that the settler must be enabled to succeed if reclamation as a whole is to succeed. Any system of land development that does not contain within itself the elements that reasonably insure the thrifty farm family a reasonable degree of prosperity is inevitably doomed to fail.

As Secretary Work says, not all the farmers on irrigation projects in the United States are prosperous. In fact, on some projects prosperity is all but a stranger. Unquestionably the secretary is justified in exercising his best judgment and devoting his best energy to the operation of the reclamation service with a view to increasing the prosperity of the deserving settler on reclaimed land, even though a sweeping reorganization be necessary to the undertaking.

Fifteen Months of Work

The farmers of Washington, especially the dairy farmers, have 15 months of hard work ahead of them educating their brothers and sisters in the towns and cities. On the first Tuesday after the first Monday in November, 1924, the voters of the state are going to say whether or not real honest-to-goodness cow butter or a make-believe product shall dominate the markets of the state, and what the city folks learn between now and then will decide the issue.

The measure that is to be voted on then was adopted by the last legislature and referred to the people through a petition fostered largely by dealers and others interested in the sale of the various forms of vegetable oil margarines.

There is a misunderstanding of this bill in the minds of many. They think it prohibits the manufacture and sale of butter substitutes, but this is not necessarily true. What it does do is prohibit the adulteration of butterfat or milk by mixing cocoanut oil or some other vegetable fat into it. Any manufacturer who can invent something that people will be willing to spread upon their bread in place of good, clean, wholesome dairy butter is entitled to do so under the bill if he does not use milk or a milk product in the making of it.

Isn't that fair? Hasn't the dairyman a right to protect his product and its well-deserved reputation? And have not the people at large a right to be protected against a product that is made to look and taste like butter, but which is very different from the genuine article?

As we said at the outset, the dairymen and their friends have 15 months in which to lay the truth of this butter substitute matter before the people in the towns and cities where the voting strength of the dealers in the imitation product lies. Not an opportunity should be lost to make some voter see the light.

Washington State Gleanings

Among the big ranch deals reported this month is the sale of 20 acres of full bearing apple orchard by Dr. H. J. Whitney to Mrs. J. L. Parsons for $40,000. The place is one and a half miles west of Cashmere. The varieties are Jonathans, Winesaps and Rome Beauties.

UNIQUE FAIR FEATURES.

Some rather unique features will be carried out at the Burley Valley Fair, at Burley, Kitsap county, Washington. Each day all persons over 65, as well as ministers of the gospel will be admitted free. A special tax of twenty-five cents will be charged for bachelors. A special ribbon will be awarded every day to the oldest person on the grounds, the couple that has been married longest, the smallest baby, the largest baby, the tallest person, the heaviest person, and to the young lady who can pump up a tire in the shortest time.

SPECIALISTS VISIT FARMS.

Two important meetings were held near Chehalis recently by state college specialists. At the J. O. Wallace apiary 19 bee men attended demonstration by B. A. Slocum. Near Napavine W. D. Buchanan gave a chicken culling demonstration to upwards of 50 practical poultrymen.

The week-end district horticultural inspector, Theodore Albert, and County Agent R. G. Fowler, with State Seed Inspector J. E. Curry and Dr. Link of the federal government, inspected potato and berry fields in the Chehalis section. Dr. Link's special search is to locate mosaic diseased plants.

TO STUDY DUCK HABITS.

The migratory habits of wild ducks in the northwest are not understood as thoroughly as it is desired and in order to check up on the extent of their wanderings and choice of habitat the game farms of Washington have raised 100 mallard ducks and will release them soon. The Portland office of the biological survey will supply leg bands on which are printed numbers and "Notify biological survey." These bands will be placed on these birds. Ray C. Steele, in charge of bird control of the biological survey, is very anxious that sportsmen who kill ducks bearing such bands should comply with the request printed thereon.

GROWERS SELL LOGANBERRIES.

According to Charles J. Young, president of the Stanwood local North Pacific Cooperative Berry Growers, the National Packing company has contracted 800,000 pounds of raspberries and all loganberries from the Stanwood district as far north as the British Columbia line. The packing company is using the Burlington plant of the association to can and barrel the fruit.

This purchase comes at a time when the marketing of the loganberry was questionable. The packing company will pay growers an advance of 2 cents a pound and the balance in 90 days.

The North Pacific association is to build a cooling plant in Burlington next year to take care of the fruit for shipping.

PRIZES FOR PIG BREEDERS.

Prizes of $75 will be offered to boys' and girls' pig clubs at the La La Palouser, September 6, 7 and 8, says a Colfax report. Besides the general prize of $5 offered by the Whitman county commissioners to every boy and girl showing a litter of not less than three pigs, there will be individual prizes offered by interested men.

Ben Kammerzel, breeder of purebred Poland China hogs, will give a purebred Poland China boar pig to the boy member of a pig club displaying the best litter of pigs of that breed. Colonel L. Strobel, auctioneer, of Colfax, is offering a cash prize of $25 to be distributed in smaller amounts for the best individual pigs shown. The La La Palouser management offers merchandise prizes to any boy or girl in the county who does the best work in the swine judging contest.

ORGANIZATION GETS RESULTS.

During the last two years the price of butterfat in the Seattle market has averaged 2.3 cents higher per pound than in Portland, according to J. A. Scollard, president of the Lewis-Pacific Dairymen's association, in an address delivered at the annual picnic of that organization Sunday, August 5, at Claquato, three miles west of Chehalis. This higher price, Mr. Scollard averred, was due largely to the fact that Washington dairymen have an effective organization, whereas Oregon dairymen are not thus organized. In a year this difference means $836,000 to Washington dairymen, sufficient in a two-year period to build all their utility plants.

J. M. Humphrey, manager of the Skagit county association; W. G. Grim, president and manager of the Snohomish county association, and E. M. Sorensen of Chehalis, manager of the Lewis-Pacific association, were also on the speaking program.

Music for the occasion was furnished by the state training school band.

POULTRY BREEDERS MEET.

More than 2000 poultrymen or members of their families gathered in Cornwall park in Bellingham August 4 to enjoy the annual picnic of the Whatcom county branch of the Washington Cooperative Egg and Poultry association.

At 10 o'clock the poultrymen began to gather from all parts of the county. A program of varied sports was indulged in before noon, which most every one took part in and enjoyed the fun. The folks then had a basket luncheon.

After dinner Mayor E. T. Mathes welcomed the poultrymen and told how glad the city was to offer them the playground for the day's outing. S. D. Sanders, state president, told how vital it was for the egg and poultry producer to take a serious interest in the marketing of his product.

R. T. Hawley, manager of the poultry feed association, described how the industry had grown in the country from the small flock in the farmyard, from which the farmer occasionally sold a few dozen eggs to his neighborhood store, to the present big poultry farms with their thousands of layers and the big correlated plants at Lynden and Bellingham, that prepare the product for the market.

How to grade poultry products was explained by H. E. Wills, state sales manager. R. P. Loomis of Bellingham told of how to handle the finances of a business such as poultry raising has become in the county. D. S. McDole, state secretary, told how necessary cooperation was.

Farming State of Mind

Found Practically the Same From New York State West

Crop prospects from Montana to New York are just as bright as in the Pacific northwest, but conditions surrounding farming, and the farming state of mine, unfortunately are the same also, was the observation of George N. Angell, staff representative of THE FARMER, who recently returned from a visit to his old home in the Empire state. "There is prospect everywhere of good crops this season," he said, "but there is also shortage of labor to harvest them, prospect of low prices, and much discussion of the advisability of curtailing production by the comparatively painless method of laying off all help and doing only such farm work as can be handled by the farmer and his immediate family. The latter is a course to which many an eastern and middle western farmer will be forced to resort."

In the section of New York state where he visited, the production of market milk for the metropolis, 200 miles away, is the principal industry and the one around which all other farm operations are arranged. It might be expected, he said, that farmers so close to this greatest of markets could hardly fail to prosper, but a long-drawn-out fight between the dairymen's league and the big private corporations, together with other conditions prevalent everywhere since the war, has left room for little profit on raw milk production. The league now appears to be solidly established, however. It does an enormous business in handling fresh milk in New York, and recently has undertaken a very attractive advertising campaign covering its manufactured products. Milk prices are higher than a year ago, and altogether the outlook is more encouraging.

"My own father and brother, however, are seriously considering selling the milking members of their purebred Holstein herd, giving stricter attention to the poultry flock, which has furnished the only real farm profit for three or four years back, dismissing all help, and themselves getting out railroad ties from the wood lot or cleaning up pastures during odd moments next winter. This because they are never more than one or two jumps ahead of the feed bill, and because they begin to feel underpaid for such acrobatics. If they carry out this program, some one else will have to increase their output or Gotham will be short about a ton of milk daily, and decreasing rather than increasing is 'the vogue' upstate right now.

"Rich harvests of grain were being garnered as I drove through western New York, but I talked with a miller from near Rochester who said that, because of the low price of wheat, at least half of the farmers with whom he did business would not produce a kernel more than they need for their own use, in 1924, and he was wondering just where he would 'get off.' That is one very prevalent topic of conversation in the east this summer—the plight of the farmer and how it will affect the city or small-town business man. Even doctors, engineers, professional men, are interested, and many theories are advanced as to what can be done about it.

"Crossing Michigan I was impressed by the apparent vastness of the grape-growing industry, and it struck me that, as with our northwestern apple growers, it will be extremely difficult for our northwestern grape growers to overcome the handicaps of distance from big markets and high freight rates under which they now labor, sufficiently to meet the competition of a product grown almost in the consumer's back yard, unless quality and efficient marketing methods are kept to the front.

"A blistering hot day in Chicago, succeeded by one almost chilly, in St. Paul, and by reports of a near-frost and summer snowstorms in near-by states, reminded me of the story of the Dakota farmer whose hired man suffered from sunstroke in the midst of August harvest operations. 'We rushed him to the hospital in an automobile,' said the Dakotan, 'but the son-of-a-gun wasn't used to the climate and froze both of his hands on the way.'

"Wisconsin, Minnesota and North Dakota could scarcely have looked better, but here too the low price of wheat was a source of discouragement and there was much apprehension over the threatened harvest strike. Every freight train carried its quota of transients, apparently traveling in too great numbers to be interfered with by trainmen. One train in the Dakotas must have carried 30 'vags,' most of them riding

(Continued on page sixteen.)

Be Fully Persuaded

Allow Your Neighbor Same Privilege You Claim for Yourself

Let every man be fully persuaded in his own mind. Romans 14:5.

Persuasion gives life to decision. Without persuasion decision is only a matter of knowledge. You may decide that it is right for you to do a certain thing, take a certain position, help a certain laudable undertaking, and not be persuaded to action. But if you are fully persuaded, then that not only ends all doubt and hesitation, but your heart has been enlisted and nothing can keep you off the job.

St. Paul was making a plea for individual freedom of thought. "One man esteemeth one day above another; another esteemeth every day alike. Let every man be fully persuaded in his own mind."

Do not dictate to another what he shall do in the matter of observances. It is up to you to be persuaded, to be fully persuaded in your own mind what you should do, and then you will do it. Let your neighbor be fully persuaded in his own mind as to his observances, even if they do not coincide with your own observances.

Then there is the question of eating and fasting as a religious rite. Shall you fast as often or as long as your neighbor fasts? That, again, is for each one of you to be persuaded in your own mind, and follow your own conviction.

There is, however, one condition for both to submit to, one limitation of your freedom, that is whatever course you take you do it "unto the Lord."

"He that regardeth the day, regardeth it unto the Lord; and he that regardeth not the day, to the Lord he doth not regard it. He that eateth, eateth to the Lord; and he that eateth not, to the Lord he eateth not, and giveth God thanks."

There you have the whole philosophy of united purpose and individual action; there you have the whole philosophy of essentials and non-essentials, of cooperation, without coalescence.

The big trouble in the world has been in telling the other fellow what he should do in the matter of all these observances and trying to make him do it.

FARM BUSINESS AND MARKETS OUTLOOK

CATTLE MARKET ADVANCES.

Cattle prices at the main points of the market compass were marked upward in the last ten days. Better grades of all sexes and ages advanced 25 to 50 cents at Chicago with prime mature steers at $12.60 and yearling at $12.50, while intermediate grades of steers shared in the rise to an unexpected degree. Low grades have held practically unchanged but with the tendency downward.

Broader feeder trade played a large part in the upturn as total receipts were relatively heavy compared with the recent past or with the corresponding period in preceding years.

Recent rains which have given assurance of a good corn crop and excellent fall pastures, as well as the passing of the harvest season and the advance in the fat cattle market have roused interest in feeder cattle. Well fattened grass steers are being bought at Missouri River markets at prices as high as 10 cents to be short-fed with new corn in an effort to take advantage of the present premiums for choice and prime cattle.

HOG RECEIPTS DECLINE.

Receipts of hogs at the eleven leading markets in the last two days were the smallest for any like period since early November and prices have advanced to a top of $8.70 at Chicago, the highest since last April. The top for the year was $9 paid last January. The run has not expanded on this upturn as it has done heretofore, suggesting that the pressure may be lifted for the next few weeks. After that interval the spring pig crop will be due to start marketward.

The precentage of good hogs is dwindling and the spread between prices of butcher and packing grades is widening. Domestic consumption of hog products remains enormous and exports have picked up slightly, confirming to some extent reports of larger sales.

Lamb Supply Below Normal.

Receipts of lambs are not expanding in seasonal fashion as the total at seven markets last week was the smallest for the corresponding period with one exception in a dozen years. Taken in connection with the light movement for the preceding few weeks, it seems to herald a relatively small run during the fall. Range lambs are not moving freely as yet and the supply of native has diminished. Dressed lamb markets have recovered from their recent indigestion and prices on the hoof advanced last week. Feeder lamb values moved with the fat lamb market and breeding ewes rose about $1, yearling ewes now being quoted up to $11 at Chicago. The number of both feeder lambs and breeding ewes going to the country is small because of inability to fill orders.

Wool Market Still Sluggish.

The wool market is still rather sluggish as the response to buyers to opening prices on spring goods by mills has not been such as to stimulate large purchases of raw material by the latter. Buying in both the range and bright wool sections is still slack. Foreign markets also are inactive, but prices are steady. Raw wool is low-priced compared with goods prices, mills are still consuming at a relatively high rate and there are no heavy supplies of wool to make trouble. The shortage of fine wools, especially from Australia, has stimulated more buying of that grade than of other kinds. The program for selling the new Australian clip estimated at 1,610,000 bales provides for beginning the season on September 17 and distributing sales over the following eight months.

Will Sow Less Winter Wheat.

A survey by the department of agriculture of intended plantings of winter wheat indicates a total of 39,200,000 acres compared with 46,379,000 acres reported last December, a reduction of 15.5 per cent. Assuming average yields per acre, the decrease would be about 100,000,000 bushels or over half of our apparent exportable surplus for the present crop year and would leave a surplus next year smaller than the pre-war average.

Conditions in the next two months will have something to do with the way these intentions will be executed. Rains in the middlewest and southwest have done a great deal of damage to wheat in the shock, increasing the percentage of low grades which are likely to be fed in large amounts.

The Cannadian crop was officially estimated as of July 31 at 382,514,000 bushels compared with 399,782,000 bushels from last year's record yield.

Mills are doing a fairly thriving flour business and are competing for the good wheat as it comes into sight. Prices advanced slightly last week to the highest point in over a month. Clearances from North America are averaging about 1,000,000 bushels for each week day in spite of the fact that foreigners have been cancelling moderate quantities during the last few weeks.

Cash Corn Continues Scarce.

The demand for corn keeps the supply entering commercial channels closely swept up and prices are still near the season's high point but they have not been able to break into new high ground during the last three weeks. Receipts are above normal for this time of year but the visible supply was down to such a small figure that the slight additions made recently have not removed the tension.

Oats prices have become adjusted to the new crop movement which thus far is not up to normal for this time of year. Demand has increased to some extent at the lower prices prevailing.

The range of cash grain prices for the week ending August 15 was as follows: Chicago—Wheat: No. 2 red, $1.00@1.02½; No. 3, $1.00@1.02½; No. 2 hard, $1.00¼@1.04½; No. 3, $0.99@1.02. Corn—No. 2 mixed, 87@88c; No. 2 yellow, 88@98c; No. 2 white, 87½@88 1-4c. Oats—No. 2 white, 36½@39c; No. 3, 36 1-4@38 1-3c. Rye—64½@67c. Barley—54@63c.

Clover Seed Market Higher.

Timothy seed prices have been practically steady during the past week but red clover seed has advanced again. Reports of yields in various sections are still mixed but on the whole indicate a smaller outturn of clover seed than last year. New timothy seed will begin to come on the market in volume before long. Chicago, per 100 pounds—Clover, $15@17; timothy, $5.85@6.05; Toledo, per bushel—Prime red clover, $11.60; prime alsike, $10.30; prime timothy, $3.15.

Advance in Wheat Feed.

Wheat feed prices advanced sharply last week, especially for bran. Mills have contracted with jobbers for their output and the latter have advanced quotations. Interior demand is only fair and flour mills are gradually expanding operations. Strength in the corn market is sustaining prices on gluten and hominy feeds. But little old cottonseed meal is available and prices maintain a large premium over new crop offerings.

Prices per ton (100 pound bags) in carlots: Chicago—Bran, $24.25; standard middlings, $27.75; flour middlings, $31.25; cottonseed meal, 36 per cent, $40.50; 43 per cent, $46.50; hominy feed, $32.50; gluten feed, $40.75; old process oil meal, $47.00; tankage, $55.00.

Timothy hay prices advanced 50 cents to $1 on the principal markets because of the light movement. Demand has not broadened a great deal. Alfalfa hay prices also are firm.

Plan Is Considered to Coordinate Fruit Marketing

A second conference of bankers, fruit growers and representatives of cooperative organizations was held in Portland, last week.

"Can not the fruit growers' associations of the northwest get together on some common ground for their common good?" was the question that Vice President I. D. Hunt of the Ladd & Tilton bank of Portland, as chairman, put before the first conference several weeks ago. "They can and will," unanimously answered those present, who thereupon devoted their best energies toward working out a program for the development and encouragement of cooperative apple marketing organizations, and for the coordination of many of their activities. Mr. Hunt put the same question in a different form to the same men and others, at the conference August 14, and received a similar rejoinder, with the result that a plan for immediate coordination of many activities of cooperative associations and large independent growers, and for future coordination of others, was adopted. Many confidently predict it will be signed by the three associations necessary to put it into effect. Aaron Sapiro of San Francisco, attorney in cooperation who has had a hand in other similar undertakings in the northwest, was present at and addressed both meetings, and drew up the plan which was finally adopted practically as he presented it. Those present at the meetings somehow felt that eventually there will be effected a unification of northwest fruit growers' interests.

The first conference was called hastily by telegraph by a subcommittee of the agricultural committee of the Portland Chamber of Commerce and the Oregon State Chamber of Commerce: Charles R. Stewart, vice president of the Northwestern National; C. C. Colt, vice president of the First National, and Mr. Hunt. Notice of it was sent largely to bankers, but the invitation spread to fruit growers' associations and commercial organizations, so that there appeared in response to it representations from Wenatchee, Yakima, Hood River and the Willamette valley. Its being called was directly in line with the plan of state development for which a group of Portland leaders was even then planning the completion of a $300,000 fund; at least one of the men calling it will be a trustee in the expenditure of that fund, which is now complete; and the results from it were so outstanding that Emery Olmsted, chairman of the committee in charge of the drive, announced that development of cooperative marketing as a means to the revival of agriculture would take precedence over either land settlement or tourist advertising, when it comes to spending the money.

"Bankers and business men, as well as farmers, have found out during the past two years that the apple growing industry is not a profitable one, often returning to growers less than their cost of production," said Chairman Hunt, who formerly was connected with the Oregon growers. "This is not economic and it must cease or apple growing be discontinued. Cooperative marketing has had a very hard row to hoe, but it is now sweeping the country, and bankers' and growers' minds are coming to the point that it is the one thing which will make production profitable, increase the value of our lands, bring in new settlers for our farms, and put farming back on an attractive basis. Various associations are doing great things for their members, but they are doing nothing toward unified marketing. They seek to accomplish the same purpose, yet they compete with each other along many lines. This is not logical, it is not proper. Can they not get together on some common ground?"

Lessons of Experience.

Sapiro then presented what he called a "laboratory experience" in cooperative marketing—his observations on a score of failures to every success that has been achieved along this line. Defining terms, he said that cooperative marketing aims not to get better prices for the member than for the nonmember, not to create competition between the outsider and the insider, but to stop blind, unintelligent dumping of farm products, to substitute intelligent merchandising and so to raise the level of prices that both will benefit.

Many Give Opinions.

One after another those present offered their comment on the situation. Walton Peteet of Chicago, director of marketing of the American Farm Bureau federation, said he thought the task ahead was to coordinate. E. M. Gillette of the Wenatchee District Apple Growers' association said the grower was convinced that some kind of coordinated effort must be undertaken if the industry were to be saved. Robert C. Paulus, general manager of the Oregon Growers' Cooperative association, said that his association would be found ready to cooperate when the time came. A. W. Stone, traffic and extension manager of the Hood River Apple Growers' association, said that he "came to listen and remained to pray," and that the question lay wholly within "ourselves," whether the industry should survive or go to destruction. H. W. Steinhouser, independent grower of Hood River, believed that absolute control of all northwest and even northern California apples was the only way to save the orchards, but that coordination should be the first step. A. T. Dorsey of White Salmon, representing a $200,000 investment there, declared that the growers of his district wanted to see something done, and that he was ready to give two years to the task if necessary. President H. L. Hull of the Yakima County Farm bureau expressed the belief that the thing could be accomplished only by the absolute conviction, through education, of a great many association members, that it must be accomplished; and his reference to the opposition in some managerial quarters to any form of coordination brought a heated declaration from Chairman Hunt that "prima donna" management is not the type that a farmers' cooperative wants. "If we can get enough people to say that the cooperative type of marketing is the best one to tie to, then I'm one like Mr. Dorsey to contribute not only my time but my money to get this thing back to the producer. It is his problem and not the managers' in the slightest."

This plan embraced the provisions of the resolutions adopted at the first conference, and because of its length can perhaps best be described by quoting the essential points in those resolutions:

(a) The establishment of a more standard and uniform method for the organization of local associations and packing houses, including, particularly, methods for financing the same;

(b) The creation of local organizations in all of the unorganized sections;

(c) Development and increase of membership in all existing local associations;

(d) Immediate coordination between existing associations and other cooperative associations which may be hereafter organized on all rate and transportation problems, including, especially, the handling of all claims;

(e) Gradual development and establishment of uniform grading, with centralized supervision looking to the ultimate establishment of a brand for better-grade apples only, to be universally advertised as the brand for the best northwest apples, along with retention and development by each local or district association of its own brand and name for advertising to the trade or otherwise;

(f) Immediate and general coordination for all export business;

(g) Coordination in some form for all American sales (without removing at this time the plan of direct selling by each cooperative association, but particularly arranging for coordination on routing, exchange of information, plans for storage, date on sales, methods and arrangements for financing apples in storage or in process of marketing, with a plan for centralizing all sales offices at a convenient point, with constant conferences of managers on all of the above subjects, such coordination to be accomplished through the associations themselves as well as any sales or distributing agents with whom they may have made existing contracts.

The Northwest Apple Growers' exchange, the organization was tentatively called, and it would be managed by a board of trustees appointed by the associations signing the agreement, which would not be effective until three had signed. Public appointees to the board would be named through the clearing houses of Spokane, Seattle and Portland, and the number of carloads of apples shipped would furnish the basis of association representation. Twelve departments for handling the various matters of grading, storage, rates, sales, etc., were suggested, but the completion of the structure would be a matter of gradual development. Possibly only one or two would be attempted at first, as the trustees might decide. Spokane was suggested as the place for headquarters, but this was merely for purposes of discussion and the space finally was left blank, to be determined by the trustees.

Delegates Approve.

"I have no criticism of the plan except that as the industry now stands it is impossible for the growers to take on any additional expense, and whether or not the dollars-and-cents benefit to be derived from this would offset what it costs I don't know," said Manager C. H. Swigart of the Yakima Fruit Growers' association. However, he said that if the plan were adopted he would help work it out as far as he could. President H. P. James of the same organization said he believed the plan practical because the growers could go as far as they liked with it. "There is not a thing in it that would not, in same organization said he believed the plan practical because the growers could go as far as they liked with it. "There is not a thing in it that would not, in the end, be desireable for fruit growing interests. I am heartily in favor of taking the first step in the direction indicated here today." "The bunch I represent would be heartily in favor of the plan, and I personally will do what I can to get it started," asserted J. W. Shipley of the Underwood Growers' association, and William McGonagle, representing the Selah (Wash.) Farm bureau, declared that fruit growers of the northwest had pulled apart long enough, and that it was time for them to pull together under some such arrangement. President H. L. Hull and Secretary N. H. Massie of the Yakima County Farm bureau both concurred, and President Kenneth C. Miller of the Oregon Growers, A. W. Stone of the Hood River Apple Growers' association, and E. M. Gillette of the Wenatchee also approved. Manager A. R. Hayes of the Star Fruit company of White Salmon summed it up when he said: "I am an apple grower and my business is sick. I am not inclined to question the qualifications of the physician who has been called in, and I am strongly in favor of the plan outlined. If we get in and support it, nothing on earth can prevent it from working."

The conference voted unanimously to adopt the form of coordination outlined, and Messrs, Miller, Stone and C. J. Hurd of O. A. C., representing Oregon, and Swigart, Gillette and Hayes, representing Washington, were appointed to go over the plan in detail with Sapiro, to make such changes as seemed necessary, and with the continued assistance of the Portland committee which called the conferences, to campaign for its adaption throughout the northwest. To this end several hundred copies will be printed for distribution. Places were made on the committee, also, for one representative each from Idaho and British Columbit, and the conference adjourned with a vote of confidence in Mr. Sapiro.

Those Who Participated.

Others than those mentioned, who were present at the first conference, were Truman Butler, president, Butler Banking Co., Hood River; R. J. McIsaac, president; C. K. Benton, secretary; J. D. Guttery, director, and A. F. S. Steele, general manager, Hood River Apple Growers' association; C. L. (Farmer) Smith; J. F. Burton, district manager, American Farm Bureau federation; J. E. Nestor, Northwest Fruit exchange, Seattle; C. J. Hurd, extension specialist in marketing, Oregon Agricultural college; Arthur Goldsmith, attorney in cooperation, Portland; O. C. Soots, secretary, Yakima Commercial club; J. McPhee Ferguson and Ray Paddock, exporters, Seattle; E. E. Ullburg, Cunard line, Seattle; George A. Mansfield, president, Oregon State Farm Bureau federation; J. W. Brewer, secretary, Oregon State Chamber of Commerce; W. D. B. Dodson, manager, Portland Chamber of Commerce; Harold Sharkey, First National bank; G. C. Finly, Guarantee Trust company; Lyman Bunting, cash buyer; Alexander Miller, First National bank; W. N. Irish, Yakima Trust company, and M. A. Peacock, Yakima Growers' association, all of Yakima; E. O. Blanchar, First National bank, Hood River; R. G. McNary, sale manager, Oregon Growers' Cooperative association; Thomas B. Hill, assistant secretary, Seattle Chamber of Commerce; Frank E. Andrews, president, Portland Chamber of Commerce, and E. E. Faville, chairman agricultural committee, Portland chamber.

At the second conference there were present, in addition to those mentioned, Whitney L. Boise, who acted as secretary; Clayton L. Long, horticultural extension specialist at O. A. C.; Secretary J. E. Neston, Northwestern Fruit exchange; Manager J. O. Holt, Eugene Fruit Growers' association; Earl S. Coe, White Salmon, Wash.; Manager Lee M. Lampson, Three Rivers' Growers' association, Kennewick, Wash.; J. A. McLean, Yakima Fruit Growers' association, Kennewick; V. C. Follenius, Hood River; W. W. Rodwell, Hood River; C. E. Spence, Oregon State market master; H. W. Steinhouser, Hood River; A. J. Dorsey, White Salmon; E. L. French, director of agriculture in Washington; and representatives of various commercial organizations.

Extension Service at the Fair

By LINCOLN LOUNSBURY, Agricultural Extension Editor, State College.

People attend fairs to observe and learn. Realizing this fact, the extension service has tried to make its exhibit this year more practical than in former years. If a person can see a new device or a new method of doing something, and take the idea home, he or she may feel well repaid for going to the fair.

What will you see at the fair this year in the State College of Washington extension service exhibit?

The size of the fair will determine the size of the exhibit, but there will be exhibited at the fairs this year demonstrations in poultry, bees, dairy, potato diseases, clothing, home management, feeding live stock, berries, drainage, wheat production and foods.

What can I learn as a chicken raiser from poultry demonstration?

That it costs 29 cents for a hen laying 120 eggs per year to produce a dozen eggs. A hen laying 180 eggs will produce a dozen for 19 1-3 cents and a hen laying 240 eggs will produce a dozen for 15 cents.

When does a hen lay the most eggs?

Charts will be seen showing what months each one of the three hens above mentioned laid the most eggs and what month they laid the least. The average Washington hen lays 95 eggs a year, the best Washington hen laid 335 eggs in a year. You can learn from a study of the poultry booth how to secure more than the average.

Dairying is my business, what is there to interest me?

A picture of a good cow and an average cow will show the difference. The good cow gave 400 pounds of butterfat per year, or 16 quarts of milk a day. The average Washington cow gives 200 pounds butterfat per year, or eight quarts of milk a day. It cost 3 cents per quart for a good cow to produce a quart of milk and 4 cents for an average cow to produce the same amount.

Didn't it take a lot more feed for the good cow than it did for the average cow?

The exhibit shows by measured amounts that it took 6 1-4 pounds of grain more for the good cow than the average cow. There is also to be seen figures on how much profit the two cows made.

I started a couple of colonies of bees this year. Can I find out anything about them?

Can honey be adulterated in the comb, and what makes the different colors?

The honey bee is the only one able to make a wax comb filled with honey. There will be exhibited the four main honey producing flowers of Washington, showing the different colored honey from each flower.

A great deal will be seen on handling bees. All the latest and most simple methods and devices will be exhibited.

What have you to show the potato growers?

Washington potato growers raise 8,175,200 bushels of potatoes a year, but of that amount 1,638,507 bushels are lost each year from disease. How to help stop the invasion of the "disease army" will be seen.

You have told us a lot about the men's work; how about the home work?

There will be a special booth illustrating how the living room, dining room, hall, kitchen, bedroom and, in fact, every room in the house may be curtained and draped inexpensively and correctly.

What about clothing for women?

To the woman who has to do her own sewing there will be shown a method of

(Continued on page fifteen.)

Education and Fun Mark Club Tour

(Continued from page one.)

pigs each were arranged, and the members given a chance to study the animals before making their placings. The club members were also interested in seeing the 10-litter pigs which Mr. Woodhouse is fattening. He expects to have the entire 10 pigs weigh over one ton by the time the county fair opens.

The picnic dinner was enjoyed under the cottonwood trees at the home of Eugene Wilson, following which Roland Newman was elected temporary chairman of the club and Grace Jones temporary secretary-treasurer.

At the Ernest W. Wilson home the club members judged a class of ram lambs, while Shorthorn steers were ready for expert judgment at the Leslie Wilson farm.

On August 2, the day previous to the picnic and judging tour, the swine clubs had two tours, in which they visited most of the herds owned by the members. The forenoon was devoted to the Chester White herds, while in the afternoon the Berkshires were the center of interest.

Chester Whites were seen at the homes of the following: Ivan Hutchinson, Thorp; Leonard Newman, Thorp; Roy Brunson, Ellensburg; Elmer Harvey, Thorp; Marie Skiffington, Ellensburg; Aubrey Lynch, Ellensburg; Florence Robinson, Ellensburg and Steve Woodhouse, local club leader.

Berkshire owners whose pigs were seen by those making the tour included: Gilbert Mills, Arthur Dreyer, Irwin Mills, George Mills; John Tjoseen, Helen Wilson and Harold Wilson. The J. Alva Bull live stock farm was also visited.

Brand New Fall Merchandise at Lowest Prices in America

Send No Money

These prices for brand new fall styles will positively amaze you—They are ▬ low! But wait until you have seen the actual merchandise. Just make your selection now and order at our risk. Don't send one cent now. We cheerfully send your choice of these bargains for examination and approval right at home.

Just letter or postcard brings any of these astounding bargains. Merely give name and number of each article you want. Also state size and write your name and address plainly. Pay nothing till goods arrive. Then only the bargain price and postage. If not satisfied, you may return the goods and we refund your money.

For Stout Women

Popular Model Embroidered Gabardine for Stouts

$3.98

Sharood heartily recommends this attractive frock of good quality cotton gabardine. It is designed along slenderizing lines for stout women. The skirt is finished with two wide loose panels attached at waist and bottom. The edges are bound in black and embroidered in contrasting color. Collar is in the new long roll shawl effect, embroidered to match panels on skirt, as are also the vestee and tabs on the bell-shaped sleeves. Dress is gathered at waistline at back and finished with tie sash. Sizes 44 to 54 bust measure. State length desired. **Order navy by No. 52E7610; brown, No. 52E7612. Send no Money. Pay $3.98 and postage ▬ arrival. State size and length.**

Popular One-Strap One-Buckle Pump, Black Patent or Brown Calf Finish

$1.98

Always Mention Size When Ordering

A leading style in all the big cities for fall wear. One-strap one-buckle pump of rich black patent or brown calf finished leather. Is well made with perforated sewed tip and medallion toe. Fancy perforation on vamp, strap and quarter. One-piece medium extension oak sole; low flapper walking heel with rubber top lift. Sizes 2½ to 8; wide widths. **Black patent No. 52A20. Brown calf finish, No. 52A21. Send no money. Pay $1.98 and postage on arrival for either leather. State sizes.**

Pretty Black Velvet Egyptian Strap Pump

$2.48

State Size

An absolutely new and novel Egyptian style dress pump of rich black velvet. Medium pointed dress toe and patent leather trimming as pictured. Patent leather vamp, collar and instep straps fastened on each side by buttons. Neat perforations at sides. Fancy carved Egyptian slave ornament on vamp. Leather insole; genuine oak outsoles; medium height, rubber tipped leather heel. Sizes 2½ to 8; wide widths. **No. 52A257. No money now. Pay $2.48 and postage on arrival. State size.**

Richly Trimmed Gabardine Dress for Misses and Juniors

$3.48

No prettier frock has been designed in many seasons than this charming model for misses and juniors. The material is a fine quality cotton gabardine with collar and tabs at waistline of contrasting materials, attractively scalloped and embroidered. The front, vestee and sleeves are trimmed with rows of red and tinsel novelty braid. Skirt is finished with two panels and has self material sash tying in back. Sizes for misses and juniors, 14 to 20 years, 32 to 38 bust measure. **Order navy by No. 52E7650. Brown No. 52E7652. Pay $3.48 and postage on arrival. State size and length.**

Child's Middy Dress, Attractive Two-Tone Combination

$1.98

One of the most novel and attractive children's garments ever produced, and sure to be a big favorite for fall and winter. A charming two-piece middy dress, including snappy Balkan middy of all red flannel cotton warp with round collar and cuffs. The front, collar, cuffs and Balkan bottom are embroidered in exquisite contrasting colors. Rope girdle with tassels at waist. Skirt of navy blue serge in clustered plaited style hangs from a white muslin under-waist. Furnished in red blouse and blue skirt combination only. Sizes 7 to 14 years. **Order No. 52E8326. Send no money. Pay $1.98 and postage ▬ arrival. Be ▬ state size.**

Strap Pump of Rich Velvet and Patent Leather

$2.19

Be sure to Give Size Wanted

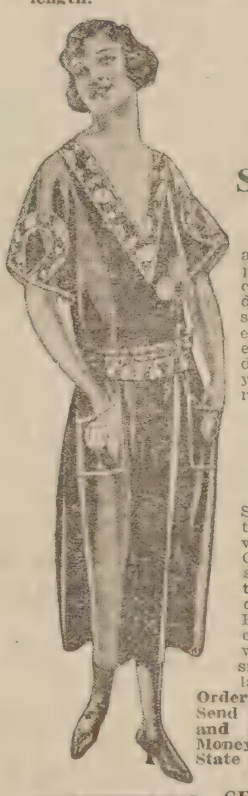
A wonderful shoe bargain in new one-strap, two-button dress pump. Has patent leather vamp and black velvet quarter and cross strap. Perforated velvet tip with medallion on toe. Neat perforations on vamp and also on patent leather piping which trims the quarter and strap. Medium extension oak sole with military rubber heel. Sizes 2½ to 8; wide widths. **No. 52A256. No money now. Pay $2.19 and postage on arrival. State size.**

Novelty Cross-Strap Model in Rich Black Patent Leather

$2.98

State Size

Every one will admire this early fall style cross-strap pump. The vamp and quarter are of selected black patent leather with rich black suede four-bar effect cross straps. Medium pointed dress toe has imitation perforated tip. Vamp and quarter neatly perforated. Straps fasten on each side with buttons. One-piece leather sole with Baby Louis leather heel and metal plate. Sizes 2½ to 8; wide widths. **No. 52A12. Send no money. Pay $2.98 and postage on arrival. State size.**



Pretty Sateen Dress Apron

Another shining example of Sharood super bargains. We claim this handsome dress apron at our special price is unequaled anywhere else in America today. Send and see for yourself. Order at our risk—not yours.

$1.59

Splendid quality black twill sateen which wears wonderfully. Graceful V-neck, sleeves and belt trimmed with gay colored cretonne. Pockets finished with crepe applique edged with piping. Sizes small, medium and large. **Order by No. 52E-6001. Send no money. Pay $1.59 and postage ▬ arrival. Money back if not satisfied. State size.**

Bulgarian Effect Gabardine Frock For Women and Misses

$2.98

An exceptionally attractive fine quality cotton gabardine dress for women and misses. Long roll collar in shawl effect, sleeves and belt piped in red. Entire front of blouse enhanced with exquisite allover embroidered design in Bulgarian effect with harmonious colors. Two streamers at both sides and front. Wide belt embroidered to match blouse. Sizes for women, 34 to 44 bust; for misses, 32 to 38 bust. State length desired. Colors, navy or brown. **Order navy by No. 52E7500. Brown by No. 52E7502. Send no money. Pay $2.98 and postage on arrival for either color. State size.**

Rich Black Satin Pump for Women

$1.98

Women's black satin dress pump, one-strap, one-button style, with fancy rosette and ornament on strap. Plain vamp with medium toe and close edge trim sole with low rubber heels. Genuine oak soles. A dressy, stylish new spring fashion that will be all the rage among the best dressed women. Sizes 2½ to 8; wide widths. **Order by No. 52A252. Send ▬ money. Pay only $1.98 and postage on arrival. State size.**

Men's, Boys' and Little Boys' Scout Shoes

Reliable, sturdy soles, low broad leather heels; leather insoles; reinforced leather back stay. Guaranteed to stand hardest wear. wide widths.

$1.59 Up

Be sure to give size. Order men's sizes, ▪ to 12, by No. 52A733. Send no money. Pay $1.98 and postage ▬ arrival. Order little boys' sizes, ▪ to 13½, by No. 52A565. Price $1.59. Order big boys' sizes, 1 to 5½, by No. 52A564. Price $1.79. Pay bargain price and postage on arrival. State size.

Women's Soft Kid One-Strap Slippers

$1.59

Always Mention size.

Soft kid leather slipper. Stylish strap model with two buttons. Medium round toe. Cushion insoles. Medium rubber heels. Solid oak leather soles. A bargain at our slashed price. Sizes 2½ to 8. Wide widths. **Order black by No. 52A365. Order brown by No. 52A366. Send no money. Pay $1.59 and postage on arrival.**

GUARANTEED! For Six Months' Wear

U. S. Army Work Shoe

For Men and Boys.

$2.98

State Size. Send ▬ Money

Men! Don't lose a moment in ordering this wonderful brown work shoe. It is made of leather as near waterproof as can be made—solid leather through and through, with full grain leather uppers, guaranteed to wear six months. Easily worth $5. Two full, heavy double soles, sewed and nailed for greater strength. Extra wide, full leather counter, riveted to prevent ripping. Sizes 6 to 12, wide widths. **Order by No. 52A700. Send no money. Pay $2.98 and postage ▬ arrival.**

Boys' Guaranteed Shoes—Six months guarantee. Two green chrome leather soles, same feature quality points as shoe above. Sizes 1 to 5½. Wide widths. **Send no money. Order by No. 52A550. Pay $2.69 and postage on arrival.**

LIVESTOCK AND DAIRY

Fresh Water
Is Important for Live Stock

By J. E. NORDBY.

More than one-half of the animal body is made up of water.
Animals will live longer without food than without water.
Fresh water stimulates the appetite and aids digestion.
Animals fed on a highly nitrogenous feed require more water than those fed on a carbonaceous ration.

All of our domestic animals will live longer without food than without water. This is especially true during the drier months of the summer and early autumn. The less permanent creeks and springs will dry up, and pools become stagnant, affording water that is very undesirable, if, indeed, they afford water at all. Around the farmstead, too, perhaps this busy season of the year fresh water for all classes of live stock may not be too freely applied. It always takes much special effort to provide enough when the spare moments for extra management are very few.

Fresh water freely applied stimulates appetite for solid foods, indirectly making possible a more thorough gastric and intestinal digestion and by facilitating absorption and assimilation. When the intestines are not properly flushed the body and food residues remain there too long and tend to cause poisoning to a greater or less degree. This sort of thing may not cause immediate death, but it very often asserts itself to a marked degree in the general tone of the animal's thrift.

Somewhat more than one-half of the animal body is made up of water, the percentage varying with the species, age and condition. One of the most important functions of water in the animal body is that of the physical regulations of heat, and we mean by this the emission of heat from the animal body through conduction, radiation and evaporation of water. During the hot summer more water is required in the process of heat regulation, for it serves as a cooling agent, inasmuch as a large amount of the heat of the animal body is absorbed in converting the water into vapor that is given off by the lungs and skin. Animals like the hog, for instance, that have no sweat glands, give off very little vapor from the skin, which explains why they overheat so readily.

In dry lot feeding, and much of that is done even in the summer months, the water supply becomes a very serious matter. No doubt every feeder has observed that animals fed on a highly nitrogenous feed require more water than those fed on a carbonaceous ration. This is due perhaps to the fact that starchy feeds yield a larger amount of water when entirely oxidized, while the nitrogenous or protein feeds are rarely so completely oxidized in the animal body and consequently yield a smaller amount of water. In addition to this the laxative nature of the protein feeds make a greater demand on the water supply than do those that are not so laxative. Under normal conditions domestic animals require a fairly uniform quantity of water for each pound of dry matter consumed. When conditions are not normal, however, such as is the case in the hot summer and fall, the thermal environment must be adjusted and this is done by regulating heat emission, which is greatly facilitated by a supply of fresh water.

If the temperature of the animal body is not above normal, as it may be after violent exercise, it is quite safe to allow the animal free access to water, as it is not likely that it will take too much unless it is fed salt irregularly or when it is forced to take large quantities through watery feeds.

Fresh and cool water, supplied in ample amounts, will serve the very useful purpose of eliminating many of the digestive disturbances often complained of by feeders of domestic animals. Unless the digestive agencies are properly functioning the best results can by no means be realized. Since water, which is one of the most abundant elements we have, serves so many useful purposes, it should be given serious consideration in our live stock management scheme.

VETERINARY

By DR. S. B. NELSON.

Milk Fever—Kindly tell me how to prevent milk fever in the care of cows and how to treat same if it can not be avoided? G. W.

Elk, Wash.

To prevent milk fever take your cow off from rich feed for 10 days before you expect her to calve. Feed her the poorest feed you have on the place. Give her one handful of epsom salts in a quart of water daily if she needs it.

The treatment for milk fever varies according to the conditions. One of the several treatments with modifications is to not milk out the milk when the cow first calves, and then if she still takes the milk fever, inject sterile air, or as near sterile air as possible, into the udder, leaving it there for some time.

Sore Foot—We have a cat that has been bothered for three months with a swelling on front leg. The leg swells up to twice its normal size, then breaks open and pus comes from it. Then it heals up and seems all right until the leg starts to swelling again. The cat is very thin.

Lopez, Wash. E. M. H.

The cat has some foreign dead tissue in the foot. This tissue causes inflammation and pus forms, which seeks an outlet and the easiest place is through the skin. It breaks and discharges; then nature tries to heal it again.

The next time it tries to break, it would be well to fasten the cat in a sack, putting the front leg out through a small hole so that it can be handled without the operator being hurt. Carefully enlarge the opening of the abscess. If it is not near the joint it would be well to take a silver probe, or if you take one of your very large dull knitting needles and boil it, it can be used as a probe to see if you can find the foreign decaying substance. If it is there it will have to be removed or gradually sluff out through these constant series of abscesses. Take a small syringe and fill the opening with peroxide of hydrogen until it ceases to foam. After this you might touch up the inside of the wound with tincture of iodine and let her go.

Baby Beef

Baby beef shows an increased profit over older cattle, because yearlings can make 25 to 40 per cent more gain than mature cattle on the same feed. They are much the same as the milk fat lamb. The herd costs are smaller because the size is cut down because of earlier marketing. Open heifers will sell as well as steers and undesirable females may be then marketed. A greater marketing opportunity is afforded, as the finish and bloom may be held longer. The cuts are more desirable because they are smaller and meet the smaller modern family requirements. There is a premium for the product because of its scarcity. Baby beef may be profitably raised only in smooth, well bred up herds that have used pure-blood bulls for at least two or three crosses. Grain and concentrated feeds are necessary and calves suitable for baby beef feeding must be uniform, blocky and have quality and finish.

The Perfection Milker

—milks the cows with less vacuum, which means safely for the cow. The squeeze is from the udder down, which is nature's way, the calves' way and the correct way. The suction and squeeze can be regulated by the pulsator, absolutely necessary for best results at different times of lactation period.
We now have a good hand-power milker. It's fine for a few cows. **Why Milk by Hand?**

Haul Heavy Loads on all roads with a
McCORMICK-DEERING
Weber Wagon

When you buy a wagon you want one that will stand up under all kinds of loads, one that you can use for years and years, and one that you will be proud of all the time. On such a basis, consider a McCormick-Deering Weber.

There are two construction features in the Weber which combine with the high-grade materials and workmanship, and which make unusually long service possible. First of these is the *swivel reach coupling* [patent applied for], which prevents twisting and breakage of the reach; second is the *patented malleable fifth wheel*, which prevents breaking the bolster and sandboard. You will find these two features on no other wagon!

If you will go to the store of the McCormick-Deering dealer he will show you these two Weber features, tell you about the wagon in detail, and give you a list of Weber wagon owners in your community. Talk to these owners; you will find them anxious to praise the Weber—a fact which is insured by Weber design, quality, and construction.

PERFECTION PLASTER WALLBOARD

THE
Modern Method of Plastering

"Perfection" Plaster Wallboard makes it possible to enjoy all the benefits of a perfect plaster job without the usual delay or muss, and with permanent results—as it can not crack, warp or weaken under any condition. It is simply the best plaster in sheets one-quarter inch thick between layers of especially prepared waterproof paper. You nail it to rafters and studding just like lumber and the only tools you need are a hammer and a saw. Ideal for walls and ceilings in all kinds of construction and on repair jobs it can be nailed right on top of broken plaster.

Ask for Booklet and Sample which will give you full information and enable you to test our guaranteed statements. Call at your nearest dealer or lumber yard or write direct to

Bedrock of Cooperation in Denmark

By CHRIS L. CHRISTENSEN
United States Department of Agriculture

TO complete the picture there are the agricultural societies organized to promote the technical and educational side of agriculture, and which do not engage in marketing. Fully 90 per cent of the Danish farmers have membership in these societies, which have been an important influence in the production of standardized products.

Mr. Christensen returned early this year from a two years' study of cooperative marketing in northern Europe. He made a thorough study of Danish cooperation, which will be published in a bulletin by the United States department of agriculture. This and two succeeding articles present some of the more important observations, which are of special interest to American cooperators at this time.

FIRST ARTICLE.

In less than 50 years Denmark has changed from a nation of peasant agriculture to the most highly organized agricultural nation in the world. More than 92 per cent of the farmers in Denmark own the land they cultivate. Tenant farming is comparatively unknown, whatever tenantry exists being conducted on long-term arrangements calculated to promote the best interests of a permanent national agriculture.

On his farm, ranging from 5 to 60 acres in size, organized on an efficient business basis for the production and marketing of butter, bacon and eggs, the Danish farmer is not only self-sustaining, but is financially independent. Through cooperative marketing he places on the market a highly standardized product that finds ready demand. His marketing costs have been cut to a minimum, so that he receives the largest possible share of the consumer's dollar.

Of the 205,000 farmers in Denmark, approximately 100,000 operate farms of an average acreage of 40 to 60 acres; 90,000 farmers cultivate an area of between five and 20 acres each, and about 15,000 farmers between 75 and 150 acres. More than 86 per cent of the Danish farmers are members of local cooperative marketing organizations, which assemble and process the farmer's products.

High Priced Products.

The English markets consume the major portion of Denmark's surplus production of butter, bacon and eggs. These products bring high prices, for the consumer knows that any product with the Danish stamp is of high quality and that a regular supply may be depended upon. More than 80 per cent of the Danish butter production scores 92 or better, and by reason of the development of winter dairying a regular supply is available. The bacon is of the best quality that scientific agricultural and manufacturing skill can make it. Every egg is placed upon the market in the best possible condition.

Denmark's present position in the agricultural world is the more remarkable by reason of the comparatively short time in which it has been attained.

Was One-Crop Country.

Denmark has been an agricultural nation from the time of the Vikings. Grain was the chief agricultural product, but centuries of production had virtually exhausted the soil and grain production had become economically unprofitable. This condition had prevailed for more than 100 years and was one of the chief reasons for the agricultural reform in 1788, when the large agricultural estates owned by the titled and nobility classes and worked in common by the peasants were broken up and turned over to the peasants.

Unlike the agricultural reforms in other European countries, the landholders were mindful of the strong economic and social value of a land-owning population and they cooperated with the government in inducing the peasants to own their own farms. Some improvements resulted from the change, but modern methods of revitalizing the soil were unknown and its fertility became gradually depleted. Modern rail and water transportation also had begun to flood the principal markets of northern Europe with cheap grains from the Americas and Australia, and the Danish farmer suffered from their competition.

Turned to Dairy Cow.

Meantime, with the concentration of masses of people in cities, a demand for animal food products had developed and the Danish farmer turned to the dairy cow as the solution of his problem. Danish statistics showed that the price of animal food products such as butter and bacon had advanced faster than the price of grain. The loss of Schleswig-Holstein to Germany had affected trade relationships and had caused the Danish traders to turn from the German markets to the English markets. It was seen also that the dairy cow would have a beneficial effect in increasing soil fertility.

Although there was a definite English consumer demand for a high quality butter, the disorganized efforts of individual farmers to meet the demand resulted in the shipping of considerable quantities of mediocre products which affected the prices of the higher grades. There was not a sufficient quantity of one uniform standard grade to make proper merchandising possible. Conditions continued in this pass for several years until producers were forced to realize that if they were to obtain the high prices the markets were willing to pay for quality products concerted action to meet the demand was needed.

Credit Associations.

The Danes had already had 30 years of experience with cooperative principles through the credit associations organized in the '50s to lend money on farm mortgages, the money being obtained through the sale of farm-land bonds. A system of consumers' cooperative stores had also been inaugurated in 1866. The first cooperative creamery was started in 1882.

The organized effort to produce and market a uniform product regularly throughout the year met with large success, and by 1890 there were 600 cooperative creameries. The secret of the project was that every effort was devoted toward furnishing the consumer with the high grade of product that he demanded and for which he was willing to pay a high price.

There are now approximately 1335 cooperative creamery associations in Denmark doing an annual business of 500,000,000 Danish crowns. Of these associations 546 are federated into 11 export associations, the remainder of the creameries operating on an individual competitive basis.

In 1885 there were 250 cooperative organizations of various kinds doing an annual business of approximately 10,000,000 crowns, as compared with more than 5000 at the present time doing an annual business of over 1,500,000,000 crowns. These associations also own the controlling interest in the Danish Cooperative bank at Copenhagen, which last year had a clearance of over 13,000,000 crowns.

Skim Milk Profits.

In their cooperative creamery movement the Danes were early confronted with the need for utilizing the large quantities of skim milk remaining after the cream was made into butter. The bacon-type hog was selected as the solution. In former days Germany had offered a market for the lard type of hog, but the economic upheaval wrought by wars had practically closed this outlet. On the other hand, urgent demand had developed in England for a high grade of bacon.

In meeting this demand for bacon, however, the Danes were forced to market their pigs in Hamburg, where they were slaughtered and the bacon shipped from Hamburg to England.

Bacon Factories.

To shorten the marketing lane and to receive more of the prices paid by the consumers, the hog raisers decided to assemble their products locally, combine the process of killing the pigs and curing the bacon in their own cooperatively owned plants, and send the finished product direct to the English market. The first co-

What the three U.S. Rubber discoveries bring to Royal Cord Leadership

A GREATER confidence than any tire has shared since the beginning of the automobile.

An increasing money's worth as promised by the Royal Cord policy of doing business.

A more definite way of comparing tire values than the public has ever had before.

The three new U. S. Rubber discoveries are fully described in recent newspaper and magazine announcements

Flat Band Process—ensuring the positive length, angle and strength of each cord.

Web Cord—the first successful method of impregnating cords with pure rubber by direct soaking in the latex itself.

Sprayed Rubber—the first absolutely pure rubber.

United States Tires are Good Tires

NOTE TO LIGHT CAR OWNERS—*The three U. S. Discoveries apply to Royal Cords in all sizes from 30 x 3½ inch up.*

POULTRY AND RABBITS

What Trapnests Did

By GEORGE N. ANGELL.

"Do I think it pays to trapnest? Say, I want to tell you something I found out as a result of trapnesting for a straight 15 months, from September, 1921, to December, 1922, 650 birds of my own raising, and let you draw your own conclusions as to what I think about it. You may think that I had a mighty bum lot of chickens to start with, but I don't care. I want you to get the figures."

Orin Belknap of Chinook, Pacific county, who started in the chicken business with the aforesaid 650 birds, who made up this season's breeding list from pens with records from 180 to 250 eggs, and who trapnested the highest pen again this year in order to get the individual records of all the hens in it, glared at me from behind the dining room table, where I had caught him in the act of going over some figures from these same trapnest records. I had visited his plant in the spring of 1922 and learned why W. D. Buchanan, extension poultry specialist, dubbed him the hardest working poultryman in the state of Washington. I had seen his name appear on the list of 20 or 25 poultrymen in the state whose trapnested eggs the state college would accredit for hatching, and now I was back again a year later to find that he hadn't a chicken on the ranch with a record of fewer than 230 eggs, and that they ranged from that all the way up to 257. Naturally I was very much interested to hear about the embattled 650, and I jumped to the advance conclusion that the thing Belknap could least understand was why anybody would think of raising chickens from hens that were not trapnested. I was right the first time, as subsequent developments showed.

"Among those 650 hens," Belknap continued, "I found only 96 which went above 200 eggs in a year, only 24 which went above 230, and only six—six, mind you—which went above 250. In round numbers, then, I had about one in seven which would be considered fair breeders, and anybody with a flock of common chickens—say as good as mine—in which the rooster runs with the hens and the hen lays in a box and after a while starts sitting on them—anybody with a flock like that would have only two eggs in a setting of 14 that were fit to hatch. The other 12 would better have been eaten up. My hens averaged only one in 28 that went above 230, so only every other setting in this imaginary flock would have produced one as good. Now suppose they wanted to hatch something pretty good, something that would lay 250 eggs in the course of a year. On the basis of my average they would have required 100 eggs to produce one such chicken.

"In the light of this, consider my experience. I have four pens from which breeding stock and eggs are offered. The hens in No. 1 produced from 250 to 264 eggs each, in No. 2 from 230 to 250, in No. 3 from 200 to 230 and in No. 4 from 180 to 200. Now then from which pen do you suppose I made the most sales? Never one until today from pen 1—those eggs cost 50 cents and the chicks $1. Never a chick, but a few eggs, from pen No. 2; a few chicks and a good many eggs from pen No. 3; but the bulk of the orders were from pen No. 4. They're white chickens, of course, and they eat wheat, like all other chickens, I suppose, but it's beyond me why people want to raise that kind!"

Belknap started with Tancred stock, and is staying right with it. First he bought the Tancred special mating, then the imperial, and this year he paid $5 apiece for eggs from the 302 to 311 egg mating. "And if that old Plymouth Rock hen that's sitting on them does a good job Tancred will be only one jump ahead of me next year. The wife and I needed that $25 for 1000 different things, but we decided that we'd spend it for hatching eggs, and our next notch is the $10 kind. Most people think we're crazy, and maybe we are, but I'm not quite ready to believe it."

Getting in Step

By W. D. BUCHANAN, Poultry Extension Specialist, State College of Washington.

Some poultrymen have lost step. They are waiting for the accredited hatchery to start. It is started, and going so fast that some people will have a hard time to catch up.

Every mail brings a letter or two asking where the writer can find cockerels of the required breeding. Your agent, if you have one, has a list of twenty-odd breeders who have this kind of stock for sale. Ask him for the list and get busy. Just now the supply is plentiful and the prices moderate. A little later they will be scarcer and the prices higher.

Another lot of letters in every mail ask: "How can I get in? To whom should I make application?" Answer: You can get in by deciding to meet the requirements—and by meeting them.

First, decide how many hens you are going to keep as breeders, and then buy, or contract for, enough cockerels to mate with them. You will need at least six for each 100 hens. If you buy at 3 months of age, and select carefully, you will need two for every one you wish to mature. If you are careless in selecting, you had better buy three.

This is the first step. Then cull your flock according to the standards fixed by the state college, or have it culled by some one trained by the college. Now you are ready for business.

If you want your flock so culled and ready to mate, accredited, send 2 cents for each hen to P. S. Dickey, secretary of the Washington Accredited Hatchery and Breeders' association, Puyallup, and ask to be put on the accredited list. The association will do the rest.

If you want your hatchery accredited, send an additional fee of $2 per 1000 hatching capacity. If you intend to buy and hatch eggs from outside flocks, send a complete list of all these flocks. When all of these are accredited, your hatchery will be accredited.

This is the whole thing in a nutshell. You don't have to wait for an application blank, although these will be ready for distribution later. Simply meet the requirements as above, and state that you are ready to comply with the rules of the association, and in due time a supervisor will visit your farm. If he finds conditions as represented, you will be accredited.

Some counties are asking if they might file through their local secretary. Yes. A hundred, or a thousand, men may so file, provided that the local secretary later files all applications with the state secretary.

In conclusion let me call your attention to the fact that there is a minimum fee of $5 per flock and $10 per 1000 hatching capacity. These fees cover all flocks up to 250 hens, and all hatcheries up to 5000 capacity.

CENTRALIA POULTRY SHOW.

Poultry show will be held in Centralia January 14 to 19, inclusive. A. E. Badger has been elected president of the association; E. H. Colson, vice president, and L. L. Lynn, secretary and manager. H. H. Corrier of Tacoma, well-known poultry expert, will act as publicity director and judge. Entries will be limited to 600 birds.

SPREADS DISEASE.

Unclean soil in the poultry yard leads to diseased flocks.

LIME IS A CLEANSER.

Lime is a great purifier of soil.

GENERAL ADVERTISING.

1000 Eggs in Every Hen

New System of Poultry Keeping—Get Dollar a Dozen Eggs Next Winter—Famous Poultryman

TELLS HOW

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, international poultry expert and breeder, for nearly eighteen years editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then, she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1000 eggs from every hen; how to get pullets laying early; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle; $5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen next winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how, if you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 1103A Herald Bldg., Binghampton, N. Y., and a free copy of "THE 1000 EGG HEN" will be sent by return mail.—Adv.

"Some few years ago I bought a Peerless equipped with Goodyear Cords. These tires gave me over three years of daily service. I do not believe there is a better tire made than Goodyear."—W. H. BROWN, *Americus, Ga.*

"In August, 1920, I purchased a new Studebaker equipped with Goodyear Cord T... 14, 1923 ou... n...

"I have been using Goodyear Cord Tires with the beveled All-Weather Tread on my Nash for the past 8,200 miles, and figure they are far above the average tires that can be bought."—CLYDE C. SMITH, *McKenzie, Tenn.*

"Two of the Goodyea... Cord Tires on our Old... mobile were put on t... spare bracket after 16,... miles, when my husb... started on a long trip ... Canada; the other ... have now gone ... miles. This mileag... cludes mud and ic... other bad road condit...—MRS. W. HEIMIC... *Brunswick, N. J.*

The *Pure* Lye to Use in Fruit Dehydration

FRUIT dipped in a boiling one-percent solution of RED SEAL Lye dries more rapidly than untreated fruit. In addition, RED SEAL destroys all possible germ life.

Another big use for RED SEAL Lye is in peeling fruit. Immerse the fruit for thirty seconds in a boiling five-percent solution and rinse in cold water to remove adhering lye and softened skins.

Booklet containing complete list of uses, with description of each, sent on request. Full directions in every can. Be sure and buy only the genuine RED SEAL Lye.

P. C. Tomson & Co.
PHILADELPHIA, PA.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

ORCHARD AND GARDEN

Apple Anthracnose

Anthracnose has caused some trouble with the apple trees this season and its rapid spread has made it necessary for every owner to take precautions against it, according to Theodore Albert, district horticultural inspector in the Chehalis district. This disease, which is often known as black spot canker, should be checked in the fall before the rainy weather starts.

The disease starts its deadly work as soon as the trees enter the dormant stage, which about coincides with the beginning of our wet period. The effect of last season's ravages can now easily be located by the sunken spots of bark on trunks and branches of the apple trees. The bark on all diseased spots should be carefully removed with a sharp knife, and every particle of it burnt. The resultant wound should then be painted over with a thick solution of Bordeaux. The entire tree should then be sprayed with a 4-4-50 solution of Bordeaux. The secret of success is to see that every particle of bark is covered with the spray. This spray put on in August will not injure the fruit. To be of the greatest benefit to the trees, this spray should not be put on later than August.

The 4-4-50 solution of Bordeaux is made as follows: Carefully slack four pounds of the best lime obtainable, then dissolve four pounds of bluestone in a wooden vessel. When ready to spray, add two gallons of water to the lime, and the same amount to the bluestone solution; next pour the two solutions (at the same time) into the tank containing the 45 gallons of water, stirring it all the time until the tank is emptied.

Where only small quantities of spray are used the formula would be one pound of lime, one pound of bluestone and 12 1-2 gallons of water.

For additional information if desired call on or write to the undersigned, who will be glad to assist in any way.

Cabbage Worms

By DON B. WHELAN.

Throughout the summer and late into the fall the cabbage is attacked and riddled by the green worms that are the larvae of the imported cabbage butterfly. This white butterfly is a native of Europe and was accidentally introduced into America at Quebec in 1860, at New York in 1868, at Charleston, S. C., in 1873 and in Apalachicola, Fla., at about the same date. From these centers it rapidly spread throughout the country. Its favorite food is cabbage, cauliflower, turnip, horse radish, radish, mustard, nasturtium, as well as a number of wild plants belonging to the mustard family.

Life History.

Winter is passed in the pupal stage, or chrysalis, from which they emerge early in the spring as white butterflies. The eggs are deposited singly on the under surface of the leaves of the food plant. These eggs are of a lemon-yellow color, nearly 1-25 of an inch in length and attached by the end. After about a week the egg hatches and the pale greenish yellow caterpillar begins feeding on the under surface of the leaf. Later holes are eaten through the leaves and into the developing head. About the only portion untouched are the larger veins of the leaves. In about two weeks the caterpillar is nearly full grown, being about an inch in length, velvety green, with a greenish-yellow stripe down the back. When ready to pupate it generally seeks a sheltered place on the under side of a cabbage leaf or in some sheltered place about a house, building or fence, in which to transform into the chrysalis. It takes from a week to 12 days in summer for the butterfly to emerge.

Control.

Since the worms eat the cabbage it is the common practice to treat the plant with some chemical which, when eaten by the worms, will kill them. This can be applied either as a dust or in the liquid form. Lead arsenate can be used dry by mixing a pound of it with four parts of hydrated lime. After it is thoroughly mixed it can be applied by placing some of it in a fruit can and then tie a piece of cheese cloth over the mouth to act as a sifter. Calcium arsenate and Paris green can be used in the same manner. If one desires to use the poison in the liquid form soap or some other spreader should be used, or else the spray will not adhere to the cabbage leaves.

There is little danger of getting poisoned by eating sprayed cabbages for it has been estimated that one would have to consume about 25 at one meal to get a killing dose. However, if one is prejudiced against the use of poison, hellebore can be used with good results. If it is used dry it can be applied undiluted, but if it is to be used as a spray four ounces are placed in two gallons of water. Add a little casein spreader or soap to the solution to make it spread better.

Manure for Orchards

George P. Stuart of Monroe finds that he can secure a better crop of berries from his trees by the application of from 15 to 20 tons of manure to the acre in his orchard. Such an application, he finds, gives a stronger set of fruit and therefore a greater yield of high quality fruit. His entire orchard is sprayed three different times for brown rot, and he feels that it paid him well, since he has had less trouble from this source than he would have had, had he not taken this precaution.

"I have always been able to sell good fruit," said Mr. Stuart, "and I find that quality is the first essential required by the buyer. I also find it a good plan to shop two or three kinds of fruits in the same car, such as raspberries, logans and cherries, in order that the dealer can have a larger variety, and thus insure better sales than if the shipment contained all of one kind of fruit. It has been much easier to sell all fruits under this plan, and I am going to keep it up in the future."

Eastern Fruit Show

Eastern fruit interests are waking up. Big preparations are being made for the Eastern Apple Exposition and Fruit Show to be held in New York city November 3 to 10. Already claims are being made that it will be "the largest fruit show ever given in the United States." It is under the direction of state committees of representatives of agricultural departments, horticultural and pomological societies, agricultural colleges, experiment stations, farm bureaus and individual growers who are interested in growing and marketing eastern-grown fruit and fruit products, nuts, honey and maple products, in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia and North Carolina.

Orchard Tours

Definite dates for the orchard tours to be held in Yakima county this month have been set for August 27 and 28, and County Agent A. E. Lovett is arranging for a schedule covering those two days. M. D. Armstrong, extension horticulturalist, will be in the county for those tours. One day will be spent in a tour of the county below Union Gap and a day in like manner above the gap.

Orchard improvement, thinning, demonstrations, cover crops and spray plants will be visited.

Similar tours will be held in Walla Walla county August 16 and 17, and in Chelan county on August 21, 22 and 23.

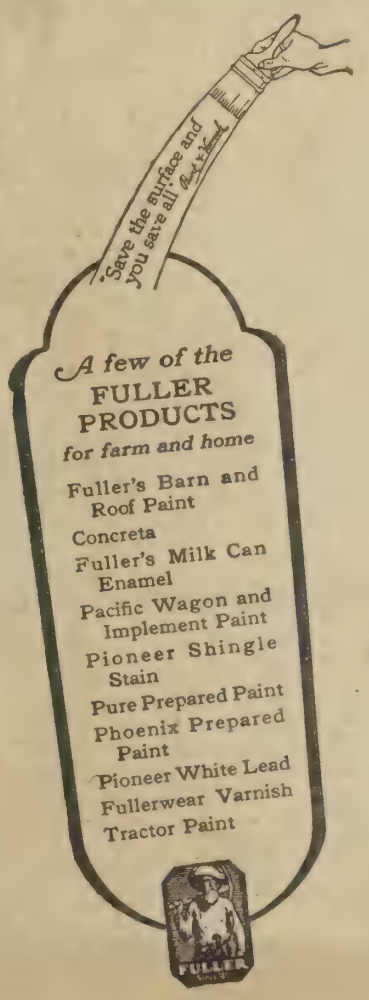
THE CLIMBING CUTWORMS.

You will not see the climbing cutworm at work on the tender, unfolding buds of the fruit tree, or in the greenhouse, for he hides by day. Spraying with paris green or lead arsenate, in the orchard, so as to coat the buds, or using poison bran mash at the base of the tree or the greenhouse plant, will rid one of this infestation.

THE VALUE OF HONEY.

It is estimated that the value of honey produced in the United States approximates $50,000,000 per year.

Let "*Fuller Film*" help *increase your profits*



IT IS ECONOMY to apply Fuller Paint. It means money—your profits—on deposit in the bank, instead of paid out for new buildings or equipment or repairs on old.

Fuller Paint should be applied to all farm buildings and implements. "*Fuller Film*," the "coat" which forms as Fuller Paint dries, will protect any surface to which it is correctly applied from the destructive action of wind, rain and sun. *Fuller Film* will keep rot and decay from lumber and rust from implements.

There's a Fuller Paint or Varnish for every farm and home need—every product as good as 74 years of successful paint-making experience can make it. With Fuller Paints, a man or boy can easily do the necessary painting on the farm. Fuller Paint will prevent the waste of hundreds of dollars through depreciation of buildings and implements! Ask the nearest Fuller agent or dealer for complete information. Or, write our Service Department.

Drainage

What It Did for One Farmer

By A. B. CRANE, W. S. C. Extension Specialist.

County Agent Fred Martin of Wahkiakum county recently conducted a community farm tour to soils and crops demonstrations and drainage projects in the Skamokawa and Alacomon valleys. Among the places visited was the first drainage project which the extension service was instrumental in having installed in the county.

This was on the farm of William Dawson and some very interesting items were noted. Mr. Dawson says:

"That drainage was practically the making of the farm. Before draining, the field would lie covered with water every time it rained. Now no water stands there at all. On seven and a half acres now in hay I got 29 loads, which would average better than a ton to the load. Before I drained I got nothing but a poor pasture."

Mr. Dawson says that the increased yield from his fields enabled him to increase his herd of cows from 14 to 25, as he now has feed enough to keep that many. "Fourteen cows did not give an adequate income for my time and labor but 25 cows will." He says he now has a field of oats growing on a part of this field, which if cut and threshed is estimated will yield at least 100 bushels to the acre.

This system was laid out by the drainage specialist of the extension service in 1919 and put in during the next year. In the fall of 1920 the specialist met Mr. Dawson at the fair at Skamokawa. It had been raining for about two weeks.

"I tell you it seems good to look out over the fields and see it all dry after these rains. It never was that way before," was his comment.

Mr. Dawson run one eight-inch tile line from the creek back through the low place in the field to the county road in front of his house. Leading into this he ran two four-inch laterals from the field which has yielded so well. He expects to run two other laterals from the other side of the main that will reclaim another 10 acres which is not developed yet. There are about 30 acres now drained.

The cost of this improvement, Mr. Dawson says, was $385 for the tile and $450 for labor, or $835. The value of his entire 40 acres is increased at least $3000 at the initial cost of less than $900, or about $30 per acre for the part drained.

Many other farms in Wahkiakum county could show as good or better results if drainage was installed.

Running Water

Costly Power Plant Not Necessary

It is not essential to have an expensive power plant in order to have running water on the farm, provided there is some kind of a stream that can be made to operate a water wheel or other power apparatus. Robert S. Smith of the Yelm district in Thurston county, has an undershot wheel, which is rigged to a pump and forces the water to a tank in the barn yard.

The main head of water runs through a part of the cow pasture and is polluted. It was, therefore, necessary to pipe pure water from one of the springs to the pump. A three-inch cylinder is stationed on the frame work, which supports the water wheel, and the crankshaft on the wheel itself works the piston that pumps the water. The entire equipment is homemade, with the exception of the pump cylinder, and it was installed at a cost of $150, which includes all pipe and a few piece jobs which were done at the blacksmith shop. This figure, however, does not include labor.

This power plant has been mentioned as one of the most efficient of its kind that has ever been installed in Thurston county. A. B. Crane, drainage specialist of the state college helped to install it, and later said that it developed more power for the amount of fall in the running stream than any plant he had ever seen installed.

Fertilizer for Alfalfa

By F. J. SIEVERS, Department of Soils, State College of Washington.

Will you please advise me what is the best fertilizer for alfalfa where dry farming is practiced? Can you tell me how much sulphur per acre is used for dry land alfalfa? J. F. G.

Lyle, Wash.

Dry land soils in general are well supplied with the mineral elements of plant food, but are, as a rule, deficient in nitrogen. Since alfalfa, as well as other legume crops, when properly inoculated, has the power of taking its nitrogen supply from the air, there is hardly ever any need of applying a fertilizer to alfalfa under conditions where precipitation is very limited.

Here in the Palouse region of eastern Washington it has been quite common to get pronounced increases in yield from alfalfa when this crop was treated with either land plaster or sulphur, and consequently I would advise you to try either of these materials on a small portion of your alfalfa field in order to determine whether such results may be obtained in your locality and under your soil conditions.

The land plaster should be applied at the rate of 200 pounds per acre, broadcast, while the sulphur need not be applied heavier than 60 to 70 pounds per acre, also broadcast. The application of either material should be made just as early as possible, and best results may be obtained if the application is made even a year before the alfalfa is seeded. An ordinary grain drill will give fairly good results when used as a distributor, and an application such as is recommended should satisfy the demands of the crop for sulphur for as long a period as you may see fit to keep the alfalfa on the same piece of land. You no doubt know that best practice requires that alfalfa sod be broken up at least after five or six years.

Bedrock of Cooperation

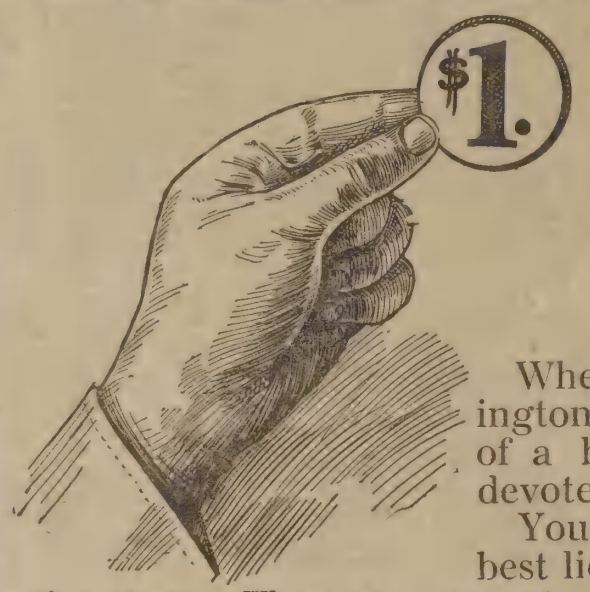
(Continued from page nine.)

operative bacon factory was organized in 1887. Today there are 46 such factories distributed throughout the country, doing a total annual business of nearly 400,000,000 crowns. Eighteen of these factories are federated into a cooperative wholesale agency, the remaining 28 plants selling independently.

Quality Eggs.

Similar marketing problems confronted the egg producers. A standard quality product was demanded in the foreign markets, but the disorganized efforts of producers resulted in many inferior eggs being shipped. The Englishmen in those days often said "there is something rotten in Denmark" in commenting on Danish eggs. The outcome was the organizing of local egg collecting associations federated into a large central association, where the eggs were handled under careful supervision, examined, sorted, graded and packed so that they would provide the buyer with a uniform, high-quality product. There are now 550 egg collecting associations federated into one central selling agency which annually markets nearly 300,000 cases of eggs on the basis of 360 eggs to the case.

For $1 You Employ the Services of Scores of Workers for 5 Years



Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hard-working organization devoted to your interests alone.

You hire these people to put in their best licks for you. They cover the entire state. They get accurate, up-to-date market quotations from the principal centers. They prepare careful crop and weather reports. They glean the news and views expressed at conventions, shows and farm gatherings of every sort.

Others in the organization conduct the departments. They comb the state for information of value to you. They answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of especial interest to Washington people.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

Subscription Rates of the Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

World's Live Stock Supply

Of the present 1,295,160,000 head of cattle, sheep and swine in the world, the United States contains 13.3 per cent. In 1914 of the total of 1,419,787,000 it contained 11 per cent. The United States leads in hog production with 27 per cent, China is second with 18 per cent. In sheep, Australia leads with 15 per cent, Argentina is second with 7 1-2 per cent, the United States third with 7.2 per cent. In cattle, India leads with 25 per cent, the United States is second with 13 per cent. Supply and demand coupled with the influence of transportation costs will always govern live stock prices.

THE WAY TO BEGIN.

Use high-producing cows to raise calves from if you can, but use a good bull without fail.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

MONUMENTS F

COMPLETE STOCK. WRITE FOR DESIGNS and prices. Inland Monument Co., N1001 Monroe, Spokane.

HELP WANTED—Female 1

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

The first time we met John Worth, the leading character in this story, he was taking an active part in preparing the little frontier village of Bismarck, N. D., to withstand an Indian attack. We next saw him playing the part of a man, although he was only 12 years old, in defending the village when the warriors appeared.

After the Indians were repulsed by the frontiersmen under the leadership of Jim McKenzie, the sheriff, and order was restored, Mr. Worth, John's father, set out for the north to search for outcroppings of coal, he being a miner as well as a freighter. He returned with news of Indian uprisings that made the establishment of a camp unwise, but when peace was somewhat restored he led a party northward. It was a great day for the boys when the wagon train started across the wild prairie, but the first few hours out brought an experience that they long remembered. They rode away from the party for a swim in the river, and when they came back to where they had tied their horses they found them gone. Afoot they started after the outfit, now miles ahead and it was late at night when they wearily dragged themselves into camp and went to bed after a supper of cold beans and coffee.

They finally reached their destination. The mine was opened and worked throughout the winter, during which the boys enjoyed many sports in the adjacent region. The following year, however, camp was broken and the start made for a new mine far to the westward.

The trip westward was filled with interesting experiences for the boys, who supplied the travelers with fresh antelope and buffalo meat. Upon arrival at the new mine, John became an employee below the surface of the earth. The pleasure of his work and play was greatly dampened by the accidental death of his closest partner under a slide of coal in the mine.

The boys became well acquainted with the Indians on their rides over the prairies after the camp's livestock.

CHAPTER VIII.

A Close Finish.

"Boys, you'll have to go and hunt those spare mules tomorrow; they haven't been seen for a week." Thus Mr. Worth greeted the boys as they came shuffling in after a long day of mingled work and play one evening not long after the buffalo hunt.

The following morning the youngsters mounted their horses, after completing their early chores, and started out. "Where shall we go?" asked Ben.

"Let's look among the Indians' ponies; those mules are always following their cayuses around." The plan was no sooner made than executed. They trotted along the edge of the river for several miles, the crisp morning air acting like a tonic on horse and rider. Baldy was too old and dignified to be foolish, but his springy stride, wide-awake look, and quick response to each word or urging betokened his good condition and enjoyment. Ben's horse, a little bunchy cow pony with an occasional wicked streak in him, danced about as if he were worked by electricity and the current was being turned on and off.

The ford reached, the ponies waded in till the boys had to cross their legs in front of the saddles to keep from getting wet.

On the other side they found a bunch of a couple of hundred horses, and as they drew near the herders came charging down on them. They feared horse thieves, but John explained matters, and after a long sign-language talk learned that there were six of the long-eared runaways tied at the camp. They had been put there for safe keeping, since they had been killing colts and were in danger of being roughly used by the horses in consequence. A grown "pony," though generally smaller, will drive out a mule in short order, and these plucky little animals are never afraid to tackle their vicious antagonists.

The boys went back on the opposite side of the river from which they had come until the camp was reached.

They found the Indian village all agog with excitement, and for a time could not get any of the braves to answer their inquiries about the missing mules. A horse race was to be held, and the usually stoical bucks could for the time being think of nothing else.

The whereabouts of the missing animals was learned before long, however, and an Indian went with them to see that they really belonged to the Worth outfit. On their way they had to pass straight through the village of several hundred tepees, and many were the greetings of "How!" that were shouted to them.

On the outskirts of the camp many braves were standing around, making bets, grooming their horses, and comparing notes. Little redskins darted everywhere in and out between their elders' legs and shouted shrilly to each other. The boys found it hard to go on to attend to their errand, and though neither said anything for a while, they looked appealingly at each other. "If we find the mules belong to us," said John, finally, in answer to Ben's questioning look, "we'll take 'em part way back, tie 'em, and then come here and see the races." So they went on reluctantly, leaving the gesticulating, grunting crowd behind them.

The captive animals were, as they hoped, the ones they had been seeking, and if the guide had any doubts of their ownership the big "W" branded on the shoulder of each beast soon dispelled them. "Lucky there's a fort near by," said John. "We'd never have seen those critters again if there hadn't been." The mules were driven back to a point convenient of access on the trip back to the mine and tied securely. Then both boys rushed over to the course as fast as their ponies could go.

Nothing had changed; the men still talked excitedly, and on either side of the level space where the horses were to run lay little heaps of personal belongings that had been bet on this or that horse—saddles, blankets, gay bead-embroidered moccasins, and belts, rifles and cartridges.

As the boys drew near, old Wolf Voice started toward them with greater speed than befitted a chief of his dignity and years.

"You got white-faced horse?" he shouted as he came near. "You run race? Me bet you now, me beat you." The grave old buck was almost childish at the prospect of racing a running horse.

Before answering, John looked over the horses that were to compete, and then consulted with his brother. "What do you think?" said he. "Wolf Voice is crazy for a race, and I think Baldy can beat anything here."

"But we haven't any money," said Ben.

"Me bet you poney, you bet um poney," said the Indian, coming up at this instant and speaking as if in answer to Ben's remark.

John would not put up Baldy as a stake for anything in the world, but he took off his saddle. "I'll bet saddle against your ponies," he said, pointing to two horses a boy was leading forward. The old brave demanded more, so John added bridle and silver-mounted bit to the pile; still he was not satisfied, but John refused to give anything more. Wolf Voice haggled and demanded larger stakes on the boy's part and finally pointed to his spurs; these were unbuckled and thrown on the ground, and at last the bargain was completed.

At this juncture Big Hawk joined the group. He was eager to bet against Baldy, but all John's possessions were already pledged. It was a trying situation for the boy, for he wanted to get even with him, and he felt sure that his horse would win. A happy thought struck him.

"Say, Ben," he called out. "Lend me your saddle to put up against Big Hawk's pony. I haven't got anything left." The younger boy was also eager to pay back the young brave for his work at the buffalo hunt, so he complied with this request unhesitatingly.

The wagers arranged, John looked to his horse. Baldy was now without saddle or bridle, but his owner speedily made a hackamore or halter out of a piece of rope and climbed on his back; he had decided to ride bare-back.

A number of braves were clearing the course for the racers, who had already lined up at the starting point, but old Wolf Voice rushed down and asked them to wait a minute for the new entry. In the meantime John was trotting up and down, warming up his mount. In a few minutes Baldy was in his place with the others. The horses all knew what was to be done, but Baldy did not become excited and tire himself as did some of the others.

They all lined up a hundred feet from the starting place. The course, which was merely a level, grassy place, stretched out invitingly before them; the Indian spectators formed the boundaries on either side, their usually impassive, dark-red faces working with excitement. At a word from the starter the horses went forward at a trot, then changed to a lope, and were breaking into a run when, a few yards from the scratch the boy riding Wolf Voice's bay shot out of the line and ahead. Of course they had to be called back, and the boy was sharply reprimanded for spoiling the start.

Then again the horses started and came down to the scratch steadily. At the starter's yell of approval, they sprang ahead with a dash.

After the jolting scramble of the start, John began to plan his race. He pulled his horse out of the bunch and ran on the outside. Baldy and he were about the middle of the string as the fast ones led away. The little bay, which was the old chief's pride, led, running beautifully; at his heels was a big gray, fully holding his own. The distance of half a mile was more than half covered and both bay and gray were ahead of Baldy, who was third and well in advance of the bunch. The crowd was yelling wildly, each man shouting encouragement to his favorite in a way that would make an eastern baseball "rooter" turn pale with envy.

John lay down closer upon his horse's neck and chirped gently in his ear. There was a perfect understanding between them, and the old steed stretched out his neck a little more, laid his ears hard against the side of his head, and set out to overhaul the leaders, now running nose and nose. Baldy's long stride told, and he gained steadily, but the race was not yet over. If he could get abreast of the two leaders John knew that he could win out on a 20-foot spurt if need be—he had done it before.

It was but 50 yards from the finish. The two Indian ponies were tiring, but they kept up the pace gamely. The crowd was yelling insanely, uttering threats, encouragements, entreaties in the Indian dialect, which neither John nor Baldy understood; but just at the critical moment a clear, shrill voice rose above the din: "Now, Baldy, hit it up! Get a move on, John!"

Horse and rider braced. John set his lips tighter: they were gaining, gaining perceptibly each second. The two leaders were whipping their ponies spasmodically, but John and Baldy kept their heads. Now Baldy's nose was on a line with the gray's hind quarter, now even with his shoulder, and now all three horses were running as if harnessed in one team. And still he gained. John was becoming excited and raised his quirt. "Come, Baldy, do it!" he cried, and at the same moment brought down the lash on him. The game old horse responded magnificently. A few great jumps and they gained three-quarters of a length. Another instant and they dashed past the finish line. Baldy had won!

John slipped from his back and patted his nose affectionately. "Good work, old chap. I knew you could leave that lot of cayuses behind."

"Hurrah for you, John!" cried Ben as the victors drew near. "Baldy, you're a trump, sure enough."

The boys were soon the center of a circle of red faces, excited, threatening, joyful, or merely interested, according to their bets. All were anxious to race again, but John refused. Realizing that he and Ben would be expected home, he broke through the ring, put his saddle and bridle on one of the horses he had won from Wolf Voice, mounted, and started off, leading the other two and Baldy. Ben managed as best he could with the mules, and so they returned to the mine, the richer by three ponies, several trinkets, moccasins, etc. It was not till a good deal later in life that the boys learned how much better worth while it is to race merely for the sake of the sport itself, and what a surprising amount of trouble a man can bring on himself and other people by forming a habit of betting. At present they unthinkingly followed the examples of the rough men around them.

In the year and a half that was spent at this mine on the Yellowstone many opportunities were offered for Baldy to show his speed, but the redskins had learned caution and were never again so reckless as on this memorable occasion.

The friendly feeling between the red and the white boys grew as time went on, and many excursions were taken in company. The Indians told John and Ben things about birds and beasts of which they never dreamed, and showed them games that were a constant delight. They made a kind of combination spear and skate from the curved rib of a buffalo to the end of which were fastened three feathers; the highly polished convex surface offered little resistance to the ice, so the whole could be thrown a long distance on the glassy surface. The Worth boys grew to be very expert throwers of this queer bone skate, and many were the exciting matches they participated in.

Our boys in turn taught their coppery friends some civilized games. Trials of strength and skill were frequent, and in most of them the honors were about even. While the red boys could give points on the art of wrestling and never lost an opportunity to show their superiority, the Worth youngsters got even by initiating them in the "noble art of self-defense." John put in practice the points given him by Tom Malloy, much to the discomfiture of the Indian boys and the corresponding satisfaction of his teacher and the men of the mining camp.

The new sport did not become popular, however, in the redskins' camp; John was too successful—his opponent was invariably worsted.

And so the days passed, with more work and less play perhaps, than most boys are accustomed to. Many pleasant evenings, after the day's work was done, were spent by the men telling yarns. John and Ben slipped out often, joined the group, and listened eagerly to the tales that were told. It was on one of these nights that Charley Green told a tale that entirely eclipsed Munchausen; a tale that would never have occurred to a westerner.

"You know Big Hawk?" he began, looking at the men around him and then out of the corner of his eye at John. "Well, Big Hawk has seen the boys, and especially John, box, and made up his mind that he could do something in that line himself—at least that is my idea of his method of reasoning." He interrupted himself to explain: "He challenged John

It was a trying situation for the boy.

Bits of Fun For Everyone

Yeah-r.

Winter can not jump to summer without a spring, and
Summer can not jump to winter without a fall.—Boys' Life.

Soft Answer.

He—I suppose when all women vote the party managers will have to put handsome men on their tickets for candidates.

She—What makes you think women will demand handsome men to vote for when you look at the kind most of them marry?—Farmer and Breeder.

As Elucidating.

Efficiency Expert Barr—That's funny. I've been studying this business chart for an hour, but I'm unable to discover what it means.

Mrs. Barr—No wonder. The baby scribbled that.—American Legion Weekly.

Lucky.

Archie—That's a very nice engagement ring that Phyllis is wearing.

Reggie—Yes, I've been quite successful with it, you know. Five girls have worn it already and all I've paid on the thing so far is $6 down.—American Legion Weekly.

Some Mistake.

The telephone in a well-known surgeon's office rang and the doctor answered it. A voice inquired, "Who is this?"

The doctor readily recognized the voice of his 7-year-old son. Although an exceedingly busy man, he was always ready for a bit of fun, so he replied:

"The smartest man in the world."

"I beg your pardon," said the boy, "I have the wrong number."—The Austin (Texas) Cumberland.

An Exchange of Courtesies.

One of the young bloods of the town recently invited a beautiful young siren of the merry-merry to dinner. She belonged to that section of Broadway sisterhood classed as "beautiful, but dumb."

When the young man met her he became gurglingly enthusiastic.

"My gracious," he said, "you look like a bit of rare old tapestry.",

"You're not so snappy-looking yourself," she retorted.—O. O. McIntyre in St. Louis Globe-Democrat.

The Silver Lining.

"Mister," began the seedy-looking man, "I haven't got no home and——"

"No taxes to pay?" interrupted the man addressed, "no coal bills! no worry lest the landlord raise your rent. Permit the to congratulate you."

"I have no job and——"

"Lucky chap! No danger of getting fired."

"But I'm serious, mister. I have no money and——"

"No temptation to spend it foolishly on able-bodied beggars. Why, you're the very child of fortune. Good-day!"—Boston Transcript.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

IF SHE BUT KNEW!

If mother only knew how I regret
The anxious hours, the worry and the fret
I gave her long ago. If she could see
The tears I shed all unavailingly
To my sad wish, I should not call in vain:
"Mother, come back! Forgive me once again!"

If she could only know how tenderly I prize
Only the memory of her dear eves—
How all her words seem holy as a prayer,
And how with tears and sad repental care
I've tried to be like her, both brave and true—
Ah, if she knew! If mother only knew!
—LILLIE E. BARR.

Experience Letters

Dear Mrs. Barland: I am the mother of three fine boys and a little girl, so enjoy reading what the young people write. I like the frank way E. A. B. introduces himself; he has a strong will, a love for fun, and an appreciation of worth. Try this, E. A. B.: Take that nice girl to a good show, watch the show closely, learn the big moments, the high morals and the real value of the story. If you don't find real fun reviewing together the story, the comedy, the tragedy, the costumes, in fact, the whole show, you are out of tune with life. Climb to the highest peak, play tennis or any game you both can play. It is the sweet memories of the real things that bring joy as we travel on. Whatever you have seen that you liked, that nice girl will like to hear you tell about it. Let her laugh with you, tell her your hopes and plans. Remember that the nice girl does not forget, and that it is hardly a safe game, or a fair one, to spend your play time with the wild girl and expect to marry the good girl.

Each day we paint a bit of memory's picture.
We paint it fast, nor can it be erased.
Let's paint it bright with joy, and fun and laughter.
Ne'er dip our brush in shades of doubtful hue.
Let not our brooks show murky, in our picture,
But clear, like mirrors we may look into.
And looking back, see joy and fun and laughter.

I like the suggestion by J. W. The good things we do may be very interesting and helpful also. The best way to overcome the unpleasant is to give more thought to the pleasant. M. S.

Family Circle Girls

Dear Mrs. Barland: I live on a 220-acre farm, one-half mile from town. Though this is the first letter to the Circle, I have not been asleep as to its happenings, as I have read every letter with a great deal of interest.

I am glad to know that there are yet many real girls and boys. By real girls and boys I mean girls who are not flappers and boys who are honorable, manly young men. These kinds have at times seemed quite scarce, but if one looks long enough they can be discovered.

I liked the letter by the young man, H. K., and hope it will help every girl who reads it. I think it is very nice of you, H. K., to be so frank, for we girls are not mind readers, you know. The next time I write I shall give a girl's view of boys.

I do not believe in any mushy love business between boys and girls, but I think it a fine thing for a girl to have a good boy friend, a regular "pal." I don't think a girl should think seriously about a boy until she has finished her education. (I don't intend to.) I was graduated from high school last June and intend to go to college this fall.

I should like very much to have the question of education, suggested by "Happy Daisy," discussed by the Circle. If some one will lead, I shall join in.
GERTRUDE K.

Dear Mrs. Barland: I wonder if Sis from Tulip Town always does that much work. I believe in a girl doing her part, but I don't believe in spoiling a boy by doing work which wouldn't hurt him to do and would probably do him good.

I have two brothers, both younger than I, and they do the milking and other chores while I do my work.

I think the subject mentioned by Happy Daisy a good one and no doubt the girl she alludes to will be helped by the discussion. It is hard to have an opinion when one knows nothing of the circumstances. I imagine from what Happy Daisy wrote that the girl will have to board away from home. If so, she might write good, long weekly letters to her father, and, if possible, she should go home for the week-ends and, of course, should spend all holiday seasons with her father. In answer to the question: "Under what circumstances should one sacrifice his education," will say there are two words which would answer, and they are health and wealth.

One sometimes has to sacrifice his education on account of his own health and sometimes on account of the health of some member of the family. I think every one who possibly can should go through high school, providing he is going for the actual good he can get out of it. Some go, it seems, just for the good times to be had. I believe in the good times, but not in neglecting studies to have the good times. I don't believe in running out nights and losing sleep and unfitting one's self for the school duties.

I don't consider it advisable for girls to to go with strange boys nights, nor for girls as young as 11 and 12 to be going out with boys. I know several who do. What do the rest of you think about it? From the letters in the Circle it would seem that there are not many of the flapper kind of girls and I hope there are not. I believe the larger percentage of the girls are of the better class.

With best wishes to all, "MICKEY."

This voices the sentiments of one of the younger girls, but one old for her years.
A. W. B.

Dear Mrs. Barland: Do you mind if children of 14 write to your column? I have lived in the country and the city and like both places.

I don't think there is enough enjoyment planned for children living in the country. The only time we meet is at school. I believe there should be a party planned at least once a month in the school buildings or some place. We could have a little dance and some games and a general good time.

The girls in my school seem to have more cliques or sets than the boys do. In my room the boys have one set and the girls two; there are really three, the "popular set," the "unpopular set," and the set that tags the "popular set." It seems to me that the majority of the girls in my room are snobs.

I have plenty of friends, but not many in this community and I am just like "Lonesome" in that way. I wish some of the "popular" girls would send in a recipe for friendship, if there is such a recipe.

I don't seem to understand the poor little flappers, but they have my heart-felt sympathy. The flappers' letters seem funny to me, but maybe I don't understand as I am too young.

My brother and I are great chums and always have good times together during our summer vacations. We have a beautiful farm and have many pets for company. I like to be kind to all animals and to have them trust me.

I have known many boys and girls to come home from Sunday school and then go out and steal fruit and other things. Sunday school doesn't seem to do them any good and I think they need to be taught the 10 commandments week days as well as Sundays, from the way they talk and act. "DICKEY."

Family Circle Boys

Good Morning, Mrs. Barland: May I come in? I have wanted to do so for some time, but didn't seem to have any right until lately.

I want to tell the bachelor from Oregon my way of making bread, which I think will do away with lots of work for him.

First, get a large pan, called a bread rising pan; it has a cover with holes in it. At noon put two yeast cakes (I use yeast foam) in a teacup of water. After supper sift about one and one-half gallons of flour into another large pan, take two quarts of warm water, one small teacup of melted lard, two heaping tablespoons of sugar, one heaping tablespoon of salt, and to this add the yeast foam that has been soaking and mix all together.

Warm the flour before you begin and make a large hollow place in the middle of it before you pour in the liquid mixture, stir it into a hard lump and knead hard for half an hour. Next grease your bread rising pan and put the bread in it. Put on the cover and fold a clean blanket or quilt four double, set the pan in the middle and fold in the corners. At 4:30 or 5 o'clock the next morning my bread is ready to make into loaves, which I do the first thing. This will make eight loaves and I place them around the stove and bake as soon as they rise to double their size. It is all baked by 7 o'clock, before I start to the field. This will last me a week. After the bread is cold I put it into a tin wash boiler with a tight lid and it keeps well to the end of the week.

My letter is pretty long and I will close, wishing all my bachelor friends success with my way of making bread. I read the Circle and get much good from it.
Washington. B. P. L.

Babyhood

Baby life is a brook serene
That joys to mirror a larger scene.
Tiny tragedies make great plash;
But, sudden, merry the ripples flash.
—Julia M. Martin.

Just Folks

Experience hinders as well as helps.

Academic wisdom can solve any problem.

He who can not enjoy details can not enjoy life.

It was my privilege to be present at the Harding memorial services in the armory in Spokane. To me one feature of the services outweighed all the other features. It was the brief period of silence when the crowded audience of 3000 souls bowed their heads in common with memorial audiences throughout the country at the concerted time. The newspaper report of the meeting says: "Not a sound could be heard in the armory and outside a strange calm was felt."

Here was one time and place when Catholic and Protestant, when Jew and Gentile, when Greek and Barbarian could unite in spirit, each according to his own conscience, and pay that homage which death exacts from all.

It seems almost as that summons to silence had come down all the way from the Prophet Zechariah, who exhorted: "Be silent, O all flesh, before the Lord."

That silence is deeper than speech has been acknowledged in all ages; "the silence that is in the starry sky," and that silence which "is deep as eternity."

Babel voices are playing havoc with national affairs, with our own daily lives, and the oncoming of periods of reverent silence are imperative.

We have not cultivated the silences as we should, nor appreciated what they could do for us. E. A. S.

Extension Service at the Fair

(Continued from page six.)

altering the commercial pattern, showing the type of dress for slender, ideal and stout person and proper and improper dress.

I started some berry bushes this year. How should I train them?

All the latest methods of training raspberry and loganberry bushes will be seen in the horticulture booth. These may be examined and studied.

What would it cost me to drain some of my land, and where can I find out about drainage?

Drainage costs and the results you could expect to receive if you have the soil may be studied in the exhibit. A number of home-made devices, to be used on the farm in running levels and working around drainage ditches, may be seen which will help you in your everyday work.

Will all the exhibits be in chart form, or will there be some action?

Considerable action has been added to the exhibit this year. For instance, in the farm management booth it will show a hen laying an egg, and for every egg she lays it will give the cost of feed, upkeep and profit. Watch the hen and find out how much you can make on chickens.

Why does the extension service of the college send out an exhibit each year?

It is the function of the extension service to take the facts secured by the experiment station, good farm practices and other facts determined by the United States department of agriculture and give them to the people. Exhibiting at fairs is one of the most effective methods of having people see and learn.

HOOK ONTO THE WIRE.

If there is a power line in your community, hook onto it and install some electrical devices in your home. Or maybe you can afford an electric plant of your own.

High Points in News of the Week

Had Warren G. Harding lived but a few weeks longer he would have witnessed the formal ratification of the treaty which he had in mind between the five leading maritime nations of the world when he called the international conference early in his administration to consider the limitation of navies.

Last week official representatives of the United States, Great Britain, France, Italy and Japan met in Washington, D. C., and formally deposited their respective governments' ratifications of the treaty. As a result, the destruction of war vessels in various numbers by these governments will begin immediately, as provided in the treaty. The ratio of capital war ships between these five countries as named above is provided in the treaty to be 5-5-3-2-2.

The ratification of the treaty recognizes a reservation made by the United States, namely, that this country shall not be bound to use military force in international controversies to which it is not a party, under the terms of the four-power Pacific treaty, which is also now in effect. This four-power treaty, which is between the United States, England, France and Japan, provides that war shall not be entered into between any of these four nations until the four shall first have consulted in a formal hearing in an effort to settle the controversy without resort to arms.

Under the navy limitations treaty this country and others have already ordered the cessation of construction works in their navy yards.

Friends of world peace believe that these two treaties will go far toward guaranteeing the future peace of the world, though none is so bold as to see in them an absolute preventive of war.

* * *

There exists in this country today an organization called the Association Against the Prohibition Amendment. Under its leadership the fight for the return of liquor through the modification of the Volstead enforcement act or the ultimate repeal of the prohibition amendment to the national constitution is being made. This organization last week sent broadcast a statement of their plans for the campaign to gain control of congress next election. This statement reads as follows:

"The Association Against the Prohibition Amendment won a real victory in the 1922 election.

"Conditions are favorable for a more impressive triumph in 1924 and we believe that you will be interested in our plans to this extent.

"As the political situation stands, our organization has an excellent opportunity to graps the balance of power in next year's political contest by working now to awaken public sentiment in such 'pivotal' or 'key' states as Massachusetts, Connecicut, New York, New Jersey, Pennsylvania, Maryland, Ohio, Illinois, Wisconsin and California.

"The states mentioned contain 45 per cent of the population of the country and all are more or less favorable to the repeal of the Volstead law. It is the task of the association so to organize these states that it will be for the party that wins them in 1924 to make concessions along the line of repealing or modifying the present prohibition laws."

* * *

The department of labor last week announced a continuation of the downward trend of the prices of general commodities in the United States. Since the first of April, according to the report, the decline in general prices has averaged 6 1-3 per cent. The principal declines were in fuel, lighting material, cloth and clothing and certain agricultural crops, notably wheat.

* * *

The movement is still under way to settle by arbitration the controversies between the anthracite coal mine operators and the miners, which threatens to cause an anthracite coal strike beginning September 1. Chairman Hammond of the United States coal commission summarized the situation as follows last week: "It would be suicidal for either party to assume responsibility for the suspension of industry, and I have too high a regard for the operators and miners to think they could commit such egregious folly. And yet, such things have been done."

* * *

Premier Poincare of France has made it clear that it is the intention of that country to pay its war debts to the United States regardless of collections it may be able to make from Germany.

* * *

An election is soon to be held to fill 153 seats in the parliament of the new Irish Free State.

* * *

An explosion in the Kemmerer coal mine at Kemmerer, Wyo., last week resulted in the death of 99 miners.

* * *

The war department is reported to have included in the budget which it will ask for the next fiscal year $1,500,000 for improving fortifications at the Panama canal.

Farm Business and Markets Outlook

(Continued from page five.)

Prices per ton, in carlots—Chicago—No. 1 timothy, $25@27; No. 2, $21@25; No. 1 light clover, mixed, $21@25; No. 1 clover, $19@22; No. 2 clover, $14@18; No. 1 and choice alfalfa, $16@25; midland prairie, $16@18; rye straw, $13@14; oat and wheat straw, $10.50@11.50.

Good Eggs Remain Firm.

Prices on top quality eggs are firmly maintained because of limited supplies. General quality of receipts is beginning to show improvement, although most of the arrivals are still irregular. Receipts are running slightly behind the volume moving into consumptive channels and withdrawals of short held stocks in storage have been made to supplement the supply of good eggs. Excess holdings over last year of 229,000 cases, as shown by the preliminary report of 10,390,000 cases on August 1 this year, were the largest on record and compare with 10,161,000 cases in 1922 and a five-year average of 7,811,000 cases.

Butter Market Steady.

A shortage of only 2,182,000 pounds of butter in cold storage holdings on August 1, compared with a year ago, as shown by the official report on warehouse holdings, was far out of line with the general expectancy of the trade. However, consumption remains excellent and the output of butter is falling off considerably each week and consistently running behind a year ago, so that prices are well maintained, even in the face of the "bearish" report.

Cheese Prices Sustained.

With a good demand for cheese for both immediate consumption and storing purposes, prices remained firm last week. Stocks of cheese in storage on August 1 aggregated 55,526,000 pounds, the largest on that date since 1919, and about 20 per cent larger than last year. Prices on No. 1 American cheese on August 15 were: Chicago, Twins, 23@23½c; S. Daisies, 23@23½c; D. Daisies, 23@23½c; Longhorns, 24@24½c; square prints, 23½@24c.

Fruits and Vegetables.

The white potato crop forecast amounts to about 3½ bushels per capita, or about the same as 1921 and 15 per cent less than in 1922. On this basis a favorable season for the grower appears probable. Yields in the important states show decreases of 10 to 33 per cent below 1922. Carlot shipments for the season to August 13 total 40,905 cars, compared with 54,851 cars to the same date in 1922. Shipments are running rather light at present and prices are holding fairly steady. Irish Cobblers, U. S. No. 1, are quoted at $2 to $2.10 per 100 pounds in Chicago and at $1.35 at Colorado and Idaho shipping points.

The apple crop promises to be a good one in spite of reports of an extremely heavy summer drop. The commercial crop is about 2,000,000 barrels larger than last year, the increase being located mostly in the Pacific coast states, Michigan and the Virginias, while New York shows a decrease.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Aug. 18.—Cattle—Choice steers, $7.25@8; medium to good steers, $6.75@7.25; fair to medium steers, $5.75@6.75; common to fair steers, $4.75@5.75; choice heifers, $5@5.50; choice cows and heifers, $4.25@5; medium to good cows and heifers, $3.75@4.25; fair to medium cows and heifers, $3@3.75; common cows, $2@3; canners, $1.50@2; bulls, $3@4; choice dairy calves, $9@10; prime light calves, $9@10; medium light calves, $8@9; heavy calves, $5@8.

Hogs—Prime light, $9@9.50; smooth heavy, 230 to 300 lbs., $8@9; smooth heavy, 300 lbs. and up, $6.50@8; rough heavy, $5@6.50; fat pigs, $8.25@8.75; feeder pigs, $8.25@8.75; stags, subject to dockage, $2.50@5.

Beef—Steers, fancy, 7c per lb; cows, fat, 5c per lb.

Farming State of Mind

(Continued from page five.)

in state on a flat car loaded with harvest machinery. They cluster openly about every station and boldly swing aboard such trains as they pick to ride.

"In Moorhead, Minn., I ran across the trail of Aaron Sapiro, expert in cooperation, who is assisting in the organization there of county and state potato marketing associations. The work was already well in hand, with a prospect that considerably more than 50 per cent of the potato acreage would be signed up before Sapiro returned in September. In Fargo, N. D., the merchants were arranging for a big dairy day, when the importance of dairy products would be emphasized in a striking parade and the importance of dairy farmers would be shown by many special attentions to those who visited town that day.

"Crossing Montana, I learned of new agricultural practices being put into effect in the north which state college authorities said would have made farmers there incalculably wealthy had they been used during the last 30 or 40 years, instead of the practices transplanted from the middle west. Among other things, they are learning to trap heavy winter snows, and to melt them in the spring where moisture is most needed, instead of allowing them to blow innocuously on into Canada."

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

In the course of a year very many persons write to me for advice about skin troubles. One particular ailment is the topic of many letters. This is the disease called "psoriasis."

Dr. Copeland.

There are several diseases of the skin characterized by redness of the surfaces and more or less extensive scaling. The chief of these is the one under discussion. In this trouble there are round, well-defined patches of redness, covered with scales, silvery in appearance.

The affected spots are raised a little above the natural level of the skin. The scales can be scraped off easily. When cleared the surface may show a few bleeding points.

It is not uncommon to find the knees and elbows affected. Sometimes the scalp is the seat of trouble. The palms of the hands and the soles of the feet are rarely attacked. Occasionally the fingernails are included in the invasion. Indeed, any part of the body may be diseased, although psoriasis rarely appears on the face.

There is little itching, as a rule, and the affected parts are dry. The disease has been described as looking as if mortar had splashed the surface and dried there. Sometimes a patch of "psoriasis" will heal in the center, leaving a ring of diseased skin. No scars are left after the sore spots have healed.

In local treatment the skin should be soaked in a solution of hot water and soft soap, to which has been added borax or bicarbonate of soda. With this solution and a hard brush all the scales should be removed.

Then ammoniated mercurial ointment may be applied. Five grains of salicylic acid may be added to an ounce of the mercurial ointment, and this may be applied locally.

The patient should have a low protein diet, avoiding eggs, meat, fish, fowl, liver and the other high protein foods.

The X-ray has been found useful in many cases. It is to be thought of especially if the patches are very small.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent dircet from the east, and under present mailing conditions it takes abcut that time for them to reach you.

3979-4265. Ladies' costume. Waist 3979, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4265, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make this dress for a medium size will require 5 3-4 yards of 36-inch material. The width of the skirt at the foot is three yards. Two separate patterns, 10 cents for each pattern.

4469. Child's apron. Cut in four sizes: 6 months, 1, 2 3 years. To make the apron in either size will require three-fourths yard of 24 or 27 inch material. Price 10 cents.

4470. Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. An 8-year size requires 2 3-4 yards of 32-inch materail. Price 10 cents.

3980. Child's dress. Cut in four sizes: 1, 2, 3 and 5 years. A 3-year size will require 1 1-2 yards of 36-inch material. Price 10 cents.

4098. Ladies' apron. Cut in three sizes: Small, medium and large. A medium size requires 2 1-2 yards of 36-inch material. Price 10 cents.

4179. Ladies' house dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 5-8 yards of 32-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

4455. Ladies' dress. Cut in seven sizes: 36, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 5-8 yards of 40-inch material. The width of the skirt at the foot is 2 1-4 yards. Price 10 cents.

4451. Ladies' coat. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 1-8 yards of 54-inch material. Price 10 cents.

4467. Boys' suit. Cut in four sizes: 3, 4, 5 and 6 years. A 4-year size requires 3 1-4 yards of 27-inch material. Price 10 cents.

4461. Ladies' night dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3 5-8 yards of 36-inch material. Price 10 cents.

4465. A pretty blouse. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires two yards of 32-inch material. Price 10 cents.

4481. Ladies' skirt. Cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make of one material requires 3 3-4 yards 40 inches wide for a medium size. The width at the foot is 2 1-2 yards. Price 10 cents.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1923-1924 book of fashions.

New "Lift" on Hills

—A Feature of Non-Detonating Gasoline

There are two kinds of explosions from gasoline. One is instantaneous, crashing, **detonating.**

It smashes against the piston, hammering it down with the single blow.

Having a tendency to explode prematurely, detonating gasoline reduces compression. Thus power and efficiency are lowered.

"Knocking" frequently is the result of detonating gasoline, especially on hills. And the increased vibration means increased wear and tear.

The Sustained Thrust

You get the other kind of explosion from Union **Non-Detonating** Gasoline—a progressive and prolonged explosion. The impulse is sustained, **thrusting** your piston throughout the entire stroke.

This permits increased compression, for compression is limited by the tendency of a gasoline to **detonate.**

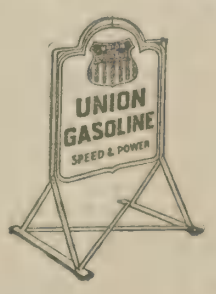
And efficiency and power increase with added compression.

Try It on Hills

With Union **Non-Detonating** Gasoline your car will improve on hills. It provides a new "lift"—steady, sustained power.

You'll also note new speed on the level, new rush in the pickup and less vibration at all times—less wear and tear.

Also there is a saving in fuel due to higher efficiency in motor cars, trucks and tractors. So there are many advantages in this better gasoline.



Union is always uniform. It doesn't disintegrate, thus doesn't deteriorate in storage. All the power that goes into it at the Union plants is there to use when you want it.

Union Oil Company
of California

Union Gasoline

Alyda Tenbrink of Island county, Wash., is a new cousin. Her cousin told her about the Children's Corner. Alyda has a gray and white kitty with two baby kittens. They are blark and white.

A girl in Okanogan county, Wash., Opal Carpenter, sends in the following jokes, for which we thank her: "Is Mr. Black in?" inquired the caller. "No!" he has gone to lunch," replied the stenographer. "Will he be back after lunch?" "No! That is what he went after." Mr. White—Your dog just bit a piece of flesh out of my leg. Mr. Wells—Glad you mentioned it; I was just going to feed him. Bind, he had a little pen. He used it every day, and when he tried to fill the thing, the ink ran all astray.

Leatha Runner and her sister had fun riding on the wagon while their grandpa hauled hay. T pole stuck out from the rack in the back and while he drove from cock to cock they climbed on and rode. Leatha is an eastern Washington girl. She will be in the fourth grade next year at school.

Seven-year-old Elsie Cramer writes her first letter and we are happy to hear from her. Elsie will be in the fourth grade next year at school. She has a little brother named Robert. Elsie and Robert's pets are two kittens, a cat, three calves and a dog named Shep. September 9 Elsie will be 8. She lives in Spokane county, Wash.

A message reaches us from Rosale Staeheli, who has never written to us before. Rosale is nine and has three brothers, all younger than herself. The pet in the Staeheli home is a dog named Sport. Rosale's home is in Stevens county, Wash.

Birthday Greetings

THURSDAY, August 23.—Emma Baum, 10 years old; Pauline Robinson, 11.

FRIDAY, August 24.—Leslie Smyth, 10 years old; Grace Lenore Woodyard, 10.

SATURDAY, August 25.—Marguerite Duffy, 11 years old; Mildred Jones, 9; Artise Elaine Morris, 9; Helen Wayne, 11; Lavelle Wilson, 11.

SUNDAY, August 26.—Ruth Brown, 10 years old; Dora Malone, 9; Kenneth Sieveke, 8.

MONDAY, August 27.—Ethel Lindberg, 11 years old.

TUESDAY, August 28.—Dale Early, 7 years old; Thelma Melger, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear fro mtime to time in The Junior Farmer:

Bernice Clemons, Martha Moorehouse, Paul Fox, Mildred Brown, Delores Evans, Lemerl Birdsell, Thelma Martinson, Norma Rogers, Bessie Pendell, Otto Strom, Olive Altha Martin, Martha Steinke, Olga Foster, Mildred Gallagher, Fae Casey, Hazel Baker, Venice Williams, Myrtle Lovain Williams, Esther Weston, Nanna Hazelton, Evelyn Ellis, Carol Simerman, Gertrude Schrag, Mabel Terry, Matilda Louise Guler, Beulah E. Warren, Lawrence Rice, Madeline Wilton, Irene Severson, Earnest Long, Reuben Helmbigner.

Virgene Fife, Bertha Osborne, Lewis Gibbs, Faye Palmer, Nellie Powell, Alice Johnson, Georgia Muriel Hanson, Hazel Baker, Belle Matson, Esther Doering, Lorna Vogelaar, Mildred Waranka, Edward Wildermuth, Hulda Giese, Gus Van Der Pole, Elna and Ethel Early, Itha Bowen, Lena Schauerman, Frances Schnuriger, Gertrude Reimann.

BEDTIME STORIES

By THORNTON W. BURGESS.

MATTERS ARE SETTLED.

Farmer Brown's boy came into the old orchard whistling. It was good to hear some one who seemed happy and wanted everybody else to feel happy. he truth is there had been very little happiness in the old orchard since Bully the English sparrow had moved there.

So it was good to hear the whistle of Farmer Brown's boy, for there had been no song or whistle for days and days.

"I wonder if Skimmer the swallow has babies by this time. He ought to have. I believe I'll pay him a call."

Straight across the old orchard he walked to the tree in which Skimmer had built his nest in the summer. Just imagine how surprised he was when, as he drew near, Mrs. Bully and not Mrs. Skimmer appeared in the doorway to see what was going on. The whistle of Farmer Brown's boy stopped abruptly. "Hello!" he exclaimed. "What are you doing there? I must have a look into this. I certainly must.

"The last time I was here Skimmer was living in that house. I wonder if you stole it from him the way you steal grain from my chickens. It would be just like your impudence, too. You may be all right in the country you came from, but you're a nuisance here in America."

He walked straight over to the tree where the nest was. Such a fuss as Bully and Mrs. Bully did make! Once all the other little peeople in the old orchard would have left, oh! so sorry for any one whose nest Farmer Brown's boy had found, but now there wasn't so much as a single peep of sympathy. Although Farmer Brown's boy didn't know it, many eyes were watching him, and for the first time there was hope and not fear in them. Fear, great fear, and sorrow and anger were all mixed up together in the voices of Bully and Mrs. Bully as they flew about frantically, but Farmer Brown's boy paid no attention to them. He slipped a hand into the hole in the tree where the nest was, and when it came out it brought the nest with it.

"One, two, three, four, five, six," counted he as he spread the nest open and looked

"Hello!" he exclaimed. "What are you doing in there?"

at the speckled eggs, while Bully and Mrs. Bully cried as if their hearts would break. "If these belonged to anybody but you I wouldn't touch them," he declared. "As it is, I'm obliged to take them. I'm sorry, but it is so. If I didn't I would prove myself a poor friend of all the other birds in the old orchard. The old orchard needs them and it doesn't need you. You don't do any good yourself, or if you do it is so little that it doesn't count, and you drive away the birds who do do good. I suppose I ought to get my gun and shoot you, but I can't do that. You are dirty, noisy, useless nuisances, but you are no cowards, and I just can't hurt you. I suppose you can't help being what you are. But I can't have you driving out my other friends, so you can't nest here."

With this he tore up the nest and walked off with the six eggs. Jenny Wren sighed with relief. "Now they certainly will go away," said she.

Cattle Ranch to College

(Continued from page fourteen.)

something in this fashion: 'You heap big fighter,' he said, 'me show you.'"

The men in the circle began to grin; they were beginning to take in the joke. John and his brother gazed in amazement; all this was new to them.

"Though he is a pretty big chap," Green continued, "the kid didn't seem to be scared; he knew how to put up his hands and the big red duffer was entirely ignorant of fistic tactics. Anyhow, the boy called the bluff by responding, 'Well, I don't know, I reckon I can do you up.' Ben was sent for the gloves, those primitive, deerskin-stuffed-with-grass affairs. A space was cleared on the dry grassy bottom, and the spectators marked the boundaries. The spectators were mostly red," added Green.

"Produce a spectator," shouted a listener.

"Proof, proof, we want proof of this."

"Never mind him," exclaimed another; "go on, Charley."

"I'm not making affidavits. I'm simply telling a story," Charley explained. "Big Hawk, knowing it to be a kind of battle, had arrayed himself in full war regalia, which consisted chiefly of a big feathered bonnet and a decorative effect in yellow, red and green paint."

The group of interested listeners chuckled, but offered no remarks or objections. John and Ben appeared to be dazed.

"Tom Malloy was the referee and I acted as John's second. Wolf Voice did the same service for Big Hawk.

"When the two stepped into the ring," Green continued, "the tall, paint-decorated, feather-tufted Indian and the short, pink-skinned boy, a smile appeared on the usually grave-faced red men. I said to myself, 'Is this a Punch and Judy show or a scene from the inferno come to the surface? 'Time!' sang out Tom Malloy, watch in hand."

Green stopped to take breath, then continued:

"The two stepped to the center, and the red man decided to settle matters at once. A strong right-arm jab followed. John dodged, and the force of the blow nearly jerked the Indian off his feet, and at the same time pulled the war bonnet over his eyes. The boy took advantage of this and thumped Big Hawk on the chest. The Indian cleared his eyes and came at him like a wounded buffalo, head down, hands going like flails; avoiding them, John hit out for the nose and landed square on his beak. The buck tripped and fell on his back and the blood began to flow freely from the bruised member, mingling with the yellow and green paint, forming a very weird design. It was enough, Big Hawk was satisfied and hastened to get off the gloves and bathe his nose at the river's edge."

From time to time during the recital of this tale Green glanced at the boys to see the effect of his absurd story. That they were greatly amused was evident. Cries of "Come off!" "What are you giving us?" and the like followed the conclusion, and Charley Green subsided, congratulating himself on his vivid imagination.

The feeling between the two camps, or rather the younger members of them, was not always friendly, and the boys were glad their father came back after opening a new mine, told them that he had bought a sheep ranch, and asked them if they wanted to go to work on it. The brothers accepted eagerly, for they were possessed with the restless spirit of the westerner and were anxious for new scenes and new experiences.

Much had transpired during the long stay at the Yellowstone mine. The railroad, with its busy construction gang and its noisy, short-breathed engine, had reached and passed the little camp and had left behind its steel trail. The tracks were not used for regular traffic as yet, but the little dinky engine went by frequently, dragging flat cars loaded with rails, ties, and other construction material. The boys became great friends of the engineer, and he allowed them to ride with him in the cab of the locomotive occasionally.

It was with real regret, therefore, that one morning, as the iron horse stood near the mine, hissing and grunting in impatience to be off, the boys climbed up the step and into the cab to bid their friend, Mr. Jackson, goodby.

"What! going to pull up stakes?" he inquired. "I've got three boys about your size back in the east at school, where you ought to be," he added.

"Well," John replied, "mother has talked about school, but father says he's going to teach us to work first."

"Father's great on work," interposed Ben.

In answer to Mr. Jackson's inquiry, John said that they were to start in a day or two and would go alone, driving a buckboard; and that though they did not know the road the horses had been over it, so with that aid and the description given they would be able to find the way.

"Well, so long, boys," said the kindly engineer, after they had shaken hands and thanked him for the many engine rides, "I shall miss you."

"Same here; so long!" called Ben and John in chorus.

The little engine began to cough, the steam puffed and hissed, and in a few minutes it was out of sight around the turn.

A day or two later the boys climbed into the buckboard, and, after bidding a matter-of-fact farewell to all, started off: on a journey to a place neither of them had been to before, over a road that was entirely unfamiliar to both.

With their father's last instructions ringing in their ears, they set out at a good pace.

The 150-mile drive lasted five, long, wearisome days. Day after day they traveled, sitting still on the bouncing, rattling buckboard. The white-topped wagons that came into view occasionally were hailed with relief, for they somewhat broke the monotony of the journey; a word or two with these drivers and a question as to the location of the best grass, wood and water—camp necessaries—was all that passed, but even that was a comfort after the desolation and loneliness through which they had been passing.

On the fourth day the Big Horn river came into view and was crossed in safety. The appearance of the country changed, and the boys for the first time saw real mountains. Living, as they had been, on the flat prairies, their surprise was as great as their interest and delight at these massive hills uprearing themselves against the sky. The day following they drove up to the door of the ranch house and were received cordially by Abe Miller, the foreman in charge. In obedience to their father's command they delivered a letter of instructions, and while Abe was painfully studying this out, his hardened forefinger pointing to each word as he went along, the boys had ample time to observe him as well as their new surroundings. They saw that he was short and rather fat and blessed with the face that is apt to go with that build: it was decidedly cheerful, for the corners of his mouth turned up; even now there was a half smile on his lips, though his brow bore a perplexed frown from his literary struggle. The ranch buildings, which consisted of half a dozen rough sheds and as many more corrals, beside the ranch house or log shack, lay in a valley. On one side rose a high range of mountains, wooded to the summit; on the other, a long, rolling, grass-covered plain.

"I don't see any sheep," said John, after scanning the country in every direction.

Abe looked up, but held his stubby forefinger pressed firmly on the last word he was deciphering, as if to make sure of its safety.

"Oh, they're 25 miles down the creek now," he answered. "We only keep them here in the winter. We'll go there tomorrow; it's too late now."

By the time the ranchman had finished the letter the sun was nearing the mountain crest and the boys' appetites assured them it was time to eat. In the shack a low fire was burning, which blazed cheerfully when John added an armful of twigs and brush. While the boy was mending the fire Abe went to one corner of the cabin and from a tall pole which stood there let down part of a sheep's quarter.

"Why do you keep it up there?" asked Ben, who now noticed it for the first time.

"No flies up there," explained Abe. "Meat keeps in this climate till it dries up if the flies don't get at it."

The boys went out and sat on the doorstep to wait till the meal was cooked, for though they were more tired than they realized, they had the greatest curiosity to see everything connected with this new home.

After sitting silent a while, their heads resting on the doorjamb, their eyes on the crest of the mountain where the sun shone with its last departing glory, John turned toward his brother.

"These mountains are great. We didn't have—— Say, Mr. Miller, what's this?" he asked excitedly, interrupting himself and pointing, first to some bullet holes in the logs and then at a blood stain on the block below.

Culling the Herd

"No dairyman can cull his herd intelligently until he knows what all of his cows are doing, and there is nothing like the records from a cow testing association to give him these figures," asserts John Ford of the Novelty community near Duvall, in the northern part of King county.

"I had two cows in the herd when I began testing that I intended to butcher. I thought I would give them a trial and found that one produced 42 pounds and the other 48 pounds of butterfat per month," said Mr. Ford. "They were both young animals but did not milk up as well as I thought they should. Since I had no way of telling that they had a good butterfat test, I did not realize that they were two of the best cows in the herd. I had one cow, a registered Guernsey, that produced 50 pounds of butterfat for the month of May. She was a purebred, but I had no papers on her and had planned on selling her.

"This goes to show that a man must have some check on his cows before he lets them go, if he is going to cull them intelligently. I have always believed in three essential points to be followed for getting the best returns from the cows. They are: Breeding, weeding and feeding. It is hard to say just which one of these ranks first, but I have found that they are all very important points to watch."

Mr. Ford has 45 cows and heifers in the entire herd, and had an average fat production of 35.6 pounds for the month of May. He has a new herd bull, Chicona Hero, formerly herd sire at the Orchard Hill farm, at Redmond, Wash., owned by Dr. Park Weed Willis of Seattle. He is sired by King of the Medfields and is out of Hazel's Girl of Chicona, who had a fat production of 456 pounds and 8864 pounds of milk. This herd bull replaces a Holstein bull, and Mr. Ford expects to get some very good grade Guernsey calves that can be raised for milk cows.

There are 114 acres on the bottom and 140 acres of hill land on the Ford farm, and it is an ideal location for a dairy farm. Mr. Ford has been on the place only four years, and has built up the entire herd during that time. He expects to remodel his dairy barn, put up another silo, and have the entire place fitted as a real dairy farm, in the course of a few years.

IN REGISTER OF MERIT CLASS.

The cows in the E. O. Erickson herd of Yakima have been making creditable records, but only recently there were eight cows which met all requirements for the register of merit class. Mr. Erickson is especially well pleased with the results, since they were made with two milkings a day and just ordinary care, the cows running with the rest of the herd. This speaks well for the quality of the stock, which was put on official test.

Sultan's Figgis of Jersey Home made 11,745 pounds of milk, containing 664.69 pounds of fat, in 365 days. She produced this record as a 4-year-old, when only 384.8 pounds of fat was required for advanced registry, thus making nearly double the amount necessary to qualify.

As a 3-year-old, Sultan's Flower Girl produced 13,132 pounds of milk, containing 596.63 pounds of fat. This was a 365-day test. A good record was also made by a 2-year-old heifer. Her record was 6056 pounds of milk, containing 301.76 pounds of fat, the test being for 305 days.

Sultan's Victor Rose, made a good record for the time that the test was continued. She was sold to a Canadian buyer before the record was completed, but in 288 days she produced 8403 pounds of milk, containing 445.31 pounds of fat. The record was made as a 4-year-old.

A cow 13 years old, Vesta's Figgis, produced in 305 days 8007 pounds of milk, containing 423.37 pounds of fat. Brown Lad's Lady, 9-year-old, produced in 365 days 11,130 pounds of milk, containing 544.33 pounds of fat.

Gold Bug's Wild Rose, 5 years old, produced in 365 days 10,315 pounds of milk, testing 5.25 per cent and containing 541.93 pounds of fat. Raleigh's Beauty of Jersey Home, 6 years old, produced 10,690 pounds of milk in 365 days, containing 538.09 pounds of fat.

SOLD THROUGH ASSOCIATION.

A carload of grade Holstein cattle from Whatcom county shipped to Roy, Utah, recently makes a total of $9000 worth of animals that have been sold through the efforts of the Washington State Holstein-Freisian association during the last two months. This last car was selected by R. T. Davis of Weiser, Idaho, and was purchased by R. P. Townsend. The animals were picked from the following breeders: Ed Hoem, Snohomish; Lee Brothers, Youngquist Brothers, Mount Vernon; Hollywood farms, Hollywood, Wash., and Carnation Stock farms, Seattle.

GUERNSEY BREEDERS ORGANIZE.

On the 4th of July Guernsey breeders in the vicinity of Spokane, Wash., met at Little River farm, owned by M. H. Jerdee, near Buckeye, and organized the Spokane County Guernsey Cattle club. The following were elected to office: President, Dr. W. J. Keyes of Spokane; vice president; J. C. Trotter of Rockyford; secretary-treasurer, Mrs. Anna J. Odell of Valleyford.

Come out of the fog on this feed question

Let the light of science show you why the home-mixing poultryman can't possibly "see" what he's doing

Let's assume that Mr. Poultryman can buy his feed ingredients as cheaply as we can (which he can't). Let's assume, further, that he knows how to balance and blend them as well as we do (which he doesn't). The big point is—

What has he got when he's through? He has an egg mash, of course. But what sort of mash? Is it *exactly* the same as the last batch he mixed? Is it the same in protein? In carbohydrates? In fat? In fiber? In food essentials, such as vitamins? ..... It's hard to tell! *He* can't tell. He doesn't know. He can only guess and grope along, as a man in a fog.

Contrast this with the clear-as-day analysis of mill-made, mill-mixed Sperry Feeds and—what's the answer? The man who keeps on mixing his own feeds is only leading himself—and his profits—up a "blind alley." You must remember that all the ingredients that enter into an egg mash may test differently. All bran, all middlings, all barley, all soya bean meals, are not the same. They may look alike—but they are not. It takes laboratory analysis—nothing else and nothing less—to "show up" their real value.

Take carbohydrates for example. *Bran* may range from 53 to 61%; *middlings* from 56 to 62%; *barley* from 56 to 71%; *soya bean meal* from 26 to 30%; *cocoanut meal* from 28 to 55%; *meat scraps* from nothing to 10%. And so on—you find the same kind of variation in protein, fat, fiber, etc.

That's why the Sperry system of laboratory control—the finest on the Pacific Coast—gives you something money can't buy: It gives you the assurance, the certainty, that every time you feed Surelay, for example, your hens are getting the *same* uniform, balanced ration. No guess work; no chance of slip-up or mix-up!

It is this kind of sure-feeling and sure-feeding that makes Surelay the "cheapest" feed you can buy. Why waste time and trouble mixing feed—only to have your hoppers filled with doubts and disappointments? Order Surelay-in-the-yellow-striped-bag from your dealer, and send for the new Sperry Service Bulletin, "Why Mixed Feeds," written by Dr. Kaupp—one of the greatest authorities on feed investigation. Mail the coupon now—it's free!

Can Low Priced Wheat Be Fed Profitably?—Page 7

Would Continue Farm Protection

Thomas J. Drumheller, head of the Washington Wool Growers' association, has been appointed chairman for the state of Washington to organize nonpartisan tariff clubs to oppose proposed reductions in the protection on agricultural products.

A telegram to Mr. Drumheller from F. J. Hagenbarth of Salt Lake City, president of the National Wool Growers' association, said:

"Powerful organized commercial interests are making concerted efforts antagonistic to western producers, demanding that the tariff commission reduce the tariff on agricultural, mineral, live stock, dairy and other western products.

"To continue prosperity and enable the farmers to remove their debt burden, conditions must remain stable and unaffected by tariff changes. With this in view, we have accepted the chairmanship of the organization committee of the western tariff association, now organizing nonpartisan tariff clubs in every western state, and have issued a call signed by western governors and producing organizations for a western nonpartisan tariff congress."

Mr. Drumheller, who returned recently from Chicago, where he marketed 3500 lambs, said: "The proposed reductions, fostered by the big users of western raw materials, would injure the entire west. The tendency in the east is not to give a whoop for the farmer. The change would throw agricultural industries back where they were two or three years ago."

The present law puts a protective tariff o.. cattle of from 1 1-2 to 2 cents a pound; on sheep, of $2 a head; on fresh lamb, of 4 cents a pound; on hogs of 1-2 cent a pound; on bacon, hams and shoulders, of 2 cents a pound; on lard, 1 cent a pound; on milk, 2 1-2 cents a gallon; on cream, 20 cents a gallon; on eggs, 8 cents a dozen; on rye, 15 cents a bushel; on wheat, 30 cents a bushel; on wheat flour, 78 cents per 100 pounds; on potatoes, 50 cents per 100 pounds.

All of the foregoing farm products were without protection under the old law. It is feared by those who are opposing a return to the old law that free trade or reduced protection would put American farmers in direct competition in their own home markets with the products of Canadian farms and ranches. Dairy producers and live stock men also fear heavy imports of butter, cheese and meats from other foreign countries.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Lord Carnarvon's death was a shock to everybody. He was in the very center of the limelight. The most indifferent could not resist the glamour of his startling discoveries in Egypt. Everybody talked about King "Tut" and the splendors of his tomb.

Dr. Copeland.

Then came the news of Carnarvon's illness due to the insect bite, his attack of pneumonia, his brave fight and the final surrender to death. Added to this were the rumors of secret poisons in the tomb, the anger of the gods and the whisperings of the mystics.

To me there is not the slightest mystery about the death of this archaeologist. He was the victim of loss of sleep, of excitement, of the heat and stress of the climate, of bad air and, finally, of infection carried to him by some one afflicted with a cold in the nose or chest.

Carnarvon's resistance was lowered by all the things I have mentioned. Then came the bite and the natural illness incident to poisoning by a venomous insect, but materially aggravated by the physical depression of the man.

You see how the way was prepared for the successful attack of the pneumonia germs. Some careless friend or visitor sneezed or coughed them into the air within breathing distance of Lord Carnarvon. He became infected when his fighting powers were already exhausted.

Dissipation is a common factor in preparing the way for pneumonia. I do not mean drunkenness or carousing. I mean neglect of the body, needless waste of energy, deliberate abuse of the natural laws. You can not burn the candle at both ends and get away with your foolishness without a sharp rebuke from Mother Nature.

Abundant sleep at regular hours.
Good food at regular hours.
Exercise at regular hours.
Reasonable regulation of your regular work.
Regular inspection and repair of your body.
These are the rules of right living.

Use Washington Honey

To the Editor: As a meeting of the Yakima County Beekeepers' association, held at Sunnyside on July 25, it was decided to make a slight advance in the price of honey this season. Beekeepers in this association have been keeping some records of production costs and have found that it costs the average producer around 10 cents to produce a pound of extracted honey and put it in the 60-pound cans. Before these get to the freight office, drayage, costs of cases and advertising must be added.

The year 1922 was a hard one for Yakima beekeepers, as they sold their honey at around 8 cents, about 2 cents below actual cost. The 1923 crop is cut short at least 25 per cent, owing to damage from spray poison.

The honey crop in Walla Walla valley is said to be very short and California has no honey for export this year. Yakima valley beekeepers are very much discouraged. Many men with $15,000 to $20,000 invested in bees and equipment have to work at odd jobs through the winter in order to make a living.

Washington honey consumers should demand honey produced in Washington. It won't cost the consumer much, if any more than imported honey. H. N. PAUL.
Mabton, Wash.

NEW CHAMPION GUERNSEY.

The July report of official testing in Washington shows a new class DD senior 3-year-old) champion Guernsey. She is Bob's R. S. Royalette, owned by Valley Gem farm of Arlington, that produced 13,349.10 pounds of milk containing 641.40 pounds of fat in one year. This record displaces that of La France of Bralee, owned by Dr. A. Macrae Smith of Bellingham, and it also gives the Valley Gem farm heifer eighth position on the national roll of honor.

Hay at $10

"I may be putting the estimate too low, but I feel confident that I can raise alfalfa hay for $10 a ton," said L. T. Wilson, a farmer and stockman of Ellensburg, Kittitas county, Wash. "In fact, I figure that if a man can't raise hay for less than $10 a ton he has very poor prospects for his income.

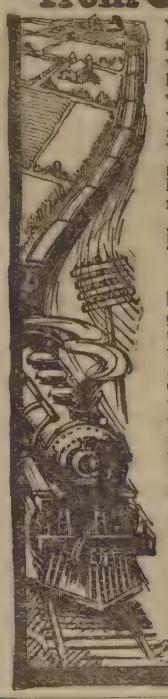
"It may be that I am working a different system than the average hay grower, but the only thing that I lay it to is that I thoroughly plan my work each day. A man must get out early every morning, get his chores done, and keep up a certain pace during the day. I figure on nine hours in the field on an average, and two hours for chores, and another two hours for irrigating. I, of course, take an hour off every day for all three meals. This schedule is for the haying season, and I try to always carry it out the same way."

Mr. Wilson has met with some strong opposition in his neighborhood, since many of the growers insist that alfalfa hay can not be produced at $10 a ton, but that the figure is closer to $12 and some even set the figure at $15. Mr. Wilson has agreed to keep a farm account book next year, and keep track of every expense incurred.

MAKE IT A REAL HOME.

Make the home worth while by eliminating a lot of its drudgery.

Opportunity Calls from CANADA



Visit Canada this summer—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near railways and towns, at $15 to $20 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

BEST TRACTORS

Plenty of Power for any Ranch Work

OVER 70 per cent side grades and 40 per cent up-hill pulls, a Washington rancher drives his Best Tractor with full load. One rancher pulled 160 inches 6 inches deep at the rate of 2⅝ miles per hour, turning 33 acres per shift with his "Sixty." With a "Thirty" pulling 42 feet of spike tooth harrow, another man harrows 100 acres in ten hours.

Wherever a Best Tractor is put to work, good accounts of it soon spread through the neighborhood.

Write for a list of Best Tractor owners in your section. Watch their machines work, and be convinced.

Southwest Washington's Big Fair Again History

Those to Follow Must Step Lively If They Would Keep the Pace That Is Set for Them

By HORACE ADDIS

With a larger attendance every day than last year, which was the record year up to that time, and with a large and well-balanced show in every department, the Southwest Washington fair, midway between Chehalis and Centralia, August 20-25, kept up its record for steady growth, improvement and success. While this fair still allows a carnival company to operate games of chance, outside of this one regrettable feature it is educational in every department. This was shown in the numerous exhibits made by the state college, the state department of agriculture and the United States department of agriculture and biological survey, as well as in the improved varieties of agricultural and horticultural products and finely fitted purebred live stock. Recreation could be had, but information and education were there for all to take.

College Has Eight Booths.

The state college occupied eight booths, where last year it had only four. And two of these were for the home. The home management department, under the supervision of Miss Minerve Lawrence, was made up to represent a home and window curtains was the subject demonstrated. Types of windows, kinds of material, combinations of materials and combinations of color and designs for three sets of curtains for three windows were shown and demonstrated. Deep interest was manifested by large crowds of women all week.

Clothing was the other department of interest to women, in charge of Miss Belle Elger. It demonstrated the making of patterns for home use from commercial patterns and made plain how to dress well with homemade plans.

A very interesting booth was devoted to drainage, with A. B. Crane, specialist in that department, in charge. It had two homemade levels and a cheap commercial level. Two kinds of tile and special drainage tools, to make drainage work easier and better, were shown. A large picture, from a dual photograph, illustrated a field drained and yielding 100 bushels of oats per acre, and a successfully drained orchard. A box drain for use where tile drain is not practical in peat soil was exhibited.

The horticultural exhibit, with M. D. Armstrong in charge, showed only berries and illustrated the value of fertilizers and the correct method for training. "A berry patch must be fed" was the legend at the top of the exhibit. Soils deficient in humus, nitrogen and phosphorus are supplied by manures, vetch cover crops and superphosphates.

Don Magruder was in charge of the dairy booth, as well as in general charge of the college exhibit. "A good cow is worth three times as much as an average cow," the reader was informed, and the proof was in charts on feeding and production and showing the results of cow testing associations.

Feeds for live stock occupied another booth, with C. M. Hubler in charge. Feeds for growing and fattening were given. That "better rams mean better lambs" was proven by illustrations.

Poultry was an important booth, with W. D. Buchanan, poultry specialist, in charge. The value of raising high producing hens was shown; trap nesting systems were explained and suggestions were made for encouraging greater consumption of eggs. Three types of hens were shown, the 120-egg hen, which yields no profit, an intermediate one with little profit, and the 240-egg hen, with a good profit.

And last but not least in interest or importance was the bee and honey booth, set up by Professor Slocum. It showed good equipment and poor equipment. Four types of honey were shown, alfalfa, sweet clover, white clover and fire weed, with extracted and comb honey for each kind. "Color is no indication of adulteration," it was declared, as flowers largely determine the color.

The United States department of agriculture had a wonderful forestry display and the United States biological survey had a most interesting showing of predatory animals and methods of catching them.

The girls of the state school were serving meals and cooking pies and doughnuts. This was a part of the domestic science work, but knitting, sewing and other work was shown. This was in charge of Mrs. Ida McQuesten, superintendent, and the assistant, Mrs. Cornell.

The exhibit of the state training school for boys, in charge of Superintendent Briffith, showed both farm and mechanical exhibits. Samples of the good shoes made by the boys in the school factory and of the three suits which every boy has, one for work, one a school uniform and one a dress suit, were shown. Blacksmith tools made at the institution, tables and cabinets, as well as the farm exhibit of vegetables, grains, grasses and photos of the high production Holstein herd, were shown.

Club Work Prominent.

Industrial club work was pronounced by Miss Elmina White, state club leader, to be of higher quality than on any previous year. Three communities in Lewis county made exhibits. These were Boistfort, Dryad and Toledo. Toledo was strongest on sewing, with a fine, large and varied exhibit. Frank Kniezek, a member of the Dryad district, made a very fine garden exhibit. Thurston and Grays Harbor counties sent good exhibits in bee club work. Lewis, Thurston, Clark, Grays Harbor and Pacific counties all had one or more exhibits in the district contests.

Seven school districts made exhibits, under supervision of Miss Z. May Meighan, county school superintendent. They were Adna, Doty, Napavine, Pe Ell, Knox, Twin Oaks and Alder Brook. It was the largest and best school exhibit the fair has ever had. There was a good exhibit of sewing and cooking, as well as hand work, paper cutting and basketry. On manual training work Doty consolidated school district won first prize with a splendid exhibit. This school has had good exhibits of this kind before.

All this was in the main exhibit pavilion, besides the commercial booths, at many of which samples of cookery were given away.

The state department of agriculture had an equally educational exhibit outside. The division of food, drugs and fertilizers showed a number of patent feeds and fertilizers that had been barred from the state. It also showed feeds that complied with the law and demonstrations were given showing how the public is thus protected from inferior products. Equally educational exhibits were made by both the dairy and horticultural divisions, with demonstrations of milk testing, grafting and other work of the two divisions.

The Agricultural Crops.

In the opinion of Superintendent Theodore Albert, the exhibits in the agricultural pavilion ranked higher in quality than ever before, although there have been others as large. Grains and grasses were exceptionally good in this fair, which always has a good show of these products. The show was well balanced in all lines, with a strong show of horticultural products for this early in the year. Okaville made a fine community exhibit and St. Urbans Grange had a grange exhibit equally as good. Many with sporting proclivities would have liked to have these two score against each other. Both were greatly improved over former years. Menlo community had an exceptionally good display of grains and grasses. There was a simply wonderful floral exhibit, with dahlias and gladioli among the flowers most prominently shown. The asylum at Steilacoom had a remarkable exhibit of the work of its inmates. The honey display was one to "tickle the sweet tooth" of any one. Mr. Mahoney of Elma was the largest exhibitor, with an artistically arranged display. The cooperative berry growers had an attractive display of canned goods and other exhibits crowded the big pavilion to capacity.

Three Hundred Babies.

The better babies contest brought out over 300 entries and the doctors and nurses were kept busy every day. The textile and art departments were crowded with very fine exhibits. And there was something of interest, with opportunity for instruction, all over the grounds.

The largest and finest automobile show the fair has ever had was on the ground, most of the machines being housed in tents, one or two companies occupying an entire tent.

Besides all this, the races held every day but Monday were of a high order. The crowded grandstands which greeted them had the added attraction of the Van-Cleave jumping and saddle horses from Vancouver, B. C. Miss VanCleave, with her splendid and daring riding, proved one of the most popular attractions of the week.

The poultry show was notable as a display of Barred Rocks. This breed was easily the dominant one of the show, with 114 exhibited, and, like all the others, the birds were in good condition for this early in the season. It was quite a large show, with most of the utility breeds and a number of the fancy ones entered. A big display of rabbits was also made. Thomas P. Horn was again in charge and Harry Collier of Tacoma acted as judge.

The Live Stock Show.

The best all around, well-balanced stock show that this fair has had in a number of years, if not in its existence, was the general concensus of opinion. The rather inexplicible thing was the fact that it was stronger as a beef cattle than as a dairy show, although in a great dairy county and surrounding dairy region. But it was strong in both divisions and there was a strong sheep show and a hog show of decided interest. R. G. Fowler, county agriculturist, who was again live stock superintendent, had made provision for taking care of all that arrived, but it taxed his ingenuity and required the erection of several temporary structures.

With Shorthorns, Herefords and Aberdeen Angus all well represented and with strong competition in each breed, the beef cattle show was one for the fair to be proud of. The herds represented widely separated regions and showed the growing importance of this fair in the minds of northwest breeders. Frank Brown of Carlton, Ore., judged all beef breeds. He paid a high compliment to the quality of the show, calling attention especially to the Canadian herd of Herefords.

Shorthorns had the largest representation, with four herds. J. D. McGuire of Tenino, Wash., showed 12 head, George Bertrand of Castle Rock, Wash., 18; L. A. Bowes of Calgary, Alberta, 15, and Charles Yule of Carstairs, Alberta, 18. The Canadian herds were a little bter fitted, taken as a whole, than the two from close by, but all were of good type and blue ribbons and championships were well divided. Bertrand won senior and grand championship bull on the unusually thick meated and blocky Max Mill Criterion. Junior championship went to McGuire on Oak Grove Gainford, a junior calf of remarkably correct conformation and beautiful color, a son of his dead grand champion of last year, Hercules Model. Yule won both female championships, senior honors going to the great cow, Lovely Bud 3d, and junior to Bessie Queen 5th.

Herefords were represented by two well-fitted and typy herds, Diamond B ranch of Lowell, Ore., having 10 head, in charge of Manager M. J. Beall, and O. A. Boggs of Daisland, Alberta, 14. The two aged bulls were exceptionally good, the Canadian bull having the scale and the Oregon bull being the smoother. Boggs finally won the senior and grand championship on Alberta Panama, while junior bull honors went to Beall on Prince Rupert 7th. Boggs had both the female honors, senior and grand championship going to the mature cow, Miss Panama.

Two herds of Aberdeen Angus, both of exceptional quality, added their part to the big beef cattle show. Congdon & Battles of Yakima, Wash., and J. A. Scallard of Chehalis exhibited full herds. Scollard won 12 first prizes and Congdon & Battles seven. Senior and grand championship on bull went to Scollard on Erickman C. B. 5th, the Yakima herd winning the other three champion honors. Junior champion bull was Erickman C. B. 8th; senior champion female, Ericka 7th of Rosemere and junior and grand champion, the grand heifer, Barbara C. B. 2d. Scollard won on aged herd, get of sire and produce of cow, while Congdon & Battles had first on pair of calves and yearling herd.

Dual Purpose Cattle.

Two herds of milking Shorthorns were shown, both in considerably better condition than the stock with this strain is sometimes represented. Northwood farms of Redmond, Wash., showed 22 head, and E. C. Truesdell of Centralia 15. While blue ribbons were fairly well divided, Northwood won all championships. Gretna Challenger, the splendid type roan bull that won the same honor last year, was made senior and grand champion; junior champion was the calf, Northwood Sam, and the senior and grand champion cow was Lily L. 3d, a large cow, with the table back so much desired, and showing great constitution, while Northwood Maggie, a senior calf, won junior honors.

Red Polls were represented by the local herd of L. K. Cogswell, in rather poor show condition, but of good type. F. H. Porter of Halsey, Ore., was present with his famous herd. Porter won all blues but one and all championships. Peach Knot, that has never yet been defeated, was made senior and grand champion; Peon 4th, junior champion; Violet, a mature cow, was senior and grand champion, and Neva, a senior yearling heifer, won junior honors.

The Dairy Cattle.

E. W. VanTassell of Wenatchee, Wash., was the only exhibitor of Ayrshires, with a herd of 18, worthy in every way, both as to type and fitting, with Herdsman H. Howland in charge. Queen's Scottish Cavalier was made senior and grand champion bull, the junior calf, and Wenatchee Peter Bruce, junior champion. The senior and grand champion cow was found in the 2-year-old, Windlus Blissom, a very promising heifer, though some would prefer the beautiful 3-year-old cow shown. Junior champion was Wenatchee Blue Belle. All but the senior bull were bred by Mr. VanTassell, and he was purchased in dam.

The first real Guernsey show Lewis county breeders have ever made was noteworthy. Counting four club boys, nine exhibitors competed, and, while not a large show, for each one had only a few head, it was a thoroughly representative show, with honors pretty well divided. R. N. Chambers, Centralia, showed three; R. H. and Carl Taylor, Chehalis, three; Victor Fir, Chehalis, three; Joe Haight, Napavine, one; William C. Hornibrook, Goldendale, one; two Thiessen boys, one each, and two Tramm boys, one each. Senior and grand champion bull went to Taylor on Chicona Berwin and junior championship to Chamberlain on Prim's Emigrant; senior and grand champion cow was also won by Chamberlain on Sequel's Dorothy Vashon, with junior honors to Taylor on Anabel of Archer Farm.

Guernseys, Ayrshires and Red Polled were judged by George Bulkley of Carnation farm.

While it can not be said this is the first real show of Holsteins Lewis county breeders have made, it was decidedly the largest and best yet put up by county breeders, for not only were there a large number, but the cattle were shown in excellent condition. Added to this was the splendid herd of Hollywood farm, to the number of 10, and it was one of the best and most interesting shows yet made at this fair. All told, 86 head were shown. Eleven mature cows were in the ring, and not a poor one. Fifteen senior heifer calves made the largest class, and there was strong competition in almost every lot shown. Aside from Hollywood, all were Lewis county exhibitors. Hugh Nesbit of Chamberlain had 17; E. A. Donaldson, Centralia, four; Chris Hendrickson, Farest, seven, and his boys, Peter and Leonard, one each; James C. Chamberlain, Ceres, seven; William Hamilton and four of his sons showed from one to three each.

(Continued on page six.)

Fair Season Is On With a Bang

Early in August the Skagit county folks opened the 1923 fair season auspiciously, as reported in a recent issue of The Washington Farmer. Last week, as reported herewith, the Southwest Washington fair followed suit with one of its most successful events. Thus the fair season is on. At least one county fair, that of Grays Harbor, is being held this week, and next week the Spokane Interstate draws the crowds of eastern Washington and northern Idaho. Then comes a series—thick and fast—community, county, district and state, not ending until the middle of October.

It is doubtful if a Washington state fair has ever faced more rosy prospects than that scheduled for September 17-22 at Yakima. The spirit is right and the various departments are being prepared in a way that promises much to those who avail themselves of the privilege of attending. H. P. Vermilye, secretary and manager, is enthusiastic, as is also E. L. French, director of the state department of agriculture, under whose department the state fair is a feature.

It has been impossible to tabulate all the district, county and community fairs that will be held in Washington this season. Here, however, are a considerable number that will attract liberal attendance:

In September (the figures indicate the dates): Spokane Interstate, Spokane, 3-8; Whitman county, Colfax, 6-8; Kittitas county, Ellensburg, 13-15; Bainbridge Island, 15-16; Clallam county, Port Angeles, 13-15; Mabton Hay palace, Mabton, 13-15; Ferry county, Republic, 13-15; Washington State, Yakima, 17-22; Stevens County Live Stock show, Colville, 19-21; Burley valley, Burley, 21-23; Pend Oreille county, Dalkena, 27-29; Cowlitz county, Woodland, 26-29; Snohomish county, Granite Falls, 27-30; Mason county, Shelton, 28-30; Whatcom county, 24-29.

In October: Western Washington, Puyallup, 1-7; Oakesdale Live Stock and Produce, Oakesdale, 5-6; Adams county, Ritzville, 4-6; Clarke County Prune festival, Vancouver, 11-13; Skamania county, Stevenson, 12-13.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 9.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

Published Weekly on Thursday.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

A Sure Winner

Whitman county commissioners will award each boy or girl who is a member of the pig club, as managed by the farm bureau for the last six months through the assistance of the state college, and who brings his or her club pig to the fair at Colfax, September 6, 7 and 8, a five-dollar cash prize. As Secretary Burford of the Whitman county farm bureau puts it: "Whether you win any of the prizes listed or not you get a five-dollar cash check. It simmers down that the commissioners are interested in seeing our own boys become good live stock men, familiar and acquainted with the various breeds of stock. This money is awarded from the fact that these youngsters have already taken the lead and the commissioners wish to show these club boys and girls that the people of Whitman county are interested in them and their work."

Southwest Counties "Going Dry"

Given a county with 30,000 acres of wet bottom lands unfit for cultivation, not to mention 10,000 to 20,000 acres of so-called "tide lands" subject to diking; and one state drainage specialist who visits the county once a year and lays out drainage for approximately 200 acres, how long will it be before that county "goes dry"?

The answer, of course, is 150 years if you leave out of consideration the cumulative moral effect of the work already done, but that is precisely what Specialist A. B. Crane of Washington State college is counting on to carry forward the reclamation of Pacific county. For the southwest corner of the state, which includes Pacific and Wahkiakum counties, is beginning to be "sold" on the idea of drainage, and it is no longer a question of how many men the state specialist and County Agents E. C. Durdle and F. S. Martin can persuade to try it, but how many farms Crane can accommodate in the short time he can spend in the district.

The men he laid out work for the first year did it all and added more; and the results in the areas which have been drained are so apparent that others in the community who noted them are now demanding similar work on their farms. And no wonder! Land which was under water from three to eight inches two years ago was dry and much of it was being plowed in 1922.

And Neither Is Right

It used to be popular subject of debate whether governments, properly, exist for the individual, or whether the individual exists for the sake of government. The latter was the ideal in ancient Sparta, where the boy became at an early age the property and ward of the state; the theory that government not only shall exist for, but shall be at the mercy of, the individual is responsible today for anarchism.

Contenders for either theory appear to have but a shallow conception of what government is. If governments do not exist for the sake of the individuals they have no justification in existence. But mark—we say "for the individuals," not "the individual." For neither has that government any justification in existence which does not exist for every individual, without distinction, as nearly as the governed choose to realize that ideal. On the other hand, no individual is excusable in interpreting his personal liberty in such manner as to imperil or to subvert government, which is the precious property and the sacred trust of all.

Vetch Seed Crop

Scientists are at work on the development of the vetch seed industry in western Washington. The Western Washington experiment station of Puyallup has been selecting strains of vetch with this in view. M. E. McCollam, agronomist at the station, has established the strain commonly known as No. 15, which is being distributed at market prices for those who wish to grow their own seed. Other strains are being grown under the plan started by E. B. Stookey.

No. 15 is described as more hardy, has better seed producing quality and makes satisfactory growth both for fall and spring planting. It is also selected for its constricted seed pod, which will not shatter as easily as will some of the vetches and thus cause heavy loss when harvesting a seed crop.

Mr. McCollam reports that this work of selecting of the strains of vetch is now one of the most important projects being carried on at the station. "There is a good chance for the development of the vetch seed industry in western Washington," says Mr. McCollam, "and some of the northern counties already have taken up this crop and find it well adapted to their climatic and soil conditions. It is hoped that within a few years vetch seed will be produced as a commercial crop, in order to utilize the winter season which in this section is very available to the growth of vetch, and it is then better able to get a good start for maturing a seed crop as soon as the spring weather opens up."

Apple Shipments From Wenatchee

Apple shipments have begun in earnest from the Wenatchee district. Regular shipments of Winter Bananas are proceeding daily and they will be followed by Ben Davis and Jonathans. While most of the Winter Banana crop will be handled by marketing agencies, cash buyers are reported paying around $1.75 for extra fancy and fancy grades combined and $1.00 for C grade. Cash prices for Jonathans are around $1.40 for early extra fancy.

More Community Fairs

A greater number of community fairs will be held in this state than ever before. This is a most encouraging sign. These community fairs mean most to the small farmer, who, as a rule, does not see his way clear to travel a long distance to visit any of the larger fairs. It is these community fairs that help to build up community spirit and create friendly competition, which is the road to better and greater production of all farm crops.

Northwest Apple Industry Remains

According to J. H. Jacobsen, statistician of the United States department of agriculture of Boise, Idaho, Oregon, Washington and Idaho are producing 35,000,000 bushels of commercial apples this year, which is more than a third of the entire United States commercial crop.

Evidently, there are many apple trees that have not been pulled out.

Rotate Pastures

Pastures should be rotated as well as field crops, according to C. M. Hubbard, state college specialist in live stock. "Rotate your pasture," says Mr. Hubbard, "keeping your lambs and pigs on fresh feed and ahead of stomach and intestinal parasites."

Washington State Gleanings

The Nye Sheep company, Prosser, sold 1000 ewe lambs in Chicago July 31 for 12½ cents a pound and 800 wethers at 10¼ cents a pound, according to report received from Howard Nye. Mr. Nye and Otto F. Allgaier, assistant cashier of the bank, loaded the lambs at the summer range near Trout Creek, Mont., and went east with them.

WHEAT AVERAGES 50 BUSHELS.

W. W. Richardson of Pomeroy reports the largest yield of wheat so far harvested in that section, considering the acreage. His 300 acres of Fortyfold yielded 50 bushels an acre, he says. Mr. Richardson contracted his crop several months ago at 90 cents a bushel.

FAIRS COME IN BUNCHES.

It is interesting to note that there are more fairs listed this year in the week of September 9 to 15. This week is just previous to the State Fair, and it is natural that many of the fair managements want their own county or community fair to take place just previous to the State Fair, so that exhibits used in one, may be sent direct to the other.

TO HAVE DEMONSTRATION FARM.

The Long-Bell Lumber company is establishing a demonstration farm west of Longview on a five-acre tract in the rich agricultural lands that the company is preparing to market. The farm will be equipped with a cottage, barn and outbuildings and will be improved and used for demonstration purposes.

BUY PUREBRED GUERNSEYS.

N. P. Hodgson of Richardson purchased a purebred Guernsey cow, a heifer and a bull from Mr. Helmstra of Everson, Whatcom county, to add to his herd.

Oscar Weeks of Lopez purchased two purebred Guernsey heifers from H. B. Douglas of Ferndale. This adds some more fine stock to the island herds.

WHEAT ESTIMATE TOO HIGH.

With the wheat harvest rapidly nearing a close in Walla Walla valley, early estimates have been revised and the crop is now expected to be between 4,000,000 and 5,000,000 bushels, as against the preliminary estimate of 6,000,000 bushels. About 10 per cent of the grain has been shipped out, although 25 per cent has been sold, according to the report.

SHINGLE MILLS RESUME WORK.

Shingle mills throughout northwest Washington are generally resuming operations after a shutdown of about two months, it is reported at employment agencies in Bellingham. All but the Siemons mill in Bellingham are working, while in Anacortes all are in operation. The old Colony mill at Banchard, the Edison, the Vanhorn and the Sauk mills resumed work August 6, as did the Marietta mill.

INDIANS TO HAVE FAIR.

A community fair will be held at Inchelium under the management of the federal Indian service. The premium list is larger than in former years and a greater effort is being made to induce Indians to compete in the agricultural and live stock exhibits.

Horse racing will be a feature of the gathering and there will be sports contests of all kinds. There will be an Indian barbecue the first day and a program of speaking and music has been provided for the three days.

PRICE FOR PRUNE DRYING.

The prune drying price of $13.50 per green ton as fair for prune growers with drying equipment to charge others for drying their crop during the coming harvest has been fixed by the Washington Growers' Packing corporation, sales organization of the Clarke County Prune Growers' association. Growers are hard at work making preparations to take care of the harvest which will commence unusually early. The ideal summer weather is rapidly maturing the prunes.

SLAPPY PEACH POOL FORMED.

There will not be many loose peaches in the lower Yakima valley, for fully 95 per cent of the peaches below the gap are now organized, according to Bruce Wees of Donald, one of the large growers of peaches. The most recent development to steady the present market on peaches is the formation of a Slappy pool. All the Slappy peaches of the Parker Heights district are being brought to one place, and Percy Sheppard has the placing of them to the trade. From 25 to 30 cars will be handled according to this arrangement.

STUDY WOMEN IN ORCHARDS.

Conditions under which women and children work in Yakima valley orchards, as well as their number, is to be made a matter of record by the welfare bureau of the United States department of labor this year. Two representatives of the bureau, Miss Mary E. Skinner of of Washington, D. C., and Miss Mildred M. Hawkins of Milwaukee, Wis., have been sent to Yakima to make a comprehensive survey for the department. If these women find numbers sufficient and their needs warrant it, it is likely, they say, that the bureau will maintain a representative at Yakima.

LOGANBERRIES AND CHICKENS.

James Bennett of Vashon, who has one acre of loganberries, reports that he has harvested close to two tons of fruit from the patch this season. The patch is in its second year of bearing and there was only a slight touch of winterkill at one end of the field. Mr. Bennett says that if he could have given more attention to the pickers and saw to it that they picked every row clean he could have gotten from a half to a ton more from the vines. He intends to raise chickens and thus have a combination that will require all the attention that one man can give.

BLACKBERRIES TO SET RECORD.

Farmers of the Puyallup valley expect their second most important crop—blackberries—to be of the finest quality and to set a new record in production. Rain, which partially damaged the raspberry crop, together with increased acreage, accounts for the heavy crop which is being harvested.

The blackberry output this year will be 25 per cent greater, officials of the various canneries believe.

W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, says the association has been shipping two carloads of blackberries daily and that the berries are of the finest quality.

Unfair Balance of Prices

Is the Chief Trouble With Farming Industry of the Nation

A statement by Secretary of Agriculture Wallace, given out at Washington last week, emphasized conclusions reached long ago by THE FARMER. Commenting upon the ruinously low prices of wheat, Secretary Wallace truly said, "It is just one more acute symptom of the general trouble from which agriculture is suffering. The disease itself is the distorted relationship between prices of farm products and the prices of other commodities."

As we have been pointing out for many months, "The farmer could get along fairly well with present prices of the wheat he has to sell, IF prices of other things were down accordingly. But prices of other things remain high, and that is what hurts."

Some politicians and labor union leaders are trying to make the farmers believe that this condition can be cured by a political alliance between organized labor and the farmers. They are mistaken.

Organized labor has one central, controlling purpose—to maintain a high level of wages, to make wages higher from time to time, to shorten the hours of the working day and stand for easier working conditions. It has been very successful in these purposes since the war. As Secretary Wallace says, "Wages in industry and on the railroads are almost twice as high as before the war. Taxes are about twice as high. Freight rates are from 50 to 75 per cent higher; metals and building materials of all kinds are from 50 to 100 per cent above pre-war prices. All these are items in the farmer's costs of production, and until a fair relationship is restored between agriculture, industry and commerce, agriculture will be upset and will have reason to complain."

The wage item is the big item in the cost of producing the things the farmer must buy; the wage item is the big factor in the making of high freight rates; the wage item enters largely into the burden of high taxes.

We are not unsympathetic with labor. We are only stating facts. We want labor to receive the highest wages that are consistent with a square deal for other classes of the nation, especially for the great farming class.

Let us analyze this general situation. The American farmers must sell their surplus in the open markets of the world, and at prices that foreign consumers can afford to pay. Our surplus wheat, dairy products, fruits, meats, etc., are wanted by millions of wage-earners in Europe, but those wage earners are receiving low wages. They can not afford to pay high prices for our surplus agricultural products. That is the condition that our farmers are facing.

Now the price at which we must sell our surplus wheat, for instance, is the price at which the American growers must sell their wheat to the American consumers. Organized labor, on the railroads, in the coal mines, in the factories—is well employed at good wages and could afford to pay the farmer better prices for his surplus products. But the constant clamor of organized labor is for reduced cost of living.

Organized labor has about everything that it could reasonably expect from the government at present; it has the benefit of the protective tariff, which guards it against the ruinous competition of the poorly paid workers of Europe and Asia; it has the protection of our immigration exclusion law, which in effect gives it a corner on the labor market in this country. We are not advocating free trade. Our own opinion is that it would be detrimental to all concerned. We are not advocating unrestricted immigration. We think that would be ruinous. We are only stating the facts.

If our analysis of conditions in the United States and in the world is wrong, we shall be pleased to be corrected; if that analysis is correct, as we think it is, how can the unfair balance of prices that Secretary Wallace has pointed out be adjusted by a political alliance between farmers and organized labor?

The Breaking of Day

The present distress of the wheat growers, paralleling in many respects the previous grief of the cotton growers of the south, has recalled these famous words from Henry W. Grady, perhaps the most eloquent and able journalist that the south has produced since the Civil war. Mr. Grady's voice is stilled in death, but these words of wisdom remain as one of his many monuments:

When every farmer in the south shall eat bread from his own fields and meat from his own pastures, and, disturbed by no creditor and enslaved by no debt, shall stand amid his teeming gardens and orchards and vineyards and dairy and barnyards, and pitching his crops in his own wisdom and growing them in independence, making cotton his clean surplus and selling it in his own time and in his chosen market and not at a master's bidding—getting his pay in cash and not in a receipted mortgage that discharges his debt, but does not restore his freedom—then shall be the breaking of the fullness of our day.

Substitute for the word "south" the term "Inland Empire," and for "cotton" the word "wheat," and the foregoing eloquent truths fit closely to the present hour and the present conditions in the Pacific northwest.

The Place of Counsel

The Adviser One Seeks Indicates the Kind of Advice Sought

Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. Psalms 1:1.

It is probably no accident that this basic declaration opens the Book of Psalms. Accidents usually put things where they do not belong. Surely, this great statement of fact and warning belongs at the beginning of this wonderful compilation of wisdom and inspiration.

If a man chooses to walk in the counsel of the ungodly, it is because there is a streak of ungodliness in him. It is because he does not take delight in the law of the Lord; because he does not meditate in this law, but rather in the lawlessness of the ungodly.

The Psalmist paints a beautiful picture in this first Psalm. He compares the man who abstains from counseling with the ungodly to a well-watered tree. He shall be like a tree that grows and thrives by the "rivers of water." He, too, shall thrive. "Whatsoever he doeth shall prosper."

Whatsoever he doeth shall prosper! It is a stupendous thought; a wonderful promise. In the true sense of prosperity, what more can any one desire as compensation for efforts put forth toward godliness and away from the so-called pleasures of ungodliness? Prosperity and poverty cover a far wider field than mere material possessions.

But in spite of the promise, we often hear it declared that poverty and failure are as likely to settle upon the man or woman of godly life as upon the sinner. Sometimes this seems true, but is it? May it not be that our definition of godliness is at fault? May it not be that our idea of it is shallow and superficial, and that we live up but poorly to our poor idea of this supreme quality?

"His delight is in the law of the Lord, and in his law doth he meditate day and night." Is our one delight in the law of the Lord? Is our constant thought dedicated to the supreme task of making our lives conform to that perfect law? If not, we are not living up to the standard of godliness that the Psalmist had in mind. Should we not, therefore, strive to know and practice genuine godliness rather than rest upon the assumption that the writer of the above text was wrong? Said the Master as he taught men the way of life, "Seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you." If the Psalmist was wrong, so was Jesus, the Christ.

FARM BUSINESS AND MARKETS OUTLOOK

THE forecasters who specialize in calling the turns in the business cycle do not always agree as to the exact time when changes from expansion to contraction, or prosperity to depression, will take place.

The volume of building operations scheduled will keep the construction industry and allied lines busy for many months. The great increase in mail order sales tells the story so far as rural buying is concerned. Employment is well nigh universal in spite of the moderate letup in industrial activity and wages have advanced more than prices or the cost of living, so that the real income of most classes of the consuming public is believed to be the highest it has ever been.

That basic conditions are sound is indicated also by the manner in which the stock market has withstood the shock of the collapse of the mark, the fall of the French franc to the lowest point on record, the political changes in Germany, the clash between France and England, the threat of a coal strike and even the change of presidents in the United States.

Furthermore, there are indications of improvement in the wheat and hog markets, which have been the sorest spots in the agricultural situation. A high rate of consumption of farm products is assured as long as employment conditions remain healthy.

Choice Steer Market Climbing.

Choice steers are prize packages on the market just now and prices on the Chicago market advanced to a new high last week of $13 for weighty beeves and $12.65 for yearlings. Last summer a similar advance took place, although top prices did not cross the $11 mark until near the end of August, rising thereafter to $13.60 in October. A further advance this year is probable.

Demand for feeder cattle has expanded sharply in the last two weeks and prices are up about 75 cents. Heavy, fleshy feeders are most wanted for short feeding with new corn to catch the high market for heavy fat steers. Receipts of stockers and light feeders are likely to increase about as fast as demand expands.

Hogs Highest of Year.

Sorted loads of hogs sold up to $9.05 at Chicago last week, passing the previous high point established last January. Receipts were the lighest of any week since last October, and the small proportion of good hogs was in a strong position because of the broad outlet for fresh pork. Smallest runs in the hog alleys invariably occur from the middle of August to the end of September, so that if prices are to show a further burst of speed it is likely to come in the next few weeks. Spring pigs approaching 175 pounds weight or higher may be sold to advantage in this period.

Sharp Upturn in Lamb Market.

Lamb prices rallied swiftly last week when 10 days of light receipts cleared dressed lamb trade channels and lamb feeders displayed increased interest in raw material for feedlots. Each week brings fresh evidence that the supply is not going to mount to the usual heights during the range season. Feeder lambs during the last few weeks have been cheaper than at the corresponding period last year, but the advance of 50 to 75 cents last week brought them up close to last year's level. Orders on file for breeding ewes remain far in excess of arrivals.

Demand for Wool Restricted.

Seaboard markets report a restricted demand for wool. Orders placed with mills for spring goods in the men's division have been light, but women's wear lines have sold well and liberal sales of fall goods are still being made. Prices have eased slightly except for fine staple wools, which are scarce.

Better Outook in Wheat Market.

While wheat prices have not advanced much in the last 10 days, they have held the gains made before that time and the long distance outlook is distinctly better.

Besides the reduction of about 50,000,000 bushels in the crop and carry-over, compared with last year, the supply of rye is smaller than a year ago and there are smaller crops of white and sweet potatoes, buckwheat and even rice, which substitute for bread grains to some extent.

The Canadian crop estimate stands about 17,000,000 bushels less than last year, but first arrivals of new wheat at Winnipeg run mostly to low grades because of rust damage and blight.

New High in Corn Market.

Cash corn prices advanced into new high ground last week. Eastern and southeastern distributors and corn industries are buying freely, while producers have not sold freely enough to permit building up stocks at terminals.

Cash Grain Markets.

The range of cash grain prices for the week ended August 22 was: Chicago—Wheat: No. 2 red, $1.02@1.02 3-4; No. 3, 97c@$1.01 1-2; No. 4, 96@97 1-4c; No. 1 hard, $1.02@1.03 3-4; No. 3, $1@1.02; No. 4, 96@97 1-2c. Corn: No. 2 mixed, 89@90 1-2c; No. 3, 89 1-2c; No. 2 yellow, 90@91 3-4c; No. 3, 89 1-2@91 1-4c; No. 2 white, 89 1-4@89 3-4c; No. 3, 89 1-2c. Oats: No. 2 white, 39@42 1-2c; No. 3, 37 1-2@39 1-2c; No. 4, 37@39c. Rye: 64 1-2@67 1-2c. Barley: 58@66c. Minneapolis—Wheat: No. 1 dark northern, $1.18@1.23; No. 2, $1.14 3-8@1.18; No. 4, $1.09@1.13; No. 2 northern, $1.13@1.18; No. 2, $1.10@1.16; No. 3, $1.02@1.10; Durum, 89 1-2@94 1-8. Corn; No. 2 yellow, 85 1-2@86c. Oats: No. 2 white, 35 5-8@38 1-4c; No. 3, 35 1-8@37 1-4c; No. 3, 33 1-8@36 3-4c. Rye: 62 1-8@63 1-4c. Barley: 42@56c. Flaxseed: $2.30@2.35.

Seed and Feed.

Clover seed prices advanced again last week, both red clover and alsike sharing in the upturn.

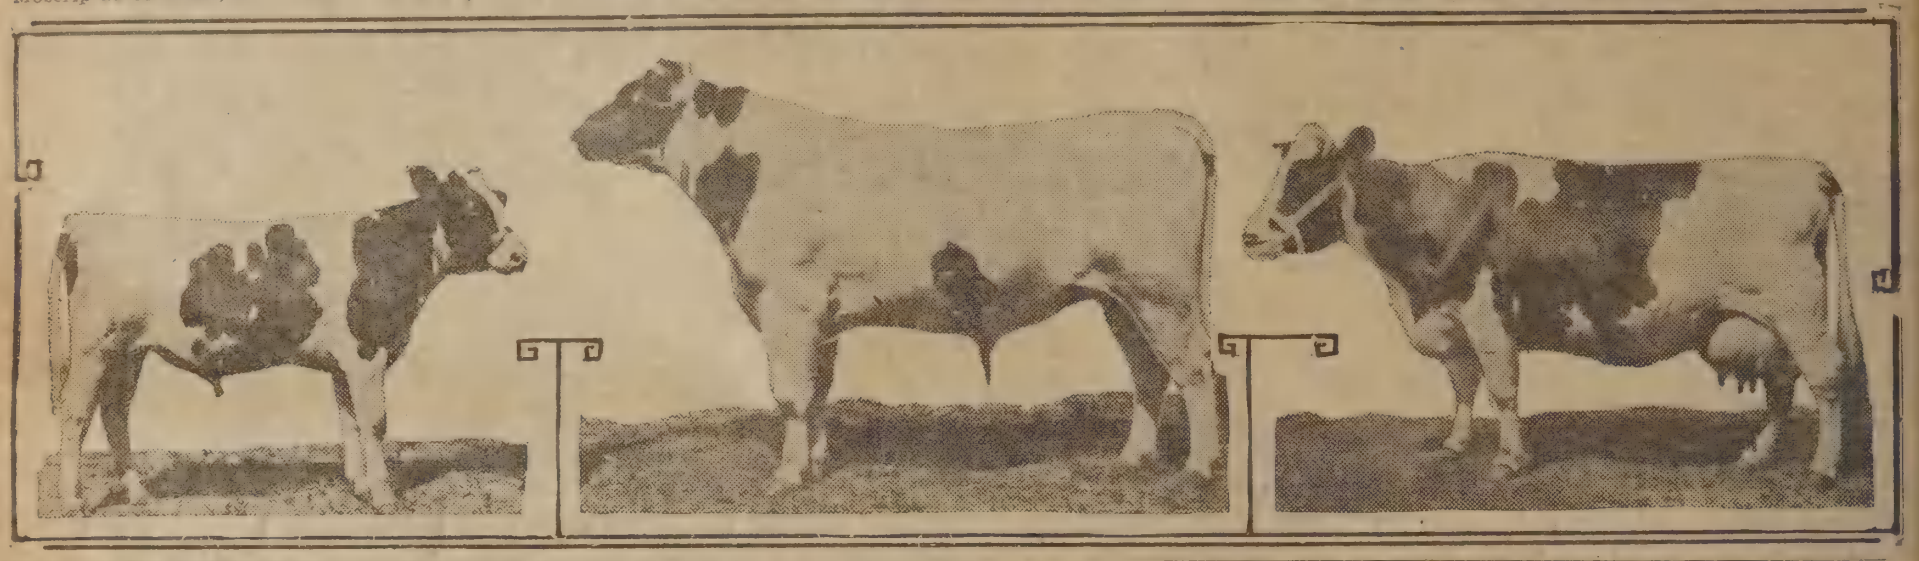
		Notes for Breeders	19

These Three Pictures Make an Interesting Study in Breeding

An interesting study in breeding is presented in these three pictures from Hollywood farm. Hollywood, Wash., where Harold C. Stimson is carrying forward the work started by his father. About a year before the latter's death in the fall of 1921 there arrived at Hollywood a consignment of sturdy females from the farm of W. S. Moscrip at St. Elmo, Minn.—the first that the famous judge and breeder had ever allowed to leave his herd for the northwest. Among them was North Star Daisy Johanna, a daughter of Moscrip's senior herd sire, carrying a calf by his junior sire, Bessie Fobes Oak Homestead. This cow, a picture of which is shown at the right, was just about Fred Stimson's ideal of what a dairy cow ought to be, and he hoped mightily that she would bring him a bull calf for future use in an outcross on the daughters of Judge Segis and his half-brother, King Lyons 3d.

Such proved to be the case, and the picture in the center shows Goliah of Hollywood, junior sire at Hollywood and destined upon the death of King Lyons 3d to succeed him, as he succeeded Judge Segis, at the head of the herd. This young bull, in whose veins flows the best blood of several famous Holstein families, is still far from proving himself, but his first calves indicate that he is able to transmit many fine qualities of individuality, at least. The picture at the left shows one of his get, out of one of the poorer daughters of Judge Segis.



Poultry Folks

Enjoy Picnic at Point Defiance

There were fully 1000 members of the Pierce county branch of the Washington Cooperative Egg and Poultry association who attended the first annual picnic at Point Defiance park near Tacoma, August 18. Although the association was just three years old the week of the picnic it was the first time a gathering of the entire membership had ever been attempted as a social function. The splendid turnout, which included friends of some of the members as well as others who were interested in the poultry industry, together with the friendly attitude with which everyone took part in the day's outing, showed that the association had developed a cooperative spirit, which extends beyond the business interest of the members.

The picnic was an all-day affair, and the members were invited to bring their basket lunches and bring any friends who might care to come with them. The 10th Artillery band from Camp Lewis furnished music throughout the day. An excellent sport program was carried on before lunch, which included events for men and women as well as for the boys and girls who were present.

The speaking program included prominent speakers from other organizations as well as some of the prominent men in the association. R. E. Darling, manager of the Tacoma branch gave the address of welcome, and introduced W. M. Buckmaster as chairman of the day. Among the speakers called on were: W. A. Linklater, superintendent of the Western Washington Experiment station; S. D. Sanders, president of the Washington Cooperative Egg and Poultry association, and Mrs. George R. Shoup, poultry specialist of the Experiment station.

One of the most interesting talks was made by D. S. McDole, of the accounting department of the association. He outlined the work of the association, and showed how the market for Washington eggs has been built up by consistent effort on the part of its marketing department. "When the association first began operation," he said, "the eggs were sold for what ungraded eggs brought on the New York markets. Later the present grades, used by the association, were established and a better price was received. We are consistently striving to increase the quality of our grades that are shipped to the New York market and have from time to time added new features to our packing that have helped us to get a slight premium over the eggs from other districts. It is only because of the members being able to work together with one thought in mind, that is the interests of the association, and our standing among other egg producers that has made such improvements possible. If we were a small organization our men would probably be too busy to work up new ideas and carry them out, but we have found that by working out little suggestions that are brought in now and then we have been able to improve our grades."

The Tacoma chamber of commerce was represented by George M. Elliott of the Rural Development bureau, who spoke of the value of cooperation and suggested that the association feel at liberty to call upon the Tacoma chamber of commerce at any time when cooperation between the two organizations might be carried out to advantage.

Another speaker who encouraged the work of cooperative organization was E. L. French, state director of agriculture, who outlined a number of practical marketing methods, and showed how much better the present cooperative organizations are functioning in this state than where the old methods of dumping products on the market and taking any price they could get. He pointed out that there were now 36 different cooperative organizations in the state, and from all indications there will be many other such organizations formed in the near future.

It is interesting to note that the Pierce county branch of the association shipped 77 cars of eggs in 1922, and during the last seven and one half months of 1923 there were 62 cars shipped out of the state. Manager Darling states that the membership is growing constantly and that a large per cent of the new members are coming in on their own accord. Further development plans are being made and the association hopes to be able to run pick-up trucks into the field and gather a large part of the eggs sold to the association. This will add greatly to the membership since there are many producers who are not at present able to deliver their eggs to the Tacoma warehouse.

Southwest Washington's Fair Again History

(Continued from page three.)

Other exhibitors were Henry Shoultes, Adna; A. T. Barnes, Chehalis; Henry Bouchard, Tono; L. L. Goff, Littell; J. H. West, Centralia, and the St. Urban Holstein Bull association. Hollywood had the senior and grand champion cow in Snowball Powers Mutual, a cow of great size, remarkably straight, broad hips and a show cow in every line. Junior champion heifer went to Donaldson on Dondary Perfection Bracelet. Hugh Nesbit had the senior and grand champion bull in Segis Pontiac Beets, that was first at the Pacific International, and junior bull honors went to the classy calf of Hollywood farm, Hollywood Goliath.

The one live stock division which showed a decline was the Jersey show, and this was in numbers only. Instead of the six or eight county breeders there were only three. N. C. Sears was there, as usual, with 18; A. T. Flagg, six; Dan Bush, four, and Mansford Brabec, one. Sears was the heaviest winner, with 12 firsts. He won senior and grand championship on Fussy's Fern Noble 35th, the bull that won the same honor last year, as a junior yearling; senior and grand championship on cow, with Brighter Dawn, and junior heifer champion with Cicily Winkle, a junior yearling that won similar honors, here and at the Pacific International as a junior calf last year. He again won the coveted honor of first on get of sire, the fifth successive year for his herd sire, St. Mawes of Oak Springs. A. T. Flagg was able to win four blues with his six head and his junior bull calf, Shady Grove St. Mawes Chris, was made junior champion. Mr. Bush won first on his yearling bull, Firwood Diploma St. Mawes, and his cow, St. Mawes Diploma, while not a show cow, was one of the greatly admired animals of the show, for her dairy quality.

John T. Kane of Salt Lake, Utah, judged Holsteins and Jerseys.

The Swine Show.

The number and quality of hogs exhibited indicated that the hog business must be coming back, to some extent, at least. More hogs were shown and more breeds were represented than for a number of years. Most of them were in good show condition, too. But when this is said, it may be added that the exhibit made by members of the Security Bank Pig club, with the president, J. T. Alexander, as leader, created more interest than all the other swine exhibits. This is purely a feeder contest, and Mr. Alexander puts up the money for the prizes. There are 28 members, of which 15 exhibited pigs. Those exhibiting were Lloyd Forth, Laurel Bartley and Joe Kerevar, Dryad; Raymond Reynolds, Joe Moteves, Keith Lawlor, Helen Medlicot, Ethel Lloyd and Iver Hulterburg, Napavine; Clarence Svinth, Arthur Donaldson, Thora Melius, Clinton Sturdevant, Lily Melius and Lafe Schmit, Chehalis.

Winners in this contest were Clarence Svinth, first, and also first in district work; second, Thora Melius; third, Joe Korevar; fourth, Raymond Reynolds; fifth, Helen Medlicot; sixth, Iver Hulterburg; seventh, Joe Moroves; eighth, Ethel Loyd; ninth, Arthur Donaldson. On sow and litter Loyd Forth won first and Lily Melius, second.

Counting baby pigs, O. I. C.'s were most largely represented. J. H. West, Centralia, showed 32, of which 19 were young suckling pigs. O. O. Phelps had 12 baby pigs and eight others; F. Van Derheyden, Wapato, Wash., two; Arthur W. Wade, Marysville, three, and Mrs. Ella Twiss, Forest, three. West won championship on sow on the smooth big type, May Belle, and Von Derheyden on his boar, Wapato Boy.

Foulger & Bryant of Centralia exhibited 10 Poland Chinas, and Miss Helen Medlicot two. The club girl won one first, all other blues and the championships going to Foulger & Bryant. Victor Price 2d was champion boar and Beatrice M., champion sow.

Ten Berkshires were shown by John C. Lammer of Centralia and 18 by the Earlken Berkshire company of Goldendale. Earlken's boar, River Banks Laurel Epoch, was made champion, with Lammer securing female honors on a senior pig.

Duroc Jerseys were shown by Howard L. Norris of Goldendale, with only four head, two nice gilts and two equally good boars.

Osborne & Cincaid of Centralia showed a few Hampshire gilts.

Most of the large and excellent sheep show was made by three firms making the big fair circuit, J. G. S. Hubbard & Sons, Monroe, Ore.; Floyd T. Fox, Silverton, Ore., and Eugene Hubbard of Corvallis, Ore. There was strong competition in Oxfords, Fox being the heaviest winner. Felzer Brothers' Shropshires, shown by Fox, were strong winners also. On Cotswolds William Riddle & Sons had nearly everything on sheep, shown by Eugene Hubbard over D. J. Kirby's, shown by Fox. Lincoln honors were well divided between William Riddell & Sons and William Riddell Jr., shown by Fox and Hubbard. On Southdowns J. G. S. Hubbard had nearly everything and most of the blues on Hamps. Rambouillets, owned by Bullard Brothers, Woodland, Cal., and shown by Fox, won without competition.

Frank Brown judged long wools and R. G. Fowler middle wool sheep.

Two Percheron stallions and two Morgan mares and colts made up the horse show. L. K. Cogswell of Chehalis had the Morgans and they made a beautiful pair, both mares and colts. The Tenino Percheron Horse company won first and J. D. Norton, Elma, second on the Percherons.

Orchardists Meet

Summer Session Is Well Attended

The summer meeting of the Washington State Horticultural association at Walla Walla August 17 and 18 was, in the opinion of leading fruitmen, one of the best summer meetings of the association ever held. Not only were many leading fruit experts present, but many presented papers and participated in the discussions.

One paper was by J. B. Wiley of Spokane, district horticulturist, who discussed the "Apple Leaf Roller, Its History and Control." Demonstrations on the disease were made during afternoon sessions. C. L. Vincent, instructor in horticulture at W. S. C., discussed pruning of small fruits, going into detail as to the reasons for and the best methods of pruning these fruits. H. J. Dana, also of the college, told of the results of experiments in cooling boxed apples and urged that fruit be hauled to the warehouse, so far as possible, in the cool of the day, when the temperature of the fruit was low, so that it needed less artificial cooling.

A paper on cherry pollination by C. E. Shuster of O. A. C. was read by the secretary and a discussion of the subject was led by Clayton Long of O. A. C. Mr. Long also talked on "The Long Arm Method of Pruning."

The Friday afternoon session was spent in visiting the Milton-Freewater orchards district, where demonstrations on leafer were held.

At the Saturday forenoon session E. J. Newcomer, entomologist of the United States department of agriculture, stationed at Yakima, spoke on oil sprays, declaring that many orchardists found them more satisfactory than lime sulphur sprays.

Leroy Childs, superintendent of the state experiment station at Hood River, Ore., spoke on the de'Anjou pear and its treatment as to pruning. M. J. Forsell, horticultural inspector at Everett discussed the strawberry root weevil, and A. L. Lovett, entomologist at O. A. C. talked on nicotine sprays.

Saturday afternoon was spent in an inspection of the orchards of the Dayton-Waitsburg district, ending with a supper tendered the delegates at the E. S. Ryerson orchard.

In speaking of the association and its meeting President Paul H. Weyrauch of Walla Walla said:

"These meetings are important because they give fruit growers an opportunity to talk over their troubles with other growers as well as hear them discussed by experts. The meeting this year was exceeding well attended for a summer meeting, 135 attending the Friday evening session and 25 auto loads taking in the demonstrations each day. The interest was very keen. It is true, however, that not enough of our fruit growers realize the necessity of discussing their problems. They are quick enough to call on our colleges and experiment stations for help when actually overtaken by orchard pests, but they pay too little attention to lectures on prevention. A case in point is the apple leaf roller, which has already done considerable damage in one of our districts and is taking hold in others. This pest, like any other, can best be controlled in its incipient stages. No one grower can do this. An association of growers can."

TURKEYS NEED ROOM.

Wide range is important for turkeys.

Value of Wheat as Livestock Feed

By HOWARD HACKEDORN
State College of Washington

The drop in the price of wheat has renewed interest in its feeding value to live stock, and this in turn to the long-term advantages of diversified farming.

The feeding value of wheat compares very favorably with that of corn. The higher price commanded by wheat as a product for direct human consumption, rather than processing it through animals for the use of man, has generally prohibited its use as a profitable stock feed.

Wheat is higher than corn in its protein or muscle-building content. It is a little higher in ash or bone-building material and in net energy material or starchy material. Wheat, like corn, is not a complete feed and should be combined with feeds higher in protein, provided these latter feeds are not too expensive. Also, to give the best results for most classes of live stock excepting sheep, it should be cracked or rolled. It has a disadvantage of gumming when fed to cattle and horses, which difficulty with the harder wheats can be overcome by mixing it with cut hay, silage or bran.

Fed to Hogs.

Wheat has been fed to hogs more extensively than to most any other class of live stock, as the hog is the most efficient machine for converting grain into meat. The value of wheat as a hog feed was tested out at the Missouri experiment station and reported in bulletin No. 136. These tests with 100-pound pigs fed in dry lot consisted of one lot fed wheat alone, one lot fed corn alone and the third lot fed equal proportions of 10 pounds of wheat to one pound tankage. The average daily gains on the lots fed wheat, corn, and wheat and corn were 1.25 pounds, 1.0 pounds and 1.18 pounds, respectively, during the 78 days of the feeding tests. The feed required per pound gain was 4.55 pounds wheat, 5.12 pounds of corn and 4.93 pounds of the mixture wheat and corn. The average daily feed per pig consisted of 5.98 pounds of wheat, 5.57 pounds of corn and 5.85 pounds of wheat and corn mixed. The wheat lot of hogs averaged 194 pounds at the end of the test, while the corn lot averaged 182 pounds, which is just about normal market weight.

In Balanced Ration.

The above results do not show the real value of wheat, as it is more efficient when fed in a ration balanced with such protein feeds as tankage, 60 per cent protein, skimmed milk or fish meal, suitable for animal feed. A ration of 10 pounds of wheat to one pound of tankage fed to a lot of 100-pound pigs for 78 days made an average daily gain per head of 1.51 pounds, as compared with 1.25 pounds where wheat alone was fed. The wheat and tankage lot of pigs averaged 215 pounds, as compared with 194 pounds for the wheat lot. The average amount of wheat per pound gain was 4.24, as compared with 4.55 for the wheat alone.

However, a balanced ration may not prove to be the most profitable one, as the supplement may be too expensive to use. Assuming the price of tankage to be approximately $60 per ton, which is the price tankage has been purchased at recently at the Washington experiment station, and wheat at 80 cents per bushel, 100 pounds of pork would cost approximately $6.05 if wheat alone were used and $6.27 if the protein supplement were added.

At the Washington experiment station fish meal suitable for animal feed was equal to tankage as a supplement to corn, and it would be safe to say equal results would be obtained with wheat. Linseed oil meal testing 31.15 per cent crude protein was some 17 per cent less efficient than the tankage. Skimmed milk is a very satisfactory hog feed, and 10 or 12 pounds of skimmed milk will replace approximately one pound of tankage. Unless the skimmed milk is very cheap, best results will be obtained by feeding two or three pounds of it, which is about two or three pints, per pound of grain fed.

Wheat in the above trials was fed in the ground form. Cracked or rolled wheat would be very satisfactory. Soaked wheat has been fed by some farmers who claim that this is a very good way to feed it; however, this method of feeding is more troublesome. Some of the hard kernels of the wheat, particularly with the harder varieties of spring wheats, are not masticated thoroughly by the hogs, and hence some method of preparation must be used to gain the best results.

For Fattening Lambs.

As a feed for fattening lambs wheat has been used only to a very limited extent. A number of years ago the Montana experiment station reports some lamb feeding trials with wheat and red clover hay. In the trials 22 black-faced lambs, weighing on an average of 70 pounds at the beginning of a 95-day feeding test, gained 25.34 pounds, or a little over one-fourth pound per day, which is a good average gain. The lambs consumed an average ration of .81 pounds of wheat and 2.04 pounds of hay per day. They were fed about one-third pound more hay than they consumed. It required 7.64 pounds of hay and 3.02 pounds of wheat per pound of grain, on the basis of feed eaten, or about one-third more hay on the basis of hay fed. These results compare very favorably with the two years' results of lamb feeding at the Washington experiment station, where lambs were fed three-fourths pound of shelled corn and all the first cutting alfalfa hay they would eat, which averaged 2.69 pounds per day. These lambs, 100 in all, made for 60 days an average daily gain of .275 pounds.

The cost of feeding a lamb for 95 days, based on the Montana wheat feeding results, and assuming the cost of hay to be $8 in the stack and wheat at 80 cents per bushel at the farm, would be $1.02 for hay and $1.02 for wheat. If the feeder lambs cost 10 cents per pound and weighed 60 pounds the cost per head would be $6 and the cost of the feed would be $2.04, so that the fat lamb at the feed lot gate would cost some $8.04, exclusive of loss, interest, risk and labor. An average lamb should gain 25 pounds when fed as stated above. Thus the assumed 85-pound fat lamb would have to sell for $9.50 per 100 pounds to just break even, exclusive of loss, interest, risk and labor. The normal loss, judging from the Washington experiment station results the last two years, for some 2500 lambs fed at the irrigation station should not be more than 4 per cent. The manure should be worth the labor on most farms, and the interest could be figured at whatever one had to pay.

As a feed for breeding ewes on the farm or range, I would expect it to be equivalent to corn.

Two lots of 1000-pound steers were fed at the Nebraska experiment station on ground wheat and alfalfa hay against ground corn and alfalfa hay. During the 77-day test the wheat lot gained 185 pounds and the corn lot 153 pounds. These steers consumed a total of 820 pounds of wheat and 830 pounds of corn per steer and in addition each lot received 909 pounds of hay. One can figure the cost of fattening a steer from these figures by assuming the same price for wheat and hay that was used in the illustration on the cost of fattening lambs, that is, 80 cents a bushel for wheat and $8 per ton for hay.

If feeder cattle cost 6 cents per pound, a margin, the difference between the price of the feeder and fat steer, of about 30 cents per 100 pounds would pay for the feed, but not the insurance, risk, interest or labor. For example, a 1000-pound

(Continued on page nineteen.)

"—and the extra egg money more than paid for our plant"— writes a pleased farmer who lighted his henhouses last winter with Union Carbide Gas from his Colt "Gas Well"

Poultry experts unite in insisting on plenty of sunlight in the henhouses. They attribute to sunlight the tonic effect of maintaining the birds in maximum production condition, and the power to dispel the majority of poultry diseases. Exhaustive tests prove Union Carbide Gaslight to be the nearest approach to sunlight. This light in the henhouses will provide your laying birds with the nearest natural illuminant for increasing production and the other valuable effects of sunlight.

Poultry research discovers the hen of tropical origin, of long sunlit days and short nights. Experiments have demonstrated the hen's digestive organism to be fashioned on the 14-hour plan—and 9 hours of winter daylight positively won't do, if you expect an egg a day and a contented healthy bird. Nature simply pulls a strike on you.

The farm hen has demonstrated beyond all question the fact that she is a dependable profit payer through the winter months (the period of high egg prices), when Union Carbide Gas from the Colt "Gas Well" lights the henhouses to make the necessary 12-to-14-hour working day. The extra hours of light will enable your hens to exercise and take in the food reserve needed for more eggs.

A Colt "Gas Well" on *your* farm

The Colt "Gas Well" is installed in the ground—in the yard. From it comes Union Carbide Gas, made automatically as needed. *It will light your house and barn. It will cook your meals. It relieves the drudgery of washday, and keeps the iron hot.* Besides converting the henhouse into a source of profit, the Colt "Gas Well" has become a necessity for the farm home.

Colt "Gas Well" users are increasing in vast numbers. Get *your* Colt Lighting-and-Cooking Plant now—be ready when the time comes for increasing egg production with artificial sunlight—Union Carbide Gaslight.

LIVESTOCK AND DAIRY

High Feed Bills

May Give Big Dairy Profits

If it is lumber you are after, logs are fed to the sawmill. If it is flour that is required, it takes wheat to make it, while if milk is the product, good cows require plenty of feed of the right kind to manufacture the great dairy product.

High feed bills do not necessarily indicate small profits from milk cows. Donald Saunders, tester for the Snohomish County Cow Testing association, gives an example of where high feed bills made high profit returns.

The high herd in the Stillaguamish Valley Cow Testing association for the past year showed an average feed cost per cow in the herd of $140.20, but the average return over cost of feed per cow was $120.36. The lowest record in the same association was made by a herd whose feed cost averaged $61.02 and the average profit over cost of feed was $44.38.

A recent statement issued by the United States dairy division that "as the production of a cow is doubled—profits increase three times," proved true. The high herd produced twice as much butterfat in the year and almost three times the profit over the low herd.

"It is possible," said Mr. Saunders, "the low herd did not have the ability to return a good profit even though the animals had received a generous ration. However, a herd of cows may be likened to a manufacturing concern—the raw material must be utilized in order to produce the finished product."

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

The Sheep Nostril Fly.

This parasite is very common in certain parts of the United States, and in others it is seldom seen as yet. The possibilities are, however, that wherever sheep are raised this disaster will appear sooner or later and cause more or less damage. In this particular part of the country this trouble has been very slight and it has been only of late years that we have seen any of it, though the probabilities are that we shall see a great deal more in the future.

This fly belongs to the bot fly group and the trouble is due to the larva that finds it way into the tissues of the body. The female fly after mating lays her eggs about the sheep's nostrils; these soon hatch, and the larvae, seen as small white worms, begin to ascend the nostril. As they go up they irritate the membrane of the nostril and cause the sheep to sneeze; they find a permanent place to dwell in the cavities of the sheep's head and remain there, living on secretions which accumulate as a result of their irritation. During their stay in the head they increase in size and become much like the cattle maggot. After this they come out of the sheep's head and are sneezed out onto the ground, where they form a shell and bury themselves under a clod or in the grass and remain for a time until the shell bursts and the mature fly emerges. This whole life cycle requires about 10 months, but at the end of that time the insect is ready to begin the life cycle again.

The symptoms that the sheep will show are rather abundant discharge from the nostril, which may become very sticky and collect about the nostril. The sheep sneeze a great deal in an endeavor to get rid of the irritant. They may also toss their heads and stamp their feet. Sometimes they have difficulty in breathing because of the swelling of the nostrils.

At times the sheep seem to fear the fly and will run and attempt to get away when it approaches. They will try to protect their noses by putting them down in a rut or near the dust or they will get together and stand with their heads down in the center of a circle, to keep their noses away from the fly.

Salting the sheep from narrow troughs that have had tar placed on the sides will cause the sheep to get the tar on their noses and this is quite a protection against the flies, as they can not conveniently deposit their eggs about the nostrils.—(Copyright, 1923, by E. E. Wegner.)

THREE YEARLY RECORDS.

The only cow in the world to make three yearly records, each over 30,000 pounds milk and 1000 pounds butterfat, in one year is Adirondac Wietske Dairy Maid, according to an official announcement just received from the advanced registry office of the Holstein-Friesian association of America. At the age of 10 years this cow, a purebred Holstein, recently completed a yearly semi-official record of 31,580.9 pounds milk, containing 1,014.47 pounds butterfat. Her total three-year production is 97,882.6 pounds milk and 3186.61 pounds butterfat, or an average for each of the three years of 32,624.2 pounds milk and 1062.23 pounds butterfat, equivalent to 1327.8 pounds butter. She is owned by the Bridgford Holstein company, Patterson, Cal.

VETERINARY

By DR. S. B. NELSON.

Cow Holds Up Milk—What can I do for a cow that will not let down her milk? She has been fresh about three weeks. I have tried bathing her udder with warm water and rubbing it. She has given three gallons at a milking three or four times, but the last week she has given less than half that much. Her udder is so large and solid and she seems to raise it up when I milk. E. McK.

I am of the opinion that your cow has a little more than "holding up her milk." She probably has a touch of garget, and I would apply an ointment consisting of 1 part of fluid extract of phytolacca with 7 ounces of lard. Rub it pretty well into the udder. I would continue bathing and rubbing the udder gently before milking, applying the ointment after milking.

Sick Pigs—I have some pigs 3 months old that seem to be all right at one feeding and then the next they are sick. Their feet do not seem to have strength enough to carry them. We feed slop from a road camp and milk. They eat anything offered to them, but can't get up. J. S.
Castle Rock, Wash.

Give your pigs two ounces of castor oil per animal in the slop. Divide them into groups of three or four when you do this. The next day or two begin giving them each 10 grains of potassium iodide put into the slop.

Your pigs need pasture and exercise. Get them on green pasture and then force them to take exercise as soon as possible.

Lameness—I have a horse that has been lame for some time and now lately his pastern joint has swollen to the size of a fist and it makes him walk on the tip of his hoof. J. P.
Grandview, Wash.

A treatment for that lameness would be a long-drawn-out affair, I think. In the first place, put on a high-heeled shoe, so as to rest the tendon that goes over the pastern joint. Playing a stream of cold water on the joint for 10 or 15 minutes morning and evening and then rubbing practically dry and applying a little liniment as follows: Soap liniment, four ounces; tincture of iodine, one ounce, and then putting on a bandage and leaving it, may be of help.

String Halt—Is there a cure for string halt? E. R.
McCormick, Wash.

One of the best remedies known for string halt is the operation of severing a little tendon on the outside of the hock. This is an operation that almost any veterinarian would be glad to perform for you.

Churning Is Slow

By E. V. ELLINGTON,

What is the matter with our cow's cream? It takes three or four hours to do a churning. The cow is 6 years old and has been fresh since November 1. The butter is always soft and puffy when it comes. T. H. M.
Cheney, Wash.

The condition of difficult churning of cream that you describe is a most common complaint and usually occurs when the cow has been fresh eight or nine months. The character of the milk changes as the lactation period advances. The per cent of fat and the solids not fat increases. This makes the cream more viscous or sticky and more inclined to whip or froth up and fill the churn. At this stage of the lactation period the fat globules in the cream are small and hard and are difficult to gather together.

About the only practical remedy is to churn the cream at a somewhat higher temperature than the ordinary churning temperature of from 52 to 60 degrees. It may help to churn at a temperature as high as 70 degrees. When the churn fills up with the frothy cream, about the only remedy is to add hot water so as to destroy the viscosity of the cream. Such treatment will not make the best butter, but is more conducive to peace of mind than churning all day and finally becoming so discouraged that the whole churning is thrown out. This condition of the cow's milk will persist until the cow becomes dry. When she freshens again this trouble will not be present.

Ride On Hasslers

YOUR Ford is the finest piece of machinery on your farm. You expect and GET more out of it. And you've got to admit that you have to give it LESS THOUGHT.

It certainly deserves as much consideration as you give to your live stock or any other cash investment.

Ten years ago Robert H. Hassler designed and perfected a positive device for protecting and insuring the life of a Ford.

You can't fool a keen-headed farmer.

Today one out of every five farm-owned Fords is protected with Hassler shock absorbers.

Think it over.

Have you got Hasslers under YOUR Ford?

There is a proper type Hassler for every Ford model, and there is a Hassler dealer in your nearest town

Write for "An Auto Biography." This new Hassler booklet, sent free on request, will grip you with its human interest, no matter what car you drive.

Bedrock of Cooperation in Denmark

By CHRIS L. CHRISTENSEN
United States Department of Agriculture

ONLY 20 per cent, or one-fifth of the Danish farmers belong to cooperative egg collecting associations, yet these associations have brought about trade reforms and adopted egg stardards as to quality eggs which must be adhered to not only by the cooperative associations, but by all private merchants engaged in the egg trade.

II. HOW IT WORKS.

In the cooperative creamery in Denmark the whole milk is delivered direct to the creamery, where the milk is separated, the cream is retained and manufactured into butter and the skim milk is returned to the farm. Each creamery has a membership of approximately 150 farmers, who deliver direct to the plant the milk from 800 to 1000 cows. Transportation of the milk is a small item of expense. Nearly 90 per cent of the total milk production in the country goes to the cooperative creameries; a large part of the remaining 10 per cent going to private creameries is used to supply the city milk trade.

Ninety-five per cent of the total quantity of sweet milk delivered to the cooperative creameries is manufactured into a standardized grade of butter, of which more than 80 per cent is equivalent to 92 score or better. More than 90 per cent of the skim milk is returned to the farms via the milk wagons that collect the whole milk on the different routes, the skim milk providing the principal feed for the Danish bacon industry.

Furnish Own Capital.

The necessary capital for building and operating a creamery is raised by a loan from the savings institution or local bank, jointly guaranteed by the members of the association. The constitution and by-laws of the association provide for a contract delivery agreement whereby each farmer agrees to deliver his total milk production except what is needed for home and household consumption to the local association for a definite period, varying from 5, 7, 10 or 20 years, the usual period of the delivery contract being 10 years. The purpose of this is to make the business pay for the plant within 10 years.

Creamery Federation.

In the early days of the cooperative creamery, each plant sold its product to private butter merchants in Denmark, who in turn disposed of the butter to wholesalers and jobbers in Denmark and to British buyers in England. To bring about greater efficiency in marketing channels and to eliminate waste in marketing, a number of creameries formed a federation in 1889 to sell the butter direct to wholesalers. This federation failed in 1908 through inefficient management and an organization plan that was not cooperative.

Export Associations.

Meantime, two cooperative export butter associations had been formed in 1895, each drawing its membership from a number of cooperative creameries in a definite territory surrounding its headquarters, rather than extending its activities over the whole country. There are now in Denmark 11 cooperative export associations in which 546 cooperative creameries have membership.

These export associations handle approximately one-third the total butter export; about one-third of the butter exported being bought in Denmark direct from individual cooperative creameries by English wholesale houses which maintain purchasing representatives and operate purchasing depots in Denmark, the remaining third being bought by Danish butter merchants who supply the home trade and export butter to foreign countries. Each creamery in an export association agrees to deliver its total butter production to the association for one or two years, thus assuring the association a regular supply.

The capital required to equip and operate the export association is supplied by a loan guaranteed jointly by the local creameries, the liability of each creamery usually being limited to a definite figure. The export association is managed by an experienced butter merchant appointed by a board of directors composed of five members elected by the membership creameries.

National Federation.

All the cooperative creameries, together with many private creameries, are also federated into a national federation of Danish creameries, known as the National Federation of Danish Creameries, to promote matters of common interest, such as proper legislation affecting the creameries and the dairy industry, and to study production and marketing problems at home and abroad.

The federation also operates what is known as the "Copenhagen Butter Quotation," which establishes the basis on which the creameries shall be paid for their butter each week. One-half the membership of the committee that fixes the butter quotation is made up of producers, and the other half of private merchants.

Cooperative Bacon Plants.

More than 85 per cent of the total number of pigs annually slaughtered in Denmark are slaughtered in the cooperative bacon plants and the bacon is given a light cure. The cured bacon is sent direct to England, where the bulk goes direct to the wholesalers and is smoked, and then distributed to the retailers. These cooperative bacon factories as well as the private plants are about evenly distributed throughout the country, each factory drawing its supplies from about 3600 farmers. Most of the pigs delivered to the cooperative plants are hauled direct in wagons or trucks, thus eliminating shrinkage in transit and losses in yards. The hogs are slaughtered the same day they are received.

The bacon plant associations are organized on a similar plan as that of the creameries, necessary capital to build and operate the plant being provided by loans executed by the association and guaranteed by the members.

The membership territory in each plant is divided into five, six or seven districts, the members in each district assuming obligation for their portion of the loans made by the association. Each member agrees to deliver his total pig production to the factory for a definite period of 5, 7 or 10 years.

Partial Payment.

At the time the pigs are delivered the farmer receives a partial payment on the basis of a "hog quotation" fixed by the bacon factories in a designated province. This payment is made on the basis of slaughtered weight and quality classification, the slaughtered weight being approximately 75 per cent of the live weight. The associations operate an annual pool and at the end of the year the balance between the price paid the farmers upon delivery and the sales price less costs is credited to the farmers' account.

The Danes have learned that the highest quality of bacon comes from a pig which in live weight tops the scales around 200 pounds. The hog must weigh, slaughtered, between 132 and 165 pounds. A deduction of 1 cent per pound on the total weight is made on hogs weighing over 165 pounds slaughtered or under 132 pounds, 2 cents per pound being deducted on hogs that are 20 pounds or more over or under weight. Thus the farmers are compelled to deliver a uniform hog from which a high grade of bacon can be manufactured. Pigs in Denmark are delivered when weigh-

Why tractor owners are standardizing on "Caterpillars"

Big operators of tractors are rapidly standardizing on "Caterpillar" power. The reasons are found not only in the proved performance, economy and dependability of "Caterpillar" Tractors but in the continued interest of the Holt organization in the owners of its products. Let one of these owners tell it in his own words:

"I have never dealt before with people who have manifested such an interest as that shown by your representatives. My principal trouble with other companies has been their lack of interest after their machine was sold and I have sustained substantial losses both in money and labor on account of poor service rendered by them."

The Two-Ton "Caterpillar" Tractor T35, pictured here, is built for the most dependable field service. Its overhead valve and camshaft motor, 3 speed transmission, accurately controlling governor, special heat treated steels, complete enclosure from dust and dirt, force feed lubrication, assure satisfactory performance. This machine, like all Holt products, is backed by the most sincere factory service—the kind that makes you want to standardize on "Caterpillar" equipment.

Write at once for full information about the 2-Ton or about the larger "Caterpillar" Tractors, 40 h. p., 60 h. p. or the big power "75."

There is only one "Caterpillar" —Holt builds it

POULTRY AND RABBITS

To Kill Lice

Sodium Fluoride Will Get Results

Although there are many methods used in attempting to rid poultry of lice, the sodium fluoride method is one of the simplest to apply, and perhaps the most effective, according to Dr. W. T. Johnson, veterinarian of the western Washington experiment station.

It has been determined that real poultry lice are masticating and not blood-sucking parasites. In other words, they live by eating the scales of the skin and parts of the feathers. It has also been determined that sodium fluoride acts as a poison when consumed by the lice. Taking advantage of this fact and placing the drug on the fowl, so that when the lice eat they consume the chemical, results in their destruction.

At least two methods of treatment have been very successfully used, the dust method and the dip method.

The dip method is the easiest, most rapid and the cheapest method, but should not be applied during the colder seasons. It consists in dipping the fowls in a lukewarm solution of sodium fluoride in water at the rate of three-quarters to one ounce (approximately a well-rounded tablespoonful) of the powder to each gallon of water. A tub is a convenient receptacle to use and it should be over half full of the solution.

A warm, sunny day should be selected when dipping, so that the fowls are dry before going to roost.

The fowls are grasped similar to that when dusting and held in the solution with the head out. The feathers of the body are then ruffled with the right hand. Finally the head is ducked once or twice for just a moment each time.

The dust method consists in applying a pinch of the drug on the skin and feathers of various parts of the body, since it has been found that several species of lice may inhabit a fowl, and that they tend to migrate to certain parts of the body and remain in more or less restricted areas. A pinch of the sodium fluorid is picked up between the index finger and thumb and placed on the skin of 12 places on the body when treating to destroy all lice that may infest the chicken. The order of applying the chemical is: (1) Base of tail; (2) below the vent; (3) to one side of keel bone; (4) other side of keel bone; (5) outside of thigh region, left; (6) along wing, left; (7) on back, just back of wings; (8) base of tail; (9) outside thigh region, right; (10) along wing, right; (11) throat; (12) back of head. Particular pains must be taken to deposit some of the drug on the skin in each part of the body mentioned. It is not necessary to make special effort to apply the powder to the feathers.

In order to treat as rapidly and efficiently as possible it is necessary to do the work in a systematic manner. It is well to hold the fowl in such a manner that one does not have to change hands; changing hands results in delay and increases the chances of the fowls getting away before treatment is completed. The wings are held together back to back by the left hand and the right hand remains free to apply the powder. The fowls should be held by the one hand throughout the entire procedure. If the wings are not held as given a cloud of the powder is liable to be created with detrimental results to both fowl and operator.

If the fowls are properly handled and a table be used upon which to lay the fowl and to hold the container of the sodium fluorid it is possible to treat more rapidly than one realizes at first thought. Three people with proper conditions at hand should catch and treat 100 or more birds per hour by this method after becoming experienced. Most rapid and effective work is done when a definite routine is followed in the case of each individual fowl, according to some such procedure as above given.

One pound of the powder should be enough to treat approximately 100 fowls by the above described method.

As stated before, in order to eradicate all lice that may affect the chicken it is necessary to apply the powder to 12 parts of the body, but if the louse which is found principally in the vent region is the only one noted it is only necessary to place the drug on the skin below the vent. The louse which infests the vent region is the most frequently encountered in our flocks and very often the only kind present.

It is no more necessary to apply sodium fluoride to various parts of the body than is the case when using various ointments. In using ointments they must be applied twice to completely eradicate. In the case of sodium fluoride one thorough treatment is usually effective, as it destroys all the lice present at that time and remains long enough to destroy the lice coming from the eggs present at the time of application. Treatment is not immediately effective, but requires several days.

Although it is possible to completely eradicate lice with one sodium fluoride treatment properly applied one must not harbor the impression that the flock will remain permanently free from then on, as there are various means by which a reinfestation may be established. But, when the work has been thoroughly done, reinfestation does not soon take place. To lessen the danger of reinfesting the flock treat all fowls on the premises and those brought in and isolate introduced fowls for a week's time before putting them with the flock.

It is highly important to have a convenient means of catching fowls, so that they may be handled very rapidly and yet disturbed as little as possible in order not to seriously lower egg production because of handling. A convenient means which is applicable for day work consists in running fencing wire along the edge of the droppings boards and then driving the fowls in back of the wire below the droppings boards. The fowls are then driven into a catching crate placed at one end of the enclosure.

In the United States department of agriculture farmers' bulletin No. 801 is found the following regarding this problem:

"For lice on your chickens, young turkeys and, in fact, all newly hatched fowls the application of sodium fluoride in the dust form is recommended, rather than by dipping. Sodium fluoride if used too freely on very young chicks may kill them. The importance of treating the hen before the hatch comes off is urged. It has been found that there is no injury to eggs provided the setting hen is properly treated. If this is not done the chicks should not be treated until about a week old and then only two very small pinches should be used. One of these should be distributed on the neck, top of head and throat, and the other on the back and below the vent. The mother should be given only three pinches—one on the head and neck, one on the back and one below the vent. The treatment should be given while the fowls are active and for a time they should be prevented from hovering, so that the free powder will be shaken off."

Ask for commercial sodium fluoride when purchasing, and not for sodium chlorid.

Treat all fowls on the premises—chickens, geese, ducks, turkeys, etc.

Do not let a single fowl escape complete treatment.

Apply the powder on the skin in each required part of the body when using the dust method.

Hold the fowl with the wings back to back and by the same hand throughout the entire procedure, as it prevents fluttering and production of a cloud of sodium fluoride, which results in an irritating effect on the breathing passages.

Do not dip in cold weather.

Do not leave solution of sodium fluoride so fowls may drink it—it is poisonous.

Do not let this solution stand in metal containers over night—it attacks metal.

Sodium fluoride does not destroy mites—they are blood suckers.

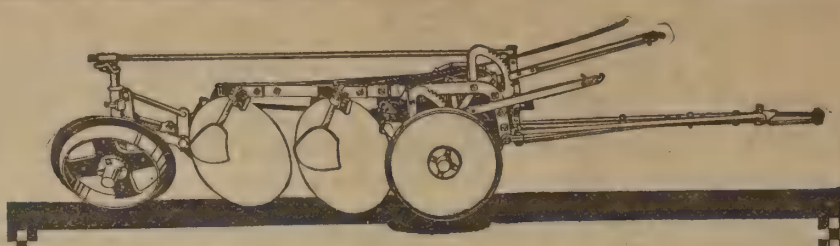
Do not use sodium fluoride to eradicate lice on cattle and hogs—these animals have blood sucking lice and irritation is sometimes produced.

LITTER FOR FERTILIZER.

Litter from the scratching floor should be used as fertilizer and soil conditioner in the garden or field.

DESTROY BODY LICE.

Sodium fluoride, dusted into the feathers, will destroy body lice on chickens.



An Orchard Disc Plow Needs a Stiff Hitch

You want to offset your plow to right or left of tractor for close work under the low limbs. And you want the plow to run steady when thus offset.

John Deere No. 26

is the plow that meets those requirements, because of its stiff, adjustable hitch.

Note, in the illustration at the right, how this hitch can be adjusted to the right or left to provide the desired offset.

Being stiff, this hitch tends to hold the plow in the furrow, when offset; and it also aids in controlling the rear wheel for short turns at the ends.

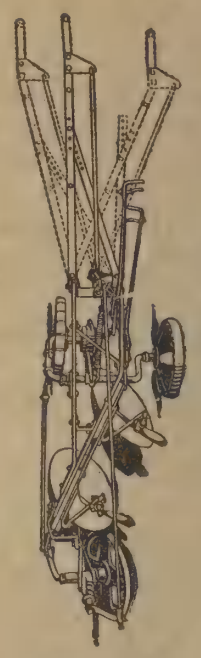
An exclusive feature—the No. 26 is the only disc plow with stiff hitch.

And don't forget these other important reasons for the great popularity of the No. 26:

Only 26 inches high when plowing 6 inches deep, and only 37 inches wide—it's the low, narrow plow that gets under the low limbs, up close to the row. Rear end can be made to float, thus preventing damage to large roots. Unusual clearance—frame is above the discs, not at the side. Simple, strong and positive power lift.

Subsoiling and ridging attachments can be furnished, making the No. 26 a three-in-one-plow.

Real service—adequate stocks of plows and repairs maintained at San Francisco, Los Angeles, Portland, Seattle, Spokane and Boise. And there is a John Deere dealer with plows and repairs near you.



FOLDER—write today for your copy. Address John Deere, Moline, Illinois; ask for Folder CO-347

ORCHARD AND GARDEN

Apple Marketing

Clearing House of Information

That the time is ripe for the formation of an apple market clearing house is the opinion of large growers in north central Washington who have been marketing their products direct for several years.

"My idea is not to attempt to control the method of marketing apples or the prices at which they are sold," said one of these growers, who has studied the problem for many years. "To begin with, I would propose simply a clearing house of information which would be in the sole charge of a man in whom every dealer, grower and marketing agency would have complete confidence. Every carload price quoted would be reported to this clearing house daily and in turn all quotations would be bulletined out to each member of the organization. However, the bulletin would not contain the names of the firms making or receiving the quotations. I would suggest that the bulletin would simply announce five cars were quoted at $2, f. o. b. Wenatchee in a certain zone. The entire country, of course, would have to be zoned for this purpose so that bulletins would be intelligible.

"Of course, the names of the firms making and receiving quotations would be kept in the office, but would be strictly confidential. This shows why the man in charge of the clearing house must be of the very highest character and standard.

"Two great objects would be accomplished by the clearing house: One the stabilizing of the market, and the second, to prevent the flooding of certain markets while others may perhaps be bare of fruit.

"If all dealers and marketing agencies were informed as to the general range of quotations they would be able to act much more intelligently and efficiently. They would also avoid shipping large quantities of apples into a market which was overcrowded.

"During the last three or four seasons I have encountered quotations made by local firms or agencies varying as high as 75 cents per box for one grade and variety. Naturally the eastern dealer receiving such quotations would come to the conclusion that the situation here was pretty badly demoralized and would hold off in making a purchase, hoping for even better prices.

"It woud not be the hope or expectation that an absolutely uniform quotation could be worked out, but there is no reason why the prices of extra fancy Winesaps should vary more than 10, 15 or 20 cents in the market at any one time, in my opinion.

"It is useless to dwell further upon this phase of the situation, as every one knows it and knows that it is not the fault of any one firm, individual or agency, but rather the fault of the system.

"The one great object toward which all business is working is stability, and unless this can be achieved in the apple marketing game we can not expect to attain to maximum results either as growers or shippers.

"As a matter of fact the local dealers or shippers are the ones who suffer more seriously from the unsettled condition and the fluctuations of the market than any one else.

"With uniform grade and pack and quality of apples, picking at the proper time and transportation to the eastern markets in prime condition, there is no reason why the products of the Wenatchee district should not command a stable price during the entire season, which should return a fair profit to all of the factors concerned in their production, transportation and sale.

"I believe that the market clearing house is the one missing link which shall help to stabilize the market more than any other element."

Wintering the Bees

By GEORGE W. YORK.

No doubt by the time this appears in print most beekeepers will have taken the surplus honey off the hives. If not already done it is a fine time to requeen the colonies with young queens. The later rains will help continue the fall blossoms, and thus go far toward supplying the bees with honey stores for winter. But be sure to examine every colony carefully long enough before continued cold weather arrives, so you can feed them sugar sirup, if necessary to complete the required amount of food for winter. This should total around 40 pounds at least; or, if an eight-frame hive, the gross weight of hive and stores for winter should be about 60 pounds, and if a 10-frame hive, about 70 pounds.

Some beekeepers who run their bees for extracted honey make the mistake of extracting from the brood combs, which may contain quite a little sealed honey. This is seldom necessary if ample room was given in the supers during the honey-storing season. Besides, there is danger of getting young brood in the honey, which does not tend to improve it as a table food. It is a good rule never to extract any honey from the brood chamber. Rather than extract there it would be much better to exchange, say, one or two of the brood combs full of honey, with empty drawn combs, putting these latter in the center of the brood nest. This would give the queen a good chance to lay more eggs for the rearing of young bees for the winter time. Then keep the full combs of sealed honey for feeding early next spring, in case they are needed. They can be inserted in the brood chamber again in place of empty combs. If this is done, say, in March, it may be all the attention the bees will need until near swarming time.

But, whatver you do, try to have the colonies strong with young worker bees this fall for the coming winter, for they are the ones that will do the work next spring before the time when the young bees reared then are ready to do their part.

If the reader is somewhat inexperienced I would advise referring to some good book on beekeeping and learn just how to do everything as well as possible. Even the best of beekeepers sometimes miss it, but you will stand a better chance of succeeding if you will try to follow the advice given in the best bee books.

Another good way is to visit some successful beekeeper in your vicinity and learn how he proceeds to get his bees in condition for safe wintering.

A little later I will describe what is considered a good way to prepare bees for wintering here in the Pacific northwest. In the meantime don't fail to see that they have plenty of good stores to carry them through the cold season that will likely be here in two or three months. One of the oldest and best beekeepers in Wisconsin used to say that "too much honey in the hives for winter is just enough."

More Vitamines

Leafy Foods and Dairy Products

"If the American people wish to save themselves and their children from malnutrition they must arrange their diet list to include more of three important foods," said Dr. E. V. McCollum of Johns Hopkins university, one of the leading experts in the science of nutrition in the United States, as he spoke to a Seattle audience on the subject of "What to Eat and Why."

"In the first place, we must have more raw foods—such as lettuce, celery and fresh fruits in salad or other palatable form. We also need more dairy products. Every one should have a quart of milk a day in some form or other. And finally we do not eat enough leafy foods, such as spinach, beet greens and chard. These foods contain vitamines and vitamines are, to quote Dr. McCarrison of the British army, 'the spark in the engine. They are the fundamental essential in all human diet. Lack of any or all of them spells malnutrition and that in turn physical and mental breakdown.

"It is a deplorable condition when one-third of our school children are suffering from malnutrition, and it is to correct these conditions that we have been studying the human diet problem in the light of prolonged animal experimentation.

"The best source of vitamine 'A,' without which the tear glands and salivary glands cease to secrete, is the oil of fish and animal livers, kidneys and pancreas, butterfats and the leaves of lettuce, spinach, carrot tops and turnips. It is found in no vegetable fats or oils.

General Malnutrition.

"General malnutrition results from the lack of vitamine 'B,'" he continued, "with definite damage to the processes of digestion and assimilation, the motor nerve cells of the spinal cord and possibly paralysis. This vitamine is found in almost all our food except polished rice, starch, sugars, fats and oils, white wheat flour and store corn meal.

"Vitamine 'C' is the most easily destroyed and the result is a breakdown of the capillary blood vessels, with the spilling of the blood into the tissues. Scurvy is the extreme of this condition. Vitamine 'C' is found in fresh uncooked fruit and vegetables, not in cereals, canned, preserved or cooked food.

Some Form of Rickets.

"A great many children have some form of rickets, which is caused largely by the lack of vitamine "D." Cases of bow legs, knock knees and swollen joints have been produced by the omission of such foods as have this vitamine in them. The best source of this vitamine is cod liver oil, but this should only be given as a preventive when the proper diet can not be supplied. This disease is rare in China and yet these people eat very little animal food. They get a large part of their diet from leaves of different plants and are thus able to supply the vitamines that are needed.

"On the other hand, we find that a leaf and seed diet such as the Chinese people eat does not produce a dominating people. It is also true with animals. No seed and grass eating animal ever ruled the wilds and they never will. The beasts that prey on other animals are more ferocious and come nearer being rulers than are the herbivorous animals. When the principle is applied to the human races we find that the meat and vegetable eaters have always been the most progressive.

"Vitamine 'X,' discovered recently by Drs. Evans and Bishop of the University of California, is the latest find in our field. Whole wheat and lettuce are rich in its contents."

Source of Vitamines.

Dr. McCollum noted that yeast is a source of "A" and "B" vitamines, oranges of "A" and "B" and "C" and cod liver oil of "A" and "D," and stated that a correct estimate of the health of the nation may be based on the condition of its teeth.

Dr. McCollum dwelt on the importance of the vitamines to the teeth and the relation of the health of these to the general health of the individual.

Bedrock of Cooperation

(Continued from page nine.)

ing on an average 210 pounds. Moreover, production is uniform each week because the amount of skim milk regulates the number of pigs the farmer must keep.

Common Trade Mark.

The 46 cooperative bacon plants are also federated for educational purposes into one national federation known as the National Federation of Danish Cooperative Bacon Factories. This federation has been able to influence government legislation that provides for the exporting of all bacon from Denmark under the common trade mark "Lur Brand," which can be stamped only on the highest class bacon from sound, healthy animals free from tuberculosis and other diseases.

The agents of the bacon factories on the bacon exchange in London are informed each week of the amount of bacon available and meet with the English wholesalers on the principal market days. As a result of this direct marketing scheme, the bulk of the Danish bacon is shipped direct from the cooperative bacon plants in Denmark to the provision wholesale houses in England. In a few instances, some of the cooperative plants have made direct contacts with the larger retail buyers in England and ship direct to them.

550 Egg Associations.

Forty years ago the Danish farmer looked upon egg production as a chore which might be handled by the women on the farm. The Danish egg trade to Great Britain was not a success because the eggs were of poor quality, irregular supply, and of no dependable grade, with the result of low prices to the producers.

Today, through standardization and cooperative marketing, Danish eggs are the third export commodity of the country. The 550 egg collecting associations, with a total membership of 50,000 farmers, are formed into one central egg marketing association known as the Danish Cooperative Egg Export association, with headquarters at Copenhagen. The central association owns 10 branch packing houses throughout the kingdom and a large packing house at Copenhagen. Loans are executed and contracts made with the farmers for delivering their total egg production, similar to the plan of operating the creamery and bacon plants.

The chief aim of the central association is to create better home and foreign markets for high-quality eggs, all buyers being assured fresh, high-quality eggs.

A stamping scheme has been devised so that each egg may be traced from the English breakfast table to the individual producer. The eggs are collected from the farmers and forwarded to the nearest packing house owned by the central association. Here under the supervision of the central association all eggs are examined, sorted, graded and packed. All eggs collected are paid for according to weight. The association influenced the producers to standardize their product. In 1921 the Danish egg export association handled 241,266 cases of eggs. While about 20 per cent of this number of eggs were disposed of on home markets, the remaining 80 per cent were exported. The 194,445 cases, or 80.6 per cent which were exported represented 10.8 per cent of the total egg export from Denmark.

In addition to the Danish cooperative egg export association, there are seven smaller egg associations operating along similar lines, but in the respective membership territory of seven different cooperative bacon plants. These associations exported 175,121 cases in 1921.

FARM WOODLOTS.

Farm woodlots offer a splendid opportunity for growing timber crops, according to statements from the forest service, United States department of agriculture. It is estimated that there are 150,000,000 acres now in farm wood lots which if placed under sound forestry methods would yield substantial revenues to their owners, as well as lumberto help relieve the timber shortage which has already begun to be felt.

MEN WANTING FOREST RANGER, RAILWAY mail clerk or carrier positions, write for particulars. Mokane, Dept. A11, Denver, Col.

(Continued on the following page.)

Great Northern Operating and Equipment Cost Advances

All the work that you do, all the work that everybody does, consists in moving from point to point yourself and in moving objects from one point to another. This is all that a railroad does. You know that it costs you something to do your own work. Do not forget that it costs the railroad immeasurable more to do its work, which is also your work, and without which the greater part of your labor and expense would be lost.

In traveling on a completely equipped train with dining, parlor and sleeping car service, the facilities are the same as in high class hotels. The cost to the traveler is immensely less.

Every item in the provision for both passenger and freight service costs more than it did. You travel over a mile of railroad track in a minute or two. This mile of track, exclusive of the grade and right of way, which cost $15,000 in 1913 now costs $25,000.

Here is a comparative list of the cost of Great Northern equipment ten years ago with the cost of similar equipment now:

	Cost in 1913	Cost in 1923
Mountain Type Engines	$24,000	$54,000
Sleeping Cars	16,000	30,000
Dining Cars	14,000	31,500
Day Coaches	9,000	20,250
Refrigerator Cars	1,200	2,700
Ore Cars	800	1,800
Box Cars	800	1,800
Flat Cars	650	1,462

Taxes have increased in these same ten years over 100 per cent. This makes a formidable addition to the operating expense of every railroad. But at the same time railroad freight and passenger rates have increased only about 40 per cent.

For everything we have, food, shelter, clothing, and transportation, we must pay. Transportation has made this country what it is, and if it is impaired the whole country suffers disaster. It is worth thinking about as a matter of self interest as well as a matter of justice that the service is being rendered, under cost conditions most unfavorable to the carrier and growing yearly more difficult, at a price to the public so little over that of ten years ago.

Take these facts into consideration whenever you think or talk about railroad rates.

LOUIS W. HILL,
Chairman of the Board.

Talk No. 6

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word per insertion. Open also to nonsubscribers.

In using these columns advertisers must observe (1) No advertisement will be accepted for less than $1.00 per insertion. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

CHAPTER IX.

A "Bad Man's End."

"That's where Mexican Jack was killed," answered Abe, coming in the doorway, frying pan in hand. "He was shot just where you sit. I'll tell you about it after supper."

John moved away from the spot.

Before long the ranchman called them in, and they enjoyed a supper the like of which had not fallen to their lot since they left the mine. The compliment the boys paid Abe's cooking did much to win his heart. Though they were anxiously waiting to hear the story of the bullet holes and the spot of blood, Abe continued to talk about gravies, the advantages of a very hot pan in cooking and other culinary topics that would have interested John at another time, for he rather prided himself on his ability as cook, but which now seemed more than trivial.

The boys lent a hand and soon the tins were washed and the table cleared. The fire replenished, and Abe's pipe fairly started, all three drew their stools up to the blaze.

"Well, how about Mexican Jack?" ventured Ben at last, unable to restrain his curiosity longer.

"Oh, yes, I was going to tell you about that, wasn't I? Well, he was a hard case," continued the speaker. "Half Mexican, half white man—and all bad, he was. I made his acquaintance about 10 years ago at Boise City, and the first thing I heard of him was that he'd just killed a gambler—gambler was a hard case, so nobody cared much—and Jack skipped. Shortly after that he went to Denver and bullied the town. Oh, he was a regular 'bad man.' You know what a 'bad man' is, don't you?"

"Sure," said John. "Tough customer who knows he's tough and takes pride in it. They're always mighty quick with their guns, and dead shots. One of 'em shot a man in the arm, near our shack in Bismarck, and mother tied it up. It was queer; the bullet went right through and it looked like a rose where it came out."

"Well," continued Abe, "Jack was a 'bad man,' and he didn't care who knew it. He had a shooting scrape in Denver and had to jump the town in pretty lively style. The sheriff's posse got after him, but he killed two of 'em and got off. After that every sheriff in the country was looking for him, so he turned outlaw and road agent near Virginia City, and held up Ben Halliday's stages till the vigilance committee hung some of his partners and got too hot on his trail. Not a thing more did I hear of him till he turned up about two years ago with this bunch of sheep of your father's. He had turned herder and driven 'em all the way in from Utah." Miller stopped to relight his pipe, for he had forgotten to keep it going in the interest of his tale. The boys were impatient at the least delay; the ruddy firelight lit up their faces and showed their eager interest.

"Your father had bought this ranch and put me in charge just a little while before Mexican Jack came along; I spotted him at once and he spotted me, but I didn't let on, for I knew he was all-fired quick with his gun and I wasn't looking for trouble. Of course he never went to town: it wasn't healthy for him there; and if he wanted anything he had to wait till somebody who was going in would get it for him. Even with such care, though, he knew it wasn't safe for him to stay in one place very long, so one day in spring he told me he was going to quit and move on. Don't you boys ever turn 'bad men,'" said Abe, with a laugh; "it don't pay. Brave as that poor chap was, he was fairly afraid of his shadow when he got to thinking of sheriff's posses. One man isn't much good against the law, even out here. Well," he went on, "I went to town to get another man—it's 30 miles, so I stayed over night. Charley Boyd, who runs a liquor joint there, told me a young feller, an Englishman, he thought, had been in there several times asking about sheep. Charley said there might be some business in it, so I dropped in later.

"Boyd went up to a young chap who was sitting watching a faro game. 'Here's your man, Mr. Simmons,' said he. The stranger wanted to know all about the different bunches of sheep near there, so I told him and talked a good deal about one thing or another having to do with them. I remember I told him I was looking for a herder to take the place of a Mexican that was going to quit. Soon after that he left. I could not quite make him out, but it was plain enough he wasn't buying."

"What's all this got to do with Mexican Jack?" inquired Ben, who didn't see the drift of the narrative.

"If you'll wait a minute I'll tell you." Abe was vexed at the thoughtless interruption, and Ben subsided, realizing that he had been rather foolish. "In the morning I packed my stuff on the lead horse, mounted my own cayuse and started out. I had just topped the rise near the shack when a bullet went by with a hum, and then another and another, so I chased back for cover to the other side. I dismounted, crawled up to the top and looked over. There at the door sat Mexican Jack, six-shooter in hand. I couldn't understand why in the world he should shoot at me, so I rode over to look up Billy, the other herder, and find out what was up. He hadn't been to the shack since morning and knew nothing about it, so he left the sheep and we went down the coulee, which runs just below here, you know, till we got behind that clump of brush—perhaps you saw it. We peeked through pretty cautious, I can tell you. The Mexican was still there, but his body was all hunched up; he seemed drunk or asleep, for his six-shooter lay on the ground by his side.

"We covered him with our guns, for he was chained lightning with his shooting irons, and then yelled at him. He didn't answer or move an inch. We jumped out then, still keeping him covered, and walked slowly up, ready to riddle him if he should make a move with that deadly pistol hand of his. Once he quivered a bit and his right hand stirred toward his gun. I almost plunked him then, I was so nervous, but there was no other sign of wakefulness or life. We decided he must have gotten hold of some liquor somewhere, but when we got within about 50 feet of him Billy noticed a pool of blood at his side. Then we rushed forward—guns still ready, however—and just as we reached the steps he lurched forward and fell full on his face—dead!

"A couple of bullets had gone clean through him. We found out when we turned his body over to the authorities in town that Simmons, the young Englishman I had met, had come over to America a year before expressly to kill Mexican Jack, who had shot his brother in some quarrel. I had supplied the missing link of information, and he had gone early in the morning to our shack, where he had shot the Mexican twice. Jack evidently thought I had given him away purposely and tried to settle me."

"My! what a fiend," said John. "But what became of Simmons?"

"Oh, he went back to town and gave himself up, was tried and acquitted; for no jury out here would convict such a man for shooting a bad lot like Mexican Jack."

"I should think you'd be glad to get rid of him," exclaimed both boys in chorus. "Weren't you afraid to have him round so long?"

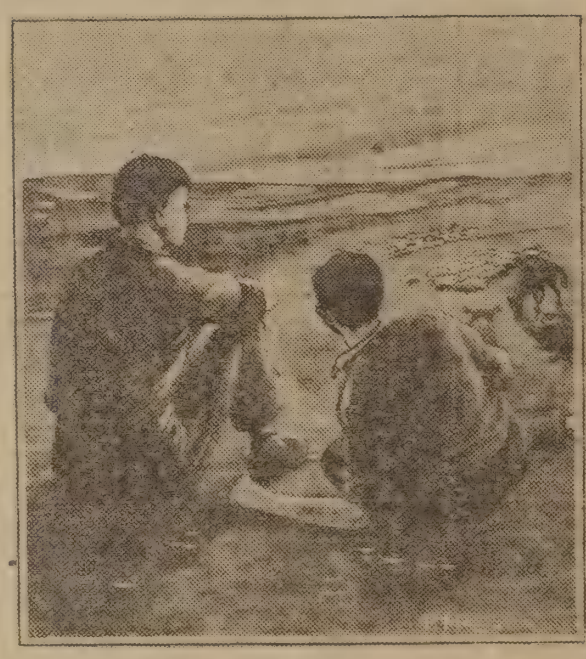
"Oh, no; he wouldn't trouble me, I guess, as long as I let him alone; he was a blamed good herder, and it was worth while to keep on the right side of him. Now, you boys want to tumble in, for we'll be going out right early in the morning to the range."

The 25-mile trip next day to the range where the sheep were grazing was made without incident, but the country was all new to the boys and they plied their guide with questions. They learned that Abe Miller was to stay with them on the range and teach them their duties, another man taking charge at the ranch house during his absence. It was expected that Mr. and Mrs. Worth would move to the new mine (about 15 miles from the ranch house) in a couple of months.

Their education as herders completed, the boys would be given sole charge of a large bunch of several thousand sheep. A kind of shed, open in front and built of round, chinked logs, entirely lacking in comforts of every kind, was to be their home. Polly, Dick and Pete, the three sheep dogs, and the great flock of woolly animals would then be their only companions.

Abe initiated them at once into the routine of their new occupation and introduced them to Polly and her two sons, Dick and Pete, the ever-vigilant, intelligent dogs who were to be their capable assistants.

It was hardly the work that an enterprising, wide-awake, active person, young or old, would choose. Untiring vigilance was the one thing necessary. Watchfulness never ceasing, day and night, rain and shine, was the chief occupation of the sheep herder. Polly, the dog, was a much better herder than her young masters at first, and Dick and Pete were not far behind. They moved the "bunch" to fresh feeding grounds at the command, and fully understood the wigwag code of the plains. When driving at a distance from camp Polly would trot to a hill top and watch for the boys' signal: if John waved horizontally she would drive them farther, Dick and Pete assisting; when the bunch had been driven far enough John's hat would be flapped up and down, and the dogs, with almost human intelligence, would at once stop their charges.



"I'd go crazy if I had to stay here with these woolly idiots," said John one day.

The attacks of coyotes, wolves and, more rarely, mountain lions were the greatest danger to the sheep that the young shepherds had to guard against. Some of these four-footed enemies were almost always prowling about, looking hungrily for a chance at a stray sheep or lamb. A coyote or wolf among an unprotected flock will destroy a surprising number of sheep in a few minutes, seemingly for the pure love of killing, so there was good reason for the sharpest kind of lookout.

After the novelty of the life wore off, the boys began to wish themselves back at the mine. For weeks at a time they did not see another human being. Each day was like every other day; in the morning the rope corral enclosing the flock was let down and the sheep were driven by the dogs to a place where the feed was good; then the boys mounted their horses and followed to the grazing ground. During the two mid hours of the day the animals rested, lying down quietly, and the brothers would take advantage of this time to get in as much sport as the spot afforded. Rifles were always slung on the saddle, and the slinking coyotes gave plenty of opportunity to show good markmanship. Occasionally the curiously marked antelope appeared, looking, as Charley Green once said, "as if some one had started to paint the whole lot tan but had got tired of the job and left patches of white at odd places"; then the young hunters would set out, and in the excitement of a hunt forget for a time the monotony of the life. Seldom was it safe for both to go at once; only at noon, when the sheep were lying down in open, level country, could the dogs be left wholly in charge.

Toward evening the bunch must be corralled for the night—a difficult task if there are many lambs in the flock. The boys found, often to their disgust, that a lamb can run like a deer when it gets thoroughly frightened. It was shortly after Abe had left them that, in accordance with his teaching, they began to "round up" the flock preparatory to stretching the rope corral. Ben was on one side with Polly and Dick, John on the other with Pete; all was going well, and John and Pete, neither very experienced in the business in hand, began to feel the pride that goeth before a fall. Suddenly the sheep 50 yards from where John stood began to scatter. Pete was sent forthwith to force them back, and while he was busy there a lamb, long and clumsy of leg, apparently not strong enough to stand alone, started out on a voyage of discovery not 10 yards from the boy. It would not do to let it stray far, for a coyote would make short work of it, so John sped off in pursuit.

As he drew near the little woolly thing it increased its speed, running as you would imagine a rickety table would run, but it kept going faster and faster. John, who unfortunately was on foot, found to his mortification that he could not overtake it. It looked as if he would have to give up the chase. At last, however, he tried gradually turning to one side and heading it back to the bunch; even then it might have got away if Polly, taking in the situation, had not flown to the rescue. John came back panting, hot, and tired, only to find Ben sitting calmly in his saddle with a broad grin on his countenance. Even the dogs seemed to be laughing, their open mouths and lolling tongues giving their faces a look of keen enjoyment over his discomfiture.

Even after the flock was safely corralled it required almost as much watching as if in the open. The boys usually took turns, each watching half the night. A fire was built on one side of the enclosure and watcher lay on the other. The sheep, probably the most helpless animals one could find, lay right up against each other, their closely packed bodies looking at night like a patch of snow.

As the young herder fought with himself to keep awake, the howl of a coyote often broke the stillness; then he must start up, gun in hand, and make a round of the flock. From time to time he replenished the fire and made a careful scrutiny of the country round in search of the lurking enemies of his charges. Till he woke his brother about midnight there was hardly a minute's rest. Then Ben took up the vigil, while John slept till daylight; and so began another weary day exactly like the preceding one.

While in summer sheep are docile and amiable, though never so interesting as are cattle, horses or mules, in winter they become stupid, intraceable and aggravating to the herder. It was in the winter that the boys' hardships were encountered, for they found it necessary more than once literally to carry some of the flock through snowdrifts to the ranch. They would not be driven or led, but when a trail had been made, and a number carried and forced along it, the remainder would pluck up courage to follow through the bank of snow.

The boys spent all one summer and winter with the sheep. From time to time Mr. Worth, who had moved his entire outfit over to the new mine, came out to the range to inspect the animals; and toward the end of the year the boys each

Bits of Fun FOR Everyone

Offer Declined.

Caddie—I got that ball we lost this morning, sir—got it from a small kid.

Golfer—Good! I'll hand you what you gave for it.

Caddie—No, thanks; I gave him a punch in the eye.—Boston Transcript.

He Knew What Was What.

The superintendent of schools, says the Argonant, was visiting a class of very young pupils. He chose a youngster to quiz, and said: "Now, Johnny, I'm going to ask you to solve a very difficult sum. How much is three times eight?"

"Twenty-four," the youngster replied promptly.

"Well, now, that is excellent. That is very good indeed," said the superintendent.

"It's better than that, sir," said Johnny with a cheerful grin; "it's perfect!"

In Bad Taste.

May—Oh! Ray, dear, is my hair in your way?

Ray—You said a mouthful, Maytime!—Topics of the Day Films.

Accomplished.

"Everybody should lie on the right side," is the advice of a medical man. The only exception, we gather, is the politician who can do it on both sides.—Punch (London).

Does He "Short Circuit?"

He—Here comes a friend of mine. He's a human dynamo.

She—Really?

He—Yes, everything he has on is charged.—Bell Telephone Magazine.

"Not Dutch, but Germy."

Tom—Remember that old Dutch girl of mine?

Jerry—Yes, you mean that cross-eyed girl?

Tom—Yep, that's her. She was so cross-eyed the tears ran down her back when she cried.

Jerry—Why, that is what you call bacteria.

When It Occurs.

A psychiatric board was testing the mentality of a weak-faced negro soldier.

"Did you ever hear voices without being able to tell who is speaking or where the sound comes from?"

"Yes, suh," answered the negro.

"When does this occur?"

"When I'se talkin' over the telephone."—Transmitter.

The Flower Garden

By RUTH GIPSON PLOWHEAD.

PLANNING YOUR PERENNIAL GARDEN.

This is the first of a serious of garden talks showing how ornamental flower effects can be obtained with the least work and expense. Most of us are too busy to spare more than the stray minutes among the flowers, but those few minutes can be used to produce some very lovely results. Among the most decorative and easily raised flowers are the perennials, many of which increase in size and beauty from year to year and require little care save division and cultivation.

So, though we think of spring as the busy time in the garden, if you are planning bulbs and perennials for next year, your seeds should be obtained at once and planted as soon as possible. Plants so started should bloom next year, whereas if you wait until spring the blooming season will be delayed a year. In my own back yard a number of perennials are already started—several varieties of columbine, for-get-me-nots, carnations, pyrethrum, delphinium, and even some experimental boxes of tulip seeds. I have used small boxes so as to be able to watch them more carefully, but if you have an unused spot in the garden, which can always be kept damp, it will be ideal for your seed rows. In the spring the plants can be transplanted to their permanent beds.

Press the seeds well into the soil, and it is a good idea to cover the beds with burlap until germination. It is necessary that the soil should never dry out if the seeds are to germinate. Some perennials are weeks in starting, but if undisturbed until spring will often start then.

Some of the very easily raised perennials which might be started in late summer are: Hollyhocks, perennial sunflowers, gaillardia, oriential poppies, sweet rockets. Each flower lover has her favorites, but all the above are most easily grown from seed. If bought from the nursery most of these would cost at least 25 cents a clump.

There are several hardy and lovely perennials that are not as well known as the old standbys and I would like to tell you about them.

Sweet rocket: This is an old-fashioned flower, growing about the height of a perennial phlox and looking much the same. It is grown in shades of pink and white. The delightful thing about this flower is its wonderfully sweet odor and its early spring blooming. It makes a showy mass when planted in large clumps.

Pyrethrum or painted daisy is a plant with lovely fernlike leaves and flowers in shades of pink and white, somewhat smaller than a Shasta daisy. It is always much admired in the garden and makes fine individual bouquets or combines most artistically with roses and gypsophila.

Gaillardia or blanket flower: This is also of a daisylike form, but comes in bronze, red and yellow shading. This is most easily grown and has a wonderfully long blooming season, from June until the heavy frosts come.

Anchusa Italica: This seems to be little known in many gardens. I do not know its common name, but do know that it bears one of the loveliest blue flowers that we have. The plant is several feet tall, and the flowers are somewhat like large for-get-me-nots. For cutting or for garden show it is equally attractive.

Home Recipes

Sweet cucumber pickles: The following will make one-half gallon, said to be very like those we buy. Use cucumbers about two inches long, leaving on a little of the stem. Soak one day and night in weak salt water, drain and wash thoroughly. Heat enough water to cover with one cup of vinegar added. When hot drop in the pickles and stand on the back of the stove for one hour or till they change color, never boil.

Have ready the following mixture prepared hot: Three cups of vinegar, one cup of water, one and one-half cups of sugar, two teaspoons of whole mixed spices. Drain the pickles and put into the spiced vinegar for 10 minutes. Pack into jars and pour the liquid over and seal tight.

Washington. E. D. G.

Dill pickles: Cut from the vines and put into a jar, keg or barrel with dill leaves between layers. Add salt to a pail of water until it will hold up an egg. Pour over the pickles and weight down.

MRS. S. A. C.

Easy way to can beans: Use fresh beans cut in inch pieces; to five pints of beans add one small teacup of salt and enough water to cook. Boil 10 minutes and seal. When used pour off the water, add cold water and bring slowly to a boil. When tender season, but use no salt. Should they be too salty freshen twice.

To can chicken: Kill the fowl and draw at once; wash carefully and allow to become perfectly cold. Cut into convenient pieces, drop into boiling water, then dip at once into cold water. Pack immediately into glass jars, well sterilized, fill with boiling water, adding one level teaspoon of salt to each quart jar. Put rubbers and caps into position, but not tight, and process for three hours in boiler with false bottom of wood or wire.

Remove from boiler, tighten caps, test and put away in a cool place.

Easy canning method of peas, beans and corn: Take nine measures of vegetables, one of sugar and one-half measure of salt and just enough water to cover. Put on the stove and boil just 5 minutes from the time they begin to boil. Put in cans and seal.

Care must be taken not to have too much water, as all the liquid must be canned and having just enough to cover the vegetables in the cans. I sometimes run short on the last can, then I add boiling water with sugar and salt. One can cook them longer, but it isn't necessary, as it saves time and fuel in the hot season. I pick peas and beans and get them ready in the evening; the next morning I measure and wash them and have the cooking and sealing all over in a very little while.

When you want to use them rinse two or three times in cold water, put on the stove in cold water and heat and if still too salty change the water. Cook until done and season and they will be just like fresh.

Try cooking pumpkin for pies in your meat roaster in the oven. When the pumpkin is small I cut into halves, remove the seeds and put in the roaster with a very little water and cook till done. When done I pick out the peeling and stir with a spoon, as it needs no mashing or putting through a sieve. Try this and you will never again peel a pumpkin.

A BUSY MOTHER.

To can corn: Take the corn when in the milk stage just right for table use and with a sharp, thin bladed knife cut the corn from the cob, but do not scrape the cob. Take 11 cups of corn, one cup of sugar and two-thirds cup of salt, one quart boiling water. Place all in a granite dishpan, set on the back of the stove with a slow fire and let it boil through thoroughly, stirring often. Have glass jars sterilized, fill them with the corn, seal and put away for use. When wanted pour cold water over and let stand a couple of hours, drain and season in the usual way. It will be like fresh corn. Do not cook more than double this recipe at once.

MISS E. W. M.

Cattle Ranch to College

(Continued from preceding page.)

time besought their father to let them go back with him. For the first time they realized the meaning of an expression they had often heard: "as crazy as a sheepherder." The shepherd's life in the far west is as uninteresting, ambitionless and lonely an existence as falls to the lot of man. For long periods of time a shepherd is so entirely alone with his flock and his dogs that the experience not infrequently costs him his reason. It was a terribly lonely life for youngsters such as they; though each was company for the other, they both longed to hear the home sounds and see the familiar faces. Mr. Worth, however, would not consent to their return till the year was up. He felt that the discipline was good for them, and besides he was never willing to have them let go of anything without finishing it.

The new mine was the most important and largest that had been opened. It was situated on the line of the railroad that had just been constructed, and was of a more permanent character than the preceding ones. Many of the miners brought their wives and families with them, so that they formed quite a settlement. Occasionally all the miners' sons would ride out to visit the Worth boys, who were delighted to see them, though there was little in common between them. The miners were easterners, as a rule, and knew nothing of horsemanship, hunting or plainscraft; but they were boys and were gladly received as such. They regaled John and Ben with accounts of the happenings at the mine, but while they listened eagerly, this only added to their impatience to return and made them more discontented with their present life.

When the snow began to melt and the grass to grow green again, the brothers occupied most of their time in thinking what they would do when they got back to civilization, for the time of their release was drawing near.

"I'd go crazy if I had to stay here with these woolly idiots another year," said John one day.

"Yes," returned Ben, "it's about as tame as anything could be. But what are we going to do when we get back? You can bet your bottom dollar father won't let us sit around and enjoy the view."

"I suppose we'll have to get to work at something." John stroked Polly's head reflectively as he spoke, and the good dog, undemonstrative always, showed her pleasure only by the slow wagging of her bushy tail.

"But what?" It was Ben who spoke. "I'll be switched if I want to go to coal mining, and I guess you don't care about it, either."

"That's right," replied John, laconically. "I've had enough of mining to last me a lifetime." He shivered a little at the remembrance of his experience.

For a time both were silent; each was trying to think of something he might turn his hand to that would suit his father and at the same time please himself. It was not an altogether cheerful prospect that lay before them. They would soon change the solitude for their bustling, busy home. It was home, and that was good to think of. Yet it was a home where a boy's love of fun and his healthy animal spirits were not considered: his capacity for work was what counted. A home where uncongenial, hard labor awaited them unless they could think of some other occupation that would satisfy their stern, just, absolutely honest but unyielding father.

"Well?" said Ben at last.

"Well!" returned John in much the same tone, "there is one thing we might do—perhaps."

"Well?" said Ben again, eagerly.

"You remember when young Watson was over here the other night," John began. "He said that a mail route was to be run from Ragged Edge camp to the railroad, through the pass in the mountain——"

"Yes, and he had the job. That shuts us out, doesn't it?"

"Wait a minute!" exclaimed John, impatiently. "He's a tenderfoot, and he'll never in the world be able to make that trip on time, in winter—he'll never be able to make it at all. You'll see that after he has been late a few times we'll have a chance. Then I intend to apply for the job. See?"

John was the more aggressive, the stronger of the two, both in mind and body. The younger brother had learned to lean on his more independent spirit, so it was John who always had the deciding voice when there was a doubtful plan. Ben's yielding disposition enabled him to get along more comfortably with every one, and especially with the supreme authority in the household.

The Worth boys soon learned from their occasional visitors that they would be expected to show their prowess as boxers and wrestlers on their arrival in camp, so they determined to practice up. Every day at noon, when the sheep lay down, the two went at each other good humoredly, but with seriousness, advising one another when a mistake was made. Every blow, every trick, that Tom Mallory had taught John they tried till they knew it perfectly. Every feint, every fall, that the Indians practiced they perfected, till by the time their term with the sheep was up their bodies were as supple and their muscles as strong as constant exercise and clean, healthy living in the open air could make them.

At last the new men arrived, the boys turned over the sheep to them, and promptly saddled up for their ride across the mountains. They were glad to get away from the ranch, but when they reviewed the past long months and realized that they had not flinched, they experienced that peculiar pleasure that comes from carrying through a hard job.

High Points in News of the Week

At this writing there appears to be little to indicate that an extra session of congress will be called by President Coolidge to consider wheat price fixing legislation or any other issue. The president has repeatedly stated that in his opinion congress could not enact legislation in time to do the wheat growers any real good. Others point out the fact that several different remedies have been proposed by farm organizations and individuals and that congressmen and senators who oppose price fixing would use this division of opinion as an excuse for not enacting any remedial legislation.

The American Farm Bureau federation is urging wheat growers to hold their wheat as long as possible for higher prices.

Senator Stanfield of Oregon last week announced that he was planning to introduce a measure when congress convenes which would, if enacted, require the government to turn back to the actual wheat growers the $51,000,000 which the government made in profit in handling the farmers' wheat during the war. Senator Stanfield calculated that this would be equivalent to an increase in price of 7 or 8 cents a bushel.

Secretary Wallace of the department of agriculture last week issued a statement in which he declared that the present ruinously low prices of wheat are not a new agricultural disease but just one more acute symptom of the general trouble from which agriculture is suffering. He said that the disease itself is the distorted relationship between prices of farm products and the prices of what the farmer must buy. He frankly said that he did not know whether or not relief would result from the government setting up a wheat buying agency.

* * *

President Coolidge last week appointed Governor Gifford Pinchot of Pennsylvania as a mediator between the anthracite coal mine owners and the miners who are planning a general strike beginning September 1. Governor Pinchot announces that his first act will be to call representatives of the two factions together to find out if there exists a basis upon which negotiations for the prevention of a strike may be entered into. Nearly all the anthracite coal mines are in Pennsylvania.

President Coolidge has let it be known that the government will use its entire power if necessary to supply coal to consumers should the strike be carried out as announced. * * *

Whether there is an early collapse of the German government in prospect is a problem troubling the nations of the world. The United States and Great Britain fear that there is. A news dispatch from Washington, D. C., last week said the internal situation in Germany is regarded in Washington with grave apprehension.

* * *

Premier Poincare of France last week sent a reply to the British note recently delivered concerning the situation existing between Germany and the allied nations. The French premier reiterated his former statement that France will not evacuate the Ruhr district until Germany begins paying reparations to France. He said also that the severe methods employed in the Ruhr by the French would not be altered until Germany ceases her program of passive resistance. Also he declared that France would make no reductions in the amount of reparations due unless other nations which France owes makes corresponding reductions in her debts to them.

* * *

Secretary Mellon of the United States treasury has returned from a tour of Europe investigating European financial conditions. Following a conference with President Coolidge he announced that this country would not exert undue pressure upon foreign nations owing this country. He finds conditions in Europe are not such as to enable them to pay their debts promptly. He is convinced that there is no practical way in which this country can give definite assistance to Europe at this time.

* * *

It is expected that within a few weeks agreement will be reached by which diplomatic relations between the United States and Mexico will be resumed after some 15 years of lack of such relationship.

* * *

A suit has been filed in Oregon attacking the constitutionality of the compulsory public school law enacted by the voters of Oregon at the last general election by a vote of about 115,000 to 103,000. The suit is brought by the Society of the Sisters of the Holy Names of Jesus and Mary. The act would go into effect in 1925 and would require the parents of children between the ages of eight and 16 years to send them to the public schools and not private schools.

Premier Kato of Japan died in Tokyo, August 23. Premier Kato was leader of the Japanese delegation at the conference for limitation of armaments at Washington, D. C., two years ago.

* * *

Airplanes last week carried mail from coast to coast in a minimum time of 26 hours and 14 minutes between San Francisco and New York.

* * *

President and Mrs. Coolidge have moved into the White House following the withdrawal of Mrs. Harding who will spend the next year or more at the home of her brother.

* * *

Former Secretary Meredith of the department of agriculture has brought a libel suit against Senator Brookhart of Iowa. Mr. Meredith claims that the senator declared in a recent speech that Meredith "sat in the Wall Street game and helped to produce the greatest panic in farm prices in the history of agriculture." Mr. Meredith claims this alleged statement to be false and libelous.

* * *

Senator Hess of Ohio is advocating a constitutional amendment changing the term of office of the president of the United States to six or seven years and forbidding a second term immediately following.

* * *

President Coolidge has announced that his administration will stand behind Governor General Leonard Wood of the Philippines on the same basis as did the Harding administration.

Farm Business and Markets Outlook

(Continued from page five.)

the last 10 days. Consuming demand has not broadened and is inactive at the higher quotation. The advance is believed to be due to buying by short interests .

Hay Markets Firm.

The hay market remains firm, with the demand in excess of the receipts in the principal distributing markets. But little top grade hay is available and low grades are selling to better advantage. Farmers are not offering hay freely, in spite of the advance.

Prices per ton, in carlots: Chicago—No. 1 timothy, $27@28; No. 2, $24@26; No. 1 light clover mixed, $24@27; No. 1 clover, $22@24; No. 1 clover mixed, $23@25; No. 1 and choice alfalfa, $18@29; upland prairie, $16@18; rye straw, $12@13; oat and wheat straw, $10@11.

Egg Prices Go Higher.

Egg prices advanced sharply last week as receipts continued light and supplies of top grades were insufficient to meet trade demand and appear firmly entrenched on the new level. Some short held eggs able to pass as fresh firsts were withdrawn to supplement the supply. Eggs have been moving out of storage at a faster rate than they have been going in throughout the first half of the month, which will probably be the case from now on. The number of eggs disappearing into consumptive channels at the four leading cities thus far in August is larger than last year and the largest on record for the corresponding period.

Butter and Cheese.

Further advances were scored in the butter market last week as the effect of the "bearish" cold storage report wore off.

Sharply higher country cheese quotations were responsible for advances in distributing markets last week.

Fruits and Vegetables.

Carlot shipments of potatoes are running considerably smaller than at this time last year or two years ago. Prices have advanced, with U. S. No. 1 Cobblers at $1.25 to $2.50 per 100 pounds and early Ohios at $1.90 to $2.10 on midwestern markets.

Carlot shipments of apples continue to run rather light for this season of the year and prices have advaneed. No. 1 Duchess, Transparent, Wealthy and Golden Sweet apples are quoted at 75 cents to $1.50 per bushel on the Chicago market. The early varieties promise to be well cleaned up early in the season, paving the way for a good market on the later varieties as soon as they are ready.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Aug. 25.—Cattle—Choice steers, $7.25@8; medium to good steers, $6.75@7.25; fair to medium steers, $5.75@6.75; common to fair steers, $4.75@5.75; choice heifers, $5.50@5.75; choice cows and heifers, $5@5.50; medium to good cows, heifers,, $4@5; fair to medium cows, heifers, $3@4; common cows, $2@3; canners, $1.50@2; bulls, $3@4; choice dairy calves, $9@10; prime light calves, $9@10.50; medium light calves, $8@9; heavy calves, $5@8.

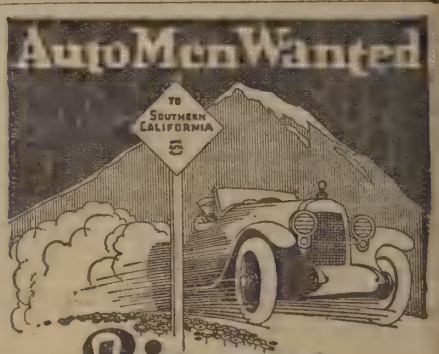
Auto Men Wanted



Big pay-jobs open now

Everywhere in California auto men are wanted. Good jobs at big pay open NOW. Men can't be trained fast enough to supply demand. California is crowded with autos. Has more autos to population than any other state in Union. Greatest shortage ever known of garages and skilled auto mechanics.

LEARN AUTO TRADES IN COAST'S BIGGEST SCHOOL

Now's YOUR opportunity to step into this big money-making business. YOU can become an electrician, mechanic, ignition expert, garage foreman or used-car appraiser after a few short weeks training. We'd like to tell you here how thousands of men have gained big-pay auto jobs through NATIONAL training. But it's a long story, and we've put it all in a handsome illustrated book which also tells everything about NATIONAL AUTOMOTIVE. Wonderful big training shops right next door to 130-acre city park. Ball parks, swimming pool, world's largest stadium—all free to you. Send for this book now.

Your Success Is Sure After NATIONAL Training

Hundreds of men write: "I have increased my earnings 100%." "I have built a wonderful garage business, and owe it all to National." "I am well satisfied with National training; am sending my brother to take the course." It's the National practical shop training that counts. Actual construction work on all types of motors. Ignition, battery and lathe work—driving and vulcanizing. Special advanced electrical course FREE. You KNOW autos when you complete the NATIONAL course. Special Low Tuition offer now. Earn your room and board while learning. Find out about everything in interesting illustrated auto book. Send for this big FREE book. Mail the coupon NOW.

Just Folks

Estimates can be colored.

Remedies are a pastime with politicians.

The beginning inspires; the end sobers.

What the other fellow thinks has much to do with the success or failure of any movement. If you simply ignore all those who do not agree with you, you might as well give up at once. Honestly listen to the other fellow and the chances are he will listen to you. Then you two have hopes of getting together.

We might as well take it for granted that nothing in this world is ever done in the best way possible. Limitation of conditions, limitation of brain power, make themselves felt everywhere.

Most of us take the longest route, occupy the longest time and waste a lot of effort before we accomplish our project. Some shorten the route and the time and are in the ranks of leadership. Now and then, one thinks and acts directly and becomes the superman.

Hence, you may possibly have thought out the best way of raising a crop of wheat, of fattening a beef steer, of getting the most eggs from your farm flock, of organizing your own farm community into the happiest association, of the best method of pushing your cooperative movement—yet in every one of these projects there are limitations of circumstances, limitations of selfishness, which have to be met and which seriously modify that pet idea of your own.

The best workable plan ever devised is more or less of a makeshift and has to have constant attention in order to keep it going.

This should give encouragement to those who see disaster in deviating from any set plan.

In the meantime, the distinctive purpose can not be abandoned. There come times when it is better to wait than to surrender, for the quarter loaf is not worth the battle—but the whole loaf is out of the question.

In giving up much, if you can substantially hold on to the one purpose, you are doing about all you can reasonably expect in a cooperative movement.

Having your own way is one thing and agreeing to a common way is quite another thing. E A S

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

"Oh Mother—

Kellogg's

is just what Bobby an' I wanted for our breakfast"

Little appetites, like the big ones, get mighty sharp when you bring out generous bowls of crisp, delicious Kellogg's Corn Flakes for breakfast or for lunch! Watch how fast they disappear; see the bowls handed back for another supply!

That's because Kellogg's are not only delicious, but wholesome for growing children—and wonderfully sustaining for men and women.

Every work-day it takes more than the annual output of a 450-acre farm to supply the raw corn used in the "million packages a day" made in the Kellogg factories!

For extra treats, serve Kellogg's Corn Flakes with stewed fruit or with bananas or other fresh fruits in season. Hear everybody say, "Great—s'more, please!"

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg. None are genuine without it.

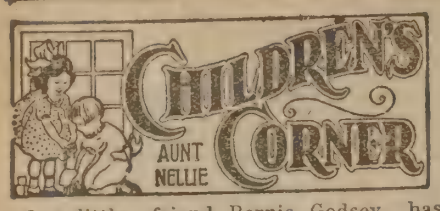
LOOK AT THE GOOD FARM BARGAINS THAT ARE OFFERED ON THE FARMERS' "WANT AD" PAGE THIS WEEK.



Our little friend Bernis Godsey has moved since she wrote to us before and now lives way down in southwest Washington. She says she likes their new location very much. There is a big tunnel back of her home, through which the railroad runs.

On her birthday, June 21, Edith Puckett received many nice presents. She was 11 years old then. Snowball is a pretty little white kitten belonging to Edith and thinks she is an important member of the Puckett household. The Pucketts live in southeast Washington.

Aunt Nellie thanks Violet Pflugrad for a little poem and her letter. This little girl is a western Washington housin. She says it has been very hot there this summer.

The cousins and Aunt Nellie welcome you to the Corner, Martha Keiska, and we shall look forward to another letter from you. This little girl in western Washington was 8 years old January 1, 1923. She has two pet kittens.

Indeed we haven't forgotten you, Esther Kiehn. Aunt Nellie has so many letters that some of them have to be held over. Esther's home is in eastern Washington. She has five brothers and two sisters.

"I should like to become a Corner cousin," says Josephine Sanders, a southern Washington girl, in a recent letter. "I am 10 years old August 14. My school closed May 22. We take THE FARMER. I have a brother 7 years old."

Birthday Greetings

THURSDAY, August 30—Cora Turner, 11 years old.

FRIDAY, August 31—Elna Early, 10 years old; Myrtle Matre, 11; Hattie Becker, 11; Laila Paavola, 9; Emma Rennick, 10; Carl Sieveke, 10; Inez Smelcer; Patricia Stuhr, 8.

SATURDAY, September 1—Jenny Johnson, 11 years old; Flora McAuley, 10; Annie Schilbeff, 11 years old; Bessie Sherwood, 8; John Thaden, 3.

SUNDAY, September 2—Donald DeHart, 11 years old; Gudveig Hammervold, 11.

MONDAY, September 3—Mary Hoard, 8 years old.

TUESDAY, September 4—Nadine Hutchens, 11 years old.

BEDTIME STORIES

By THORNTON W. BURGESS.

BULLY IS PERSISTENT.

When Farmer Brown's boy pulled Bully's nest out of the hole in the apple tree in the old orchard and tore it to pieces and carried away the six eggs that were in it he thought that Bully and his wife would surely leave the old orchard. That is why he did what seemed like such a dreadful thing. He wanted them to leave the old orchard, because he knew

The next day he visited the old orchard to see if Bully had left.

that if they didn't the other birds would, and that would be truly dreadful. He knew that other little feathered people simply couldn't live with such noisy, quarrelsome neighbors as Bully and his wife, and wouldn't live there. He knew that unless something was done the Bullys would have the old orchard to themselves the next spring, and then how the worms and the insects would thrive on the trees! But he couldn't quite make up his mind to kill or really hurt Bully and Mrs. Bully, so he thought that if he took their eggs and destroyed their nest there couldn't be any baby sparrows to grow up and make more trouble, and then perhaps Bully and his wife would go away from the old orchard.

But Farmer Brown's boy didn't know Bully. No, indeed! He didn't know how persistent Bully can be. The next day he visited the old orchard to see if Bully had left. What do you think he found? Why, he found that Bully and his wife had a new nest half built in the very same hole that the old one had been in!

He tore this to pieces only to find another on the next day. And so it was on the following day and the day after that Farmer Brown's boy just had to admire the spunk and persistence of Bully and Mrs. Bully.

"You certainly deserve to be left alone," said he, "but I can't do it. You are a nuisance, and so you have got to go if I have to come here and break up your nest every day all summer."

A day or two after that Farmer Brown's boy found no nest when he put his hand in the hollow of the tree. "At last they've given up," thought he. "I hope they have left the old orchard for good." He was almost out of the old orchard on the other side when his sharp eyes caught sight of a little bird just disappearing in a hole in the very last tree.

He walked up and pounded on the tree. Out popped—whom do you think? Why, Mrs. Bully to be sure! She and Bully were building a nest there. It took Farmer Brown's boy three days to make Bully and his wife understand that they couldn't build there or anywhere else in the old orchard. Finally they gave up and flew away. And where do you think they went? Why, straight to Farmer Brown's barn, and there, way up under the eaves, where only the longest ladder could reach them, they built a nest and raised their young. Farmer Brown's boy said that such boldness and impudence deserved a reward and so, as long as they were out of the old orchard and not bothering other birds, he would leave them alone.

And in the old orchard there was great rejoicing, for now no one wanted to move away, and for the first time every one there looked on Farmer Brown's boy as their friend.

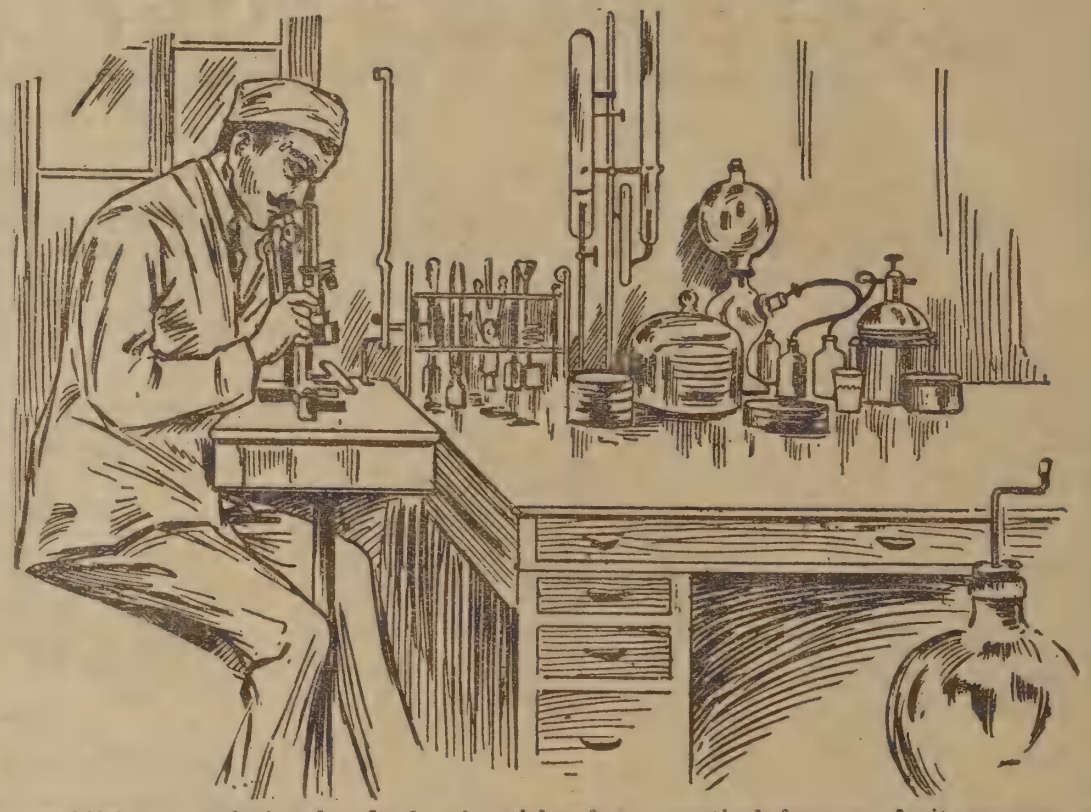
(Copyright by J. G. Lloyd.)

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Lena Schauerman, Dorothy Pomeroy, Miriam Eddie, Dana G. Urquhart, Guy Turner, Zelva Phelps, Mary Kathleen McDonald, Vera Domerude, Anna Mae Tarter, Esther Thieman, La Verne Risting, Esther Wick, Mary Roberts, Robert Moore, Olive Martin, Odna Evans, Levira Viola Berthoif, Beulah E. Warren, Eva Paavola, Mary Hall, Mayme Kynse.

Scientists, as Well as Practical Farmers, Contribute to Your State Farm Weekly



In addition to printing hundreds of articles from practical farmers, fruit growers, market gardeners, stock breeders and dairymen, The Washington Farmer gives space to the scientist and the agricultural expert who carry on careful research work with regard to seeds, plant growth, soils, fertilizers, the care and breeding of poultry and farm animals, the eradication of pests, and many other matters which have a close bearing on agricultural production and prosperity of this state. He has a vast store of information garnered together from many sources which can help solve the farm problems peculiar to this section. What the experimenters at the agricultural schools are finding out, what the scientists who specialize on agricultural problems discover are given to our readers in complete, reliable form. This feature helps round out the paper and gives it greater value to those who make a business of farming.

Your state farm weekly gives big value at low cost on account of its cooperative subscription plan.

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order, if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

50 Cents for 3 Years.
25 Cents for 1 Year.
In Canada add 1 cent a copy for extra postage.

News for Breeders

SWISS VALLEY GIRL.

Partly because of her own record at the pail, but largely because of the records of her progeny both in milk production and in the show ring, Swiss Valley Girl stands out as one of the greatest cows of the Brown Swiss breed. The old cow has been dead for several years, but she left nine daughters and three sons to keep the family name alive, and one of them alone, Swiss Valley Girl 7th, has won more show ring honors than any other animal of the breed, besides making two creditable official records. Seven of the nine daughters have completed yearly tests at various stages of maturity, the average of them being 12,002.2 pounds of milk and 465.09 of butterfat, and have won repeatedly in the show ring as well. Granddaughters also are carrying on the good work, and one of them, Nan of Lakeview, produced 647.3 pounds of fat, the largest production of any animal of Swiss Valley Girl blood.

HAVE 35 REGISTERED GUERNSEYS.

There are 35 head of registered Guernseys on the Noble Brothers' farm at Bow, Skagit county. The blood lines run to the May Rose and Governor of the Chene families. The herd bull is a May Rose animal, and, although only 18 months old, he has been in the herd over a year and has two calves which are promising individuals and well marked. All milk on this farm is separated and the cream sold to the association, while the skim milk is retained at home for feeding pigs, calves and chickens. Calves are fed bran, whole oats and some oil meal, after they have been fed whole milk from two to three months. After this age they will eat grain very readily. The grains that are fed are raised on the farm except in a few cases and they also have clover hay and silage during the winter.

CALLS FOR WASHINGTON CATTLE.

The Mutual Dairy Loan association of Missoula, Mont., has just purchased a carload of grade heifers from Robert Kooistra, Carnation, Wash. Jim Hurlburt of Mt. Vernon, Wash., has also recently shipped a carload of grades to Los Angeles, Cal. Dr. Alfred Hendrickson of Burlington, Wash., reports much increased activity in the sale of Holstein cattle and many calls for test stock for outside shipment.

BUYS NEW HERD BULL.

R. E. Waugh, a breeder of Holsteins at Mt. Vernon, Skagit county, announces the purchase of a grandson of Sir Korndyke Ormsby Piebe. The calf, which will be used as the new herd sire, is also a grandson of Sir Canary Houwtje, one of the animals owned at one time by J. H. Hulbert of LaConner. Mr. Waugh secured the calf from the Walter Johnson herd at Mt. Vernon.

W. J. ORTON BUYS BULL.

W. J. Orton of Renton, King county, recently secured from Wallace & Fordyce of Sunnyside, Yakima county, a yearling bull sired by Chicona Lover Bold and out of Aloha Darling, one of the prettiest things in the Fawndale farm herd. The youngster, Fawndale Bolder by name, placed fourth in a junior calf class of 18 at the Pacific International last fall.

ADDS TO GUERNSEY HERD.

San Juan county purebred Guernsey herds were augmented recently when N. P. Hodgen of Richardson purchased a purebred Guernsey cow, a heifer and a bull from Gus Heimstra of Everson, Whatcom county. Oscar Weeks of Lopez also purchased two purebred Guernsey heifers from H. B. Douglas of Ferndale, Whatcom county.

HIGH PRODUCING GUERNSEY.

Bob's R. S. Royalette, a senior 3-year-old Guernsey in the Valley Gem farms herd at Arlington, has recently been credited with 641.40 pounds of fat and 13,349 pounds of milk. This places her first among Washington Guernseys of that age and eighth place in class DD in the United States.

BUT FEW REACTORS.

There were only six reactors among 4263 head of dairy cows tested for tuberculosis in Pacific county. This is less than 1-7 of 1 per cent. Dr. F. E. Allen, federal veterinarian, working under the direction of the state department, tested 92 per cent of all the dairy cows in the county.

BUYS PUREBRED GUERNSEY BULL.

With the purchase by Mrs. L. Perkinson of a purebred Guernsey bull for her herd, the Lewis County Cow-testing association again enters the 100 per cent purebred bull honor list.

HEIFER COMPLETES RECORD.

Not the desire for money return, but his sporting instincts, prompt Piet Bergsma of Ferndale, Wash., to attempt records like the one he completed some time ago on Johanna Boelyn Gem Segis. As he himself put it, "It was no fun caring for the heifer at 1:30 a. m., through that blizzard," and probably there are not many breeders who would add to their other farm tasks that of milking a cow four times a day, without the element of adventure that is attached to the making of every official record.

Value of Wheat as Feed

(Continued from page seven.)

steer would cost $60, add the feed cost of $14.62 and taking the average gain from the above data, the 1185-pound fat steer would cost $74.62, including only the feed. The necessary selling price of the steer to break even would be $6.30.

Wheat has been used quite successfully in rations with most classes of live stock which are being fitted for the show and sale ring. One of the standard mixtures for fitting calves and lambs for the show ring at the Washington State college is three pounds oats, two pounds wheat, one pound peas, one pound millrun and one of linseed oil meal.

NEED PLENTY FRESH AIR.

"Some means should be provided to give the animals in a barn continuous supply of fresh air without excessive drafts," says Professor L. J. Smith of the division of agricultural engineering at the State College of Washington, in his new bulletin on "Plans for Small Barns."

"Windows hinged at the bottom, the use of muslin instead of glass, openings between pairs of loft floor joists, standard out-take flues up to cupolas, and halved doors are common methods. Animals must have plenty of fresh air if they are to be kept healthy."

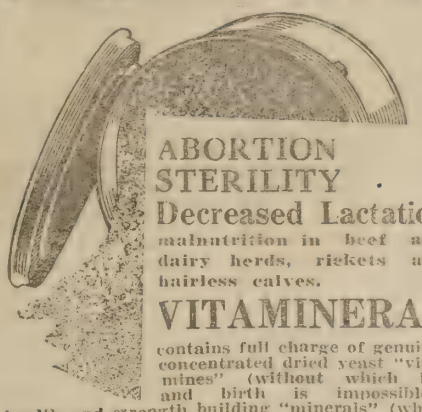
CORRECT TREATMENT FOR



ABORTION
STERILITY
Decreased Lactation

malnutrition in beef and dairy herds, rickets and hairless calves.

VITAMINERAL

contains full charge of genuine, concentrated dried yeast "vitamines" (without which life and birth is impossible); health and strength building "minerals" (which cattle do not get from ordinary natural or prepared feeds).

Vitamineral is indorsed and used by leading veterinarians, farm advisers, county agents and big breeders everywhere. Secretary Axby (Indiana State Vet. Ass'n.) has had miraculous results with VITAMINERAL in entire herds afflicted with abortion; he advises every veterinarian and breeder to use it.

Avoid dangerous, fatal contagion; make more beef; increase milk flow and butter fat; get healthy, sturdy calves.

Ask your veterinarian or write for free illustrated book "Vigorize Your Herd."

Hollywood Farm Hollywood, Wash.

LAWSON'S R. of M. JERSEYS
At Auction, Tuesday, October 9

Twenty-six head cows, heifers and few selected young bulls, all very closely related to gold medal producers and show cattle. The offering includes twenty head from the herd of G. W. Lawson and six offered by John Michaelbrook. Among them are a number of R. of M. cows, others on test. One heifer now on test has produced 198 lbs. fat in three months, 20 days, others are full brothers or sisters to cows now qualifying for gold medals.

A son of St. Mawes Golden Poppy, also a son of Captain Tristram are herd bulls on the Lawson farm. Most of the offering were sired by, or are bred to, one of these great bulls. The catalog now being prepared gives details. If your name is not already on my 1923 list, send for catalog.

This New Fall and Winter Catalogue —[illegible] Yours Free

The new, complete Fall and Winter Catalogue is now ready and will be sent you free. You need merely fill in the coupon below.

You may just as well profit by the saving this big book offers you.

In your home, this book will be a price guide and a shopping pleasure. You, too, may as well know the right price to pay, and you may as well save money on nearly everything you buy.

This Book Offers You a Saving of $50 this Season

Over *forty million dollars*' worth of goods have been bought at the lowest prices especially for this book—a part of our work to *hold prices down* and to make possible this saving for *you*.

So if you write for this book, if you use this book, and if your family uses this book, there will be a saving of over $50 in cash for you this season.

But this book offers you more than a saving—more than low prices. It offers you the satisfaction and the economy of always getting *dependable and serviceable goods*.

Ward Quality and Right Prices

For over fifty years Montgomery Ward & Co. has tried, first of all, to sell only *serviceable* goods that stand inspection and use.

We take great pride in Ward Quality. We always quote the lowest possible price. But we try always to have *our quality a little higher*.

So to write for this book, to use this book every week, not only means a saving in cash, but satisfaction with everything you buy and the saving that long service always brings.

Everything for the Home, the Farm and the Family

FOR WOMEN: Shoes, underwear, hosiery, sweaters, gloves, things for the woman's personal use. It is the woman who saves money and to any woman this book will be the best means of saving.

FOR THE HOME: Carpets, furniture, bedding, electrical devices, everything new for home use, everything used in decoration and to make the home modern and complete. And the prices always mean a saving.

FOR THE MEN AND THE FARM: Everything a man uses or wears, from tools and hardware and famous Riverside Tires, to virgin wool suits—often one-third less than prices you are paying.

The coupon below brings this new, complete Fall and Winter Catalogue to you and your family—entirely free.

You, too, may as well profit by its saving. You need simply fill in this coupon and all the saving and satisfaction and pleasure this book brings will come into your home for you and your family.

48 Hour Service from Portland, Oregon

Our big Portland House is ready to serve you quickly. It was built for the convenience of our friends in the Pacific Coast States.

Our new system of filling orders enables our Portland House to ship your orders within 48 hours.

48 hour service is our promise to you. But we do better than our promise — because most of our orders are actually shipped within 24 hours.

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and frequently within 24 hours.

The Five-passenger Six-cylinder Touring Car
The Standard of Comparison

A New Buick For You!

New in appearance and design but Buick through and through in character! This sums up the 1924 six-cylinder touring model of a car that for twenty years has been an institution among American farmers.

The new Buick differs from the old in the wider utility and greater dependability which it affords—in the more striking beauty which it possesses. Its new Buick 70 H. P. valve-in-head motor provides power to travel mud and sand, steep grades and hills more surely and with less effort. And with this power is also greater safety, for the famous Buick brakes are now applied to all four wheels.

Improvement of Live Stock Creates Big Problem

Domestication Multiplies Animal Ills; High Production Tends to Lower Resistance

By E. E. WEGNER, Dean College of Veterinary Science, State College of Washington

The improvement of our live stock has been a reality of which we are all justly proud. The records that many of the best breeds of dairy cattle have established is little less than phenomenal. The gains of our beef breeds and the increased weight and early maturity of our horses are facts that we are proud to contemplate. The egg production of the hens deserves notice and commendation. The value of an article or an animal should be in proportion to the amount of wealth that it will create. It is no idle boast that the animals of this country are being improved very rapidly and the campaigns for better bred sires and further improvement of all kinds of live stock are of tremendous value to the nation. While as yet the percentage of purebred animals is very small, the number of good grades represents a vast improvement.

I would not suggest that we were forging too far ahead in our desire to increase production and losing on one end while gaining on the other, but I do wish to bring out for consideration the effects upon the animal of certain practices under domestication. Not that we should discontinue our improvements, but rather that we should realize the attending dangers and seek to prevent their operation. In our desire for greater production the effect upon the stamina of the animal has been lost sight of. Should we produce an animal capable of yielding twice the present amount, we would still not be satisfied, because man is never satisfied with his accomplishments.

Must We Slow Up?

Is it possible to continue the present production advancement indefinitely, and if not, why not? What are the limiting factors? That question brings squarely before us a discussion of the effects of artificial handling under domestication. An analysis of this subject throws some light upon the limiting factors of the future and unless we find efficient means of disposing of these influences we can not hope to continue indefinitely.

Stamina is of greatest importance. Nothing is gained by high production unless the pace can be maintained for a considerable time. There can be no question as to the effect of high production on the animal body; it is the same as the effect of high speed on a motor. The best of engineering care must be given if the high rate of speed is to be maintained.

Production vs. Stamina.

Under domestication animals have been afforded protection from certain natural enemies, but other dangers have been added that may prove to be more considerable unless care is taken to control them. The cow was originally intended to produce enough milk to supply her calf until it was old enough to feed on the vegetation of the range. Man has increased her production many fold by careful selection and mating of individuals of superior qualities. This has frequently resulted in line-breeding or inbreeding to a dangerous extent, and though the production may have been increased, it was at the expense of the animal stamina. Chickens that normally laid a nest full of eggs to be hatched to propagate the species now lay 20 times that number, and man isn't satisfied yet. It is possible to require 20 times the amount of work that nature intended and still maintain normal health? Egg and milk production is work, and when one body function is severely overtaxed, may it not be detrimental to other body activities? Certainly the high producer of today does not show the individual resistance to disease that her rugged ancestor showed.

Horses that have been developed to earlier maturity and greater weight have not been so badly affected as the animals that produce raw food products, but the effects of close breeding and artificial protection with rich feeding has created an animal with less resistance than the ancestor of the open range. The hog, once lean and gaunt, was a hardy animal that lived a life of toil and activity as he ate the vegetation of the fields and rooted the hard earth for a great portion of his food. Today he is fat, languid and lazy as he eats his rich, prepared meal from a clean trough. A professional gorger is ever at his command to cause him to make a pound of flesh on less feed. He now has small lungs and weak muscles, but he is an economical food producer.

Housing Affects Health.

If the demands made upon our animals are more severe than they formerly were one might suppose that this condition was balanced by the better protection from disease. That, if the resisting powers are impaired, the artificial protection afforded more than makes up for it. The facts are that under domestication diseases spread more rapidly than under natural conditions. The same stables, barns, sties and sheds are used for one generation of animals after another. The corrals and pastures are in constant use and greater numbers of animals are required to inhabit these small quarters. The result of this system of management is that diseases are much more prevalent today than they ever were. The problem of animal management, to keep the herd or flock on a paying basis, is very much more complex than it has ever been, and the future will show the absolute necessity of having a sufficient number of scientifically trained men to control this serious aspect of animal production.

Natural Conditions Best.

Under natural conditions animals roamed the ranges over wide areas, bedding one night in one spot and the next night a mile or miles away; always on virgin soil. Infections spread very slowly under those conditions. Contrast this with the conditions at present, where the animals lie in the small lots on the average farm.

To be more specific, I might mention such diseases as navel infection in foals. This did not cause much loss when the mare dropped a foal on the clean, open range. White scours in the calves now takes its toll in increasing numbers as our intensification increases. Lump-jaw spreads more rapidly now. Glanders and tuberculosis involve great numbers in a short time when they are kept in narrow quarters. I am not saying that we must return to the open range conditions of years ago, for we can never do that; but we must prepare to protect the wealth producers in our herds from the losses that present living conditions invite.

Parasites of swine had become such a curse on certain places that these animals could no longer be raised profitably. The eggs of the parasites lived over from one generation of hogs to the next and infected the little pigs; killed a great number and stunted the rest. Hog cholera spreads rapidly in the swine herd. Bull-nose and necrotic inflammation of the bowels are becoming more prevalent, because the young pigs are quartered in the old pen where past generations of hogs have been kept.

Sheep that are herded in large bands are more certainly affected with scab. Recently we treated 1300 of these animals for foot-rot which would not have spread so rapidly had the animals been loosely herded. The great ranges of the west are practically gone and we must raise our live stock in the farm yards and small pastures in the future. We need, therefore, at present men who can see the great problems of the live stock raiser and fit themselves, by the study of animal disease, to control these conditions as they arise.

We have seen the healthy young horses taken from the pastures on the farms to the city sale stables and come down with influenza in a few days because these stables were hotbeds of infection, as many such cases had occurred previously. Notice this same disease as its spreads through an entire bunch of horses on the farm when it once gets a start. Distemper does the same thing, and other infections spread with similar rapidity.

Dairy Barn Troubles.

In cattle, probably the most closely housed of any of our animals, we see the difficulties of controlling calf scours and calf pneumonia, two of the most serious diseases of young cattle that take the profits from the breeder and prevent normal additions to his herd. In the adults, infectious inflammation of the udder (garget) is the scourge of the dairyman in certain herds where it has obtained a hold. Foot-rot and lump-jaw are two others that are rapidly spread. Tuberculosis and hemorrhagic septicaemia cause much loss when they get started. Anthrax, in localities where it is prevalent, is a terrible disease. Abortion, when due to infection, is spread easily when animals are confined to small quarters.

In short, the more closely animals are associated with each other, the more rapidly infectious diseases of all kinds will spread. Our economic conditions force us to raise our live stock on smaller and smaller tracts, and as these crowding conditions become more acute the danger from disease increases. One may ask, "Why the same conditions do not prevail in man?" We answer that strict sanitary regulations are enforced by nations, states, counties and cities. People are not grouped in great numbers in single undivided apartments and this family isolation prevents the rapid spread of infections.

A Challenge to Men.

This field in animal care is big enough to attract the best brains of the young men of this nation because there is not an old farm in this country that has not lost live stock from some of the above causes.

There may be some who think that this question is not serious, but it is because they are familiar with only a few herds. If I could show you the letters and inquiries that come to me from all parts of the northwest you would be convinced that the need was acute. Some say, "We are broke unless this loss can be stopped," and others virtually have tears in them. Recently I was advised that a dairy herd was taken over by the bank; couldn't make expenses. The production was low and the reproduction lower. Good animals to start with, but they couldn't make the grade in the face of domestic difficulties. That's where the man with a full understanding of these problems should be doing his work and helping to strengthen the back of this great industry.

Real Sanitation Needed.

How are these conditions to be handled? There are different ways of handling them. No two can be handled in exactly the same way. Sanitation is the thing that we most need and that implies more than sprinkling a few handfuls of lime about the floors and premises. It may mean taking the calf from the mother as it is dropped and keeping it in special quarters for a few months or having it dropped on clean pasture. The same applies to the foal. It may be necessary to take the sow and rid her of worms and clean her skin and place her to farrow in a newly built or scalded house placed on ground where hogs have not lived in order to keep them away from the infections. Change the hog lots; plow up the old one and sow grass or grain. Some diseases, such as tuberculosis and glanders, may be controlled by carefully testing the animals and getting rid of the spreaders. Certain others, like blackleg, hog cholera and anthrax may be controlled by vaccination. Early recognition and rigid quarantine are necessary in other cases such as necrophorus infection, dog distemper and so on. The use of antiseptics is always helpful and may be used to good advantage, but it is not all. The problem is a large one and requires a broad and liberal education in the science of animal diseases.

The Feeding System.

I could not close this article without commenting upon the effect of our present method of feeding, since it differs so widely from the natural one. Keep in mind that our animals were intended to roam wide areas of ground in search of food. They grazed on the hills and in the valleys. They roamed over sandy plains, rocky slopes and fertile bottoms. They traveled far to water and always hunted the salt-lick. They cropped the grass in all stages of its growth. Under those conditions the animals were quite sure to find a great variety of essential body building substances.

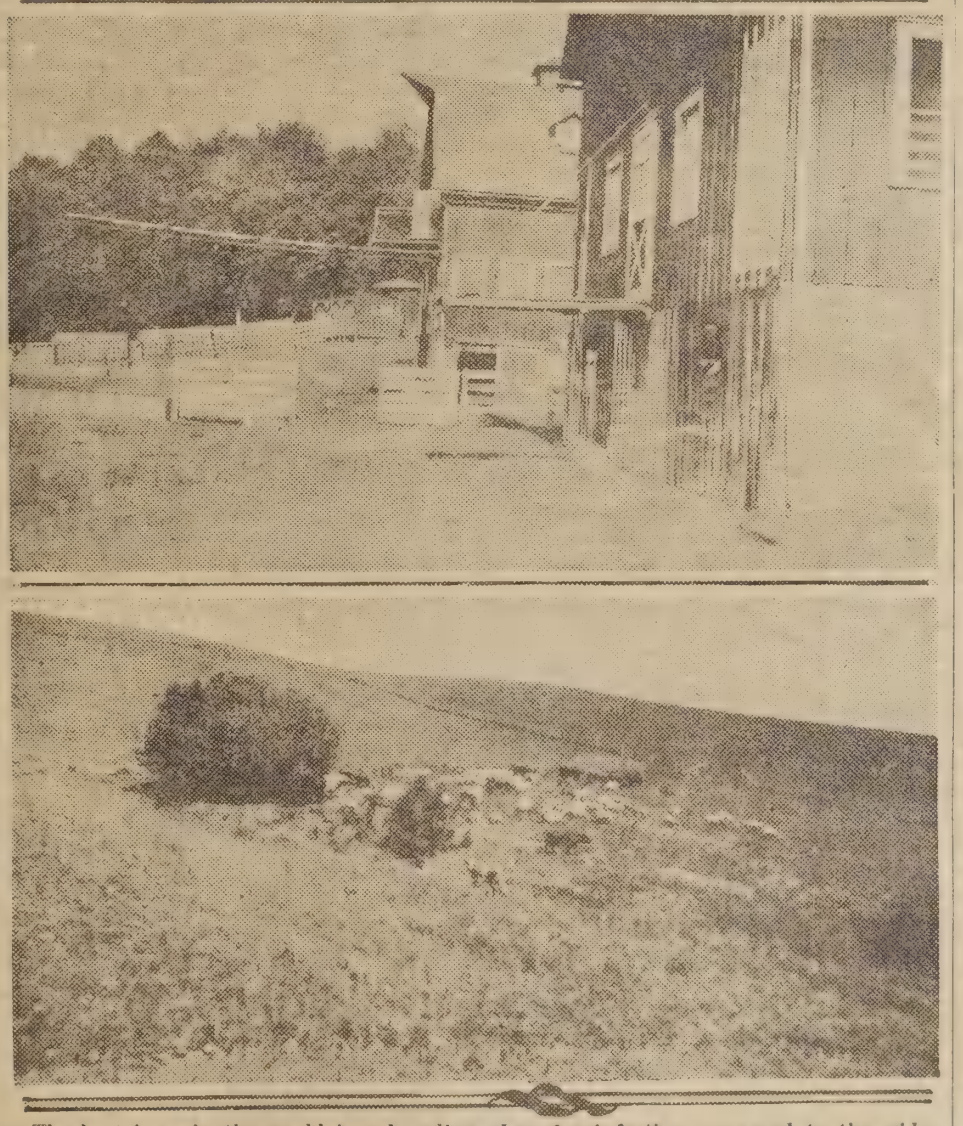
Minerals Often Overlooked.

Certain mineral substances are as essential to normal body development and activity as the carbon and nitrogen. In certain districts in this region the lack of iodine causes the incomplete development of the young and the calves are born with goiter, the pigs hairless and the colts weak and crooked. The lack of one element is responsible for this. It is significant that the wild animals with natural freedom appear to be free from this trouble. Lack of minerals is distinctly seen in the form of rickets in the growing animals, particularly, and may be corrected by giving feeds that contain a high calcium content. We find also that adults when fed on forage deficient in calcium show weakening of the bones, stiffness and lameness, and this is not uncommon. Considering that the grains contain a low calcium content, our high grain feeding is likely to cause trouble unless it is supplemented by a legume hay which contains a liberal amount.

Animals Often Poorly Nourished.

If our working horses suffer from this deficiency, what about the dairy cow and the hen that, aside from the requirements of their bodies, must have materials for the manufacture of milk and eggs? The cow must have enough for the maintenance of her body plus the requirements for milk production and in addition she may be nourishing a fetus at the same time. The shortage under these conditions means that the milk production will be lessened, or the female will rob her body to supply the deficiency or she will be required to drop her fetus from the womb undeveloped. All three of these conditions are common, some animals manifesting one more prominently than the others, but suffering a real physical inconvenience in all cases. Sway backed, soft boned and lame cows are a common sight in the dairies. Low milk records and abortions and sterilities are without doubt frequently the direct result of feeding materials that do not supply all the es-

(Continued on page eleven.)



The best barn in the world is a breeding place for infection compared to the wide, open pasture or the natural range.

THE WASHINGTON FARMER

Successor to
THE RANCH, PACIFIC DAIRYMAN, HORN AND HOOF.
VOL. XLIX. NO. 10.

Trade Mark Registered U. S. Patent Office.
Entered as second-class matter, January 13, 1916 at the postoffice at Spokane, Washington, under the act of March 3, 1879.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Train for Farming Profession

One of the reasons so many young men and women have left the farm is that farming has been made, too often, merely a means of existence rather than a life work, a profession, a calling. Director E. L. French of the state department of agriculture hit the nail on the head in an address not so long ago.

"There are too many of our boys today under the impression that they should take up some kind of professional life, and consequently pay too little attention to agriculture as a calling," says Director French. "The state of Washington is just beginning to develop its wonderful possibilities. We will, in time, get down to more constructive methods of agriculture than we have ever known in the past and this is going to require more specialists who have had a scientific training. When we consider the facts we will see that as yet we have paid but little attention to the permanent upbuilding of our soils, but if we are to continue as a leading agricultural district we must lay particular emphasis on this point. We are going to need more trained men to help us attain our aim. In our work in the department of agriculture we find that there is actually a shortage of trained men to conduct the different lines of work. This is because about nine out of every 10 boys attending our higher institutions have the impression that the professional life has greater possibilities for them and some even consider it more respectable. This is a mistaken idea.

"Many will argue that agricultural positions do not pay as well as do some other lines of work. This is true to a certain extent, but it should be remembered that there are few professions that do not call for several years of struggling along before they can be made to produce satisfactory income.

"The young men graduating from our high schools who have had some farm training should study the possibilities that are offered in a course in agriculture. Practical experience will enable a man to take up farm work and in many cases he will be able to 'get by,' but if his foundation is fortified with a college education the broad field which lies before him offers added possibilities."

Remember Last Season

A news dispatch from Wenatchee says that the general superintendent of transportation for the Great Northern reports over 7000 refrigerator cars now on the system compared with about 2500 on September 1, 1922. On the western division of the road there are now 2638 "reefers" compared with 635 on the same division last year. Among the 7000 cars now on the line are several hundred of a new type being built especially for the Western Fruit Growers' Express, painted a rich yellow color. These are said to be the very latest thing in reefers, containing improved ventilating, heating and icing facilities.

That should be encouraging to the fruit growers of the territory served by the Great Northern. Wenatchee is to be congratulated on its agitation for improved service. It is entitled to have its crop of fruit moved efficiently, which was not done last year. Likewise, the Great Northern is to be complimented upon its apparent efforts to furnish adequate transportation facilities for the coming season. May the district and the railroad cooperate to the end that fruit will be handled without losses this year.

Result in Happier Homes

It is not always convenient to have a model kitchen made from the old one, but many times a slight change will add much to the convenience of the housewife, as was the case in the kitchen of Mrs. C. C. Wade of Montesano, Grays Harbor county.

Her kitchen was arranged so that only a small amount of light could get in from the two small side windows. A large pantry had been built next to the other side, but in such a way as to shut off the light. There had been no plans for a sink and the one who worked over the stove must do a great amount of walking when preparing a meal.

After securing the assistance of the home demonstration agent, and Miss Minerva Lawrence of the state college, she arranged to have the pantry opened up and a sink built in with a double window over it. All of the wall space has been built up with closed closets and two coolers. Some of these cupboards have been built high and can be used for storage. Even the space beneath the sink has been closed with two doors, but a small space has been allowed at the bottom for the toes when one is standing close to the sink.

The material for the remodeling has been estimated at $54 and the work of the carpenter would, of course, be in addition to that. But the value of improvements of this character can hardly be measured in dollars. Health, comfort, happiness and general satisfaction are the measure of such things in the housewife's workshop.

This Should Give Courage

Business failures in the twelfth district of the federal reserve bank during the first six months of 1923 were less, both in number and liabilities, than during the first six months of 1922, according to official report. This district includes Washington, Oregon, Idaho, Utah, California, Nevada and most of Arizona. The figures on the business failures for January to July of these two years follow:

	First Half 1923	First Half 1922	Percentage Decrease 1923 Compared with 1922
Number	1,078	1,148	6.0
Liabilities	$14,296,328	$19,885,666	28.1

In the country as a whole, the record for the first six months of 1923 compared with the same period in 1922 shows a decline of 27.3 per cent in the number of failures and of 30.6 per cent in the liabilities of failures involved.

The record of business failures in the states of this district during June, 1923, shows a decline of 27 per cent in the number of failures as compared with both May, 1923, and June, 1922. Liabilities of failures during June, 1923, were respectively 21 per cent and 37 per cent less than those of failures reported for May, 1923, or June, 1922, and were smaller than in any month since February, 1921. The average liabilities of business failures during June, 1923, were $10,478, compared with $9,657 in May, 1923, and $12,248 in June, 1922.

Lewis County Clover Industry

Lewis county is going into the grass and seed production. W. F. Mueller of Claquato has 35 acres of clover seed this year and Harry Smith of the same section, 25 acres. Alfred Gregg has 30 acres; J. A. Scollard has nearly 100 acres, and many others are going into the business. The seed is reported of a good quality and the yield large, while prices are satisfactory. The second cutting of red clover is allowed to mature for seed. Clover hullers are coming into use.

While the middle west has produced the bulk of clover seed, it has been grown quite extensively in Oregon.

Washington State Gleanings

Miss Pauline Child of Sprague has left for the Hawaiian islands to resume her position as teacher in the government schools for the third year. Miss Frances Simas accompanied Miss Child and will teach in the islands.

ALFALFA DOES WELL IN CLALLAM.

C. N. McLaughlin of Clallam county reported to County Agent A. W. Holland that he planted a new field of alfalfa in the spring and it is making a fine stand. Last year A. N. Taylor of Jamestown harvested 42 tons of first-class alfalfa from seven acres of land and sold the third crop in the field for $60.

POULTRYMEN GET PEDIGREED BIRDS.

Jacob Erving, owner of the Standard hatchery, has received 100 high pedigreed cockerels from Hollywood Poultry farm. The birds will be apportioned among local poultrymen who will produce hatching eggs under the accredited system. Later 200 to 300 more cockerels will be purchased for distribution.

GROWERS ASK FOR INSPECTOR.

Lewis county berry growers, through President L. G. Colyn of the Lewis County Berry Growers' association, have presented a petition to the county commissioners asking that a county horticultural inspector be appointed to serve six months each year. The request is made because of the growing importance of the berry and other fruit business in Lewis county.

PEACH SHIPMENTS HEAVY.

Shipments of Elberta peaches from the lower Yakima valley district alone are nearly 40 cars a day, according to County Agent A. E. Lovett, who is arranging orchard tours through the district. Horticultural experts from the state college will make the trips with growers and point out new systems and experimental features employed under their direction.

INTER-ISLAND FAIR SEPTEMBER 27-29.

The fourth annual Anacortes Inter-Island fair will be held this year September 27, 28 and 29. This fair is held under the direction of the Anacortes Chamber of Commerce, and in the past has been pronounced one of the best exhibitions of its kind in northwest Washington.

The committee in charge of the fair includes Charles P. Stapp, chairman; E. P. Barker, C. D. England, F. G. Abbey, Mrs. Douglas Allmond, Sam Mendelson, A. C. Thompson and C. F. Stafford.

HOLD 1924 POULTRY SHOW.

It has been decided to hold the 1924 Centralia poultry show from January 14 to 19 next. The chamber of commerce has had this matter under consideration for some time and an organization has just been perfected.

H. H. Collier, Tacoma; C. W. Harris, Seattle, and F. J. Oeltjen of this city met recently with a local committee. A. R. Badger will head the Centralia poultry show as president; Earl H. Colson will be vice president, while L. L. Lynn, secretary of the chamber of commerce, will act as secretary-manager.

BELIEVES ORCHARDISTS NEED HELP.

"We have worked and saved and struggled for six years in the Kennewick district, and at last have come to the point of asking whether it wouldn't be better, as suggested by some one at the previous conference, to pull our orchards out," declared J. A. McLean, representative of the Yakima Valley Fruit Growers' association at the second Portland conference on coordination. "We'd be glad to quit if we could, but we can't. We've got to have help of some knd." McLean has a 12-year-old orchard. Last season his returns for Jonathans, after the association had deducted 40 cents for its services in grading, packing and marketing, netted him 26 cents per box with which to pay all expenses of producing.

MAKES MONEY ON ORCHARD.

Herbert Williams of White Salmon, Wash., was one of the few apple growers at the recent Portland conference on coordination to assert that conditions were any way to his liking. He had made a profit on his orchard every year since it was five years old, he said, and a satisfactory profit every year until 1922, when he netted $1 per box. He admitted having had business experience before he started orcharding, something which the average fruit grower has not had, and it was pointed out that as an independent he probably had benefited, without paying for it, from the stabilizing influence of the cooperative associations. He expressed the opinion that White Salmon growers as a class have made money, but said nevertheless that he would work as hard as the next one to establish a central selling agency.

POULTRY CULLING SCHOOL HELD.

Announcement was made by the county farm office at Montesano that 13 Grays Harbor county poultrymen qualified to do culling at the poultry culling school recently held by W. D. Buchanan, poultry specialist of the Washington State college.

Mr. Buchanan spent a day training these men in understanding the poultry score card, and in scoring 10 birds each. They will receive certificates stating that their culling will be recognized by the specialists. Each of the 13 have agreed to do culling at 1 cent a bird if the owner catches the birds, and 2 cents if they do their own catching.

Those taking the training were R. E. Huttula, Paul Seifret, D. V. Drake, Ray Cox, Robert Ruddel, Mrs. F. A. Lumber, Armis Jarvi and Mrs. R. D. Ruddel, Elma; Clarence Glenn Jr. and Mrs. J. M. Spencer, Montesano, and Mr. and Mrs. C. M. Purkapile, Aberdeen.

FORM PEACH POOL.

Contracts of sale for 100,000 boxes of peaches were placed in the hands of bankers by the peach growers of the upper Yakima valley August 24 to be sold at minimum price of 75 cents a box, f. o. b. Yakima county, by peach growers working in harmony with shippers and bankers. More than 100 representative growers, bankers and dealers met and, after Chairman B. V. Davis had explained the agreement and contract, signers were easily obtained, with promises by those present to get in touch with their neighbors and get their signatures. It is thought by those interested that between 60 and 75 per cent of the tonnage will be obtained.

This is the first organization for disposal of crops in the valley where shippers and bankers have been taken into the confidence of the growers, with the possible exception of the four-county hay growers' organization, which is being formed.

Glorification of Work

Is One Condition of Continuing Business Prosperity

The "glorification of work" was laid down as one of the conditions of continuing business prosperity in a recent address by A. R. Erskine, president of the Studebaker corporation. According to the dictionary, to glorify work is to bestow honor and distinction upon it; to shed radiance or splendor on it; to transform it into something more splendid.

In place of being cast out of paradise into a world cursed by labor, Mr. Erskine evidently would have Adam and Eve ejected into a paradise of work. These two theories of work have had a lot to do with the misery and happiness of human beings.

Not only is work glorified in and of itself like that done by an Edison, a Burbank, a Shakespeare or a Michelangelo, but the so-called humblest kinds of work are transformed and glorified by the light of the home fires which are kept burning.

Other conditions of continuing business prosperity cited by Mr. Erskine are correct teaching of the principles of economics; the inspiration of honesty, confidence, courage and optimism; encouraging of constructive forces and the condemnation of those which are destructive; the enforcement of law and order and respect to our institutions.

This leader in the business world also notes the conditions in the United States which are conducive to business prosperity. Our exports average but 6 per cent of our production and hence we have by far the biggest and richest home market of any industrial nation in the world's history. Our producers are themselves the greatest consumers of their own production and only need constant employment to insure national prosperity. Panics induced by overexpansion of loans, withdrawal of credit or restricted supply of money are highly improbable, if not impossible, under our present federal reserve banking system.

Mr. Erskine further believes that business prosperity may continue indefinitely if the psychology of the nation is properly directed. In other words, the mental attitude of the nation largely determines the state of business. The continuous operation of business at the nearest possible approach to the capacity of productive facilities insures the greatest possible employment, happiness and prosperity to society.

There are, however, serious obstacles to be overcome in the path of business prosperity. Business will not function freely unless employers are optimistic, confident and courageous. We must be rid of that baneful habit of the human race—superficial criticism. Those who care nothing for history or facts concerning the things they seek to discredit are the enemies who upset business.

The printed page and the schoolroom must be drafted into this campaign for continuing business prosperity. Even grade schools, as well as high schools, should teach and feature economics as a regular study.

Of course, depressions may occur, owing to inflation of the price level, overproduction, unpreventable wars, and other upheavals may bring disasters, but "that is no reason why we should not eliminate the psychological agency of ruin."

As a man thinketh so is he, and Mr. Erskine would have him think more heartily and more healthfully of those things which make for health, happiness and prosperity.

Woman Farmer Succeeds

"Mrs. Luttrell's is an interesting story of what thrift and carefully planned work will accomplish," writes W. E. Martin in the Oklahoma Extention News, concerning a Marshall county woman who made a success at farming under trying circumstances. "Five years ago her husband died, leaving a debt of $1200 on the farm. There was only one son to carry on the work, and shortly after Mr. Luttrell's death this son was killed in an explosion. Mrs. Luttrell, however, did not resort to charity but she and her two grown daughters rolled up their sleeves and went to work themselves. Since then they have done all the work of the farm, even to cutting their own wood. She has paid off the $1200 debt, and told me she didn't want to ever have a loan on the place if she could possibly get along without it. She has kept the three smaller children in school most of the time. Two years ago I terraced her farm and she has kept these terraces up in good shape. As a money crop she raised hogs and cattle. She has 20 head of cattle and 75 head of hogs on hand now, as well as a large flock of poultry. In many ways she is a better farmer than lots of men in her community."

Seeking Pleasure

Enjoyment of That Which Is Worth While Is Desirable
